**2. Ratio between Exports and Imports.**—The foregoing table shews the percentage of exports on imports for each year. From this it will be seen that, with few exceptions, due to temporary dislocations of trade, prior to 1892 the balance of trade has been on the side of imports, but from 1892 the reverse has been the case, the value of exports having increased by 123.22 per cent. and the imports by 99.34 per cent. The excess of imports in the earlier years represents the introduction of capital in the form of Government loans and for investment in private undertakings, and the excess of exports in the later years represents mainly the interest and profit on the earlier investments, repayment of loans to foreign bondholders, and also freight on trade which is carried mainly by ships of the United Kingdom and foreign countries.

## § 5. Direction of Trade.

**1. Country of Shipment and Country of Origin.**—From the 1st January, 1905, the Trade and Customs Department, in addition to the usual record of the countries whence goods directly arrived in Australia, has kept a record of the countries of their origin.

The following table shews, for the years 1906 and 1910, the value of imports recorded as direct from the principal countries, and also the disposition of the value of imports against the countries where they were produced or manufactured. A similar comparison for the years 1905, 1907, and 1908 will be found in previous issues of this work.

**COMMONWEALTH IMPORTS FROM COUNTRIES OF SHIPMENT AND COUNTRIES OF ORIGIN, 1906 and 1910.**

The only country from which the value of direct imports exceeds by any large amount the value of the imports of goods which were manufactured or produced therein, that is to say, the only country which shews a balance of any magnitude as a distributor of the goods of other countries to Australia, is the United Kingdom. The records of our imports therefrom during the year 1910 shew that while the total direct imports from that country amounted to £36,646,441, the value of the manufactures or produce of the United Kingdom itself, imported from all countries whatsoever during the same year, was £30,420,540. From the foregoing figures it appears that goods to the value of at least £6,225,901 were received from other countries through the United Kingdom.

Other countries which shew balances as distributors to Australia, though absolutely of much less amount, are Belgium, Hong Kong, New Zealand, Straits Settlements, and Ceylon. The countries mentioned are, of course, not the only countries through which goods are indirectly imported into Australia, for the direct imports from other countries, notably France and Germany, include considerable values which are not of the produce of those countries. These values, however, are more than balanced by value of French and German goods received through the United Kingdom and other countries.

2. **Direct Imports according to Country of Shipment.**—The following table, shewing the average yearly value of imports from each of the principal countries during each succeeding quinquennial period from 1887 to 1906, and for the year 1910, shews considerable change in direction of imports during the past twenty years. The countries mentioned in this table are those where the goods were shipped or whence they were directly consigned to Australia.

3. Imports from the United Kingdom.—The foregoing tables shew that while the value of direct imports from the United Kingdom during 1910 is above the yearly average of the period under review, the proportion to total imports has diminished, having fallen from 70.14 per cent. during the years 1887-91 to 61.06 per cent. in 1910.

It will be observed, however, that the percentage proportion for 1910 is an advance on that of the quinquennium 1902-6, and is also higher than in the year 1909, when the proportion was 60.92 per cent. The position of the United Kingdom as indicated by her percentage proportion of the total trade is largely affected by the imports of vegetable foodstuffs, a branch of trade in which the United Kingdom cannot participate. The apparent diversion of Australian trade from Great Britain is more fully dealt with hereinafter, viz., in sub-section 11 of this chapter. The values of the principal imports of United Kingdom origin during the year 1910 are as follows:—

Alc and beer, £364,324; apparel and textiles—apparel, £2,395,661, textiles, £8,268,112; arms, ammunition and explosives, £552,232; books and periodicals, £501,495; brushware, £73,194; earthenware, etc., £246,490; clocks and watches, £43,468; cocoa and chocolate, £180,343; confectionery, £149,339; cordage, metal, £96,291; cordage, other, £129,845; cutlery, £182,752; drugs and chemicals—alkalies (soda), £97,617, fertilisers, £124,468, medicines, £157,712, other drugs and chemicals, £559,552; electrical and gas appliances, £161,627; electrical materials, £277,105; fancy goods, £202,860; fish, fresh and preserved, £147,793; furniture, £65,043; glass and glassware, £134,445; indiarubber manufactures, £232,799; instruments, musical, £72,921; instruments, scientific, etc., £178,937; iron and steel—pig, £105,596, bar, hoop, ingot, etc., £590,302, scrap, £48,118, girders, beams, etc., £138,588, plate and sheet, galvanised and corrugated, £1,590,746, not galvanised or corrugated, £201,788, pipes and tubes, £452,666, rails, fishplates, etc., £399,547, tinned plates, plain, £355,395; wire, £232,147; wire netting, £159,291; jewellery and precious stones, £231,395; leather and leather manufactures, £257,855; machines and machinery, £1,638,880; metals, manufactures of, £1,479,369; milk, preserved, £124,116; oils (not essential), £245,729; paints and colours, £311,641; paper, £718,610; pickles, sauces, etc., £117,650; plated ware, £211,487; soap, £45,853; specie, £369,487; spirits, £686,938; stationery, £730,328; tobacco, £44,167; tools of trade, £287,341; varnishes, £81,357; vehicles—bicycles, etc., £158,368, motors, £448,415, other vehicles, £79,739; vessels (ships), £687,500; yarns, £158,518.

4. **Imports Shipped from British Possessions.**—The growth of the value of imports from other British possessions during the past twenty years has been such as to increase the proportion to total imports from 12.41 per cent. in the years 1887-91 to 13.11 per cent. in 1910, the actual values being respectively £4,389,783 and £7,865,649. Of the total imports from British possessions during 1910, 28.01 per cent., or 3.67 per cent. of all imports, was from New Zealand, 33.93 per cent., or 4.45 per cent. of all imports, from India, and 9.79 per cent., or 1.28 per cent. of all imports, from Ceylon.

5. **Principal Imports, the Produce of British Possessions, 1910.**—These are as follows:—

(i.) *Africa, South.* Bark, tanning, £5385; coal, £24,787; explosives, £19,565; maize, £12,147; precious stones, £115,253.

(ii.) *Canada.* Apparel and textiles, £18,100; boots and shoes, £9473; drugs and chemicals, £8333; fish, £98,146; furniture, £13,124; Indiarubber and manufactures of, £7074; agricultural implements and machinery, £258,046; other machines and machinery, £20,242; metal manufactures, £21,743; paper, £163,080; timber, £77,150; bicycles and other vehicles, £60,250.

(iii.) *Ceylon.* Coffee and chicory, £1392; leather, £6987, nuts, £21,058; tea, £712,260. The large increase in the imports from Ceylon—from £124,057 during the years 1887-91, to £760,238 in 1910—is due to the displacement of China teas in the Australian markets by those of India and Ceylon. Of the total imports of tea during the year 1910, 56.31 per cent. was the produce of Ceylon.

(iv.) *Fiji.* Bananas, £42,655; copra, £12,438; sugar and molasses, £84,047.

(v.) *India.* Bags and sacks, £1,596,282; hessians, £183,778; carpets, mats, etc., £12,247; coal, £149,262; coffee and chicory, £31,723; cotton, raw, £25,144;

other unmanufactured fibres, £8528; iron pig, £17,137; linseed £8467; rice, £145,629; shellac, £6622; manures, £2961; oils—castor, £51,581, linseed, £11,039; skins and hides, £71,032; spices, £13,615; tea, £329,134; timber, £13,638; wax, paraffin, £41,937; yarns, £9,322.

(vi.) *Mauritius*. Sugar, £19,533.

(vii.) *New Zealand*. Apparel and textiles, £8121; animals—horses, £255,213, sheep, £13,103; military stores, 19,391; coal, £5657; fibre, flax, and hemp, £108,486; fish, £28,117; gold, bullion and ore, £896,057; grain, barley, £8444; hops, £17,608; implements and machinery (agricultural), £6774; machines and machinery, £7391; meats, £20,785; seeds, £33,803; skins and hides, £161,463; timber, £421,862; wool, £5360.

(viii.) *Straits Settlements*. Rice, £776; spices, £32,850; sago and tapioca, £45,431; canes and rattans, etc., unmanufactured, £11,013; rubber, and rubber manufactures, £42,820.

6. **Imports Shipped from Foreign Countries.**—The imports direct from foreign countries during the year 1910 represented 25.83 per cent. of the total imports, as compared with 17.45 per cent. during the years 1887-91. Compared, however, with the average of the quinquennium 1902-6, the proportion during the year 1910 shews a decline mainly due to the smaller proportion of the import trade drawn from the United States of America. Of the total imports into Australia shipped from foreign countries 24.38 per cent.—6.30 per cent. of all imports—was from Germany, and 41.90 per cent.—10.82 per cent. of all imports—was from the United States.

7. **Principal Imports the Produce of Foreign Countries, 1910.** The details are as follows:—

(i.) *Austria-Hungary*. Apparel and textiles, £138,393; furniture, £28,211; china-ware, £12,657; glassware, £11,948; fancy goods, £19,703; jewellery and precious stones, £8151; paper and stationery, £19,514; pipes, smoking, etc., £9395.

(ii.) *Belgium*. Apparel, £69,525; textiles, £133,294; candles, £3212; drugs, chemicals, and fertilisers, £18,767; glass and glassware, £121,378; iron and steel—partly manufactured, £109,283, girders, beams, etc., £1601, plate and sheet, £33,236, railway iron, £14,806; wire, £15,783; jewellery, £49,392; machines and machinery, £12,607; matches and vestas, £28,186; metal manufactures, £67,897; motors and parts, £28,727; paper, £30,250, zinc manufactures, £13,165.

(iii.) *Chile*. Soda nitrate, £60,714.

(iv.) *China*. Apparel and textiles, £99,813; cotton, raw, £13,839; fish, £13,100; fruit, £13,409; ginger, £7381; rice, £55,102; nuts, £13,192; oils, £11,820; tea, £85,427.

The decline of the value of imports from China during the past twenty years is due to the loss of the tea trade, which now draws its supplies mainly from India and Ceylon.

(v.) *France*. Apparel and textiles, £864,694; cream of tartar, £124,977; other drugs and chemicals, £52,862, fruits, £7799; fancy goods, £56,033; jewellery, £7277; time-pieces, £8155; pipes, smoking, etc., £46,336; motor vehicles and parts, £152,137; rubber manufactures, £48,533; leather, £15,874; spirits, £182,575; tiles, £17,362; wine, £104,531; machinery and manufactures of metal, £48,528.

(vi.) *Germany*. Ale and beer, £68,356; apparel and textiles, £1,441,355; arms, ammunition and explosives, £113,731; brushware, £38,721; cement, £46,420; chinaware, etc., £58,630, earthenware, £22,325; drugs and chemicals—calcium carbide, £8010, fertilisers, £38,772, other drugs, etc., £139,012; fancy goods, £142,657; furniture, £8869; minor articles for furniture, £5492; glass and glassware, £89,665; hops, £14,619; indiarubber manufactures, £119,419; metals and manufactures of metals—iron and steel—

bar, hoop, ingot, etc., £153,609, plate and sheet, £68,100, pipes and tubes, £34,917, railway iron, £33,864, tools of trade, £27,864; wire, £422,746; wire netting, £127,807; machines and machinery, £210,393; lamps and lampware, £48,563; electrical and gas appliances, £51,861; other manufactures of metals, £385,711; jewellery, cameos, etc., £80,562; leather and leather manufactures (excluding boots and shoes), £70,241; musical instruments, £322,331; paper, £165,898; spirits, £24,335; stationery, £82,204; tobacco, £8910; paints and varnishes, £12,524.

(vii.) *Italy*. Apparel and textiles, £173,313; fruits, £21,111; matches and vestas, £13,373; marble and stone, £27,021; oils, £23,477; nuts, £17,382; sulphur, £34,672; motors and parts, £37,302.

(viii.) *Japan*. Apparel and textiles, £389,013; bags, baskets, etc., £20,068; china-ware and earthenware, £14,703; fancy goods, £11,014; fertilisers (superphosphates), £37,114; furniture, £9333; rice, £37,899; oils and waxes, £39,808; sulphur, £39,670; timber, etc., £42,026.

(ix.) *Java*. Cotton, raw, £916; hats and caps, £3157; rice, £565; kapok, £78,471; rubber, £33,396; sugar, £313,940; timber, £1244; tobacco, £2637; tea, £102,264.

(x.) *Netherlands*. Apparel and textiles, £60,342; cocoa and chocolate, £64,372; cameos and precious stones, £26,111; metal manufactures, £11,747; paper, £27,982; spirits, £115,767.

(xi.) *Norway*. Calcium carbide, £40,545; fish, £59,842; milk, preserved, £3382; paper, £90,417; timber, £385,389; vessels, £24,350.

(xii.) *Philippine Islands*. Flax and hemp, £65,838; cigars, £42,882.

(xiii.) *Russia*. Flax, £7424; oils, £16,172; timber, £89,475.

(xiv.) *Sweden*. Calcium carbide, £36,739; earthenware, glassware, etc., £7289; electrical machinery and fittings, £9374; cream separators, £75,486; matches and vestas, £41,106; paper, £111,237; telephones, £40,249; timber, £148,828.

(xv.) *Switzerland*. Apparel and textiles, £840,842; cigars, £11,824; cocoa and chocolate, manufactured, £30,283; confectionery, £14,187; milk, £5000; watches, £77,034.

(xvi.) *United States of America*. Apparel and textiles—Boots and shoes, £73,831; other apparel, £124,530; textiles, £203,127; ammunition and explosives, £55,950; cameras, magic lanterns, phonographs, etc., £110,396; clocks and watches, £68,169; fish, £165,603; furniture, £54,763; glass and glassware, £39,738; glucose, £33,048; indiarubber manufactures, £42,692; leather, £263,671; meats, £76,372; medicines, £78,717; metal manufactures—iron and steel: bars, ingots, hoops, etc., £43,488, girders, beams, etc., £16,774, pipes and tubes, £57,376, plate and sheet, £154,498, railway iron, £371,561, tools of trade, £215,275; wire, £212,473; machines and machinery, agricultural, £242,995; other machines and machinery, £832,694; other metal manufactures, £356,632; musical instruments, £43,724; oils, fats and waxes—kerosene, £578,104, lubricating oils and greases, £133,996, naphtha, £33,028, paraffin wax, £37,171, turpentine, £57,831; paper, £189,038; resin, £35,688; soap, £49,520; stationery, £86,143; timber, £928,622; tobacco, cigars, etc., £579,450; wood manufactures, £99,797; vehicles, bicycles and motors, and parts, £115,371; other vehicles and parts, £71,412.

8. *Direction of Exports*.—The following table shews the average yearly value of exports to principal countries during each quinquennial period from 1887 to 1906 and for the year 1910. As in the case of the import trade, considerable alteration in the direction of exports is evident. The largest increases in exports to British possessions are shewn to the South African Union and to India and Ceylon. During the South African war large shipments of gold were sent from the Commonwealth to that country, and the decline in the value of the exports to South Africa during 1910 is due to the cessation of these shipments together with a decline in the exports of timber. The value of exports to India and Ceylon is also mainly of gold, of which exceptionally heavy shipments were made during 1904 and 1905. The large increases in the case of Belgium,

Germany, and France are probably more apparent than real, being mainly due to the increase in local sales of wool, skins, etc., and the resulting direct export to the countries mentioned, while formerly a much larger proportion of wool, etc., was sent to the United Kingdom for sale, and ultimately found its way from there to the Continent. The figures given below, however, do not, even now, denote the total purchases by European countries of Australian produce, as large quantities are still distributed from London.

### TRADE OF COMMONWEALTH WITH VARIOUS COUNTRIES, 1887 to 1910.

9. Exports to the United Kingdom.—Notwithstanding an increase of 71.33 per cent. in the actual value of exports to the United Kingdom during the year 1910 as compared

with the yearly average of the period 1887-91, the proportion of the total exports despatched to the United Kingdom has fallen from 74.74 per cent. in the earlier period to 50.61 per cent. in the year 1910. This decrease is, to some extent, undoubtedly due to the fact that wool and other commodities which were formerly despatched to the United Kingdom, and distributed from that centre, are now to a greater extent shipped direct to continental ports.

The principal exports to the United Kingdom during the year 1910 were as follows:—Butter, £3,597,173; fruit—apples, £194,732, other, including pulp, £15,597; grain—wheat, £7,558,893; flour, £209,573, other, £35,350; hair, £24,871; jewellery and precious stones, £211,623; leather, £316,802; meat, frozen—beef, £967,662, mutton, £1,274,804, lamb, £795,128, rabbits and hares, £481,547, other frozen meat, £43,010; potted meat, £94,890; meat, preserved in tins, £507,939; minerals and metals—copper—concentrates, £68,233, ingots, £82,854, in matte, £943,728, ore, £70,187; gold—bullion, £1,236,088, in matte, £492,972, ore, £32,881; silver—bullion, £21,209, in matte, £263,272, silver and silver-lead—concentrates, £10,725, ore, £37,870; lead—pig, £453,585, in matte, £278,427; ores, other, £51,846; spelter and concentrates, £72,783; tin, ingots and ore, £526,712; oil, cocoanut, £151,945; pearlshell, £209,657; skins—hides, £294,702, rabbit and hare, £407,706, sheep, £747,244, other skins, £547,258; specie, gold, £511,810, tallow, £1,659,694, timber, £77,575; wine, £91,654; wool—greasy, £9,047,845, scoured £2,399,514.

10. **Exports to British Possessions.**—The value of exports to British Possessions during 1910 is the lowest recorded since 1901, having declined from a yearly average of £13,876,127 during the years 1902-6 to £8,323,486 in 1910. This decline is due to reduced exports of gold, which fell from an average of £8,396,113 during the years 1902-6 to £2,285,840 in 1910. The shipments of gold to India, Ceylon, and South Africa were in some years very large, being particularly heavy during the quinquennium 1902-6. If, therefore, this element of the export trade be eliminated, it will be seen that the sales of merchandise to British Possessions have been materially increased.

#### 11. Principal Exports to British Possessions, 1910.—These are as follows:—

(i.) *Canada.* Butter, £26,967; meats, £30,545; oil, cocoanut, £1773; skins, £13,852; timber, undressed, £7038; wool, £10,695.

(ii.) *Ceylon.* Butter, £8459; horses, £7486; specie, £235,000; grain—flour, £19,370; lead, pig, £36,612; silver, bullion, £276,890; soap, £12,462; sugar, £1670.

(iii.) *Fiji.* Apparel and textiles—apparel, including boots and shoes, £20,878; textiles, £15,095; bags, sacks, and cordage, £6577; biscuits, £22,489; coal, £17,909; drugs and chemicals, £12,428; grain, prepared—bran, pollard, and sharps, £19,744; flour, £15,657; machines and machinery, £13,398; metal manufactures, £57,716; oils, £5788; specie, £39,450; timber, £13,733; vessels, £18,500.

(iv.) *Hong Kong.* Butter, £21,767; coal, £5321; fish, £18,547; flour, £16,144; gold bullion, £10,436; lead, pig, £66,997; sandalwood, £71,672; specie, gold, £431,846; timber, undressed, £19,590.

(v.) *India.* Coal, £32,753; copper, ingots, £8959; gold, bullion, £675,221; specie, £61,609; horses, £171,862; hay and chaff, £8027; lead, pig, £20,105; meats, £11,631; silver bullion, £158,820; tallow, £3482; timber, £305,105; wool, £24,268.

(vi.) *New Zealand.* Apparel, textiles, etc.:—apparel—boots and shoes, £8418; other apparel, £27,415; textiles, £64,121; bags and sacks, £2005; bark, tanning, £25,036; books and periodicals, £51,689; cameras, magic lanterns, etc., £26,051; coal, £117,982; copper, ingots, £3972; drugs and chemicals—fertilisers, £89,871; medicines, £35,652; other drugs, etc., £39,609; electrical materials, £12,981; fodders, £17,078; fruit, fresh £55,475, dried, £7042; glass and glassware, £10,760; grain—flour, £27,411; rice, £34,140; horses, £12,403; indiarubber manufactures, £72,977; iron, pig, £3388; jewellery and precious stones, £15,188; lead, pig, £20,814; leather and leather manufactures, £50,707; metals, manufactures of—agricultural implements and machinery, £18,130; other machines and machinery, £73,452; other manufactures of metals, £77,031; oils, etc., £17,999; onions, £10,132; plants, trees, and bulbs, £8857; potatoes, £31,024; salt, £12,545; seeds, £9169; soap, £27,102; specie—gold, £601,108; spirits, £21,169; stationery, £35,496; sugar, £7641; tea, £77,381; timber, £161,371; tin, ingots, £19,390; tobacco, £76,625; wine, £26,898.

(vii.) *Papua.* Apparel and textiles, etc., £11,473; flour, £2003; meats, £11,711; specie, £9853; tobacco, £10,201.

(viii.) *South African Union.* Animals, living—sheep, £20,248; butter, £97,733; fruits—fresh, £6443; other, £5855; grain—wheat, £755,267; flour, £256,066; jams and jellies, £13,031; leather, £102,277; meats, frozen beef, £36,559, mutton and lamb, £28,935, other meats, £21,354; oil, cocoanut, £10,140; seeds, £4898; specie, gold, £225,000; sugar, £63,402; tallow, unrefined, £50,150; timber, £82,340.

(ix.) *Straits Settlements.* Butter, £23,400; coal, £72,578; grain, flour, £113,921; horses, £21,185; machines and machinery, £10,944; meats, £32,264; tin ore, £194,066; tin concentrates, £34,438.

**12. Exports to Foreign Countries.**—The foregoing table shews a very great increase in the value of exports to foreign countries, both in actual amounts and in relation to total exports. The value of exports to foreign countries during 1910 shews an increase of 475 per cent. over similar figures for the years 1887-91, thus increasing the proportion per cent. of all exports from 16.80 per cent. in the earlier years to 38.22 per cent. in 1910. This increase is chiefly due to the direct consignment of wool and other produce to European countries, instead of distributing from London, as in the earlier years. A striking feature in this table is the lack of expansion of exports to the United States. From the figures given in the table, it would appear that the sales to the United States were less in 1910 than in 1887-91. These figures, however, include gold bullion and specie, which in 1910 amounted to only £50, compared with an average of nearly £3,000,000 per annum during the quinquennium 1897-1901, and about £1,300,000 during the period 1902-6.

**13. Principal Exports to Foreign Countries, 1910.**—These are as follows:—

(i.) *Argentine Republic.* Agricultural implements and machinery, £73,937; timber, £20,385.

(ii.) *Belgium.* Bark, tanning, £15,815; copper, £410,294; grain, wheat, £241,046; lead, £8801; leather, £23,575; silver ore, £62,321, concentrates, £472,586; hides and skins, £422,537; tallow, £47,479; timber, £24,870; tin, £47,142; wool, £3,084,847; zinc ore, £20,435, concentrates, £1,026,434.

(iii.) *Chile.* Coal, £303,627; wheat, £19,980.

(iv.) *China*. Butter, £19,352; coal, £1245; copper, £18,469; flour, £6094; lead, £24,661; sandalwood, £7332; specie, gold, £18,280; timber, undressed, £2699.

(v.) *Egypt*. Butter, £14,714; flour, £2965; meats—beef, £14,582, mutton, £4385, other meats, £1131; timber, undressed, £104,600.

(vi.) *France*. Concentrates—silver, £40,900, zinc, £215,068, copper, £119,647; hides and skins, £920,885; lead, £28,250; ores, £38,131; tallow, £31,059; wool, £6,962,057.

(vii.) *Germany*. Bark, tanning, £70,442; concentrates—silver, £16,295; zinc, £150,358; copper, £238,419; fruit, fresh, £28,242; grain—bran, pollard, and sharps, £3911, wheat, £71,090; hides and skins, £211,861; lead, £17,700; linseed cake and oilcake, £4750; meats, preserved in tins, £16,303; oil, cocoanut, £22,236; ores—scheelite, £7857, silver and silver lead, £135,393, wolfram, £62,714, other ores, £20,221; sausage casings, £72,044; tallow, £27,666; timber, £18,639; tin ingots, £13,806; wool, £6,053,873.

(viii.) *Italy*. Copper, £42,540; grain—wheat, £11,730; lead, £20,630; skins, £58,200; tallow, £39,225; wool, £177,617.

(ix.) *Japan*. Butter, £5383; grain, wheat, £49,379; lead, £77,493; manures, £34,052; oils, £8357; tallow, £7112; wool, £420,622.

(x.) *Java*. Butter, £61,366; coal, £47,856; fertilisers, £6804; flour, £166,177; horses, £10,524; meats, £9511; specie, gold, £5000.

(xi.) *Netherlands*. Butter, £17,091; concentrates—silver, £81,935, zinc, £93,514; silver ore, £145,882; tallow, £13,032.

(xii.) *Peru*. Coal, £22,989; wheat, £243,932.

(xiii.) *Philippine Islands*. Butter, £30,867; coal, £105,195; flour, £87,668; fodder, £14,412; horses, £14,971; meats—bacon and hams, £10,087, beef, £126,719, mutton, £7878, pork, £6867, other meats, £2648; timber, £21,132.

(xiv.) *United States of America*. Coal, £111,115; copper, £252,872; gold, in matte, £56,353; hides and skins, £309,370; pearlshell, £112,151; silver in matte, £32,582; tin, £69,118; wool, £580,000.

## § 6. Development of Export Trade to Eastern Countries.

1. *Trade with Eastern Countries*.—During recent years attention has been given by Australian exporters to the possibilities of the markets of Eastern countries. Commissioners have been sent by the States to Eastern trade centres to investigate and advise as to the requirements of these markets in regard to such commodities as Australia is prepared to supply, but a survey of the export returns of the past six years discloses a very small expansion in the value of the export of merchandise in the direction indicated.

The principal countries concerned in this trade are China, India, Ceylon, Japan, Java, Philippine Islands, Straits Settlements, and Hong Kong, and the particulars given in the following tables apply to these countries only:—

**VALUE OF PRINCIPAL ITEMS OF MERCHANDISE EXPORTED FROM THE  
COMMONWEALTH TO EASTERN COUNTRIES, 1905 to 1910.**

Article.	1905.	1906.	1907.	1908.	1909.	1910.

<b>Total merchandise ...</b>	<b>2,970,633</b>	<b>3,121,178</b>	<b>3,790,397</b>	<b>3,170,674</b>	<b>2,744,189</b>	<b>3,121,752</b>
<b>Specie &amp; gold &amp; silver bullion</b>	<b>6,466,358</b>	<b>7,339,865</b>	<b>6,059,490</b>	<b>4,014,545</b>	<b>4,394,792</b>	<b>1,873,102</b>
<b>Total exports ... ..</b>	<b>9,436,991</b>	<b>10,461,043</b>	<b>9,849,887</b>	<b>7,185,219</b>	<b>7,138,981</b>	<b>4,994,854</b>

From the above table it will be seen that the value of merchandise shipped to Eastern countries during 1910, though somewhat greater than in 1909, is still much below the trade of 1907, when it reached its greatest magnitude. With the exception of butter the trade shows very material fluctuations from year to year both in regard to value and to its distribution among the markets. The trade in flour, which is hampered by the uncertainty of supplies, shews good progress during the last three years. The exports of timber (mainly to India) are much below those of 1909, while the value of wool (almost entirely to Japan) is greater than in any previous year, except 1907.

The following tables shew the value of the principal articles exported to each of the undermentioned Eastern countries during each of the years 1904 to 1910:—

**VALUE OF COMMONWEALTH EXPORTS OF MERCHANDISE TO PRINCIPAL EASTERN  
COUNTRIES, 1904 to 1910.**

Country.	1904.	1905.	1906.	1907.	1908.	1909.	1910.

Total ...	260,343	336,550	319,292	501,002	293,584	265,011

The increase in the exports of coal since 1905 is really greater than appears from the above figures, as prior to 1906 "bunker" coal was treated as an export to the country for which the ship cleared. These exports of coal are chiefly from New South Wales. The exports of coal during 1909 and 1910 would, doubtless, have been greater but for the coal miners' strike in November, 1909. Mr. J. B. Suttor, Commercial Commissioner for New South Wales in the East, in his report for 1909, says that, owing to the uncertainty of deliveries from Australia, in consequence of labour troubles, the time is far distant when the trade will again reach the dimensions of recent years.

**COPPER.**

Total...	156,372	292,079	501,886	147,416	281,537	444,890

The wool exported to the East by the several States during 1910 was shipped as follows:—New South Wales, £369,725; Victoria, £24,137; Queensland, £51,028.

## § 7. Trade of Commonwealth since Federation.

1. **Classified Summary of Australian Trade.**—The tables hereunder present the trade of the Commonwealth during each of the years 1901 and 1906 to 1910, arranged in classes according to the nature of the goods.

It was long ago pointed out<sup>1</sup> that the statistical presentation of imports and exports would be increased in value by being properly arranged under categories (classes and orders). The following arrangement has been adopted, viz.:—

## STATISTICAL CLASSIFICATION OF IMPORTS AND EXPORTS.

Class.	Articles.
I.	FOODSTUFFS of animal origin, excluding, however, living animals.
II.	FOODSTUFFS of vegetable origin, and common salt.
III.	BEVERAGES, non-alcoholic only, and the substances used in making them.
IV.	SPIRITS AND ALCOHOLIC LIQUORS, including spirits for industrial purposes, and such pharmaceutical preparations as are dutiable as spirits.
V.	TOBACCO, and all preparations thereof.
VI.	LIVE ANIMALS.
VII.	ANIMAL SUBSTANCES, mainly unmanufactured, which are not foodstuffs.
VIII.	VEGETABLE SUBSTANCES and non-manufactured fibres.
IX.	APPAREL, TEXTILES, and various manufactured fibres.
X.	OILS, FATS, AND WAXES.
XI.	PAINTS AND VARNISHES.
XII.	STONES AND MINERALS, used industrially.
XIII.	SPECIE, gold, silver, and bronze.
XIV.	METALS, UNMANUFACTURED, and ores.
XV.	METALS, PARTLY MANUFACTURED.
XVI.	METALS, MANUFACTURED, including machinery.
XVII.	LEATHER AND MANUFACTURES of leather, together with all substitutes therefor, and also INDIARUBBER AND INDIARUBBER MANUFACTURES.
XVIII.	WOOD AND WICKER, both raw and manufactured.
XIX.	EARTHENWARE, CEMENTS, CHINA, GLASS AND STONWARE.
XX.	PAPER AND STATIONERY.
XXI.	JEWELLERY, TIMEPIECES, AND FANCY GOODS.
XXII.	OPTICAL, SURGICAL, AND SCIENTIFIC INSTRUMENTS.
XXIII.	DRUGS, CHEMICALS, AND FERTILISERS.
XXIV.	MISCELLANEOUS.

1. By R. M. Johnston, I.S.O., the Statistician of the State of Tasmania.

**COMMONWEALTH IMPORTS ARRANGED IN CLASSES, 1901 and 1906 to 1910.**

XXIV. Miscellaneous " " " "	3,140,345	3,357,918	3,978,018	4,054,282	4,233,687	5,188,246
Grand total " " " "	42,433,811	44,744,912	51,809,033	49,799,273	51,171,896	60,014,351

The exports are shewn according to the same classification, and the usual distinction is made between exports of Australian produce and re-exports. It will be seen what a small proportion of the total exports is made up by re-exports, and that the latter consist largely of specie minted from imported gold.

**COMMONWEALTH EXPORTS ARRANGED IN CLASSES, AND DISTINGUISHING

From the above table it will be seen that there has been a very substantial expansion in the principal divisions of the export trade of the Commonwealth. Compared with 1901 the exports in 1910 of animal foodstuffs, principally butter and meat, shew an increase of 112.96 per cent.; vegetable foodstuffs, principally wheat, shew an increase during the same period of 156.20 per cent.; animal substances—wool, skins, etc.—shew an increase of 97.67 per cent.; oils, fats, and waxes—mainly tallow—an increase of 151.82 per cent; and wood, etc. (timber) an increase of 51.55 per cent., while the exports of gold are the lowest recorded since 1892.

## § 8. Movement of Specie and Bullion.

1. **Specie and Bullion.**—The following tables shew the value of gold and silver bullion and specie, including bronze specie, imported and exported during the years 1901 and 1906 to 1910 :—

**COMMONWEALTH IMPORTS AND EXPORTS OF SPECIE AND BULLION,  
1901 and 1906 to 1910.**

**2. Imports of Bullion and Specie.**—Of the total imports of bullion and specie into the Commonwealth during 1910, 71.51 per cent. was in the form of gold bullion, and was received almost entirely from New Zealand for the purpose of minting.

**3. Exports of Bullion and Specie.**—Of the total exports of bullion and specie during 1910 gold represented 88.64 per cent., 46.99 per cent. being in the form of specie, and 41.65 per cent. bullion.

The countries which appear as the largest recipients of gold from Australia are the United Kingdom, India, New Zealand, Hong Kong, Ceylon, and the South African Union, in the order named, but as large amounts of gold, recorded as exported to Ceylon, are shipped *under option*, and may be despatched thence to any country needing gold, the actual amount received by each country cannot be stated.

## § 9. Effects of Prices on the Values of Exports.

**1. Significance of Price in Totals.**—In comparing the value of exports from, and also imports into, any country for a series of years the question naturally arises as to how much any variation in the aggregate value is due to fluctuations in prices, and how much to increase or decrease of actual quantities, for, in aggregates expressed only in value—the only possible method when the commodities differ—the two sources of variation are confused.

The scheme of comparison followed hereinafter is that of the British Board of Trade. This is to select all such articles of export as are recorded by units of quantity, and to

apply to the quantities exported during each year the average price per unit ruling in some year, arbitrarily taken for the purposes of comparison as the basic year. The ratio which the total actually recorded for the year under review bears to the total obtained by applying to the quantities of the year under review the average prices ruling during the basic year, may be called the "price-level" of the latter—as compared with the former—for the group of commodities considered, and may be taken (so it is assumed in the method of the British Board of Trade) as a measure of the effect of the change of price in the intervening period. Since the value of the articles used in the calculations represents as much as 80 per cent. of all exports during 1910—after excluding specie and gold bullion, which are not subject to price changes—a fairly extensive basis on which an estimate of the effect of prices over the full range of exports can be founded is afforded.<sup>1</sup>

**2. Effect of Prices.**—The following table shews the values of exports as actually recorded in each year, together with the values computed on the assumption that the prices of 1901 were maintained.<sup>2</sup> The table also shews the yearly "price-levels," based upon the results so ascertained.

This table obviously furnishes a measure of the influence of prices on the value of exports of each year since 1901. Column IV.,—values computed on 1901 prices—represents the volume of exports (less specie and gold bullion), expressed in the common denomination of value, and from the figures therein it will be seen that, had the prices of 1901 remained constant, the value of the exports of merchandise during the year 1910, for example, would have been £56,571,308 only, instead of £70,313,053—the value actually recorded. The difference between these amounts (£13,741,745) results from a rise of 24.3 per cent. (i.e., from 1000 to 1243) in the price of commodities<sup>3</sup> for the period intervening between 1901 and 1910.

#### EFFECT OF PRICES ON THE VALUE OF COMMONWEALTH EXPORTS AND EXPORT PRICE-LEVELS FOR THE PERIOD 1901 to 1910.

(BASIC YEAR, 1901.)

1910 ...	4,178,097	70,313,053	56,571,308	74,491,150	59,932,852	1243

1. These are index numbers for the total group of exports, excluding specie and gold bullion.

**3. Influence of Quantity and Price on Total Increased Value of Exports.**—The estimated actual and relative effects of the influence of—(i.) increase or decrease in the exports of specie and gold bullion, (ii.) increase or decrease of *quantities* of other exports, (iii.) variation of prices on the value of the exports, of each year compared with 1901, are shewn below :—

1. This basis is thus subject only to the limitations of the fundamental assumption and to its limitation to 80 per cent. of the total.
2. The method of the British Board of Trade is clearly valid for certain purposes, and is adopted because it widens the field of comparison. It is not, however, universally valid.
3. On the fundamental assumption.

**ANALYSIS OF INFLUENCE OF QUANTITY AND PRICE ON INCREASE OR DECREASE

	Variation, per cent. ... ..	—70.88	+60.04	+24.32	+49.90

From the above figures it will be seen that the exports of 1910, for example, of specie and gold bullion compared with 1901, shew a decrease of 70.88 per cent., other exports (merchandise) shew an increase of 60.04 per cent. in quantities, and an increase of 24.32 per cent. in the group-prices. These several influences effect an aggregate increase of £24,794,978, or 49.90 per cent., over 1901 as follows:—By increased quantities of merchandise, £21,222,912 (85.59 per cent.); by increased prices, £13,741,745 (55.42 per cent.); accompanied by a decrease of £10,169,679 (41.01 per cent.) in the exports of specie and gold.

## 10. External Trade of Australia and other Countries.

1. **Essentials of Comparisons.**—Direct comparisons of the external trade of any two countries are possible only when the general conditions prevailing therein, and the scheme of record, are sensibly identical. For example, in regard to the mere matter of record, it may be observed that in one country the value of imports may be the value at the port of shipment, while in another the cost of freight, insurance, and charges may be added thereto. Or again, the values of imports and exports in the one may be declared by merchants, whereas in the other they may be the official prices, fixed from time to time by a commission constituted for the purpose. The figures relating to the

external trade of any country are also affected in varying degree by the extent to which they include transit or re-export trade. Including bullion and specie, the transit trade of Belgium, for example, represents approximately 40 per cent. of the gross trade recorded; of Switzerland, 45 per cent.; of France, 20 per cent.; and of the United Kingdom, 15 per cent.; whereas in Australia the same element represents only 4 per cent., and in New Zealand even less.

2. "Special Trade" of Various Countries.—Special trade may be defined, agreeably to the practice of the British Board of Trade, as (a) imports entered for consumption in the country (as distinguished from imports for transshipment or re-export), and (b) exports of domestic products.

In the following table the figures relate, as nearly as is possible, to imports entered for consumption in the various countries quoted, and to exports of their domestic products. It is to be noted, however, that these figures do not unequivocally denote the same thing throughout, since, in the United Kingdom and other manufacturing countries, raw or partly manufactured materials are imported as for home consumption, and, after undergoing some process of manufacture or further modification, are re-exported as domestic production, and further, the statistical records of many countries do not distinguish between bullion and specie imported for the use of the particular country (home consumption) and the amount in transit, nor between the exports of that produced within the country and that re-exported. Nevertheless a comparison of this character reveals approximately the extent of the external trade which otherwise would not be manifest.

From the following table it may be seen that, for the particular years indicated, the value of the total trade per inhabitant was greatest in New Zealand (£39 Os. 9d. per head); the next country in order of value per inhabitant was Belgium (£35 17s. 5d. per head), followed by Switzerland (£32 10s. 2d. per head). Australia comes fourth (£29 11s. 4d. per head), and is some way in advance of the next country, viz., the Argentine Republic (£26 11s. 3d. per head):—

3. External Trade as a Measure of Prosperity.—External trade is not necessarily a measure of the prosperity of a country. Comparisons can be accepted as furnishing satisfactory indications of the relative progress or welfare of different countries, only

when taken together with all other facts that should be considered in this connection. It is, for example, obvious that the external trade of a community depends not only upon the aggregate of its requirements, but also upon the extent to which it fails to supply requirements from its own resources. A community largely self-contained, for example, may have but a small external trade per head, and yet, by virtue of its capacity to produce and manufacture its own raw material, may actually enjoy greater prosperity and a higher standard of living than another country whose external trade per head is much greater. The same observation applies equally to comparisons of the trade of the same country at different periods. A young country, the industries and export trade of which are mainly connected with raw or natural products, may, for example, through internal development, find the growth of its external trade diminishing per head of population without necessarily suffering any real diminution in the well-being of its people. And it is further obvious that circumstances may arise when enlargement of both imports and exports is actually a consequence of temporary economic difficulties. For example, in 1908, owing to shortage in the local supply, it became necessary to import wheat and flour into Australia to the value of £2,556,968, and to meet the charges for this by equivalent exports, the effect, considered *per se*, being to enlarge both. In this case the increase is not an evidence of prosperity.

4. **Australian Trade Evidence of Prosperity.**—Despite the above suggestions regarding the necessity of caution so as to avoid hasty inferences based upon aggregate trade, a consideration of its general characteristics over a number of years, and of its marked development, will suffice to shew that Australian affairs are progressing rapidly and most favourably, especially when it is taken into account that there are no counter-balancing elements of disadvantage.

## § II. Trade of the United Kingdom with Australia.

1. **General.**—The failure of the United Kingdom to maintain the position formerly held by her in the import trade of Australia has, during recent years, become a matter of more than ordinary interest in both countries. In June, 1905, Mr. R. J. Jeffray was sent here as a "Commissioner of the Advisory Committee on Commercial Intelligence of the British Board of Trade," to investigate the conditions and prospects of British trade with this country, and early in 1908 Mr. Ben H. Morgan was sent on a similar mission by the Manufacturers' Association of Great Britain, and in particular to report on:—(i.) The extent and possibilities of the market, with a view to (a) increasing export trade, (b) establishing branch factories inside the tariffs; (ii.) the extent and condition of local industries; (iii.) the nature and condition of foreign competition; (iv.) transport services, with special reference to shipping "rings" and "conferences"; (v.) the operation of local tariffs and effects of preferences. In December, 1908, Mr. C. Hamilton Wickes reached here as a permanent Commissioner of the British Board of Trade, for the purpose of advising British manufacturers of the particular requirements of the Australian markets, with a view to improving the trade between the Commonwealth and the United Kingdom.

In a previous issue of this work (No. 1, 1907) reference was made to the report of Mr. Jeffray, in which he gave the following principal causes of the success of the foreign manufacturer in the Australian market:—(i.) Greater promptitude and attention to orders; (ii.) greater readiness to adapt their goods to the requirements of customers; (iii.) more efficient representation in Australia; (iv.) better package of goods; (v.) more attractive appearance of goods; (vi.) lower freights.

Mr. Morgan reports "that the most important reason for the growth of foreign trade in Australia is that the foreign manufacturer is able to quote lower prices than the British manufacturer for goods of equal value." That the foreign manufacturer is able to do this, is, he contends, due to the following, viz.:—(i.) *Protection*. By virtue of

protection for his home market "the foreign manufacturer can depend on a definite consumption therein, and is thus able to produce in larger quantities, and therefore more cheaply." (ii). *Lower shipping rates and raw materials.* "Direct shipping services have been established with foreign countries, who carry goods generally at lower rates than British shipping companies carry British goods, and that, following the development of manufacturing industries in foreign countries and the establishment of those cheap shipping facilities, the markets for raw materials are being diverted to those countries . . . and by carrying at lower rates, give their manufacturers an advantage in price in such raw materials." After quoting many instances of goods being charged freights from Liverpool to Australia much above those charged on similar goods from New York to Hamburg *via* Liverpool to Australia, Mr. Morgan says:—"This shipping question is one of vital interest to manufacturers, and the time has come when they must, if they are to retain their position in export markets, interest themselves directly in freight matters, instead of leaving them as heretofore to merchants and shipping agents."

Mr. Wickes, addressing the British delegates attending the seventh Congress of the Chambers of Commerce of the Empire, alluding to freights, said:—"I doubt if there is any question which so illustrates the want of organisation among our commercial community," and he suggested that there should be a keener study of freight rates from other parts of the world, and also a closer co-operation of British manufacturers, for the more economical distribution of their manufactures. In subsequent reports, Mr. Wickes strenuously advocates more direct representation of British manufacturers in Australia.

**2. Proportion of Trade from United Kingdom.**—The percentages given in the following table shew the proportions of the imports into Australia from the United Kingdom, and from other countries mentioned, during each of the years 1886 to 1910:—

**PROPORTION OF COMMONWEALTH IMPORT TRADE FROM VARIOUS COUNTRIES,  
1886 to 1910.**

Year.	Percentage Proportions from—					Year.	Percentage Proportions from—				
	United K'dom.	British Poss'ns.	Ger'm'y.	United States.	Total Foreign C'tries.		United K'dom.	British Poss'ns.	Ger'm'y.	United States.	Total Foreign C'tries.
1886	73.37	11.23	2.05	6.11	15.40	1899	61.85	11.75	6.07	13.00	26.40

1892	70.74	11.37	4.32	6.04	17.89	1905	60.17	14.04	6.42	11.70	25.79
1893	72.78	12.14	3.40	4.98	15.08	1906	59.39	15.09	7.16	10.36	25.52
1894	71.92	11.98	3.78	5.39	16.12	1907	61.59	12.93	6.85	11.33	25.48
1895	71.62	11.46	4.42	5.95	16.92	1908	60.10	12.83	7.05	12.13	27.07
1896	68.28	10.74	5.31	8.59	20.98	1909	60.92	13.45	6.51	9.78	25.63
1897	66.22	10.72	5.75	10.10	23.06	1910	61.06	13.11	6.30	10.82	25.83
1898	66.62	10.88	5.86	10.16	22.50						

In order to draw accurate conclusions from the above table, however, special attention must be given to the nature of imports from the United States, since the imports from that country have in some years been increased by imports of breadstuffs, a trade in which the United Kingdom could not participate. The years affected by the imports of breadstuffs were 1886, 1889, 1896, 1897, and 1903. Increased imports of such items as kerosene oil and timber also tend to increase the proportion of imports from the United States without any prejudicial effect on the trade of the United Kingdom. Similar modification is not necessary in regard to Germany, as the nature of the imports from that country is substantially the same as from the United Kingdom.

It has already been pointed out in this chapter that, prior to the year 1905, imports into the Commonwealth were recorded only against the country whence they were directly imported. Although the values of direct imports do not afford satisfactory data, it is

necessary for any comparison extending further back than 1905 to use such figures. These figures are unsatisfactory on account of the varying proportions of indirect trade.

In order to furnish a comparison free from the influence of such trade as, from its nature, is not open to the United Kingdom, the following table, shewing the direct imports during the years 1886, 1906 and 1910 of the principal classes of goods which enter largely into the trade of the countries named, has been prepared. It may be mentioned that the imports for the year 1886 were extracted from the "Statistical Registers" of the several States for a comparison—published in a previous issue—with the year 1906, and as their compilation involved a large amount of labour they are again utilised for comparison with the year 1910.

**PRINCIPAL DIRECT IMPORTS INTO THE COMMONWEALTH FROM THE UNITED KINGDOM, GERMANY, AND THE UNITED STATES, 1886, 1906 and 1910.**

	{ 1910	61.82	6.44	11.07	100

The foregoing table shews that the share of the United Kingdom, as indicated by the records according to "Country of Shipment," in the trade of those classes of goods enumerated—representing over 80 per cent. of the total imports from that country—has declined from 89.31 per cent. of the whole in 1886 to 71.04 per cent. in 1910. The value of these imports from the United Kingdom has increased from £20,489,153 in 1886 to only £29,641,027 in 1910, or by 44.67 per cent., while the total value of similar imports has increased from £22,937,818 to £41,727,366, or by 81.92 per cent. Had the United Kingdom maintained her position as in 1886 the value of her share of this trade should have been £37,270,000 in 1910 instead of £29,641,027.

The following table gives an analysis of the imports during the years 1906-1910 according to the countries of origin of the goods, and has been extended to include the products of Belgium and France. It is probable that in 1905\* (the first year in which countries of origin were recorded), and in a lesser degree in 1906, some goods were credited to the United Kingdom which were really manufactured elsewhere. This matter is more particularly referred to in a subsequent section dealing with the effect of preference.

A comparison of the results given in the immediately preceding tables with those given on pages 632 and 633 discloses the value of the export trade of other countries which reaches the Commonwealth through the United Kingdom.

3. **Significance of Increase of Trade with other Countries.**—It has been suggested that the larger proportion of imports now received from foreign countries is due to the establishment and increase of direct shipping with the countries concerned, and that trade formerly received through English ports is now received direct. From the Australian records it is impossible to ascertain the value of the indirect trade with foreign countries through the United Kingdom prior to 1905. The returns of the British Board of Trade, however, shew the exports from the United Kingdom to Australia of foreign and colonial products distinct from the domestic exports, and from this source the table hereunder has been compiled.

It is proper here to mention that, taken in quinquennial periods, the values of the total exports from the United Kingdom to Australia—after making allowance for freight and charges—are in very close agreement with the corresponding import values recorded in this country.

**AVERAGE ANNUAL VALUE OF MERCHANDISE AND BULLION AND SPECIE  
DESPATCHED FROM THE UNITED KINGDOM TO AUSTRALIA, 1886 to 1910.**

Years.	Merchandise.			Bullion and Specie.	Total.	Percentage Proportion of Foreign and Colonial Produce.
	United Kingdom Produce.	Foreign and Colonial Produce.				
		Re-exported.	Transhipped under Bond.			
	£	£	£	£	£	
1886-1890 ...	19,510,884	2,344,309	874,249	90,135	22,819,577	14.16
1891-1895 ...	15,376,625	1,756,065	556,287	402,256	18,091,233	13.07
1896-1900 ...	18,353,571	1,919,912	445,552	117,146	20,836,181	11.42
1901-1905 ...	18,271,705	2,226,321	750,520	79,014	21,327,560	14.01
1906-1910 ...	27,652,367	3,420,256	1,168,427	353,028	32,594,078	14.08

From the above table it will be seen that the average proportion of foreign goods despatched to Australia through the United Kingdom during the last five years is almost identical with the average of the years 1886-90, and is greater than the average of the past twenty-five years, viz., 13.35 per cent. During the quinquennium 1886-90 the average value of foreign and colonial produce despatched each year from the United Kingdom to Australia was £3,218,558, equal to 14.16 per cent. of all goods so despatched, while during the period 1906-10 the corresponding amount was £4,588,683, or 14.08 per cent. It is therefore apparent that the increase of direct imports from foreign countries has not been, in the aggregate, at the expense of the indirect trade via Great Britain.

4. **Preferential Tariff.**—The Tariff Act of 1908, at present in force, provides preferential tariff rates in favour of goods produced or manufactured in the United Kingdom. On the introduction of the preferential treatment of British goods, it was required that British material or labour should represent not less than one-fourth the value of such goods. From the 1st September, 1911, it is required, in regard to goods only partially manufactured in the United Kingdom, that the final process or processes of manufacture shall have been performed in the United Kingdom, and that the expenditure in material of British production and/or British labour shall have been not less than one-fourth of the factory or works' cost of the goods in the finished state.

In the analyses given in this section the results shewn are those obtained by applying the tariff rates to the imports of the year, whether entered for consumption or re-exported. The re-exports are, however, relatively small.

The following table presents an analysis of the imports during 1910, distinguishing those affected—favourably or adversely—by the preferential provisions of the tariff, from those not affected:—

## COMMONWEALTH IMPORTS, 1910, PREFERENTIAL AND NON-PREFERENTIAL.

Particulars.	Country of Origin.			
	United Kingdom.	British Possessions.	Foreign Countries.	Total.
Imports affected by preferential tariff	£	£	£	£
Free ... ..	6,425,260	—	—	6,425,260

Bullion and specie ... ..	371,826	951,813	8,321	1,331,960
Total imports ... ..	30,420,540	7,570,490	22,023,321	60,014,351

Of the total imports of merchandise (£58,682,391) £28,916,955, or 49.28 per cent., would be affected by the preferential tariff.

The imports during 1910 of United Kingdom origin, favoured by preference, amounted to £19,049,506, representing 63.40 per cent. of the total imports of merchandise from that country, against £16,482,032 (63.86 per cent.) during 1909. Under the preferential tariff these imports would be subject to duty equivalent to an average *ad valorem* rate of 13.05 per cent., as compared with an average rate of 18.15 per cent. which the same goods would be required to pay under the general tariff rates—an advantage of £972,174 in the amount of duty. The actual amount of rebate allowed on United Kingdom goods entered for home consumption during 1910, under the varying rates of duty, was £970,164.

The following tables give the comparative results of an application of the preferential tariff rates and the general tariff rates to the imports from the United Kingdom, British Possessions and foreign countries respectively:—

## IMPORTS AFFECTED BY PREFERENTIAL TARIFF RATES.

## FROM UNITED KINGDOM.

Particulars.	Imports.	Duty which would be payable under—			
		Preferential Tariff.		General Tariff.	
(A) Free ... ..	£ 6,425,260	£ ...	Rate % ...	£ 333,406	Rate % 5.18

Total - ...	211,687	42,804	20.22	32,057	15.15

## FROM FOREIGN COUNTRIES.

Imports similar to group A above	£	£	Rate %	£	Rate %
	1,454,867	72,833	5.01	...	...
" " " B "	8,200,895	1,963,846	23.95	1,514,610	18.47
Total - ...	9,655,762	2,036,679	21.09	1,514,610	15.69

The proportion of the imports from British Possessions adversely affected by the preference to the United Kingdom is relatively small, representing only 3.20 per cent. of the imports of merchandise from those countries. The surcharge of duty on imports from British Possessions during 1910 amounted to £10,747, as against £15,882 in 1909. The larger amount of surcharge in 1909 was mainly due to imports of steel rails from Canada in that year. The sum of £10,747 would, on the basis of the trade of 1910, represent the loss of revenue involved in an extension of the preference given to the United Kingdom to the rest of the Empire, as in the preferential scheme of New Zealand. The British Possessions chiefly affected are India, Canada, Straits Settlements, and New Zealand.

The surcharge on imports, affected by preference, from foreign countries during 1910 would amount to £522,069, as against £431,143 during 1909.

**5. Effect of Preference.**—It may again be mentioned here that the system of recording imports according to "country of origin," was introduced only from the beginning of 1905, and it is evident that in the earlier period of its operation, some goods, imported through the United Kingdom, were wrongly described as of United Kingdom origin. Particular instances in which manufactures of foreign countries have obviously been credited to the United Kingdom are alluded to later. When the question of revenue became involved, and a more exact description of the goods was insisted upon, goods which might formerly have been accepted and recorded as British would be correctly classed as foreign.

A comparison of the returns of the British Board of Trade (showing the exports of produce or manufacture of the United Kingdom to Australia) with the import returns of the Commonwealth, supports the belief that the proportion of the trade credited to the United Kingdom in this country during the years 1905 and 1906 is too high. If this supposition be correct, the apparent decline in the proportion of British goods, indicated by the Commonwealth records, is somewhat misleading.

The following table shews in regard to imports of United Kingdom origin, that, while the results for the later years are in substantial agreement, those ascertained from the Commonwealth import returns for 1905 are 8.35 per cent. above those ascertained from the returns of the British Board of Trade.

**COMMONWEALTH IMPORT RETURNS AND BRITISH BOARD OF TRADE EXPORT  
RETURNS OF UNITED KINGDOM PRODUCE COMPARED, 1905 to 1910.**

Year.	Exports. Board of Trade Returns.	Add 10 per cent. Freight, etc.	Value for Comparison.	Commonwealth Import Returns.
	£1,000	£1,000	£1,000	£1,000
1905 ...	16,991	1,699	18,690	20,251
1906 ...	20,229	2,023	22,252	22,755
1907 ...	24,097	2,410	26,507	26,442
1908 ...	22,942	2,294	25,236	25,043
1909 ...	23,999	2,400	26,399	25,809
1910 ...	27,652	2,765	30,417	30,049

If it be conceded that the figures of the British Board of Trade for 1905 and 1906 with 10 per cent. added are nearer the truth than the Commonwealth records for those years, and in the subsequent years the Commonwealth figures be accepted, the results would be approximately as follows:—

**IMPORTS OF UNITED KINGDOM ORIGIN, 1905 to 1910.**

Year.	Preferential Imports.		Non-Preferential Imports.*		Total.*	
	Value.	Per cent. on Total Pref. Imports.	Value.	Per cent. on Total Non- Pref. Imports.	Value.	Per cent. on Total Imports.
	£	%	£	%	£	%
1905†	12,220,000	63.98	6,321,000	48.18	18,541,000	57.55
1906†	14,316,000	66.80	7,774,000	50.02	22,090,000	59.74
1907	17,049,000	66.08	9,224,000	51.12	26,273,000	59.93
1908	15,896,000	65.70	9,007,000	50.70	24,903,000	59.36
1909	16,482,000	66.80	9,137,000	49.94	25,619,000	59.61
1910	19,049,000	65.88	10,821,000	48.37	29,870,000	58.23

\* See note (\*) to table on following page. † The figures for these years are based on export returns of the United Kingdom.

From this table it will be observed that instead of declining since 1905, as indicated by the Commonwealth records, the position of the United Kingdom has been, on the whole, slightly improved, the improvement being more pronounced in the preferential division.

The following comparative tables shew the proportion of imports—preferential and non-preferential, respectively—recorded in the Commonwealth as of United Kingdom origin during the years 1905-1910:—

**PREFERENTIAL IMPORTS, 1905 to 1910.**

Year.	Country of Origin.							
	United Kingdom.		British Possessions.		Foreign Countries.		Total.	
	£	%	£	%	£	%	£	%
1905*	13,268,596	69.56	151,463	0.78	5,656,611	29.66	19,076,670	100
1906*	14,643,287	68.58	165,699	0.78	6,545,603	30.64	21,354,589	100
1907	17,049,196	66.08	210,545	0.82	8,539,885	33.10	25,799,626	100
1908	15,895,721	65.70	162,097	0.67	8,136,004	33.63	24,193,822	100
1909	16,482,032	66.80	319,900	1.29	7,875,832	31.91	24,677,764	100
1910	19,049,506	65.88	211,687	0.73	9,635,762	33.39	28,916,955	100

\* See modified figures in the preceding table.

From the percentages shewn above it would appear that the United Kingdom's proportion of this trade has materially declined since 1905, but, as already mentioned, the accuracy of these figures is open to doubt. It will be more satisfactory, therefore, to confine attention to years subsequent to 1906. From the above table it will be seen that, in regard to that portion of the trade which has been affected by the preferential tariff, there has been, on the whole, no decided change in the relative proportions supplied by the United Kingdom. In fact the variations in the percentages have been so small and so uneven, that of themselves they are quite without significance. For instance, the United Kingdom's share of this trade in 1910 was 65.88 per cent., as against 66.08 per cent. in 1907—a decline of 0.2 per cent.; compared with 1908 there is a rise of 0.18 per cent., while against 1909 there is a fall of 0.92 per cent.

#### COMMONWEALTH NON-PREFERENTIAL IMPORTS\*, 1905 to 1910.

Year.	Country of Origin.							
	United Kingdom.		British Possessions.		Foreign Countries.		Total.	
	£	%	£	%	£	%	£	%
1905†	6,843,465	51.98	1,621,168	12.31	4,701,383	35.71	13,166,016	100
1906†	7,952,039	50.81	2,017,296	12.89	5,680,078	36.30	15,649,413	100
1907	9,223,549	51.12	2,277,889	12.64	6,543,733	36.24	18,045,171	100
1908	9,006,821	50.70	2,299,775	12.95	6,456,040	36.35	17,762,636	100
1909	9,137,146	49.94	2,500,859	13.66	6,659,699	36.40	18,297,704	100
1910	10,820,679	48.37	3,526,523	15.76	8,025,977	35.87	22,373,179	100

\* In order to obtain a more satisfactory comparison only goods of a character similar to those affected by preferential rates have been included in this table. Articles such as fruits, grain, cocoa beans, raw coffee, tea, sugar, unmanufactured tobacco, hides, fibres, kerosene, timber, etc., which are not produced in the United Kingdom, have been excluded. The proportion of these goods recorded as of United Kingdom origin during 1910 was only 2.41 per cent.

† See modified figures in the second table on the preceding page.

In regard to the non-preferential imports, the proportion supplied by the United Kingdom has fallen from 51.12 per cent. in 1907 to 48.37 per cent. in 1910, the decline being most marked between 1909 and 1910. The proportion supplied by foreign countries rose slightly from 36.24 per cent. in 1907 to 36.40 per cent. in 1909, but declined to 35.87 per cent. in 1910. The increased imports drawn from British Possessions have, therefore, been the principal cause of the smaller proportion from the United Kingdom. The principal items contributing to the increase of £1,248,634 (54.78 per cent.) in the imports from British Possessions during 1910 as compared with 1907 and the increase of each are as follows:—Precious stones, £77,860; bags and sacks, £494,265; guano and rock phosphates, £205,219; coal, £171,936; agricultural implements and machinery, £98,960; rubber and manufactures £42,814; printing paper, £56,930.

Although the increased imports of these items have had the effect of reducing the ratio of the United Kingdom's trade to the total trade, they have not "cut" into its trade nor been in any way detrimental to it. For instance, for some years past India has had practically a monopoly of the supply of bags and sacks, and the increased demand for these goods from India has not reduced the amount of the trade of the United Kingdom, though it has reduced its proportional share of the total trade. The increased imports of guano and rock phosphates from the Pacific Islands were accompanied by increased imports of manufactured fertilisers from the United Kingdom. The exceptional imports of coal (due to the miners' strike in New South Wales) from India and South Africa were also accompanied by similar imports from the United Kingdom, though, owing to greater distance, the imports from the latter country were smaller. The increase of imports of precious stones, though largely the produce of South Africa, came mainly through the United Kingdom, and the gems doubtless were subjected to some dressing there and otherwise yielded profit to British traders. For some years past British manufacturers have not held a prominent position in the supply of agricultural implements and machinery, so that the increased trade of Canada, during the period under review,

cannot be considered a loss to them. The increased imports of rubber from British Possessions were for the most part crude rubber from the Straits Settlements, and thus did not displace British goods; while the imports of printing paper from Canada were accompanied by an increase of 80 per cent. in similar imports from the United Kingdom.

Although the above-mentioned items cannot be eliminated from the total, for the same reasons as those mentioned in the footnote to the preceding table, it is obvious that their abnormal proportions tend to obscure the general results as indicated by the percentage proportions. If the first four of the items mentioned, viz., precious stones, bags and sacks, guano and rock phosphates, and coal, be deducted from the total it will be found that instead of falling from 49.94 per cent. in 1909 to 48.37 in 1910, a decline equal to 1.57 per cent. of the total, the proportions supplied by the United Kingdom would be respectively 54.60 and 53.99, a decline equal to only 0.61 per cent. On the other hand the share of foreign countries would shew a rise from 39.36 per cent. in 1909 to 39.75 per cent. in 1910, instead of a decline from 36.40 per cent. to 35.87 per cent. The fact that the United Kingdom's share in the non-preferential trade has steadily diminished during the past four years, while in the preferential group the movement has been more fluctuating and shews a smaller decline between the terminal points of comparison (1907 and 1910), has been regarded, by some, as an indication of the beneficial effect of preference. But a really incisive investigation of the trade in various classes of goods, however, discloses such conflicting movements that it is extremely difficult to arrive at any definite conclusion as to the general effect of the preference.

The principal classes of imports affected by preference are "apparel, textiles and manufactured fibres," and "manufactures of metals, including machinery." Together these two classes represent 70 per cent. of all imports affected, the former class representing 47 per cent. and the latter 23 per cent. The following analysis gives the particulars of the imports of these groups, as recorded, for the past six years:—

### COMMONWEALTH IMPORTS OF APPAREL, TEXTILES, AND MANUFACTURED FIBRES.

1905 to 1910.

1909 ...	1,193,196	37.77	1,380,056	43.70	585,239	18.53	3,158,491	100
1910 ...	1,385,342	35.42	1,798,895	45.99	727,053	18.59	3,911,290	100

\* The amount credited to the United Kingdom in these years is considered to be in excess of the truth.

The above table shews that the gradual improvement made by the United Kingdom in her relative position during the last three years has given her a proportion of the preferential imports of apparel and textiles in 1910 slightly greater than in 1907, while in the non-preferential group her position is shewn to have materially declined. The sudden decline in the United Kingdom's share of the former group from 75.92 per cent. in 1906 to 70.20 per cent. in 1907, accompanied by a decline of only .06 per cent. during

the same period in the non-preferential group suggests, however, that the differentiation in the rates of duty instantly caused a greater accuracy in the statement of origin of goods in the preferential group, whereas in the non-preferential group, where loss of revenue was not involved, the element of misdescription is being only gradually eliminated, and, consequently, that the decline in the latter is more apparent than real. This appears to be amply supported by the item "Minor Articles for Apparel," on which no duty is payable, for while the total imports under this heading have increased from £211,324 in 1905 to £384,886 in 1910 (82 per cent.), and the imports recorded as shipped from the United Kingdom have increased from £178,657 to £311,307 (74 per cent.), the amount recorded as of United Kingdom origin has only increased from £162,767 to £171,461 (5 per cent.); or, in other words, of the total imports of this item recorded as shipped from the United Kingdom in 1905, 91 per cent. was recorded as of United Kingdom origin; in 1906, 89 per cent.; in 1907, 79 per cent.; in 1908, 70 per cent.; in 1909, 58 per cent.; and in 1910, only 54 per cent. The proper assumption is that in the earlier years the United Kingdom was credited with goods which she did not manufacture, rather than that she has, in so short a time, lost so largely to her rivals.

The detailed tables which are appended shew the relative proportions of the various classes of textile goods supplied by the United Kingdom. In regard to those textile goods affected by preference the figures shew that since 1907 (the first year with which satisfactory comparisons can be made), the share of the United Kingdom has been substantially maintained in nearly all the lines enumerated below, the aggregate result being that in the year 1910 she supplied 70.31 per cent. as against 70.20 per cent. in 1907. During the last three years the position of the United Kingdom in the total of this group has steadily improved.

The value and proportion of the more important items, included in the above groups of apparel and textiles, recorded as of United Kingdom manufacture, are given below:—

#### COMMONWEALTH IMPORTS OF PREFERENTIAL ITEMS OF APPAREL AND TEXTILES RECORDED AS OF UNITED KINGDOM ORIGIN, 1905 to 1910.

GRAPHS SHEWING VALUES OF TOTAL TRADE, EXPORTS, AND IMPORTS OF  
COMMONWEALTH, 1826 TO 1911.

(See pages 602 and 603.)

EXPLANATION OF GRAPHS.—The base of each square represents an interval of five years, and the vertical height five million pounds sterling for Imports and Exports, and ten million pounds sterling for Total Trade. Scale for Imports on right hand.

GRAPHS SHEWING THE VALUES PER HEAD OF POPULATION OF TOTAL TRADE,  
EXPORTS AND IMPORTS OF COMMONWEALTH, 1826 to 1911.

(See pages 602 and 603).

EXPLANATION OF GRAPHS.—The base of each square represents an interval of five years, and the vertical height fifty shillings per head of the population. The basic lines of Imports and Exports are *nil* per head, and that of Total Trade is five pounds sterling per head.

The items "gloves," "trimmings and ornaments," and "silk and velvet piece goods," appear to furnish further definite instances of misdescription in the earlier years under review. These goods are largely gathered from other parts of the world into the United Kingdom, whence they are shipped to Australia. The records for 1909 shew that, of the total imports into the Commonwealth of these four items taken conjointly, only 19.34 per cent. was of United Kingdom origin, while as much as 83.63 per cent. was shipped from that country. Under these circumstances it appears probable that, until the question of revenue arose (viz., in August, 1907), some portion of these goods, merely packed in the United Kingdom, was recorded as of British manufacture. This suggestion is again supported by the British trade returns, for although the items presented therein are not identical with the items in the Commonwealth returns, it may be seen that the exports from the United Kingdom to Australia of British silk manufactures bear to the imports into the Commonwealth of silk, etc., piece goods the same ratio in 1908 as in 1905, viz., 10.88 per cent., instead of declining, as shewn by the Commonwealth records, from 24.97 per cent. to 7.61 per cent., while in subsequent years the two records are consistent.

The records of the imports of metals and metal manufactures may be accepted as free from the defects previously alluded to in regard to apparel and textiles. The proportion of metal goods of foreign origin received via the United Kingdom is relatively small.

This group also affords a more satisfactory basis of comparison on which to measure the effects of preference than does the textile group, for the reason that the value of the trade is more even between the two divisions (preferential and non-preferential), and further, the character of the goods in one division does not differ from that in the other, whereas, in the textile groups, the goods embraced in the preferential division represent 77.5 per cent. of the total of the group and differ somewhat in character from those in the non-preferential division.

The above tables shew that, in the total trade affected by preference, the United Kingdom's relative position improved somewhat during the years 1907-9, but fell in 1910 to slightly below that of 1906, while in the non-preferential group the improvement during the years 1907-9 was much less marked, and the decline in 1910 as compared with 1906 more pronounced than in the preferential group. This may *prima facie* appear to be the effect of preference. A closer examination, however, shews that of the seven groups of items enumerated in the preferential division, five shewed improvement and two the reverse, and in the non-preferential division, nine items showed improvement and six the reverse. Until it is shewn, therefore, that the influences—whatever their character—which enable the British manufacturer to improve his position in the nine items unassisted by preference were not operative in the items in the preferential division, no indubitable pronouncement in favour of preference can be made.

It is of interest to note that, while in the supply of the less complex forms of metal manufacture in both the preferential and non-preferential divisions the British manufacturers have failed to hold their position as in 1906, in the supply of machinery and the higher forms of manufacture they still shew some slight improvement, notwithstanding the decline as compared with 1909. It should also be remarked that the general tendency of the movement of the relative position of the United Kingdom was in evidence before the introduction of preference, both in the downward movement of the simpler manufactures and in the upward movement of the more complex.

It might also be suggested that the failure of the United Kingdom to maintain for an indefinite period, without extreme protective measures in its favour, the same relatively high position (in an increasing volume of trade and in opposition to the highly organised competition of other nations of more recent industrial development) formerly held by it, should not, *per se*, be taken as evidence of waning industrial or commercial virility.

Taking together the two groups of the simpler forms of iron and steel manufactures, enumerated in the above tables, it appears that in 1905\*, of a total trade of £2,051,077, the United Kingdom supplied £1,758,638, or 85.74 per cent., while in 1910, when the total value of the same trade had increased to £4,484,725, she supplied £3,430,080, representing, however, only 76.48 per cent. Thus, though the United Kingdom increased her sales to the Commonwealth by £1,671,442, while similar sales by all other countries increased only by £762,206, the relative proportion of the trade supplied by the United Kingdom fell from 85.74 per cent. in 1905 to 76.48 per cent. in 1910. Moreover, in iron and steel plates, pig and scrap iron, and tinned plates—representing, in 1910, a total value of £2,596,747, the United Kingdom had 88.63 per cent.—practically a monopoly. That such a monopoly should be maintained by her, in the face of the circumstances referred to above and in view of the rapidly increasing volume of the world's trade, is scarcely to be expected.

---

\* For 1905 figures, see Year Book No. 4.

The items responsible for the lower position of the United Kingdom in the preferential group of metal manufactures in 1910 as compared with 1907 are iron, plate and sheet (corrugated or galvanised), and rails, fishplates, etc.

The decline in the United Kingdom's share of the trade in corrugated or galvanised iron (sheet and plate) was due to increased sales by the United States, which in 1910 were nearly double those of 1909, the amounts being—1909, £64,805, and 1910, £128,010. It will be observed, however, that the United Kingdom still had over 90 per cent. of the trade. The proportions of rails and fishplates, etc., supplied by the United Kingdom shew remarkable fluctuations.

The countries from which the principal supplies of rails, fishplates, etc., were drawn, and the percentage proportion supplied by each, are shewn in the following table:—

The very marked decline in 1910 in the United Kingdom's position in the supply of machinery, affected by preference, was due to the completion of large orders for locomotive engines for the New South Wales Government. The position of the United Kingdom in regard to the supply of pig-iron has been affected by the increased imports from India and China. The imports of pig-iron from India were in 1909 valued at £7644, and in 1910 at £17,137, while those from China increased from £160 in 1909 to £11,401 in 1910. The imports of British bar, rod, angle and tee-iron which have rapidly diminished, absolutely as well as relatively, during the years 1908-1909, shew a substantial increase in value in 1910 and an almost complete arrest of the proportional decline. Germany, Belgium, and the United States have been the principal competitors in this trade, and although Germany and Belgium continued to improve their positions in 1910 they did so mainly at the expense of the United States, whose sales fell from £39,789 (7.15 per cent.) to £38,015 (4.84 per cent.).

The position is very similar in regard to iron hoop. In the supply of ingots, blooms, and slabs, the United Kingdom has failed to maintain its position in competition with Germany and Belgium, though in plain sheet and plate it improved its position in company with Belgium and United States, while Germany declined. The relative decline in agricultural implements and machinery accompanied by largely increased sales (already referred to, page 640) was due to abnormal imports mainly from Canada.

The British manufacturers succeeded in capturing from Germany and the United States an increased share in the trade in wire, though in wire netting the British share declined further in favour of Germany.

The large increase in the United Kingdom's share of the imports of sewing machines requires special explanation. In the tariff as introduced on the 8th August, 1907, it was provided that sewing machines manufactured in the United Kingdom should be free, while those from other countries should pay 10 per cent. *ad valorem*. On the 16th November, 1907, the preferential provisions were deleted and all sewing machines became free. In the meantime, in order to procure the advantage of the tariff, the largest firm manufacturing these machines and operating both in the United States and in the United Kingdom, transferred its Australian business from its American to its British branch. Notwithstanding the cessation of preference, and in the face of higher freight charges from Liverpool direct than from New York via Liverpool, this firm, rather than again disturb its business arrangements, continued to supply the Australian trade, in certain classes of machines, from its British branch. This transfer, however, did not carry a corresponding amount of employment to the British operatives, for the reason that, while the Australian business was transferred to the United Kingdom, a corresponding amount of trade—unaffected by any preferential tariffs—formerly supplied by the British branch, was transferred to America.

A further list of items, preferential and non-preferential, recorded as of United Kingdom origin is appended:—

6. **General Conclusions as to Preference.**—It will be seen from the foregoing that in order to determine in the early years of preference whether it has been efficient or not, it would be absolutely necessary to have correct records on the same basis for the years preceding the preferential scheme. There is every reason to believe that the records, in many instances, are not sufficiently accurate to allow of just comparisons being made. It is also obvious that a much more detailed analysis is essential than has ordinarily been thought necessary, and it will only be in the course of a number of years that anything like a definite opinion can be reached as to the efficiency of the preferential treatment, for as Professor W. J. Ashley in his preface to Mr. John Holt Schooling's "British Trade Book" says—"No comparison of isolated years, no comparison of short consecutive periods, can be relied upon to give properly comparable data."

Primarily, it will be necessary in some way to eliminate the normal growth in business which would have taken place under any régime whatever in an advancing country; and secondly, the significance of the statistics will depend upon a very rigid adherence to the same method of description in regard to items. If the practice of recording is as variable in the future as it has been in the past, no real deductions can be drawn, and this goes to shew the importance of maintaining the same method of describing items, quite irrespective of their significance from the standpoint merely of revenue.

In order to determine the course of trade, it will be essential to maintain in its integrity for a sufficient number of years any classification of items once adopted, and no practicable means of analysis will enable one to penetrate the significance of the trade if

that course is not followed, because the determining effect of a preference which, in its nature, is likely to be not too well marked compared with the other elements of growth, can easily be vitiated by the entering of other possibilities of change into the results.

7. **Preferential Tariff of New Zealand.**—"The Preferential and Reciprocal Trade Act 1903" of New Zealand introduced preferential rates of duty in favour of the produce of the British Dominions by imposing extra duties on certain imports which were the produce or manufacture of other countries. The list of preferential items was materially extended by the New Zealand "Tariff Act 1907," from the 31st March, 1908.

The following tables present an analysis of the imports into New Zealand during 1910, distinguishing those which would be affected by an application of the preferential provisions of the "Tariff Act 1907":—

**NEW ZEALAND.—IMPORTS, 1910, PREFERENTIAL AND NON-PREFERENTIAL.**

Particulars.	From United Kingdom and British Possessions.	From Foreign Countries.	Total.
Imports affected by preferential tariff—	£	£	£
Free ... ..	1,520,145	—	1,520,145

Total ... ..	14,199,010	2,852,573	17,051,583

NOTE.—In this table the imports affected by the preferential provisions of the tariff are stated, as far as possible, according to the country of origin; those unaffected by preference according to country of shipment, the country of origin of these not being recorded. Without doubt imports from the United Kingdom and British Possessions include goods of foreign origin.

8. **Preferential Tariff of South Africa.**—Preference to goods of United Kingdom origin was first granted by the South African Customs Union Convention of 1903 from the 15th August of that year, and similar treatment was extended to Canada from the 1st July, 1904. The present preferential tariff of the South African Customs Union (Convention, 1906, and amendments, 1908) applies to produce of United Kingdom, Canada, New Zealand and the Commonwealth.

An analysis of the trade of South Africa is appended :—

## SOUTH AFRICA.—IMPORTS, 1910, PREFERENTIAL AND NON-PREFERENTIAL.

10. Rate of rebate per cent. <i>ad val.</i> ...	5.10	12.57	3.22

\* See note to table on page 651.

From the foregoing it will be observed that the preferential schemes, as at present in force in the different parts of the empire, are by no means uniform. The preferential tariff of New Zealand applies to a wider range of countries than that of any other part of the empire, inasmuch as the advantage of the lower tariff rates is extended to all parts of the British dominions, while those of Canada and South Africa apply to the United Kingdom and reciprocating British Possessions, and that of the Commonwealth to the United Kingdom only. Apart from the British preferential tariff, however, the Commonwealth, in consideration of its participation in the South African preference, gives a preference to certain products of that country. New Zealand and South Africa have also a special reciprocal trade agreement in addition to the main schemes of preference. Canada, under the Customs Tariff Act of 1907, makes provision for an intermediate tariff, which may be applied to the produce of *foreign* countries. Canada already has a reciprocal trade agreement with France.

The margin between the rates of duty applied to British and foreign goods, respectively, is also higher in New Zealand than in the Commonwealth or South Africa, though in the latter countries the preferential tariff affects a greater proportion of the trade. On the basis of the imports into New Zealand during 1910 the average margin of preference was 12.57 per cent. of the value of the goods, while in the Commonwealth the similar margin was 5.10 per cent., and in South Africa 3.22 per cent. The average rate of duty charged in New Zealand on British goods, subject to preferential rates, was 13.01 per cent., while similar goods of foreign origin were called upon to pay 25.58 per cent. In the Commonwealth the collateral rates were 13.05 per cent. and 18.15 per cent. respectively, and in South Africa 10.27 per cent. and 13.49 per cent.

11. **South African Preference.**—Under the Commonwealth Customs Tariff (South African Preference) Act, No. 17 of 1906, preferential rates of duty were prescribed for certain goods “when those goods are imported from and are the manufacture of any of the British South African Colonies or Protectorates which are included within the South African Customs Union.”

Preference to South African States was further confirmed by the Customs Tariff Amendment Act 1908 (No. 13 of 1908).

The imports during 1910 affected by the above-mentioned Act were as follows:—

**IMPORTS INTO THE COMMONWEALTH DURING 1910 OF ARTICLES ENTITLED TO PREFERENCE UNDER THE SOUTH AFRICAN PREFERENCE ACT, AND THE VALUE OF THE PREFERENCE THEREON.**

Particulars.	Rate of Rebate.	Imports.		Amount of Rebate.

## § 12. Imports of Dutiable and Free Goods.

1. **Classified Statement of Imports.**—The following table shews, classified according to their nature, and distinguishing between dutiable and free goods, the estimated value of imports entered for home consumption during 1910, together with the amount and equivalent *ad valorem* rates of duty collected thereon. As no record is made of the value, entered for home consumption, of goods subject to specific duties, the value has been estimated on the basis of the value of corresponding imports. The free goods entered for home consumption have been taken to be the total imports of free goods less the value of similar goods re-exported.

**VALUE OF GOODS (EXCLUDING BULLION AND SPECIE) ENTERED FOR CONSUMPTION IN THE COMMONWEALTH AND DUTY COLLECTED THEREON, 1910.**

Classification of Imports.		Value Entered for Consumption.			Duty Collected, less Refunds.	Equivalent <i>ad valorem</i> rate per cent. on—

XXI.	Jewellery, timepieces, and fancy goods ...	1,045,788	349,387	1,395,175	265,659	25.40	19.04
XXII.	Optical, surgical, & scientific instruments ...	97,098	300,949	398,047	18,156	18.70	4.56
XXIII.	Drugs, chemicals, and fertilisers ...	418,821	1,719,957	2,138,778	85,318	20.37	3.99
XXIV.	Miscellaneous ...	2,472,886	2,654,926	5,127,812	508,746	20.58	9.92
	Total merchandise ...	33,328,566	24,940,008	58,268,574	10,064,640	30.20	17.27
	Merchandise, excluding stimulants and narcotics	31,052,642	24,939,574	55,992,216	6,601,461	21.26	11.79

\* The increase in the average *ad val.* rate of duty paid in this class as compared with 1908 (see previous issue) is mainly due to increased imports of sugar, which paid duty equivalent to an *ad val.* rate of 53 per cent., and to increased imports of dried fruits at an *ad val.* rate of over 100 per cent.

2. **Comparative Rates of Duty.**—Omitting bullion and specie, the proportion of total merchandise entered for “home consumption” free of duty in the undermentioned countries, and also the equivalent *ad valorem* rates of duty charged are as follows:—

## PROPORTION OF FREE GOODS AND RATES OF IMPORT DUTY.

Particulars.	Australia.		Canada.	New Zealand.	U.S. of America.

\* Unmanufactured tobacco is admitted to Canada free of duty. † Exclusive of Maoris.

In 1906—the last full year of operation of the 1902 tariff—free goods represented 35.18 per cent. of the total imports of merchandise into the Commonwealth. The tariff of 1908 extended the free list so that in 1908 the proportion of free goods increased to 40.35 per cent., in 1909 to 41.10 per cent., and in 1910 to 42.80 per cent. This gradual increase in the proportion of free goods, under the same tariff, appears to indicate some restrictive effect of the protective duties, inasmuch as the imports of free goods, which may be taken as raw materials or goods which cannot yet be advantageously manufactured in Australia, have increased by 30.96 per cent. since 1908, while those of dutiable goods have only increased by 15.20 per cent. The tariff of 1908, while extending the free list, increased the average rates on the goods subject to duty. Excluding drinks and tobacco the average rate of duty on dutiable goods during 1906 was 17.04, in 1908 it was 21.30, and in 1910 it was 21.26. The combined effect of the extension of the free list with an increase of duties on the remaining goods has been that in 1910 the average rate of duty over the total imports of merchandise was 17.27 per cent. against 17.59 per cent. in 1906.

From the above table it will be seen that, excluding spirits, etc., and tobacco, the average rate of duty charged in the Commonwealth on dutiable goods imported during 1910 was about  $1\frac{1}{2}$  per cent. *ad valorem* lower than in New Zealand, and about 3 per cent. lower than in Canada, and was only a little more than one half the rate charged in the United States. On the other hand the proportion of free goods was smaller in the Commonwealth than in New Zealand or the United States, though larger than in Canada. Over the total imports the average *ad valorem* rates charged in the Commonwealth, New Zealand, and Canada do not differ materially, while in the United States the average rate is from  $3\frac{1}{2}$  to 5 per cent. higher. The influence of the various rates charged on stimulants and tobacco in smoothing out the differences in average *ad valorem* rates on the total imports should not be lost sight of. During 1910, 81 per cent. of the value of tobacco imported into Canada was unmanufactured tobacco admitted free of duty, and subject only to excise on manufacture.

## SECTION XVI.

## SHIPPING.

## § 1. General.

1. **Legislation.**—The shipping of the Commonwealth has hitherto been conducted partly under Imperial Acts, consolidated in the Merchants Shipping Act of 1894, and amendments of these, and partly under Acts of the several States of the Commonwealth. Since the scope of the local enactments differs materially in the different States, to define the proper limits of the jurisdiction of the Imperial and State laws cannot here be attempted.

By section 98, Part IV., of the Commonwealth Constitution Act, the power to make laws with respect to trade and commerce was extended to navigation and shipping, and in pursuance of this power a Bill for an Act relating to Navigation and Shipping was introduced into the Senate on the 17th March, 1904, but was not proceeded with.

On the 29th June, 1904, a Royal Commission was appointed to inquire into the Bill and report upon its provisions and any matter incidental thereto. In March and April, 1907, a conference between representatives of the United Kingdom, the Commonwealth of Australia, and New Zealand was held in London on the subject of merchant shipping legislation. The result of the deliberations was that an amended Bill was introduced into the Senate on the 12th September, 1907. Owing to pressure of Parliamentary business, however, the consideration of the Bill was held over. It was reintroduced into the Senate on the 17th September, 1908, but has not yet been passed into law. The Bill was drawn largely on the Merchants Shipping Acts and the Acts of New Zealand and New South Wales, and, as introduced, contains 417 sections divided into eleven parts, as follows:—I. Introductory. II. Masters and Seamen. III. Foreign Seamen. IV. Ships and Shipping. V. Passengers. VI. The Coasting Trade. VII. Wrecks and Salvage. VIII. Pilots and Pilotage. IX. Courts of Marine Inquiry. X. Legal Proceedings. XI. Miscellaneous.

2. **Record of Shipping before Federation.**—Prior to Federation it was customary for each State to regard the matter of shipping purely from the State standpoint, and vessels arriving from or departing to countries beyond Australia, via other Australian States, were recorded as if direct from or to the oversea country. Thus a mail steamer from the United Kingdom, which made Fremantle her first port of call in Australia, would be recorded not only there, but also again in Adelaide, Melbourne and Sydney, as an arrival from the United Kingdom. Consequently any aggregation, especially of the recent shipping records of the different States, would repeatedly include a large proportion of the shipping visiting Australia. In earlier years, when many vessels sailed from the

various State ports direct for their destination, the error of repeated inclusion was less serious, but as the commerce of Australia developed, more and more ports of call were included in the voyage of each vessel, and this made the mere aggregation of State records correspondingly misleading. It has, as a matter of fact, led to some erroneous publications of statistical results and deductions.

**3. Shipping since Federation.**—With the inauguration of the Commonwealth, the statistics of its shipping, especially of its oversea shipping, became of greater intrinsic importance. As an index of the position of Australia among the trading countries of the world, such statistics had a constitutional importance commensurate with Commonwealth interests, and correspondingly greater than those of individual States, and the nationality of the shipping trading with Australia became also a matter of greater moment.

**4. Difficulties of Comparisons of Total Shipping.**—From what was said in paragraph 2 above, it is obviously impossible now to obtain results for Australia not subject to the defect of repeated inclusions of the same vessels. Unfortunately the statistical records of the first three years of Federal history are subject to the same defect, and do not admit of direct comparison with those now kept. A careful estimate of the extent and effect of repeated inclusion has been made and applied to the records of the earlier years, so as to extend the comparative results to those years. The error of such estimation will be negligible for comparative purposes.

**5. Present System of Record.**—The present system of record treats Australia as a unit, and counts, therefore, only one entry and one clearance for each visit to the Commonwealth. Repeated voyages of any vessel are of course included.

On arrival of every vessel at a port in the Commonwealth, whether from an oversea country or from another port within the Commonwealth, the master is required to deliver to the Customs officer a form giving all particulars, necessary for statistical purposes, in regard to the ship, passengers and crew. Similarly on departure from a port a form containing corresponding information is lodged. These forms, which provide a complete record of the movements of every vessel in Commonwealth waters, are at the end of each month forwarded by the Customs officer at each port to the Commonwealth Bureau of Statistics, and furnish the material for the compilation of the Shipping and Migration Returns.

Under the system previously in force it was found that the estimates of population, in so far as they were based on seaward movement, were very unsatisfactory, and it is believed that the method referred to above will give decidedly better results.

## § 2. Oversea Shipping.

**1. Total Oversea Shipping.**—In order to extend, as indicated, the comparison of the oversea shipping to the earliest years for which any records are available, an estimate of its probable amount has been made. This estimate is based on a comparison of the results obtained by merely aggregating State statistics with the defect of multiple records, and the results obtained under the present system, which avoids the multiple record. From the nature of the case it is obvious that the ratio of repeated inclusion to the total traffic has been continually advancing, and this fact has been duly taken into account in deducing the results in the following table:—

**TOTAL OVERSEA SHIPPING ENTERED AND CLEARED THE COMMONWEALTH, 1822  
to 1910 (MULTIPLE RECORD EXCLUDED BY ESTIMATION PRIOR TO 1904).**

Year.	Vessels.	Tons.	Year.	Vessels.	Tons.	Year.	Vessels.	Tons.

1840	915	277,335	1870	2,877	1,381,878	1900	3,719	5,894,173
1841	900	278,738	1871	2,748	1,312,642	1901	4,028	6,541,991
1842	862	232,827	1872	2,788	1,380,466	1902	3,608	6,234,460
1843	736	183,427	1873	3,159	1,609,067	1903	3,441	6,027,843
1844	629	155,654	1874	3,153	1,728,269	1904	3,700	6,682,011
1845	735	164,221	1875	3,437	1,914,462	1905	4,088	7,444,417
1846	888	211,193	1876	3,295	1,863,343	1906	4,155	7,966,658
1847	1,033	245,358	1877	3,157	1,930,434	1907	4,394	8,822,866
1848	1,182	305,840	1878	3,372	2,127,518	1908	4,051	8,581,151
1849	1,137	355,886	1879	3,344	2,151,338	1909	3,910	8,516,751
1850	1,300	425,206	1880	3,078	2,177,877	1910	4,048	9,333,146
1851	1,576	515,061	1881	3,284	2,549,364			

It will be borne in mind that while the above figures in themselves have no absolute significance, nevertheless, on the assumption that the element of duplication has been in fairly constant ratio, they furnish the best available indication of the growth of Australian oversea shipping.

**2. Comparison with other Countries.**—The place of Australia among various countries in regard to oversea shipping is indicated in the following table, both absolutely and in respect of tonnage per head of population:—

**OVERSEA SHIPPING OF VARIOUS COUNTRIES.**

Country.	Year.	Tonnage Entered and Cleared.		Country.	Year.	Tonnage Entered and Cleared.	
		Total.	Per Inhabitant.			Total.	Per Inhabitant.

In respect of these tables it may be pointed out that the statistics for any country do not fully disclose the extent of its shipping communication with particular countries. The reason of this is that vessels are recorded as arriving from, or departing to, a particular country, whereas, as a matter of fact, many regular lines of steamers call and transact business at the ports of several countries in the course of a single voyage. The lines of steamers trading between Australia and Japan, for example, often call at New Guinea, the Philippine Islands, China, etc., but, being intermediate ports, these countries are not referred to in the statistical records. Similarly in the case of the large mail steamers passing through the Suez Canal. A steamer may call at Colombo, Aden, Port Said, Genoa, Marseilles, London, Antwerp, and Bremerhaven, yet obviously can only be credited as cleared for one of these ports to the consequent exclusion of all the other ports from the records. Further reference is made in the following paragraphs to the more important of those countries with which the shipping of the Commonwealth is not fully represented in the foregoing tables.

**4. General Trend of Shipping.—(i.) General.** A grouping of countries into larger geographical divisions, as in the following tables, shews more readily the general

direction of Australian shipping, and to some extent, avoids the limitations of the records in relation to particular countries, by covering more closely the main trade routes.

It has already been shewn in the opening section of this chapter, that direct comparisons of the annual oversea shipping of the Commonwealth are possible only since the beginning of 1904.

A comparison of the total tonnage of shipping which entered and cleared the Commonwealth during 1910 with similar records for 1906 shews an increase of 1,366,488 tons, or 17.12 per cent., vessels with cargo having increased by 1,517,723 tons, or 22.92 per cent., while vessels in ballast decreased by 151,235 tons, or 19.25 per cent. By far the greater part of the increased tonnage in 1910 was employed between the Commonwealth and the United Kingdom and European ports.

(ii.) *Shipping with the United Kingdom and European Countries.* The shipping between the Commonwealth and the United Kingdom and European countries during the past five years shews that steady increase which indicates the consistent development of a well-established trade. The shipping in this direction during 1910 amounted to 3,910,465 tons, or 41.9 per cent. of the total oversea shipping of the Commonwealth, and was recorded against the several countries as follows:—United Kingdom, 2,845,076 tons (72.8 per cent.); Germany, 602,962 tons (15.4 per cent.); France, 212,534 tons (5.4 per cent.); Belgium, 130,394 tons (3.3 per cent.); other European countries, 119,499 tons (3.1 per cent.)

The foregoing figures appear to shew that while the tonnage between the Commonwealth and the United Kingdom increased by 822,826 tons, equal to an increase of 40.69 per cent., the tonnage between the Commonwealth and European continental countries has increased by 276,725 tons, or by 35.08 per cent., or in other words that 74.83 per cent. of the increase was credited to the United Kingdom and 25.17 to the latter countries. As already explained, however, no real significance can be attached to these figures, for in many instances it must be regarded as almost accidental whether tonnage be recorded against the United Kingdom or against Belgium, Germany, or France.

The failure of the statistical records to present, in all cases, the full measure of the shipping communication between particular countries is illustrated by the case of Italy. Although the mail steamers which pass through the Suez Canal call at Naples and Genoa, and during 1910 embarked or landed at those ports 3613 passengers for or from Australia, and also carried a direct trade valued at £652,512 between Italy and the Commonwealth, the records for the year shew only five vessels as passing between the two countries.

(iii.) *Shipping with New Zealand.* The tonnage of shipping between the Commonwealth and New Zealand shews a very satisfactory expansion from 1,405,276 tons in 1906 to 1,741,898 tons in 1910, an increase of 336,622 tons, or 23.95 per cent. during the four years. The shipping with New Zealand represented 18.7 per cent. of the total shipping of the Commonwealth during 1910.

(iv.) *Shipping with Asiatic Countries and Islands in the Pacific.* The total tonnage between the Commonwealth and Eastern countries during 1910 amounted to 1,795,286 tons, or 19.2 per cent. of the whole, representing a decrease of 89,702 tons, or 4.76 per cent. as compared with 1906, though it exceeded that of 1909 by 68,543 tons. The tonnage between China, Singapore, and Hong Kong collectively fell from 562,991 tons in 1906 to 301,426 tons in 1910, while Japan increased by 20,594 tons (8.76 per cent.). The tonnage recorded as to and from India and Ceylon rose from 237,190 tons in 1906 to 309,384 tons in 1910. This tonnage, of course, does not include steamers to or from the United Kingdom or other countries calling at Colombo *en route*. The tonnage recorded as to and from the Philippines shews a very rapid decline during the years 1909 and 1910, the tonnage in the latter year being less than half that in 1906. Owing to the limitation of the records, already alluded to, the figures given in the tables do not represent the full volume of the shipping between the Commonwealth and the Philippines. In addition to the shipping recorded to the Philippine Islands the

regular steam lines between the Commonwealth and Japan make Manila a regular port of call, and it is by these vessels that the general trade—apart from the coal trade—is chiefly carried. The whole of the shipping which was recorded as entering the Commonwealth during 1910 from the Philippines (28,550 tons) was in ballast, and of the 106,087 tons which was recorded as cleared for that country, 87,458 tons cleared from Newcastle with coal. The tonnage between the Commonwealth and Papua has increased rapidly, though consistently, during the past five years, in 1906 the tonnage recorded between these two countries being 26,446 tons, and 98,433 tons in 1910. There has also been a very marked expansion of the shipping to and from the Dutch East Indies during the past two years, the tonnage having increased from 97,866 in 1906 to 177,505 in 1910. The shipping with the South Sea Islands, too, was much larger in 1910 than in former years.

(v.) *Shipping with Africa.* The shipping tonnage recorded between the Commonwealth and African countries during 1910 amounted to 490,040 tons, a decrease as compared with 1906 of 37,534 tons. Much of the trade between South Africa and Australia, however, is carried by steamers calling at ports in the former country on their voyages between the Commonwealth and the United Kingdom, and which are not shewn in relation to African ports in the shipping returns. Shipping tonnage with African countries—mainly confined to Cape Colony, Natal, and Portuguese East Africa—rose from 565,759 tons in 1904, to 649,802 tons in 1905, but fell to 527,574 tons in 1906, to 350,581 tons in 1907, and to 225,798 in 1908, so that the figures for 1910 indicate a very material increase over the more recent years. An inspection of the following tables, however, shews that these figures are of no significance as an index of the transport requirements between the two countries, inasmuch as of the total tonnage passing between the two countries 353,998 tons were from Africa to Australia, with only 136,042 the other way. Moreover, of the 353,998 tons which entered the Commonwealth from Africa, 323,960 tons, or 91.5 per cent., were represented by vessels in ballast seeking freights from Australian ports.

(vi.) *Shipping with North and Central America.* The shipping of the Commonwealth with these countries during 1910 amounted to 720,359 tons (7.7 per cent. of the whole) representing an increase of 92,739 tons, or 14.8 per cent., as compared with 1906, though compared with 1907 there is a decline of 298,989 tons. The large tonnage between the Commonwealth and North America during 1907 was due to unusually heavy exports of coal to the United States. The 720,359 tons of shipping with North and Central America during 1910 were recorded against the several countries as follows:—United States, 522,740 tons (72.6 per cent.); Canada, 159,237 tons (22.1 per cent.); Mexico, 37,512 tons (5.2 per cent.); and Nicaragua, 870 tons (0.1 per cent.).

(vii.) *Shipping with South America.* The shipping between the Commonwealth and South American countries during 1910—675,098 tons—was 11 per cent. greater than in 1909, though less than in any other year since 1905. The shipping in this direction during 1910 was mainly engaged in the carriage of coal and wheat to Chile and Peru, and its decline as compared with the earlier years under review is due to the smaller export of coal. Of the total shipping tonnage between the Commonwealth and South America during 1910, 504,995 tons, or 74.8 per cent., is credited to the coal port of Newcastle, 143,683 tons having entered and 361,312 tons having cleared at that port, while of the same total 40,938 tons entered and 7554 tons cleared at the port of Sydney. Of the South American countries, Chile is responsible for 453,982 tons (67.2 per cent.); Peru, 79,294 tons (11.8 per cent.); Argentine Republic, 64,796 tons (9.6 per cent.); Uruguay, 48,281 tons (7.2 per cent.); Brazil, 24,520 tons (3.6 per cent.), and Ecuador, 4225 tons (0.6 per cent.).

An important fact, from its bearing on freight rates and its consequent possible effect on the coal trade of New South Wales with South America, is the absence of return freights from that country. Of the 261,206 tons of shipping which entered the Commonwealth from South America during 1910 only eight vessels, totalling 14,698 tons, carried cargo.

The tonnage of Australian-owned vessels engaged in the oversea trade represents 7.96 per cent. of the total, and the tonnage of New Zealand vessels 10.38 per cent. Both are engaged mainly in the trade with New Zealand and eastern countries. An examination of the figures in the above table shews that, of the increase in tonnage in 1910 as compared with 1906, viz., 1,366,488 tons, 1,186,902 tons (*i.e.*, 86.86 per cent.) were British and 179,586 tons (*i.e.*, 13.14 per cent.) were foreign, or, in other words, the British tonnage in 1910 shewed an increase of 20.4 per cent. over 1906, while that of foreign countries only increased by 8.3 per cent. The proportion of British tonnage in the shipping of the Commonwealth was higher in 1910 than in any year since 1904.

If, however, the tonnage of ships carrying cargo only is considered as indicating more closely the proportion of the actual carrying trade done than does the total tonnage, the position of British shipping shews even a greater improvement, inasmuch as the British tonnage carrying cargo to and from the Commonwealth during 1910 shews an increase over 1906 equal to 27.72 per cent., while the foreign tonnage with cargo increased by 8.92 per cent. Thus the British proportion of tonnage carrying cargo has increased from 74.42 per cent. to 77.34 per cent. The relative proportion of British and foreign tonnage which entered and cleared the Commonwealth with cargo during the past five years was as follows:—

**PROPORTION OF TONNAGE OF BRITISH AND FOREIGN NATIONALITY ENTERED  
AND CLEARED THE COMMONWEALTH WITH CARGO, 1906 to 1910.**

Nationality.				1906.	1907.	1908.	1909.	1910.
British	...	...	...	74.42	75.19	76.50	75.65	77.34
Foreign	...	...	...	25.58	24.81	23.50	24.35	22.66
Total	....	...	...	100.00	100.00	100.00	100.00	100.00

That the proportion of foreign tonnage should increase is to be expected as the natural corollary of the extension of the trade of the Commonwealth with foreign countries. This is particularly patent in regard to Germany and France. Both of these countries desire to increase their mercantile marine, and it is therefore natural that the increased direct trade between themselves and Australia should be carried by their own vessels rather than by the vessels of a third country. Recently, too, the Royal Dutch Packet Company has established a line of steamers between Java and other islands of the East Indies and Australia. The Hungarian Levant Steamship Company has also inaugurated a cargo service between the Commonwealth and Adriatic ports.

The more important competitors for the Australian shipping trade among the foreign nations are Germany, France, and Norway, and it is therefore of interest to consider the general direction of their activity. It is well to bear in mind, when comparing the figures in the table on the next page, that the French shipping from and to France and to New Caledonia is practically identical with the steamers of the Messageries Maritimes, which maintain a regular service between France and New Caledonia *via* Australian ports, and that the German shipping from and to Germany consists mainly of the vessels of two lines, the Norddeutscher Lloyd, and the German-Australian Steamship Company, which have had regular and frequent services to Australian ports for the past twenty-seven years.

A further analysis is appended, distinguishing between steam and sailing vessels of British and foreign nationality, which entered and cleared the Commonwealth during the years 1906-10. Steam tonnage during 1910 was 1,939,024 tons greater than in 1906, 1,688,874 tons (*i.e.*, 87.10 per cent.) of the increase being British, and 250,150 tons (*i.e.*, 12.90 per cent.) being foreign. The tonnage of sailing vessels shows a decrease during the same period of 572,536 tons, British tonnage having fallen by 501,972 tons, and that of foreign nations by 70,564 tons.

As might be expected, the proportion of sailing vessels engaged in carrying the trade of the Commonwealth is shewn to be rapidly decreasing, having fallen during the period under review from 26 per cent. to 16 per cent. of the total tonnage, and it is in this branch of shipping that the foreign element is stronger than the British.

## STEAM AND SAILING VESSELS ENTERED AND CLEARED, 1906 to 1910.

**6. Tonnage in Ballast.**—The following table shows the tonnage of oversea vessels which entered and cleared the Commonwealth in ballast during the years 1906-10. Of the total British tonnage which entered during 1910, 17.52 per cent. was in ballast, and of foreign tonnage 34.38 per cent. was in similar condition. Of the total tonnage which entered the Commonwealth during 1910, 21.77 per cent. was in ballast, while of the tonnage cleared 4.01 per cent. only was without cargo.

## TONNAGE ENTERED AND CLEARED IN BALLAST, 1906 to 1910.

Year.	Entered.			Cleared.		
	British.	Foreign.	Total.	British.	Foreign.	Total.

## PROPORTION OF TOTAL BRITISH AND FOREIGN TONNAGE WHICH ENTERED AND CLEARED IN BALLAST, 1906 to 1910.

Year.	Entered.			Cleared.		
	British.	Foreign.	Total.	British.	Foreign.	Total.
	per cent.	per cent.	per cent.	per cent.	per cent.	per cent.
1906 ...	27.28	39.88	30.92	2.30	3.70	2.66
1907 ...	32.23	48.60	36.75	3.36	7.56	4.51
1908 ...	25.05	40.51	29.09	2.74	12.07	5.22
1909 ...	21.06	39.80	26.18	3.16	9.39	4.86
1910 ...	17.52	34.38	21.77	2.55	8.41	4.01

Vessels in search of freights arrive in Australia from all parts of the world. The tonnage which entered each State of the Commonwealth, in ballast, during 1910, was as follows:—

**TONNAGE OF OVERSEA VESSELS IN BALLAST WHICH ENTERED EACH STATE OF  
THE COMMONWEALTH DURING THE YEAR 1910.**

State ... ..	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
Tonnage ... ..	495,532	34,111	13,104	252,027	138,238	70,254	1,003,266
Percentage of total ...	49.39	3.40	1.31	25.12	13.78	7.00	100

The large exports of coal from New South Wales afford special inducements to vessels in search of freights. During 1910, 495,532 tons, or 49.4 per cent. of all ballast tonnage arriving in Australia, entered in New South Wales, 368,496 tons having entered at the coal port of Newcastle. The proportion of ballast tonnage entering Newcastle during 1910 was much lower than usual in consequence of the smaller exports of coal. The demand for carriage of the large shipments of wheat and wool, however, was sufficient to prevent any material diminution of the large aggregate ballast tonnage to the Commonwealth. The relatively large tonnage in ballast recorded in Tasmania is mainly due to French vessels—sailing under the bounty system—calling at Hobart for orders.

### § 3. Shipping of Ports.

1. **Shipping of Ports.**—Appended is an abstract of the total shipping tonnage—over-sea and coastwise—which entered the more important ports of Australia during the year 1910, together with similar information in regard to some of the ports of New Zealand and of the United Kingdom for the same year:—

**SHIPPING OF PORTS, AUSTRALIA AND VARIOUS COUNTRIES, 1910.**

Port.	Tonnage Entered.	Port.	Tonnage Entered.
<b>AUSTRALIA—</b>		<b>ENGLAND AND WALES—</b>	
Sydney ... ..	7,137,308	London ... ..	19,737,350
Melbourne ... ..	5,314,455	Liverpool (inc. Birkenhead)	14,313,514
Newcastle ... ..	3,270,700	Cardiff ... ..	11,054,916
Port Adelaide ... ..	2,866,953*	Tyne ports ... ..	10,823,992
Brisbane ... ..	2,368,047	Southampton ... ..	6,553,206
Fremantle ... ..	1,980,138	Hull ... ..	5,514,657
Townsville ... ..	1,186,907	Plymouth ... ..	4,297,496
Albany ... ..	1,055,746	Newport ... ..	3,129,714
Hobart ... ..	809,846	Middlesbrough ... ..	3,077,604
Rockhampton ... ..	790,419	Sunderland ... ..	2,793,671
Mackay ... ..	742,324	Swansea ... ..	2,774,547
Cairns ... ..	607,402	Manchester ... ..	2,405,667
Port Pirie ... ..	552,619	Blyth ... ..	2,193,885
Bowen ... ..	516,456	Dover ... ..	2,011,405
Geelong ... ..	463,294	Grimsby ... ..	1,722,564
Bunbury ... ..	347,625	<b>SCOTLAND—</b>	
Thursday Island ... ..	343,368	Glasgow ... ..	5,633,392
<b>NEW ZEALAND—</b>		Leith ... ..	2,414,314
Wellington ... ..	2,947,156	<b>IRELAND—</b>	
Lyttelton ... ..	2,155,359	Cork (inc. Queenstown) ...	4,101,330
Auckland ... ..	1,583,716	Belfast ... ..	3,140,326
Dunedin ... ..	1,031,644	Dublin ... ..	2,672,122

\* Exclusive of coastal shipping—particulars of which are not available.

From the figures above it may be seen that the shipping business of the port of Sydney is only exceeded by that of four ports in the United Kingdom, viz., London, Liverpool, the Tyne, and Cardiff.

### § 4. Vessels Built and Registered.

1. **Vessels Registered.**—The number and net tonnage of steam and sailing vessels on the registers at the various ports of the Commonwealth at the end of each of the years 1901 to 1910 are as follows:—

#### VESSELS ON THE REGISTER, 1901 to 1910.

Year.	Steam.		Sailing.		Total.	
	Number.	Net Tonnage.	Number.	Net Tonnage.	Number.	Net Tonnage.
1901 ...	943	203,541	1,433	141,722	2,376	345,263
1902 ...	965	208,043	1,488	141,125	2,448	349,168
1903 ...	1,004	219,985	1,578	136,888	2,582	356,873
1904* ...	1,011	223,558	1,700	129,801	2,711	353,359
1905 ...	1,052	222,551	1,690	129,291	2,742	351,842
1906 ...	1,082	238,742	1,644	128,288	2,726	367,030
1907 ...	1,108	249,600	1,555	126,402	2,663	376,002
1908 ...	1,148	255,249	1,571	129,392	2,719	384,641
1909 ...	1,196	274,551	1,535	129,540	2,731	404,091
1910 ...	1,224	284,104	1,548	128,319	2,772	412,423

\* Prior to 1904 vessels registered in the Northern Territory were not included

2. **Vessels Built.**—The following tables shew the number and tonnage of vessels built in the Commonwealth during each of the years 1901-1910, so far as such information can be ascertained from the Shipping Registers of the various States. The Merchant Shipping Act, under which vessels are registered in Australia, however, does not make it compulsory to register vessels under 15 tons burthen if engaged in river or coastal trade. Larger vessels are also exempt from registration if not engaged in trade. Yachts and small trading vessels may be, and frequently are, registered at the request of the owners. As the Shipping Registers have been, and are, the source of information, it follows that the figures given below will be subject to additions in the future, inasmuch as vessels already built may be added to the register at some future date.

## § 5. Interstate Shipping.

1. **Total Vessels and Tonnage.**—In the following table are shown the number and tonnage of vessels recorded as having entered each State of the Commonwealth from any other State therein, and similarly the number and tonnage clearing from each State to other Commonwealth States. The table gives results for the quinquennial intervals since 1886. The shipping on the Murray River, between the States of New South Wales, Victoria and South Australia, is not included.

The figures presented in the above table include oversea vessels—largely mail boats—passing from one State to another. This renders the results somewhat unsatisfactory.

In the earlier part of this section attention was drawn to the custom in vogue prior to Federation of recording vessels from or to "oversea countries via other Commonwealth States" as *direct* from or to the oversea country. At each port in Australia these vessels were, on the inward voyage (to Australia), entered as from the oversea country, and cleared to the next Australian port as "interstate"; on the return journey—the outward voyage—they were entered as "interstate," and cleared as for the oversea country. In order to preserve the continuity of the records of the shipping communication of the several States with oversea countries this method has been followed in continuation of the pre-existing practice, excepting that vessels arriving or departing via other Commonwealth States are now so recorded instead of as "direct."

From the above it will be seen that while certain movements of the vessels referred to are included in the interstate shipping, other movements of the same vessels, between the same ports, are not so included.

To ascertain the aggregate movement of shipping between the States during the year 1910, including the total interstate movements of oversea vessels, the figures in the following table must be added to those of the preceding one :—

**SHIPPING ENTERED AND CLEARED FROM AND TO OVERSEA COUNTRIES VIA  
OTHER COMMONWEALTH STATES, 1910.**

State.	Entered.		Cleared.		Total.	
	Vessels.	Tonnage.	Vessels.	Tonnage.	Vessels.	Tonnage.
New South Wales ...	477	1,655,485	460	1,626,366	937	3,281,851
Victoria ...	419	1,462,299	386	1,377,232	805	2,839,531
Queensland ...	179	655,674	190	708,632	369	1,364,306
South Australia ...	206	924,177	187	703,169	393	1,527,346
Western Australia ...	10	28,404	20	51,979	30	80,383
Tasmania ...	3	6,583	24	123,166	27	129,749
Total ...	(1910) 1,294	4,632,622	1,267	4,590,544	2,561	9,223,166
	(1906) 1,045	3,849,036	1,107	3,442,747	2,152	6,791,783

**2. Total Interstate Movement of Shipping.**—From the foregoing it has been seen that the interstate movement of shipping includes two very different elements, viz.:—(i.) Oversea ships moving from State to State, and (ii.) the movement of ships engage solely in the interstate carrying trade. These two elements are approximately follows:—

**TOTAL INTERSTATE MOVEMENT OF SHIPPING, 1906 to 1910.**

	1906.	1907.	1908.	1909.	1910.
	Tons.	Tons.	Tons.	Tons.	Tons.
Oversea vessels moving interstate ...	5,452,353	5,582,571	5,961,617	5,850,749	6,384,108
Vessels solely interstate	6,791,783	7,514,089	8,258,018	8,204,858	9,223,166
Total ...	12,244,136	13,096,660	14,219,635	14,055,607	15,607,274

The necessary data are not available to enable a similar analysis to be made prior to 1906.

The following table shews the number and tonnage of vessels which entered and cleared each State during 1910; including the coastal movements of oversea vessels :—

### INTERSTATE SHIPPING OF EACH STATE, 1910.

State.	Entered.		Cleared.		Total.	
	Vessels.	Tonnage.	Vessels.	Tonnage.	Vessels.	Tonnage.
New South Wales	2,222	4,907,785	2,128	4,649,967	4,350	9,557,752
Victoria	2,050	4,344,381	2,142	4,531,648	4,192	8,876,029
Queensland	714	1,514,418	712	1,534,224	1,426	3,048,642
South Australia	970	2,719,204	1,023	2,903,821	1,993	5,623,025
Western Australia	394	1,297,993	381	1,250,487	775	2,548,480
Tasmania	856	823,493	849	824,585	1,705	1,648,078
Total...	1910	7,206	15,607,274	7,235	15,694,732	...
	1906	6,586	12,244,136	6,539	12,277,699	...

3. **Vessels Engaged Solely in Interstate Trade.**—The elimination of the element of oversea vessels, included in the interstate shipping returns, cannot be accurately effected; nevertheless a close approximation is furnished if it be assumed that vessels *entered* in the several States as from “oversea countries via other Commonwealth States” have really been *cleared* from other States as “interstate,” and further, that the vessels *cleared* to “oversea countries via other Commonwealth States” have likewise been *entered* elsewhere as “interstate.” Applying this suggestion, and so eliminating all interstate movements of oversea vessels, the number and tonnage of vessels engaged solely in the interstate trade during the years 1906 to 1910 will be found to be as follows:—

### NUMBER AND TONNAGE OF VESSELS ENGAGED SOLELY IN INTERSTATE TRADE, 1906-1910.

Year	Entered.		Cleared.	
	No.	Tons.	No.	Tons.
1906	4,434	5,452,353	4,387	5,485,916
1907	4,614	5,582,571	4,566	5,580,963
1908	4,706	5,961,617	4,654	5,916,339
1909	4,375	5,850,749	4,353	5,854,313
1910	4,645	6,384,108	4,674	6,471,566

This treatment cannot be extended to the individual States, as the records do not disclose the particular relationship of the States concerned.

4. **Interstate and Coastal Services.**—The foundation of the coastal steamship services in Australia dates back to the year 1851, when a regular trade was established between Melbourne and Geelong by the small screw steamer “Express.” Early in the fifties a company was formed in Tasmania with a capital of £40,000 for the purpose of purchasing steamboats, and employing them in the carriage of passengers and goods between Hobart and Melbourne. This service was commenced in 1852, and was thus the first regular interstate service in Australia. About this time the great influx of population and the increase

in commerce, caused chiefly by the gold discoveries, emphasised the desirability of establishing more regular and quicker means of communication between the principal ports of Australia, and in 1862 the regular interstate service between New South Wales and Victoria was inaugurated by the s.s. *You Yangs*, which was put into commission in regular service between Melbourne, Sydney, and Newcastle. In 1875 a company was formed in Adelaide for the purpose of supplying suitable steamers for the requirements of the trade between Adelaide and Melbourne. The first two steamers of the company were named the *South Australian* and the *Victorian*, and were small vessels of only 400 tons burthen. From the start success attended these enterprises, and the services thus initiated were rapidly extended and their operations broadened. Numerous other companies were formed to cope with the increasing trade between ports in the Commonwealth, and the companies engaged from time to time added to their fleets of steamers by the acquisition of more modern and rapid vessels, until at the end of the year 1910 the total net tonnage owned by the twenty-four companies from whom returns have been received amounted to 172,410 tons. A summary of the various mail services carried on during the year 1910 is given in Section XVIII. of this work.

The subjoined table gives particulars, so far as they are available, of all steamships engaged in regular interstate or coastal services at the end of each of the years 1901 and 1906 to 1910. The figures for 1906 and subsequent years include particulars relating to a number of smaller companies which did not supply returns for 1901, though they were, for the most part, carrying on business in that year.

**PARTICULARS OF STEAMSHIPS ENGAGED IN REGULAR INTERSTATE AND COASTAL SERVICES IN THE COMMONWEALTH, 1901 to 1910.**

	Sailing ...	5	115	2	205	2	3,095	...	...	9	3,415	94	20
	Total ...	6	149	7	1,146	3	4,053	2	9,307	18	14,655	718	22

\* In some cases the vessels included in the above return were subsequently recovered. † The large number of wrecks during 1908 was due to cyclones on the north-west coast of Western Australia destroying a large number of the pearling vessels.

## § 7. Wages of Employees on Coastal Vessels.

1.—Rates of Wages of Employees on Vessels engaged in the Coastal Trade of the Commonwealth.—By virtue of Judgments delivered by the President of the Commonwealth Court of Conciliation and Arbitration the minimum rates of wages to be paid per calendar month to persons employed at sea on board vessels engaged in the interstate trade, and on vessels trading within the limits of some one State of the Commonwealth, have been fixed as under:—

### MONTHLY WAGES.—MASTERS AND NAVIGATING OFFICERS.

## SECTION XVII.

### ROADS AND RAILWAYS.

#### 1. Roads and Bridges.

1. **Introduction.**—In Year Books No. 1 (pages 541 to 551) and No. 2 (pages 675 to 685), a brief historical account was given of the construction and development of roads in Australia. It is not proposed to repeat that account in the present issue of the Year Book.

2. **Expenditure on Roads and Bridges.**—Figures shewing the total expenditure on roads and bridges in the States are not available. The subjoined statement, however, gives the amounts of total loan expenditures by the State Governments up to the 30th June, 1911 :—

#### ROADS AND BRIDGES.—TOTAL LOAN EXPENDITURE IN EACH STATE AND IN THE COMMONWEALTH UP TO THE 30th JUNE, 1911.

State, etc. ...	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
Expenditure	£1,791,613	£176,475	£923,656	£1,464,736	£251,351	£2,700,000*	£7,307,831*

\* Approximate.

The following table shews the annual expenditure from loans on roads and bridges by the central Governments in each State and in the Commonwealth during each financial year since 1902 :—

#### ROADS AND BRIDGES.—LOAN EXPENDITURE BY STATE GOVERNMENTS, 1902-3 to 1910-11.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£	£	£	£	£	£	£
1902-3 ...	73,471	44,770	1,333	200	...	55,687 <sup>1</sup>	175,461
1903-4 ...	47,812	17,267	...	78	...	39,037 <sup>1</sup>	104,194

1910-11 ...	...	183	...	...	52,296	... <sup>3</sup>	52,479 <sup>4</sup>

1. For the calendar years 1902 and 1903 respectively.      2. For the eighteen months ended 30th June, 1905.      3. Not available separately.      4. Exclusive of Tasmania.

The two tables given above shew only a small proportion of the actual expenditure upon roads and bridges in the different States, for the reason that (a) there have been large expenditures from revenue, both by the central Governments and by local authorities, and (b) the State Governments have in many cases voted grants and subsidies on the amount of rates collected, and have issued loans to local authorities either for the express purpose of the construction of roads and bridges or for the general purpose of public works construction. Returns of expenditure, where available, are given below for each State. Although no revenue is now derived directly from roads and bridges, they are indirectly of great value to the community, forming, next to railways and public lands, the most considerable item of national property.

3. **New South Wales.**—The control of all roads, bridges, and ferries in New South Wales is now regulated by the Local Government Act 1906, which came into force on the 1st January, 1907 (see Section xxvi. *Local Government*.) Under the provisions of this Act the eastern and central divisions of the State are divided into shires and municipalities for the general purposes of local government, for the endowment of which a sum of not less than £150,000 is payable annually out of the consolidated revenue on the basis of a percentage subsidy on the proceeds of the general rates received by the District Councils. The control of all roads, bridges, and ferries (except those proclaimed "National" and those in the unincorporated areas of the Western Division) has been transferred from the Roads Department to the respective shire and municipal councils, who are now responsible for their construction and maintenance. Up to December, 1911, 38 miles of roads, 265 bridges, 54 wharves, 99 jetties, and 12 ferries had been proclaimed as "National" works. Power is given to construct new roads, to widen or close existing roads, to make by-laws for the regulation of traffic, etc.; in the case of the acquisition of land for the purpose of constructing new roads or of widening existing roads, the provisions of the Roads Act 1902 are incorporated. The Minister for Works is empowered to pay subsidies to the local authorities to maintain the roads. The roads leading to and within areas of lands which are made available for closer settlement will be constructed by the Government prior to transfer to the shires, as also will roads required mainly for tourists in districts not likely to produce revenue in rates to the local authorities.

(i.) *Principal Main Roads.* The four principal main roads in New South Wales run in the same direction as, and are roughly contiguous to, the four State-owned main railway lines. (a) *The Southern Road*, 385 miles in length, runs from Sydney to Albury, and before the days of railway construction, formed part of the highway over which the interstate traffic between Melbourne and Sydney used to flow. (b) *The South Coast Road*, 250 miles long, runs from Campbelltown along the top of the coast range and across the Illawarra district as far as Bega, from which place it extends as a minor road to the southern limits of the State. (c) *The Western Road*, 513 miles long, runs through Bathurst, Orange and many other important towns as far as Bourke, on the Darling River. (d) *The Northern Road*, 405 miles in length, runs from Morpeth, near Newcastle, as far as Maryland, on the Queensland border.

(ii.) *Length and Classification of Roads and Bridges.* The length of roads in the State (exclusive of 38 miles proclaimed as "National works") in 1911 was approximately 83,194 miles, of which 9514 miles were controlled by municipalities, 67,490 by the shires, and 6190 miles were in the unincorporated areas of the western division. The following table gives particulars for the year 1910-11 of roads classified according to whether metalled, etc., formed only, cleared only, or natural surface:—

## NEW SOUTH WALES.—APPROXIMATE LENGTH OF ROADS, 1910-11.

Classification.	Metalled, Ballasted, Gravelled etc.	Formed only.	Cleared only.	Natural surface.	Total.
	Miles.	Miles.	Miles.	Miles.	Miles.
Metropolitan... ..	1,104	321	241	207	1,873

Western Division ... ..	80	137	2,669	3,304	6,190
Total ... ..	14,126	9,406	23,424	36,238	83,194

(iii.) *Bridges, Culverts, and Ferries.* The more important bridges have been proclaimed under the provisions of the Local Government Act as "National works," (see above) and these, together with the bridges, etc., in the Western Division, remain under the control of, and are maintained by, the Public Works Department. Particulars of bridges, culverts, and ferries in the State in 1910 are given in the following table:—

## NEW SOUTH WALES.—BRIDGES, CULVERTS, AND FERRIES, 1910.

Particulars.	Bridges, 20 ft. span and over.		Culverts.		Ferries.
	No.	Length.	No.	Length.	No.
		ft.		ft.	
National works ... ..	265	105,322	...	...	12

Western Division (unincorporated) ... ..	124	21,815	107	1,435	5
Total ... ..	4,279	359,857	33,545	383,730	124

(iv.) *Expenditure on Roads and Bridges.* Since the year 1857 the total expenditure by the Roads Department and Roads Trust on roads and bridges is £24,608,535. In this expenditure is included the cost of administering the Department, services for other Departments, and payments on account of punt approaches and similar works incidental to the road traffic of the country. The amount expended from 1857 to the 30th June, 1900, for the next quinquennium and for each succeeding financial year up to 1910, is given below. Until recent years, the expenditure on these works increased at a much faster rate than the population.

## NEW SOUTH WALES.—EXPENDITURE BY ROAD DEPARTMENTS AND ROAD TRUSTS, 1857 to 1910.

Period.	Expenditure by Roads Department.	Expenditure by Trustees.	Total.
	£	£	£
1857 to 30th June, 1900 ... ..	18,714,078	1,258,027	19,972,105
1901 to 1905 ... ..	3,340,299	28,944	3,369,243
1906* ... ..	457,421	1,171	458,592
1907* ... ..	407,268	549	407,817
1908* ... ..	158,005	...	158,005
1909* ... ..	118,121	...	118,121
1910* ... ..	124,652	...	124,652
Total ... ..	23,319,844	1,288,691	24,608,535

\* Year ended 30th June.

The expenditure by the Department is now limited to the construction of roads in closer settlement areas and to the construction and maintenance of national bridges and ferries, and of works in the unincorporated areas of the Western Division.

4. **Victoria.**—Under the Local Government Act 1903, the control, construction, and maintenance of all roads, streets, and bridges are in the hands of Municipal Councils, who are empowered to open new roads, and to close, divert, or increase the width of any existing street or road, provided that no new road less than one chain in width may be opened without the consent of the Minister. The councils are also authorised to make and repair streets, lanes, or passages on private property, or forming means of back access to private property, and may compel the owners of such property to pay the cost of so doing. Footways in front of houses or grounds may be kerbed, flagged, paved, or asphalted, and the owners of such houses or grounds must bear half the cost of so doing. The revenue of the councils is derived from rates which may be either ordinary or special. The councils are empowered to raise loans for the purpose of making or opening new streets and roads, and for diverting, altering, or increasing the width of streets and roads, provided that the amount of such loan must not exceed ten times the average income of the council during the three years immediately preceding.

(i.) *General and Local Government Expenditure.* The gross amount expended directly by the State Government of Victoria on roads and bridges was £7,882,357 up to the end of June, 1901; figures for succeeding years are given in the table below. The annual expenditure from ordinary revenue by municipalities is not returned separately, but is included in Public Works Construction and Maintenance (see Section xxvi. *Local Government*). The subjoined table shews the cost from general revenue of municipalities of private streets, roads, etc., and also shews the amounts of municipal loan expenditure from 1902 to 1910 inclusive:—

#### VICTORIA.—EXPENDITURE ON ROADS AND BRIDGES, 1902 to 1910.

Financial Year. <sup>1</sup>	Annual Expenditure by State Government.	Municipal Loan Expenditure.		Formation of Private Roads, Streets, Lanes, etc. <sup>2</sup>	
		Cities, Towns, and Boroughs.	Shires.	Cities, Towns, and Boroughs.	Shires.
	£	£	£	£	£
1902 ... ..	75,855	13,047	15,656	17,655	4,542
1903 ... ..	69,200	13,540	12,696	15,279	4,028
1904 ... ..	42,144	12,929	1,444	15,432	4,072
1905 ... ..	30,393	21,515	2,560	21,593	2,083
1906 ... ..	56,145	5,673	8,480	18,237	1,390
1907 ... ..	43,119	21,137	7,495	25,244	3,052
1908 ... ..	72,246	21,859	5,206	30,907	1,811
1909 ... ..	99,572	21,389	9,058	34,285	3,603
1910 ... ..	102,309	25,311	18,077	29,304	2,859

1. The financial years of Melbourne and Geelong end on the 31st December and the 31st August respectively; those of all other municipalities on the 30th September.

2. Including the cost of flagging, asphaltting footpaths, etc., but exclusive of loan expenditure.

5. **Queensland.**—In Queensland the construction and maintenance of public roads are controlled under a system of local self-government, for the purposes of which the whole State is divided into (a) towns and (b) shires. The duties, rights, and responsibilities of the local authorities with regard to roads, streets, and bridges are regulated by the Local Authorities Act of 1902. The councils are invested with full powers to open, close, divert, or widen streets, roads, and bridges, and to make by-laws for the regulation of traffic, etc. The members of the councils are elected by the ratepayers, and with the aid of

executive officers they undertake the supervision and control of all necessary constructions and improvements of roads and bridges within their district. The rates which the councils are empowered to levy are supplemented by Government grants. Separate returns as to the expenditure by towns and shires on roads and bridges are not available, the amounts being included in the returns of expenditure on public works, particulars as to which expenditure may be found in the Section of this book on *Local Government*.

6. **South Australia.**—Under the provisions of the District Councils Acts, 1887 to 1904, and the Municipal Corporations Acts, 1890 to 1903, and of the Roads Acts, 1884 to 1908, the councils are invested with full powers as to the opening and making of new streets and roads, and the diverting, altering, or increasing the width of existing roads; as to raising, lowering, or altering the ground or soil of any street or road; and as to the construction, purchase, and management of bridges, culverts, ferries, and jetties.

(i.) *Main Roads and District Roads.* All the roads in each district are classified either as main roads or as district roads. Both classes of roads are under the direct control either of Municipal Corporations or of District Councils, but in the case of main roads the expenditure on construction and maintenance is chiefly provided for by Government grants, which are paid into a main road fund, while the expenditure on district roads is paid for out of general rates, and out of subsidies on the amount of such rates, granted by the central Government. Under the Main Roads Act 1908, a number of roads were declared to be main roads.

The total estimated length of streets and roads in South Australia up to the 30th June, 1910, was as follows:—

#### **SOUTH AUSTRALIA.—ESTIMATED LENGTH OF ROADS AND STREETS, 1910.**

Particulars.				Woodblocked.	Macadamised.	Other.	Total.
Miles	...	...	...	$\frac{1}{2}$	8,352	24,985	33,337 $\frac{1}{2}$

(ii.) *Expenditure by Corporations on Main and District Roads.* The following table shews the expenditure by municipal corporations on both main and district roads during each year from 1902 to 1910 inclusive:—

#### **SOUTH AUSTRALIA.—EXPENDITURE BY CORPORATIONS ON STREETS, ROADS, AND BRIDGES, 1902 to 1910.**

Year. <sup>1</sup>	District Roads.			Main Roads Fund.

1910 ...	152,091	33,853	64,079	106,096	106,221	10,752	76,150

7. *Western Australia.*—In Western Australia the construction, maintenance, and management of roads and bridges throughout the State, except those within the boundaries of municipalities, are under the control of District Road Boards, constituted by the Roads Act, 1911.

(i.) *District Roads and Bridges.* Under the provisions of this Act any part of the State, not within a municipality, may be constituted by the Governor-in-Council into a Road District, under the control of a Board of not less than five, nor more than eleven members elected by the ratepayers. The Board is invested with full powers for controlling and managing all roads and bridges within the district, and is empowered to make by-laws for the general regulation of traffic, to control the weight of engines and machines permitted to cross any bridge or culvert, to regulate the speed limits of vehicles, lights to be carried by vehicles, the lighting of streets and roads, and the licensing of bicycles and motor cars. A District Road Board, may not, however, construct any road or street less than sixty-six feet wide without the consent of the Governor, nor any bridge or culvert at a greater cost than £100, except by the direction of the Minister. The construction of the more important bridges and culverts is generally carried out by the Government, the work, after completion, being handed over to the Road Board for maintenance. In case of land being required for the purpose of constructing a new street or road, or for widening an existing street or road, the provisions of the Public Works Act of 1902 are incorporated in the Roads Act. A Board may levy general rates within its district not exceeding two shillings and sixpence nor less than ninepence in the £ on the annual ratable value, and, if valued on the basis of unimproved values of lands, the general rate must not be over threepence nor under one penny in the £ on the capital unimproved value. Boards are also empowered to raise loans for works or undertakings or to liquidate existing loans, but the amount of such loans must not be greater than seven times the average amount of general rates collected for two years. In the case, however, of Boards already indebted, borrowing power to the extent of ten times the said average is given. For the purpose of paying the interest on money borrowed a Board may levy a special rate not exceeding one shilling and sixpence in the £. District Road Boards may also exercise the powers of Drainage Boards under the provisions of the Land Drainage Act of 1900.

(ii.) *Municipal Streets, Roads, and Bridges.* As regards roads, streets, and bridges within municipalities, these are under the control of local authorities elected under the provisions of the Municipal Corporations Act 1906. The municipal councils are invested with full powers for making, maintaining, and managing all streets, roads, and bridges within the municipal area, and may request the Governor to declare any such land reserved, used, or by purchase or exchange acquired for a street or way, to be a public highway, and on such request the Governor may, by notice in the *Gazette*, proclaim such highway absolutely dedicated to the public.

(iii.) *Length of Roads, Number of Bridges, and Expenditure on Roads and Bridges.* The following table gives particulars of the operations of the Road District Boards since the 1st January, 1903, when the Roads Act of 1902 (now superseded by the Act of 1911) came into force:—

**WESTERN AUSTRALIA.—PARTICULARS OF ROADS UNDER CONTROL OF DISTRICT ROAD BOARDS, 1904 to 1910.**

1. Exclusive of three municipalities, which have not supplied the information. 2. Exclusive of four municipalities.

8. **Tasmania.**— In 1906 all the existing Road Trusts and Main Road Boards were abolished by the Local Government Act, which provided that the councils of all municipalities constituted under the Act should exercise all powers conferred upon, and should be liable to all the obligations imposed upon Road District Trusts and Main Road Boards by the Roads Act of 1884. The whole State, with the exception of Hobart and Launceston, is divided into municipal districts, each of which is under the control of a warden and councillors, and is deemed to be a road district and a main road district for the purposes of the Roads Act 1884.

(i.) *Mileage of Roads and Number of Bridges, 1910.* The following table gives particulars for the year 1910 as to length of roads and number of bridges and culverts under the control of the municipalities :—

## 2. Railways.

### (A.) General.

1. **Improvements in Railway Statistics.**—In February, 1909, a report was issued by the Commonwealth Statistician to the Minister for Home Affairs on the subject of *The Desirability of Improved Statistics of Government Railways in Australia*. In this report a number of matters were specified in respect to which there was want of uniformity in the form and basis of the statistics published in the annual reports of the Railway Departments of the several States, and the importance and desirability of obtaining more complete and uniform statistics, especially with regard to "passenger-miles" and "ton-miles," were emphasised. This report was brought forward and considered by the Commissioners and General Managers of the Australian State Railways at their annual conference, held in Melbourne in May, 1909, with the result that resolutions were passed agreeing to publish in the annual reports of the State Railway Departments

uniform statistics regarding all the matters referred to by the Commonwealth Statistician, with two exceptions, viz.:—(a) with respect to the classification of tonnage carried and the revenue derived therefrom (see further (B) paragraph 17 hereof), and (b) with respect to "passenger-mileage" and "ton-mileage" (see further (B) paragraph 18 hereof). The resolutions referred to were to take effect from 1st July, 1909.

**2. Railway Communication in the Commonwealth.**—Although it was early recognised that railway construction was essential to the proper development and settlement, and to the future commercial prosperity of a large country like Australia, ill supplied with navigable rivers, the progress made in opening up lines during the twenty years which followed the completion of the first line in 1855, was very slow. This was no doubt due partly to the difficulty of borrowing money at a reasonable rate of interest, owing to the depreciation of Australian securities in London, and partly to the sparseness of the population, which it was feared would not justify the necessary expenditure. In the vicinity of Sydney, also, the ranges of mountains in the districts near the coast had to be either traversed or pierced by tunnels at a considerable expenditure of time and money, thus retarding the expansions of the railway systems which now have their starting point at that city. Since the year 1875, however, greater activity in the construction of railways has been manifested, and satisfactory progress has been made in all the States of the Commonwealth. The State Governments now fully recognise the great importance to the community of carrying on the work of construction, and of conducting the administration and management of the railways on business-like principles, free from undue political influence, and yet with regard to the general development of the country. In the eastern, south-eastern, and southern parts of Australia there now exists a considerable network of railway lines converging from the various agricultural, pastoral and mining districts towards the principal ports, which are themselves connected by systems of lines roughly running parallel to the coast. These are shewn on the accompanying map. In the east, lines radiating from Townsville, Rockhampton, Brisbane, and Sydney extend inland in various directions for distances ranging up to over 600 miles; in the south-east there are numerous lines, those in Victoria converging towards Melbourne, while others in New South Wales have their terminus in Sydney; in the south there are three main lines, with numerous branches, running from Melbourne, while from Adelaide one main line, with several branches to the coastal towns, runs inland in a northerly direction for a distance of nearly 700 miles, and another line runs in a south-easterly direction to various ports and meeting the main line from Melbourne on the border of South Australia and Victoria. In addition to these main lines and their numerous branches, there are extensive suburban systems in Melbourne and some of the other cities of Australia, a considerable portion of the suburban traffic in Sydney being conducted by means of electric tramways. All these lines which have just been referred to are connected together by the main interstate line, which permits of direct communication between the four capital cities—Brisbane, Sydney, Melbourne, and Adelaide—a distance from end to end of 1790½ miles. The journey from Brisbane to Adelaide by rail occupies just over three days, including one stop of 8 hours 50 minutes at Sydney, and another of 3 hours 39 minutes at Melbourne. The distance between the capitals and the times occupied are as follows:—

Brisbane to Sydney ...	725 miles	27 hours 20 min.
Sydney to Melbourne ...	582½ "	16 " 51 "
Melbourne to Adelaide ...	482½ "	17 " 26 "

The longest railway journey which can be undertaken in Australia, on one continuous line of railway, is from Longreach in Queensland to Oodnadatta in South Australia, a total distance of 3303 miles. In Western Australia there is a connected system of main or trunk lines between the ports of the State and the agricultural, pastoral, and mining districts. From these main lines a number of branches have been constructed, opening up fresh agricultural areas to the ports and markets of the State. The majority of such branch lines will, on being ultimately extended, form connections between

main lines and thus provide short and convenient routes between principal centres. In the northern parts of Queensland and in the Northern Territory there are also a number of disconnected lines running inland from the more important ports. In Tasmania the principal towns are connected by a system of lines, and there are also, more especially in the western districts, several lines which have been constructed for the purpose of opening up mining districts.

**3. Mileage Open for Traffic.**—In all the States of the Commonwealth the principle that the control, construction, and maintenance of the railways should be in the hands of the Government has long been adhered to, excepting in cases presenting unusual circumstances. In various parts of the Commonwealth lines have been constructed and managed by private companies, but at the present time practically the whole of the railway traffic in the Commonwealth is in the hands of the various State Governments. A large proportion of the private lines which are at present running have been laid down for the purpose of opening up forest lands or mining districts, and are not generally used for the conveyance of passengers or the public conveyance of goods. (See D. *Private Railways*, hereinafter.)

(i.) *Mileage of Government and Private Lines, 1855 to 1911.* The subjoined table shews the mileage of both Government and private lines open for traffic (exclusive of sidings and cross-overs) in each State and also in the Commonwealth at suitable periods since the inauguration of railways in Australia in 1855 up to the year 1911. The figures from 1855 to 1881 are given as up to the end of the calendar year; later figures are as up to the end of the financial year ended on the 30th June, unless otherwise stated, excepting the mileages for private lines which are in all cases taken for the calendar year:—

**GOVERNMENT AND PRIVATE RAILWAYS.—MILEAGE OPEN, 1855 to 1911.**

Year.	N.S.W.	Vict.	Q'land.	S. Aust.	N. Ter.	W. Aust.	Tas.	C'wlth.
	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.	Miles.
1855 ...	14	2½	*	†6½	*	*	*	23½
1861 ...	73	114	*	56	*	*	*	243
1871 ...	358	276	218	133	*	12	45	1,042
1881 ...	1,040	1,247	800	845	*	92	168	4,192
1890-1 ...	2,263	2,763	2,205	1,666	145½	†656	‡425	10,123½
1900-1 ...	2,926	3,238	2,904	1,736	145½	1,984	§618	13,551½
1909-10 ...	3,909	3,542	4,205	1,970	145½	2,977	673	17,421½
1910-11 ...	4,027	3,574	4,390	1,993	145½	3,208	675	18,012½

\* No railways yet constructed. † To the 31st December. This line between Goolwa and Port Elliot was opened in 1854 as a horse tramway, but now forms part of the railway system. ‡ To the 31st December, 1891. § To the 31st December, 1901.

It will be seen from the above table that the rate of construction up to the year 1871 was very slow, the average annual length of lines opened from 1861 to 1871 being only 80 miles for the whole Commonwealth. By the middle of the following decade, however, the principal mountain ranges had been crossed, and the work of construction could be proceeded with at a greater rate, and at a less cost per mile. The greatest period of activity was from 1881 to 1891, when the average annual length opened for traffic was 593 miles for the whole Commonwealth; the corresponding figures for the following periods from June 1891 to June 1901, and from June 1901 to June 1911, were 343 and 452 miles respectively.

**4. Comparative Mileage of State-owned and Private Lines, 1911.**—The subjoined table shews for each State and for the Commonwealth (a) the length of lines owned by the respective State Governments, all of which lines are of course open for general use by the

public, (b) the length of private lines available for general use by the public, and (c) the length not so available. The mileages specified in the case of State-owned lines are as up to the 30th June, 1911; those given for private lines are as up to the 31st December, 1910.

**GOVERNMENT AND PRIVATE RAILWAYS.—COMPARATIVE MILEAGE OF STATE OWNED LINES, OF PRIVATE LINES AVAILABLE FOR GENERAL TRAFFIC AND OF PRIVATE LINES NOT SO AVAILABLE, 1910-11.**

\* To the 31st December. † Including the mileage (478) of the Port Augusta to Oodnadatta line leased to the South Australian Government by the Commonwealth Government on 1st January, 1911.

The following statement shews the actual mileage opened for traffic in the year 1910-11, and also the annual average increase in mileage opened since 1901 in each State:—

**GOVERNMENT RAILWAYS.—MILEAGE OPENED ANNUALLY.**

State	N.S.W.	Vic.	Qld.*	S.A.	N.T.	W.A.	Tas.	C'wlth.
Mileage opened during 1910-11	116½	32½	207	23½	...	230	2	609½
Average annual mileage increase (1902 to 1911)	81½	24½	118½	22½	...	113	1	360½

\* Inclusive of the line from Stewart's Creek to Ayr purchased 1st January, 1911.

NOTE.—Owing apparently to remeasurements of lines in New South Wales and Western Australia, the mileages given in this table do not agree with those open for traffic given in the previous table.

(i.) *New South Wales.* During the year ended 30th June, 1911, the following lines were opened for traffic:—Cowra to Canowindra (23½ miles); Gulgong to Dunedoo (29½ miles); Lockhart to Mucra (22 miles); Narromine to Peak Hill (36½ miles); Cootamundra West to North Junction (½ mile); Fassifern to Toronto (2½ miles); North Strathfield to Concord West (third road) (1½ miles); a total of 116½ miles.

(ii.) *Victoria.* The following lines were opened for traffic during 1910-11:—Mildura to White Cliffs (Merbein) (7 miles); Beeac to Cressy (11½ miles); Beech Forest to Crowe's (14½ miles); a total of 32½ miles.

(iii.) *Queensland.* The increase of 207 miles in the mileage opened for traffic in 1910-11 was due to the opening of the following lines:—Benholme to Kirkup (7 miles);

Pinnacle to Finch Hatton (6 miles); Boyne Valley Junction to Many Peaks (53 miles); Yungaburra to Kureen (7 miles); Atherton to Herberton (15 miles); Kannangur to Linville (17 miles); Friezland to Selwyn (18 miles); Kureen to Malanda (1 mile); Kingsthorpe to Wagoon (21 miles); Laidley to Mulgowie (7 miles); Linville to Benarkin (11 miles); and the line from Stewart's Creek to Ayr (44 miles), which was purchased on 1st January, 1911, by the Government from the Ayr Tramway Joint Board.

(iv.) *South Australia.* The only line opened for traffic in this State during the year 1910-11 was that from Gawler to Nuriootpa, a distance of  $23\frac{1}{4}$  miles.

By the transfer to the Commonwealth Government of the line from Port Augusta to Oodnadatta, the railways of the State have undergone a reduction to the extent of 478 miles. This line has, however, been leased to the State by the Commonwealth Government as from the 1st January, 1911, and is therefore included in the mileage belonging to this State.

(v.) *Western Australia.* The following new sections of railway were taken over from the Public Works Department during the year 1910-11 and opened for public traffic:—Dwellingup to Holyoake (2 miles); Mount Magnet to Sandstone (93 miles); Nannine to Meekatharra ( $23\frac{3}{4}$  miles); Wokarina to Naraling (26 miles); Dowerin to Korrelocking ( $31\frac{1}{2}$  miles); Bridgetown to Wilgarup ( $25\frac{1}{4}$  miles); Korrelocking to Kununoppin ( $28\frac{1}{2}$  miles); a total of 230 miles. The Pickering Brook to Canning Mills railway ( $3\frac{1}{2}$  miles) was purchased by the Government.

(vi.) *Tasmania.* During the year 1910-11 a branch line to Griffith on the North-East Dundas tramway was opened for traffic.

2. **Non-conformity of Gauge.**—With but few exceptions, all the railway lines in the Commonwealth open for general traffic are now owned and managed by the respective States in whose territory they run, but, unfortunately for the purpose of interstate traffic, the construction of the various systems in different parts of Australia has proceeded without uniformity of gauge. In 1846 Mr. Gladstone, then Colonial Secretary, recommended in a despatch to the Governor of New South Wales that the 4 ft.  $8\frac{1}{2}$  in. gauge should be adopted. In 1850, however, the engineer to the Sydney Railroad and Tramway Company strongly advocated the adoption of the 5 ft. 3 in. gauge, and in 1852 an Act was passed making it compulsory that all railways in New South Wales should be constructed to the wider gauge, the Governors of Victoria and South Australia being duly advised of the step that had been taken. In 1852, however, the company mentioned, having changed its engineer, also changed its views as to the gauge question, and in the following year succeeded in obtaining the repeal of the Act of 1852 and in passing another, under the provisions of which the narrower gauge was made imperative. This step was taken without the concurrence of the other States concerned, and a considerable amount of ill-feeling arose, especially in Victoria, where two private companies had already placed large orders for rolling stock constructed to the broad gauge originally chosen. The result was that it was decided in Victoria to adhere to the 5 ft. 3 in. gauge as the standard gauge for that State, while the Sydney Railroad and Tramway Company proceeded with the construction of its lines to the 4 ft.  $8\frac{1}{2}$  in. gauge, and these two gauges have since been adhered to as the standard gauges of the respective States. The Queensland Government had at the outset adopted a gauge of 3 ft. 6 in. as being best suited to the requirements of the colony, and has since adhered to that gauge throughout the State, so that all goods have to be discharged and reloaded at the boundary between that State and New South Wales. In South Australia the broad gauge of Victoria was at first adopted, and the part of the interstate line between Adelaide and the Victorian boundary was constructed to that gauge, so that the line from Melbourne to Adelaide is uniform. In the lines which have been constructed more recently, however, and in

the Northern Territory, the South Australian Government has, with a view to economy in construction, adopted a gauge of 3 ft. 6 in. In Western Australia and Tasmania the 3 ft. 6 in. gauge was also adopted. It was recognised in both these States that the construction of railways was essential to their proper development, but as their financial resources would not bear a heavy initial expenditure in connection with the establishment of railway lines, it was decided to adopt the narrow gauge. In Victoria, light railways have been constructed in recent years to a gauge of 2 ft. 6 in., whilst in Tasmania short lengths have been laid down to a 2 ft. gauge.

**3. Interstate Communication.**—Until the railway systems of the eastern States were connected at the common boundaries the inconvenience of non-conformity of gauge was not felt. Since then, however, the necessary transshipments of both passengers and goods have been a source of trouble, delay, and expense. On the 14th June, 1883, a railway bridge over the River Murray at Wodonga was opened for traffic, and communication was then established between Melbourne and Sydney. On the 19th January, 1887, the last section of the Victorian line to Serviceton, on the South Australian border, was completed, and a junction was thus effected with the South Australian line to Adelaide. On the 16th January, 1888, a junction was effected between the New South Wales and Queensland lines at Wallangarra, but there was still a break in the line from Sydney at the Hawkesbury River, thirty-six miles from Sydney. This last link was, however, completed on the 1st May, 1889, by the opening of the Hawkesbury River bridge, 2900 feet in length, and railway communication was thus established between the four capital cities, Brisbane, Sydney, Melbourne, and Adelaide.

In February, 1911, a conference of officers of the Commonwealth and State Governments was held in Melbourne under the presidency of the Minister for Defence to consider matters of defence as affected by the facilities for transport of troops and armaments in the event of war. The proposal laid before the conference was that a railway central staff should be formed, so that in case of war the Defence Department would have at hand not only a well considered scheme of mobilisation, but also an organised staff of men ready to carry out the work of transport. In § 7 of the section on Defence will be found the result of this conference.

**4. Unification of Gauge.**—The development of the railway systems of the Commonwealth has shewn that the adoption of different gauges on the main lines in the several States was a serious error. The extra cost, delay, and inconvenience incurred by the necessity of transferring through-passengers and goods at places where there are breaks of gauge, though not at present of any appreciable magnitude, are becoming more serious as the volume of business increases. As an indication of the extra cost thus involved the following junction charges payable on interstate traffic between New South Wales and Victoria and *vice-versa* are given :—

#### JUNCTION CHARGES.—NEW SOUTH WALES AND VICTORIA, 1911.

General Merchandise. 1st to 3rd Classes.	Vehicles for which rate per mile operates.	Live Stock.	Empty Returns.	Other Goods.*
2s. 6d. per ton	1s. 6d. each	3s. per truck.	1s. per ton.	1s. 6d. per ton.

\* No junction charge is made on wool.

Although the cost of alteration to a uniform gauge would be great, many propositions have from time to time been put forward with the object of securing such a gauge, and attention has been drawn to the importance of the unification of gauges before further expenditure on railway construction is incurred by the States. The problem is, however, one which is by no means easy of solution, and the difficulties are increased by the introduction of what may be called questions of local or State policy. That its solution would facilitate the development of commerce and the settlement on the land throughout the Commonwealth, is now widely recognised. The economic disadvantages of breaks of gauge, and of any artificial restrictions in regard to trade finding its proper geographical outlets, are also seen by dispassionate observers. It is obvious, too, that in the event of a foreign invasion of any part of the seaboard, the interchange and concentrations of rolling stock for the transport of men and war material would be impeded, and might result in confusion and loss. It is asserted, moreover, that unification of gauges would tend to reduce to a negligible quantity all tendency to disorganisation and undue congestion likely to occur at times of bountiful seasons; that various trades and industries would be benefited by the aggregation, at times of abnormal or periodic activity, of idle trucks from other States; that there would be a large saving in the total capital expenditure on rolling stock; in other words, that the fullest use of all rolling stock and the meeting of all exigencies would be facilitated.

As regards the unification of gauges, the question naturally arises as to which gauge should be adopted as the universal gauge of the Commonwealth. As regards Government railways only, the New South Wales gauge has a mileage of 3761; Victoria and South Australia have a combined mileage of 4023 of 5 ft. 3 in. gauge; while Queensland, South Australia, the Northern Territory, and Western Australia have together 7702½ miles of 3 ft. 6 in. gauge. By far the greater part of the mileage of private railways open for general traffic has also been constructed to the 3 ft. 6 in. gauge. The mere question of preponderance of mileage, therefore, indicates the 3 ft. 6 in. gauge for adoption. But this question is obviously subordinate to those involving engineering and economic considerations. Thus, the relative efficiency from the widest point of view, the relative costs of alterations of permanent way and rolling stock, of carrying capacity and speed, that is to say, questions of a technical nature about which figures are not available, enter into the grounds for decision. As regards the unification of the New South Wales and Victorian lines, the advantage of reducing the broad gauge to the 4 ft. 8½ in. gauge is that there would be no necessity for the alteration of tunnels, cuttings, bridges, or viaducts.

In 1897 a conference was held between the Railway Commissioners of New South Wales, Victoria, and South Australia to consider and report upon the unification of the railway gauges of these States. In their report the Commissioners specified the mileage (including double roads, sidings, and private coal lines) of 4 ft. 8½ in. and 5 ft. 3 in. gauges in the several States to be as follows:—

**UNIFICATION OF 4 ft. 8 in. AND 5 ft. 3 in. GAUGES IN NEW SOUTH WALES,  
VICTORIA, AND SOUTH AUSTRALIA, MILEAGE OPEN, 1897.**

Particulars.	New South Wales.		Victoria.	South Aust.	Total.	
Gauge ...	4ft. 8½ in.	5 ft. 3 in.	5 ft. 3 in.	5 ft. 3 in.	4 ft. 8½ in.	5 ft. 3 in.
Mileage ...	3,340	51	3,868	590	3,340	4,509

The cost of unification of the gauges as estimated by the Commissioners at the conference was as follows:—

**COST OF UNIFICATION OF 4 ft. 8½ in. and 5 ft. 3 in. GAUGES, NEW SOUTH WALES,  
VICTORIA, AND SOUTH AUSTRALIA, 1897.**

Particulars.	Alteration of Per- manent Way and Works.	Alteration of Rolling Stock.	Temporary Workshops and Material.	Total.
	£	£	£	£
<i>New South Wales</i> , conversion from 4 ft. 8½ in. to 5 ft. 3 in. ...	2,518,000	1,702,000	40,000	4,260,000
<i>Victoria, South Australia, and New South Wales</i> (51 miles) conversion from 5 ft. 3 in. to 4 ft. 8½ in. ...	493,000	1,827,500	40,000	2,360,500

It may be seen that the difference in estimated cost in favour of change from the 5 ft. 3 in. gauge to 4 ft. 8½ in. gauge was £1,899,500. The Commissioners agreed that the work could be carried out within five years from the date of its commencement.

Military officers have asserted that from a defence point of view it is imperative that the present mixture of gauges should be abolished. Reference has already been made (see paragraph 3 hereof) to the Railway War Conference, which was called more particularly to deal with the break of gauge problem as it would affect the transport of troops and armaments. It may also be observed that in South Australia the Break of Gauge Commission is enquiring into the local aspect of what is practically the same problem, presented in its commercial aspect only.

The question whether a broader gauge would be advantageous for the American railways was discussed in an editorial of the "Engineering News" of New York, 7th December, 1911, it there being stated "that the railway experience of the United States would not justify Australia in adopting a broader gauge for its railway system than that in use here, viz., 4 ft. 8½ in."

It also pointed out in the editorial referred to that while "it is, of course, true that our (American) large cars and locomotives are an important factor in reducing the cost of long haul freight traffic, it does not follow that the much larger cars and locomotives which would be easily possible with a wider gauge would effect an economic saving taking the country as a whole."

The entire article supports the view that a 4 ft. 8½ in. gauge is from all points the most desirable.

**5. Average Mileage Worked, Train Miles Run, Number of Passenger Journeys, and Tonnage of Goods and Live Stock Carried, on Government Railways, 1902 to 1911.**—The table at head of page 693 gives the actual mileage open for traffic at the end of each financial year, but, in considering the returns relating to revenue and expenditure, and other matters, it is desirable to know the average number of miles actually worked during each year. The next table shews the average number of miles worked, the total number of train miles run, the number of passenger journeys, and the tonnage of goods and live stock carried by the Government railways of each State during each financial year from 1901-2 to 1910-11 inclusive :—

**GOVERNMENT RAILWAYS.—AVERAGE MILEAGE WORKED, TRAIN MILES RUN,  
NUMBER OF PASSENGER JOURNEYS, AND TONNAGE OF GOODS AND LIVE  
STOCK CARRIED, 1902 to 1911.**

Year.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	N. Ter.	West. Aust.	Tasmania.	C'wealth.

1910-11	10,355	4,968	3,295	2,731¶	2	2,489	364	24,204

\* For the calendar years 1902 and 1903 respectively. The average mileage worked is larger than the actual mileage open, owing to the fact that the Government Railways have running powers over certain private lines. † The returns are for a period of six months ended the 30th June, 1904; the figures here given are estimated for a full period of twelve months. ‡ These figures are partly estimated, the actual returns excluding journeys by season ticket holders. § Exclusive of live stock. ¶ Exclusive of live stock returns for Tasmania. ¶ Exclusive of Port Augusta-Oodnadatta line for six months ended 30th June, 1911.

**6. Length and Gauge of Railway System in each State.**—A map shewing the State railway lines, and also some private lines open to the public for general traffic, in the different States of the Commonwealth is given on page 709 hereafter. In all the States the Government railways are grouped, for the convenience of administration and management, into several divisions of systems, some of which have already been briefly referred to above in dealing with the history of construction of the railways

The subjoined summary shews concisely the gauge and length of the main and branch lines included in each division or system of the different States of the Commonwealth for the year ended the 30th June, 1911:—

## GOVERNMENT RAILWAYS, 1910-11.

**7. Administration and Control of Government Railways.**—In each State of the Commonwealth the policy has now been established that the railways should be kept under the control of the Government. This policy, as has been shewn, was early actualised in Australia, and, excepting in cases presenting unusual circumstances, may be regarded as the settled policy of the country. It may here be observed that for many years past nationalisation of railways throughout Europe has been a feature of the development of railway policy, and so far there is no sign of any movement in an opposite direction. Indeed it may be said that the Governments have recognised the supreme importance of a railroad policy, not only as an element in the industrial, but even in the political life of nations, and have felt that nothing short of complete ownership and direct management of the railroads would give them the power which, for national reasons, they must exert. In America the modern tendency is to so condition the freights by Governmental action as to give at least a quasi-national character to the railways.

(i.) *New South Wales.* Prior to the year 1888 the control of the State railways in New South Wales was vested in the Minister for Works, under the provisions of the Railways Act of 1858, the actual management being in the hands of a Commissioner. In 1888, however, the Act referred to was repealed by a new Act, the object of which was to improve the administration and to free it from political influences. Under this Act, as amended in 1901, three Commissioners were appointed for a period of seven years, but in 1906 an amending Act was passed, which provides for the appointment of a Chief Commissioner, with supreme power, an Assistant Commissioner for Railways, and an Assistant Commissioner for Tramways. The Chief Commissioner is required to present an annual report to Parliament, through the Minister for Railways, setting forth an account of his proceedings, and of the revenue and expenditure during the previous year. New lines are constructed by the Railway and Tramway Construction Branch of the Public Works Department, and on completion are handed over to the control of the Chief Commissioner.

(ii.) *Victoria.* In consequence of general dissatisfaction in regard to the management of the railways by political heads, a new Railway Act was passed and came into force on the 1st November, 1883. Under its provisions the management and con-

trol of the State railways were placed in the hands of three Commissioners, who supervised the construction of new lines as well as the general management of lines already open for traffic. On the 1st January, 1892, the duty of the construction of new lines was transferred to the Board of Land and Works, and the Minister, under the provisions of the Railways Act of 1891, was given greater powers to interfere in matters of policy. In 1895 the Government appointed a Board to inquire into and report upon the general working of the Railway Department, and as a result of their report the Railways Act of 1896 was passed. The management was placed in the hands of one Commissioner until the year 1903, when the Victorian Railway Commissioners Act was passed, and the administration was again placed in the hands of three Commissioners.

Proposals for the construction of new lines are in every case, in which the estimated cost is in excess of £20,000, investigated by the Parliamentary Standing Committee on Railways, whose recommendation is submitted to the Legislature. Any new line authorised by Parliament is constructed under the supervision of the Chief Engineer for Railway Construction, who is responsible to the Minister of Railways for the time being, and is not subject to the control of the Commissioners. New lines are constructed under the authority of the Railway Lands Acquisition Acts 1893 to 1899.

(iii.) *Queensland.* The first Act referring to the construction of railways, passed by the Queensland Legislature in 1863, provided for the appointment of a Commissioner of Railways, who was to be the permanent head of the Railway Department, but was, however, also to be subordinate, as regards all matters of administration, to the Minister in charge of the railways for the time being. This arrangement was continued until the year 1888, when an Act was passed providing for the appointment of three Commissioners invested with full powers as to the administration, management, and construction of the railways, the control of which was thus removed from political influence. The functions of a Minister for Railways were not abolished, but they were so defined and limited that the Minister became in effect an intermediary between the Commissioners and Parliament, to which body the Commissioners were bound to make an annual report, setting forth an account of their proceedings and a financial statement for the previous year. The Railways Act Amendment Act of 1896 again provided for the appointment of one Commissioner only, for a term not exceeding three years, extended in 1902 to a maximum term of seven years. Under the Act of 1896 the Commissioner is required to prepare an annual report of the Railway Department. New lines are constructed by the Commissioner under the Railways Act of 1906. Under this Act the ratepayers in any district in which a new line is constructed are liable for the amount of any deficiency in case the earnings in any year are less than the working expenses, together with interest at the rate of 3 per cent. on the cost of construction. The separation from each other by long distances of some of the railway lines in Queensland puts difficulties in the way of their economical administration and supervision, since it is found necessary to maintain, in connection with each of the principal detached lines, a separate staff of engineering and managing officials.

(iv.) *South Australia.* The Railway Clauses Consolidation Act, passed in South Australia in March, 1847, was the first Act passed in Australia referring to the construction of railways; its provisions, however, contained many obsolete clauses of English railway legislation, and were soon modified. In 1887 an Act to make better provision for the construction, maintenance, and management of railways was passed, and came into force on the 1st June, 1888; it removed the control of the railways from political influence and provided for the appointment of three Commissioners, into whose hands the management and the supervision of the railways passed. The Act of 1887 was, however, amended by the Railway Commissioners Act of 1894, which provides for one Commissioner only assisted by a Board of Advice. Under the Act of 1894 the Commissioner has the same powers as were vested in the three Commissioners under the Act of 1887. Further amendments were made in the years 1902 and 1906, but since the Act of 1894 was passed the management, maintenance, and construction of the railways have remained in the hands of one Commissioner, who is required to present to Parliament an annual report of his proceedings, and of the revenue and expenditure during the previous year.

(v.) *Northern Territory.* On the 1st January, 1911, the railway from Darwin to Pine Creek passed from the control of South Australia with the transfer of this territory to the Commonwealth Government.

(vi.) *Western Australia.* From the time of the inception of railways in this State until the granting of responsible government in 1890, the construction, maintenance, and control of all railways were in the hands of an official holding the title of Commissioner of Railways, and having a seat in the Executive Council. This official was invested with very extensive powers for all purposes connected with railways, and had also to supervise the safe working and the charges made by private railway owners. On the institution of responsible government the office of Commissioner was converted into a Ministerial one; the active management was placed in the hands of an officer styled General Manager of Railways, while construction works on new lines were carried out by the Department of Public Works. In 1902 a Bill was introduced into Parliament providing for the appointment for a term of five years of a Railway Commissioner to be free from political influence. This Bill received the Vice-regal assent on the 20th December, 1902. The former Railway Acts, of which the Act in question was an amendment, continued to remain in force, with the result that certain anomalies and ambiguities arose, in consequence of which a Consolidating Government Railways Act was passed in 1904. Under its provisions the administration of all Government railways was placed in the hands of the Commissioner, who was relieved from the supervision of private railways. The construction of new railways or of extensions is left, as formerly, in the hands of the Minister controlling the Department of Public Works. The Act of 1904 was amended in certain details in 1907.

(vii.) *Tasmania.* The law relating to the control and management of the Tasmanian Government railways was amended and consolidated by the Railway Management Act of 1891, which has in turn been amended by Acts passed in 1893, 1896, 1901, and 1910. Under the last Amending Act a Railway Commissioner has been appointed for four years, in whose hands are placed the control, management, and maintenance of every Government railway.

8. *Lines under Construction, and Authorised and Proposed Lines, 1911.*—The following statement gives particulars up to the 30th June, 1911, of the mileage of Government railways (a) under construction, and (b) authorised for construction but not commenced:—

**MILEAGE UNDER CONSTRUCTION AND AUTHORISED, 30th JUNE, 1911.**

Particulars.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	Cwlth.
Mileage under construction ...	293 $\frac{1}{4}$	210 $\frac{3}{4}$	1,640	111 $\frac{1}{2}$	354	24	2,633 $\frac{1}{2}$
Mileage authorised ...	243	85 $\frac{3}{4}$	611	178	507	20	1,644 $\frac{3}{4}$

(i.) *Lines under Construction.* In spite of the great extension of State railways which has taken place since the year 1875 throughout the Commonwealth, there are still, in some of the States, tracts of country of immense area, which are as yet practically undeveloped, and in which little in the nature of permanent settlement has been accomplished; the general policy in the States is to extend the existing lines inland, in the form of light railways, as settlement increases, and although it is true that lines which were not likely to be commercially successful in the immediate future have been constructed from time to time, for the purpose of encouraging settlement, the general principle that the railways should be self-supporting is kept in view. (a) In *New South Wales* the lines under construction are chiefly of the "pioneer" class, and are made with a view to affording railway communication over level country to districts in which the traffic would not warrant the expenditure necessary to provide thoroughly equipped lines. As the traffic increases the permanent way is strengthened in order to allow the heavy types of engines to run over it. It is probable that railway extension in *New South Wales*, in the near future, will be mainly confined to lines of the "pioneer" class.

The lines under construction on 30th June, 1911, were those from West Maitland to Dungog (32½ miles), Dungog to Gloucester (38½ miles), Gloucester to Taree (44 miles), Taree to Wauchope (47½ miles), and Glenreagh to South Grafton (27½ miles). The extension of these lines between Wauchope and Glenreagh, a distance of 120½ miles, has been authorised, and when completed will form an alternative main route between Newcastle and Brisbane. Other lines under construction are as follows:—Moree to Garah (36½ miles), Cooma to Nimitybelle (24½ miles), Cullivel to Clear Hills (30½ miles), Flemington to Belmore, Wardell Road to Glebe Island, and Darling Island Railway (in all 11½ miles). (b) *Victoria*. In this State the following lines were under construction by the Board of Land and Works on the 30th June, 1911:—5 ft. 3 in. gauge: White Cliffs to Yelta (9½ miles), Ouyen to Kow Plains and Murrayville (68½ miles), Cressy to Newtown (24½ miles), Gheringhap to Maroona (100½ miles), Eltham to Hurst's Bridge (6½ miles), making in all 210½ miles. (c) *Queensland*. In December, 1910, the North Coast Railway Act was passed. Under this Act a series of lines when constructed will link up a number of existing lines in such a way that a through line will be obtained from Rockhampton to Cairns, *via* Mackay and Townsville, a total distance of 569 miles. Of this distance 115 miles are already constructed and in operation. By the completion of this line it will be possible to travel from Cairns to the southern border of the State at Wallangarra, a total distance of about 1198 miles. At the same time the Great Western Railway Act was passed. Under this Act provision is made for the extension in a westerly or south-westerly direction of the lines already constructed to Wallal, Blackall, Winton, and Malbon in such a manner that they will form junctions with a line to be made running north-westerly from Tobermory to Camooweal. These extensions, together with the north-westerly line, will make an aggregate distance of 1282 miles to be constructed. With the completion of both these schemes the railways of this State will be brought into direct communication with each other on both their east and west boundaries. On the 30th June, 1911, the following lines were under construction:—Herberton to Evelyn (17 miles), Finch-Hatton to Eungella Range (7 miles), Dalby to Tara (52 miles), Talwood to Thallon (Bullamon) (39 miles), Pittsworth to Millmerran (27 miles), Warwick to Maryvale (19 miles), Port Alma Branch (17 miles), McGregor Creek Extension (1 mile), Kingaroy to Nanango (16 miles), Mount Morgan to the Dawson River (69 miles), Oakey to Cooyar (39 miles), Rosewood to Marburg (9 miles), Cordalba to Dallarnil (31 miles), Gayndah to Mundubbera (23 miles), Allora to Goomburra (9 miles), Keefton to Imbil (24 miles), Blackbutt to Yarraman (15 miles). Of the Great Western Railway the following parts are under construction:—Section A: From Wallal westward (245 miles); Section B: From Blackall south-west (348 miles); Section D: From Malbon, south-west (328 miles). The following parts of the North Coast Railway are under construction:—Section A: From Rockhampton northwards to near St. Lawrence (123 miles); Section B: Portion from Mackay southwards to near St. Lawrence (72 miles); Section C: From Bobawaba northwards to Burdekin River (17 miles); Section D: From Ayr southwards to Burdekin River (5 miles); Section E: From Babinda southwards to near Cardwell (88 miles); a total distance of 1640 miles. The two first-named lines were opened on 31st July, 1911. (d) *South Australia*. In this State the lines under construction on the 30th June, 1911, were as follows:—Gawler to Angaston (3½ miles) and Yeelanna to Minnipa Hill (108 miles). (e) In *Western Australia* the following lines were in course of construction by the Public Works Department on the 30th June, 1911:—Kununoppin to Merredin (37 miles), Goomalling to Wongan Hills (34 miles), Southern Cross to Bullfinch (21 miles); Naraling to Yuna (12 miles), Port Hedland to Marble Bar (114 miles). Katanning to Nampup (38 miles), Wagin to Dumbleyung Extension (23 miles), Dwellingup to Hotham (23 miles), Boyup to Kojonup (52 miles). Of these the first two mentioned were opened in August, 1911. (f) *Tasmania*. At the end of the year 1910-11, one line, *viz.*, Scottsdale to Branhholm, 24 miles in length, was in course of construction.

(ii.) *Lines Authorised for Construction*. (a) *New South Wales*. In addition to the North coast railway extension from Wauchope to Glenreagh (120½ miles) the construction of lines from Garah to Mungindi (40½ miles), Nimitybelle to Bombala (40

miles), and Glenreagh to Dorrigo (42 miles) had been authorised up to 30th June, 1911. (b) In *Victoria* the following lines were authorised, but their construction had not been commenced up to the end of June, 1911:—5 ft. 3 in. gauge: Noradjuha to Toolondo (11½ miles), Bairnsdale to Orbost (60 miles), and Jeparit to Loxton (14½ miles). (c) *Queensland*. In addition to the new lines upon which work has been commenced lines from Woodford to Kilcoy (17 miles), Miles to Taroom (first section) (44 miles), Thallon to Dirranbandi (40 miles), have been approved of by Parliament, which has also authorised the construction of the following parts of the Great Western Railway, Section C, from Winton south-west (361 miles); and on the North Coast Railway, Section B, from Mackay Railway northwards to near Midge Point (50 miles); Section C, from near Midge Point to Proserpine (13 miles); Section D, from Townsville northward to near Cardwell (86 miles). (d) In *South Australia* the construction of a line from Tailem Bend to Brown's Well (100 miles) on the 5 ft. 3 in. gauge, and of a line from Cummins to Darke's Peak (78 miles) on the 3 ft. 6 in. gauge, was authorised during the year 1909-10. It is proposed to electrify the Adelaide-Glenelg (6½ miles) line at an estimated cost of £115,000, and also in newly settled districts to construct light lines to be run by District Councils. (e) In *Western Australia* six lines having a total length of 507 miles were authorised for construction up to the 30th June, 1910. These lines were—Northampton to Ajana (40 miles); Tambellup to Ongerup (60 miles); Wickpin to Merredin (120 miles); Wongan to Mullewa 190 miles; Brookton to Kunjin (47 miles); Quairading to Nunagin 50 miles). (f) In *Tasmania* the construction of a line, 20 miles along, from Burnie to Flowerdale was authorised by Parliament.

(iii.) *Proposed Transcontinental Lines.* (a) *Port Augusta to Kalgoorlie Line.* The necessary arrangements have now been practically completed for connecting the railways of the eastern and southern districts of Australia with the Western Australian lines by the construction of a line between Port Augusta, in South Australia, and Kalgoorlie, on the Western Australian goldfields, a distance of 1100 miles. The Transcontinental Railway Bill, passed in 1907 by the Federal Houses of Parliament, provided for the expenditure of a sum of £20,000 for a preliminary survey of the proposed line. This survey was commenced in 1908, and was completed in March, 1909. The route of the preliminary survey may be seen on reference to the map on page 709 hereof; the route *via* Tarcoola was, for several reasons, chosen in preference to that *via* Gawler Range and Fowler's Bay. It is stated in the report of the surveyors that while some part of the country which it is proposed to traverse is impossible for settlement, there is an area of good country, extending to about 40,000 square miles, which can be considered favourable for pastoral development. The estimated cost of construction and equipment of the line on the basis of a 4 ft. 8½ in. gauge is £3,988,000. It is claimed that the line would be of immense benefit in the expedition of the European mails to the southern and eastern parts of the continent, and, if occasion should arise, in facilitating the transport of troops. In September, 1911, a Bill was introduced into the Commonwealth Parliament to authorise the construction of the line. The Bill became law in December following, but the construction of the line was not to be commenced until the States of South Australia and Western Australia had granted or agreed to grant such portions of the Crown lands as were necessary for the construction, maintenance and working of the railway. In South Australia an Act has been passed enabling the Commonwealth to acquire lands for the railway in South Australia not exceeding one-eighth of a mile wide on either side of the line, but no town lands are to be included at any time. In Western Australia an Act has also been passed by which all necessary lands are to be granted to the Commonwealth for railway purposes. A Railway Construction Department has been created to carry out the work, and an early start with the Kalgoorlie-Port Augusta railway, which is to have a gauge of 4 ft. 8½ in., is to be made by working forward from each end of the line. (b) *Northern Territory Transcontinental Line.* Another proposal is to extend the main northern line from Adelaide, which at present terminates at Oodnadatta, as far as Pine Creek, the southern terminus of the Northern Territory line from Darwin. The distance between Oodnadatta and Pine Creek by the route followed by the telegraph wire is 1140

miles, and it is claimed that, if a railway line were constructed between these two places, it would be practicable for passengers and mails to reach London from Adelaide in seventeen days, *via* Port Darwin and the trans-Siberian railway. In the course of the year 1896 offers were made on behalf of various syndicates to construct this line, but the Government was not at that time prepared to recommend the acceptance of any offer based upon the land grant or guarantee system. In 1902, however, the Trans-continental Railway Act was passed, and the Government invited tenders for the construction of 1063 miles of 3 ft. 6 in. line on the land grant system, to be built at the rate of at least 100 miles in any one year, the grant of land offered amounting to nearly 80,000,000 acres. No tenders were accepted and subsequent offers have been refused. The country through which this line would pass presents no great engineering difficulties; for the most part it is one vast plain, with an occasional sand ridge or a watercourse. The construction of this line is provided for in the Northern Territory Acceptance Act 1910. (See Section XXXII., *The Northern Territory*.) Under that Act the property in the railways from Port Augusta to Oodnadatta and from Darwin to Pine Creek has been transferred to the Commonwealth Government as from the 1st January, 1911. In the meantime the former of these lines is being worked under the control of the South Australian Railway Commissioner by agreement between the Commonwealth and South Australian Governments.

**9. Cost of Construction and Equipment of Government Railways.**—The total cost of construction and equipment of the State railways of the Commonwealth at the 30th June, 1911, amounted to £152,855,231, or to an average of £9507 per mile open for traffic. Particulars as to the capital expenditure incurred in each State are given in the following table:—

**GOVERNMENT RAILWAYS.—COST OF CONSTRUCTION AND EQUIPMENT TO  
THE 30th JUNE, 1911.**

State or Territory.	Length of Line Open.	Total Cost of Construction and Equipment.	Average Cost per Mile Open.	Cost per Head of Population.
	Miles.	£	£	£
New South Wales ... ..	3,760½	50,971,894	13,555	30.83
Victoria ... ..	3,523½	44,121,767	12,522	33.25
Queensland ... ..	3,868	25,898,841	6,696	41.96
South Australia ... ..	1,935½	14,589,639	7,539	35.56
Northern Territory ... ..	145½	1,173,332	8,064	351.30
Western Australia ... ..	2,375½	12,019,927	5,060	41.76
Tasmania ... ..	470½	4,079,831	8,676	21.62
Commonwealth ... ..	16,078½	152,855,231	9,507	34.06

It will be seen that the lowest average cost per mile open is in Western Australia, and is only £5060, which is less than one-half of the highest average cost, namely, £13,555 in New South Wales, compared with an average of £9507 for the whole Commonwealth. In Western Australia there have been comparatively few engineering difficulties to contend with, and also the system has been adopted in that State of giving contractors the right to carry traffic during the period of their contracts, with the result that, at all events in all goldfields railway contracts, the cost of construction has been considerably lessened.

(i.) *Reduction of Cost per Mile in Recent Years.* The average cost per mile of the lines constructed lately in the Commonwealth is very much less than the figure given in the above table, in consequence of the construction of light "pioneer" lines, which have already been referred to, and which it was originally considered in New South Wales could be laid down at a cost of £1750 per mile (exclusive of stations and bridges). It should also be remembered that in the early days of railway construction there were considerable engineering difficulties to overcome, and that labour was scarce and dear. Since

1892 over one thousand four hundred miles of the "pioneer" lines have been opened in New South Wales, the average cost ranging from about £2000 to £7500 per mile, according to the difficulties met in the country traversed. The lowest cost per mile for any line previously constructed had been that of the line from Nyngan to Cobar, the average cost of which, to the end of June, 1911, was £3754. In Victoria also the cost of construction has been greatly reduced in recent years. The total cost to the 30th June, 1911, of the narrow gauge (2 ft. 6 in.) lines, having a length of one hundred and twenty-two miles, was only £310,010, which gives an average cost per mile of only £2541. In the other States also the cost of construction per mile has been reduced by building light railways as cheaply as possible. Fairly substantial permanent way is laid down with reduced ballast, and, as settlement progresses and traffic increases, the road is strengthened and the stations and siding accommodation enlarged. The subjoined table gives examples of some of the more expensive lines, most of which were built in the early days:—

**GOVERNMENT RAILWAYS.—EXAMPLES OF LINES CONSTRUCTED AT LARGE CAPITAL EXPENDITURE PER MILE OPEN.**

Line.	Gauge.	Length.				Total Cost.	Average Cost per Mile.	Date of Opening.
		Double Line.	Single Line.	Third Line.	Total.			
	ft. in.	m. ch.	m. ch.	m. ch.	m. ch.	£	£	
NEW SOUTH WALES—								
Penrith to Bathurst ...	4 8½	60 26½	50 64½	...	111 10½	3,263,363	29,365	1876
Sydney to Kiama ...	4 8½	24 11½	48 36½	0 63½	73 31½	2,172,808	29,605	1887
Homebush to Waratah	4 8½	74 23½	21 12	2 22½	97 57½	3,293,510	33,703	1889
VICTORIA—		Miles.	Miles.	Miles.	Miles.			
Melbourne to Bendigo	5 3	100.89*	...	...	100.89	4,856,613	48,137	1862
N. Geelong to Ballarat	5 3	41.45*	11.76	...	53.21	1,913,223	35,956	1862

\* Double lines and over.

The next table gives instances of lines which have been constructed in more recent years at a comparatively small cost per mile.

The average cost per mile of the 436.35 miles comprised in the above table was £35,521, whereas the average cost of the 487.18 miles referred to in the next table was £1812.

**GOVERNMENT RAILWAYS.—EXAMPLES OF LINES CONSTRUCTED AT SMALL CAPITAL EXPENDITURE PER MILE OPEN.**

Line.	Gauge.	Length.	Total Cost.	Average Cost per Mile.	Date of Opening.
	ft. in.	Miles.	£	£	
NEW SOUTH WALES—					
Parkes to Condobolin ...	4 8½	62½	130,839	2,085	1898
Dubbo to Coonamble ...	4 8½	96	241,524	2,516	1903
VICTORIA—					
Wangaratta to Whitfield	2 6	30½	39,260	1,288	1899
Birchip to Cronomby ...	5 3	26½	41,429	1,566	1899
Ultima to Chillingollah	5 3	20½	29,292	1,454	1909
QUEENSLAND—					
Dalby to Bell ...	3 6	23½	31,856	1,356	1906
Pinnacle to Finch Hatton	3 6	6½	10,020	1,627	1910
SOUTH AUSTRALIA—					
Port Lincoln to Cummins	3 6	42	87,336	2,084	1907
Tailem Bend to Pinnaroo	5 3	86½	135,303	1,563	1906
WESTERN AUSTRALIA—					
Goomalling to Dowerin	3 6	15½	17,726	1,171	1906
Coolgardie to Widgiemooltha	3 6	51½	78,433	1,527	1908
Narrogin to Wickepin	3 6	26½	39,983	1,515	1909

The comparisons afforded in the two preceding tables are subject to certain limitations, inasmuch as the figures in each case represent the total cost to date, and the cost is naturally greater in the case of the older lines. Further, the figures given represent the cost of construction only (i.e., are exclusive of cost of equipment), and cannot therefore be directly compared with the average cost per mile open given in the preceding table.

(ii.) *Adoption of Special Means of Locomotion.* The Railway Commissioners of Victoria have obtained from America two "M'Keen" motor cars, with the view of testing their suitability for light passenger traffic on country lines, and they are to be put into operation very shortly. The Railway Commissioner of South Australia has given orders for the construction of a truck to be run on one rail. The experiment is to be made with a view to the solution of the problem of how to get produce to stations in the Pinnaroo district. The propelling force of the engine to be used will be petrol. If the test prove a success, the Government intends to construct small lines as feeders to the Pinnaroo railway and thus convey produce over the sand hills cheaply.

(iii.) *Capital Cost of Construction and Equipment, Total and per Mile Open, 1902 to 1911.* The increase in the total capital cost of construction and equipment of Government railways in each State and in the Commonwealth on the 30th June in each year from 1902 to 1911 inclusive is shewn in the following table:—

**GOVERNMENT RAILWAYS.—CAPITAL COST OF CONSTRUCTION AND EQUIPMENT, 1902 to 1911.**

Year.	N.S.W.	Victoria.	Q'land.	Sth. Aust.	N. Ter.	West. Aust.	Tas.	C'wealth.
TOTAL COST (£,000 OMITTED).								
1902	£ 40,565	£ 40,614	£ 20,119	£ 12,826	£ 1,155	£ 7,410	£ 3,841 <sup>1</sup>	£ 126,530
1903	41,655	40,974	20,302	12,952	1,169	8,142	3,884 <sup>1</sup>	129,078
1904	42,289	41,217	20,888	13,068	1,175	8,956	3,901	131,494
1905	43,063	41,279	21,611	13,138	1,173	9,808	3,921	133,093

## THE GOVERNMENT RAILWAY SYSTEMS OF THE COMMONWEALTH.

EXPLANATION OF MAP.—The continuous lines denote the existing railway lines of Australia, the heavier lines being the main routes.

Of the two transcontinental lines, viz., one joining the railways of South and Western Australia—and thus connecting continuously by railway Queensland, New South Wales, Victoria, South Australia, and Western Australia, and one connecting Oodnadatta in South Australia with Pine Creek in the Northern Territory, the former has been commenced, and is shewn — — — — —; while the latter, the construction of which is to be deferred for the present, is shewn — — — — —.

## LIST OF PRINCIPAL SECTIONS OF RAILWAYS.

Miles.		Miles.		Miles.	
Townsville to Winton' ...	368	Sydney to Bourke ...	508	Adelaide to Broken Hill ...	334

Newcastle to Inverell ...	405	" Swan Hill ...	215		

GRAPHS SHEWING THE FINANCIAL POSITION OF THE GOVERNMENT RAILWAYS OF THE COMMONWEALTH, 1855 TO 1911.

(See pages—total capital cost, 708; mileage open, 693; gross revenue, 713; working expenses 717; net revenue, 720; average cost per mile, 708; percentage of working expenses to gross revenue, 710; percentage of net revenue to capital cost, 720.)

EXPLANATION OF GRAPHS.—In the above diagram the base of each small square represents throughout one year. The significance of the vertical height of each square varies, however, according to the nature of the several curves.

In the heavy curve denoting the total capital cost of the railways of the Commonwealth, the vertical side of each square denotes £2,000,000.

In the three lighter curves, representing (i.) gross revenue, (ii.) working expenses, and (iii.) net revenue, the vertical height of each single square denotes £400,000. For the curve of average cost per mile open, the vertical side of the small square denotes £2,000. The mileage open is shown by a dotted curve the vertical side of each square representing 200 miles.

For the percentages a new zero is taken at "20" on the scale for the general diagram. The vertical height of each square represents 2 percent. in the curve shewing the percentage of working expenses to gross revenue. For the curve of percentage of net revenue to capital cost, the vertical height of each square represents only 0.2, that is to say, the vertical scale is ten times that of the preceding curve.

GRAPHS SHEWING PERCENTAGES OF WORKING EXPENSES TO GROSS REVENUE FOR  
GOVERNMENT RAILWAYS FOR STATES AND COMMONWEALTH, 1855 to 1911.

(See page 717.)

EXPLANATION OF GRAPHS.—In the above diagram the base of each small square represents throughout one year. The vertical side of a small square denotes throughout 10 per cent., the heavy zero lines being different for each State and the Commonwealth, with, however, one exception, viz., that the zero line for South and Western Australia is identical.

The curve for Victoria commences in 1859; that for Queensland in 1865; that for Tasmania in 1872; and that for Western Australia in 1879, these being the years in which the Government Railway systems of the several States were inaugurated.

GRAPHS SHEWING PERCENTAGES OF NET REVENUE TO CAPITAL COST TO GOVERNMENT RAILWAYS FOR STATES AND COMMONWEALTH, 1855 to 1911.

(See page 720.)

EXPLANATION OF GRAPHS.—In the above diagram the base of each small square represents throughout one year. The vertical side of a small square denotes 1 per cent., the thick zero lines, however, for each State and for the Commonwealth being different. This was necessary to avoid confusion of the curves.

Where the curve for any State falls below that State's zero line, loss is indicated, the working expenses having exceeded the gross revenue.

The curve for Victoria commences in 1859; that for Queensland in 1865; that for Tasmania in 1872; and that for Western Australia in 1879, these being the years in which the Government railway systems of the several States were inaugurated.

The following statement shews the total loan expenditure to the 30th June, 1911 :—

\* For the calendar years 1902 and 1903 respectively.

† Estimated for a period of twelve months ended the 30th June, 1904.

**11. Coaching, Goods, and Miscellaneous Receipts, 1902 to 1911.**—The gross revenue is composed of (a) receipts from coaching traffic, including the carriage of mails, horses, parcels, etc., by passenger trains; (b) receipts from the carriage of goods and slave stock, and (c) rents and miscellaneous items. The subjoined table shews the gross revenue, during the years 1902 to 1911 inclusive, classified according to the three chief sources of receipts. The total of the three items specified has already been given in the preceding paragraph hereof.

1910-11	71	83	24	54	3	74	10	319

\* Tasmanian figures for 1902 and 1903 are for years ended the 31st December. † For twelve months ended 30th June, 1904. ‡ Including Northern Territory up to year 1909-10. § Included in South Australia up to year 1909-10.

(i.) *New South Wales.* In New South Wales, owing, no doubt, to the reductions made in rates and fares in recent years, and to the general prosperity of the State, the traffic receipts continue to shew substantial development, the total earnings for the past year having amounted to £6,042,205, an increase over the previous year of £556,490. The increases occurred in all branches of passenger and goods traffic, except in live stock, hay, straw, and chaff, which shewed a decrease of £14,228.

(ii.) *Victoria.* In Victoria each sub-division of traffic shewed an increase over the figures for the previous year and was also higher than in any previous year. The most notable increases were in goods and minerals (£235,297, or 10.59 per cent.), and passengers (£190,935, or 10.20 per cent.).

(iii.) *Queensland.* In Queensland the increase in 1910-11 in gross earnings, £391,962 above 1909-10, is to some extent accounted for by the opening of new lines, but it is stated that the expansion of traffic upon the older established lines has been enormous. The chief increases in earnings were in respect of passengers (£95,554, or 14.85 per cent.), general merchandise (£126,735, or 16.82 per cent.), live stock (£34,491, or 17.16 per cent.), and wool (£17,116, or 7.98 per cent.).

(iv.) *South Australia.* In this State the increase for the year 1910-11 in coaching traffic receipts amounted to £59,497; there were also considerable increases in respect of minerals (£50,510); wheat (£10,451); and live stock (£10,736).

(v.) *Western Australia.* In this State the earnings in 1910-11 shewed an increase, as compared with 1909-10. What may be regarded as personal traffic rendered an additional amount of £87,683, giving evidence of increased activity in business and pleasure, while goods and live stock returned £111,874 more than the previous year. Miscellaneous receipts were £3,634 higher than in the previous year.

(vi.) *Tasmania.* The gross revenue in 1910-11 shews a decrease of £6148 as compared with the previous year. Passenger traffic receipts afford an increase of £4798. The decrease in goods traffic receipts, £9941, is due to the abnormal quantity of coal carried in 1909-10 owing to the coal strike in New South Wales, the shortage in crops, and the closing down of the smelters at Zeehan.

The following table shews for the year 1910-11 the percentage which each class of receipts bears to the total gross revenue:—

**PERCENTAGE OF REVENUES FROM VARIOUS SOURCES ON TOTAL REVENUE,  
1910-11.**

Particulars.	N.S.W.	Vic.	Qld.	S.A.	N. Ter.	W.A.	Tas.	C'wlth.

\* The returns include the undermentioned mixed-train mileage, which has been divided between passenger-train miles and goods-train miles in the proportion of one-third and two-thirds respectively in the case of the following States:—

New South Wales ...	1,582,982	Western Australia ...	951,315
Victoria ...	2,642,624	Tasmania ...	696,653
South Australia ...	740,533		

† Excluding the returns of the Port Augusta to Oodnadatta line for the six months ended 30th June, 1911.

The above table shews that, in the several States, there is a considerable difference in the amount of the average receipts per passenger journey. Disregarding the Northern Territory, this amount ranges from 6.03 pence in Victoria, where there is a large metropolitan suburban traffic, to 20.56 pence in Tasmania. The difference in these amounts cannot be accounted for by the amounts of rates charged, which are fairly uniform in the several States (see paragraph 20 hereof), but is largely due to the different traffic conditions which prevail on various lines in the Commonwealth (see paragraph 17 hereof). In order to adequately analyse these figures it would be necessary to have particulars regarding the number of passenger-miles, *i.e.*, the total distance travelled by passengers, in each State, which particulars are not generally available (see paragraph 18 hereof).

The preponderance in the number of passenger journeys in Victoria is accounted for, to a great extent, by the large number of metropolitan suburban passengers in that State. Of the total number of passengers carried in Victoria, 86,476,657 were metropolitan suburban passengers, *i.e.*, were carried between stations within twenty miles of Melbourne, while in New South Wales the number of suburban passengers (between stations within thirty-four miles of Sydney and Newcastle, and including Richmond and Braxton lines) was 54,103,048. In Sydney a large proportion of the metropolitan suburban traffic is carried on the electric and steam tramways, the number of passenger journeys during the year 1910-11 being 217,523,548. In Melbourne, on the other hand, the number of passengers carried on the cable tramways systems during the same period was 76,295,825; and on the St. Kilda-Brighton, Prahran-Malvern and the North Melbourne tramways was 7,344,817, making a total of 83,640,642, which is not as great as the number carried on the metropolitan suburban railways in Melbourne. This matter is referred to hereinafter. (See paragraph 17.)

**13. Goods and Live-Stock Traffic Receipts per Mile Worked, per Goods-train Mile, and per Ton Carried.**—The following table shews the gross receipts from goods and live-stock traffic per mile worked, per goods-train mile, and per ton carried for the year ended the 30th June, 1911:—

**GOVERNMENT RAILWAYS.—GOODS AND LIVE STOCK TRAFFIC RECEIPTS PER MILE WORKED, PER GOODS-TRAIN MILE, AND PER TON CARRIED, 1911.**

State.	Number of Goods-Train Miles. *	Goods and Live-Stock Tonnage.	Goods and Live-Stock Traffic Receipts.			
			Gross.	Per Average Mile Worked.	Per Goods-Train Mile.	Per Ton Carried.
	No. ,000.	Tons ,000.	£ ,000.	£	d.	d.
New South Wales ...	8,913	10,355	3,586	966	96.54	83.10
Victoria ...	6,192	4,968	2,458	701	95.26	118.74
Queensland ...	6,709	3,295	1,772	467	63.39	129.05
South Australia† ...	3,451	2,731	1,322	691	91.96	116.19
Northern Territory...	20	2	5	37	63.19	631.77
Western Australia ...	2,549	2,489	1,174	514	110.57	113.22
Tasmania...	660	364	124	260	45.24	82.06
Commonwealth ...	28,494	24,204	10,441	659	87.95	103.53

\* The returns include the undermentioned mixed-train mileage, which has been divided between passenger-train miles and goods-train miles in the proportion of one-third and two-thirds respectively in the case of the following States:—

New South Wales ...	1,582,982	Western Australia ...	951,315
Victoria ...	2,642,628	Tasmania ...	696,653
South Australia ...	740,533		

† Excluding the returns of the Port Augusta to Oodnadatta line for the six months ended 30th June, 1911.

From the above table it may be seen that, disregarding the Northern Territory, the average amount of freight paid per ton ranges from 82.06 pence in Tasmania to 129.05

pence in Queensland. The remarks made in the preceding paragraph (12) hereof with regard to the average fare paid per passenger and to passenger-miles, apply equally to the average amount of freight paid per ton and to ton-miles.

**14. Working Expenses.**—In order to make an adequate comparison of the working expenses of the Government railways in the several States, allowance should be made for the variation of gauges and of physical and traffic conditions, not only on the railways of the different States, but also on different portions of the same system. Where traffic is light, the percentage of working expenses is naturally greater than where traffic is heavy; and this is especially true in Australia, where ton-mile rates are in many cases based on a tapering principle—i.e., a lower rate per ton-mile is charged upon merchandise from remote interior districts—and where on many of the lines there is but little back-loading. Further, though efforts have been made from time to time to obtain a uniform system of accounts in the several States, the annual reports of the Commissioners do not yet comprise fully comparable data of railway expenditure.

The following table shews the total annual expenditure, comprising expenses on (a) maintenance of way, works, and buildings; (b) locomotive power—repairs and renewals; (c) carriages and wagons—repairs and renewals; (d) traffic expenses; (e) compensation; and (f) general and miscellaneous charges; and also the percentage of these expenditures upon the corresponding gross revenues in each State from 1902 to 1911:—

**GOVERNMENT RAILWAYS.—TOTAL WORKING EXPENSES AND PERCENTAGES OF WORKING EXPENSES UPON GROSS REVENUES, 1902 to 1911.**

Year.	N.S.W.	Victoria.*	Q'land.	S. Aust.	N. Ter.	W. Aust.	Tas.	C'wealth.

1910-11	61.09	63.30	57.25	61.39½	113.67	65.95	77.55	61.94

\* Including amounts paid for pensions and gratuities, and also special expenditures and charges for belated repairs and in reduction of deficiencies as follows:—For the year 1901-2, £115,244; for 1902-3, £196,137; for 1903-4, £220,092; for 1904-5, £351,141; for 1905-6, £217,179; for 1906-7, £276,630; and for 1907-8, £150,122. † For the calendar years 1902 and 1903 respectively. ‡ Estimated for a period of twelve months ended the 30th June, 1904. § Excluding the returns of the Port Augusta to Oodnadatta line for the six months ended 30th June, 1911. || Including the cost of the replacement of rolling stock destroyed by fire (£22,649 in 1909-10 and £12,657 in 1910-11).

(i.) *New South Wales.* In this State the total working expenses in 1910-11 amounted to £3,691,061, an increase of £414,652 over the previous year. This increase was mainly owing to the large additional traffic, heavy repairs, and increased rates of pay to the staff.

(ii.) *Victoria.* In Victoria the increase in working expenses, £281,629, was mainly due to the greater traffic, to reductions in working hours and advances in salaries and wages of the staff, to a large contribution to the accident and fire insurance fund, to the

payment of £50,000 on renewals of rails, sleepers, and ballast, and extra expenditure in connection with additions and improvements.

(iii.) *Queensland.* In this State the working expenses increased from £1,414,271 (60.48 per cent.) in 1909-10 to £1,563,119 (57.25 per cent.) in 1910-11. The reduction in the percentage of working expenses is one not expected to continue on account of the increase of salaries and wages, and of the expenditure which is being incurred by the additional mileage in course of construction.

(iv.) *South Australia.* In South Australia (proper) the working expenses in 1910-11 shewed an increase of £186,449, viz., from £1,069,140 to £1,255,589. This was to a large extent due to augmented wages and extraordinary expenditure.

(v.) *Western Australia.* The cause of the increased expenditure (£119,569) in 1910-11 as compared with 1909-10, is mainly due to increased train mileage.

(vi.) *Tasmania.* The working expenses in 1910-11 were £215,530 as compared with £211,677 in the previous year, being an increase of £3853.

From the preceding table it may also be seen that during the last four financial year there have been for the whole Commonwealth increases in the percentages of working expenses to gross earnings. This increase is partly due to the fact that in four of the States, consequent on the favourable results of previous years, reductions were made in passenger fares and freight rates.

(vii.) *Working Expenses per Average Mile Worked and per Train Mile Run, 1902 to 1911.* The following table shews the working expenses per average mile worked and per train mile run in each State for the years 1902 to 1911 inclusive:—

**GOVERNMENT RAILWAYS.—WORKING EXPENSES PER AVERAGE MILE WORKED, AND PER TRAIN MILE RUN, 1902 to 1911.**

† See footnote † to preceding table. ‡ Partly estimated.

17. **Traffic Conditions.**—Reference has already been made to the difference in the traffic conditions on many of the lines of the Commonwealth (see paragraphs 12, 13, and 14 hereof). These conditions differ not only in the several States, but also on different lines in the same State, and this is true with regard to both passenger and goods traffic. By far the greater part of the population of Australia is confined to a fringe of country near the coast, more especially in the eastern and southern districts. A large proportion of the railway traffic between the chief centres of population is therefore carried over lines in the neighbourhood of the coast, and is thus, in some cases, open to sea-borne competition. On most of the lines extending into the more remote interior districts traffic is light; the density of population diminishes rapidly as the coastal regions are left behind; there is a corresponding diminution in the volume of traffic, while, in comparison with other more settled countries, there is but little back-loading.

As an indication of the different traffic conditions prevailing in the several States, the following table is given shewing the numbers of passenger journeys and the tons of goods carried (a) per 100 of the mean population; and (b) per average mile worked of each State during the financial year 1910-11:—

PASSENGER JOURNEYS AND TONNAGE OF GOODS AND LIVE STOCK, 1910-11.

Particulars.		N.S.W.	Vic.	Q'land.	S.A.*	N.T.	W.A.	Tas.	C'wlth
(a) PER 100 OF MEAN POPULATION.									
Passenger journeys ...	No.	3,706	7,207	2,469	4,050	67	5,357	868	4,515
Goods and live stock ...	Tons	630	382	550	666	62	900	188	539
(b) PER AVERAGE MILE OF LINE WORKED.									
Passenger journeys ...	No.	16,407	26,761	3,897	8,679	15	6,487	3,520	12,795
Goods and live stock ...	Tons	2,789	1,417	863	1,426	14	1,089	761	1,528

\* Exclusive of the returns of the Port Augusta to Oodnadatta line for the six months ended 30th June, 1911.

Particulars of the actual numbers of passengers and tons of goods and live stock carried have already been given (see paragraph 5 hereof).

(i.) *Metropolitan and Country Passenger Traffic.* A further indication of the difference in passenger traffic conditions might be obtained from a comparison of the volume of metropolitan, suburban, and country traffic in each State. Particulars are, however, available only for the States of New South Wales and Victoria. The subjoined table shews the number of metropolitan and country passengers carried in each of the States mentioned and the revenue derived therefrom during the year 1910-11:—

## METROPOLITAN, SUBURBAN, AND COUNTRY PASSENGER TRAFFIC, 1910-11.

Particulars.	Number of Passenger Journeys.			Revenue.		
	Metropolitan.	Country.	Total.	Metropolitan.	Country.	Total.
N.S.W. ...	*54,103,048	6,816,580	60,919,628	*£626,166	£1,448,694	£2,074,860
Vic. ...	†86,476,657	7,319,149	93,795,806	†846,619	1,217,097	2,063,716

\* Within 34 miles of Sydney and Newcastle, and including Richmond and Braxton lines.

† Within 20 miles of Melbourne.

From this table it may be seen that the number of passenger-journeys in country districts in Victoria is only slightly greater than the corresponding number in New South Wales, while the number of metropolitan passenger-journeys in Victoria is far greater than in New South Wales, although in the latter State both Sydney and Newcastle are included. In Sydney a larger proportion of the suburban traffic is carried by the tramway systems than in Melbourne.

(ii.) *Goods Traffic.* The differing conditions of the traffic in each State might also, to some extent, be analysed by an examination of the tonnage of various classes of commodities carried and of the revenue derived therefrom. Comparative particulars regarding the quantities of some of the leading classes of commodities carried on the Government railways are available for all the States except Tasmania; information regarding the revenue derived from each class of commodity is not, however, generally available in a comparable form. In this connection it may be stated that the following resolution was passed at the Interstate Conference of Railway Commissioners held in Melbourne in May 1909 (see paragraph 1, page 688 hereof):—"That in view of the variations in the character and classification of the goods traffic in the different States the sub-divisions of tonnage carried and revenue in each State shall be those which best suit local conditions."

The following table shews the number of tons of various representative commodities carried, and the percentage of each class on the total tonnage carried during the financial year 1910-11:—

## CLASSIFICATION OF COMMODITIES CARRIED, 1910-11.

State or Territory.*	Minerals.	Fire-wood.	Grain and Flour.	Hay, Straw, and Chaff.	Wool.	Live Stock.	All other Com-mo-dities.	Total.
TONS CARRIED.

\* Tasmanian figures are not available. † Exclusive of 300,769 tons of coal, on which only shunting and haulage are collected. ‡ Coal, stone, gravel, and sand. § Flour only. ¶ Sugar cane. \*\* Up journey. \*\*\* Exclusive of the returns of the Port Augusta to Oodnadatta line for the six months ended 30th June, 1911. †† Included in all other commodities. ‡‡ Grain only. §§ Including Bran, Sharps and Pollard. || Excluding free tonnage.

18. **Passenger-Mileage and Ton-Mileage.**—The useful comparisons and analyses which can be made with regard to the operations of the Government railways in the Commonwealth are to some extent limited, by the absence in the annual reports of the Railway Departments of some of the States, of particulars relating to "passenger-mileage" (i.e., the total distance travelled by passengers) and "ton-mileage" (i.e., the total distance for which goods and live stock are carried), and it is not possible to furnish totals for the Commonwealth in respect of these important particulars. The matter of passenger-mileage and ton-mileage has already been referred to (see page 689). The following resolution in regard thereto was passed at the Interstate Conference of Railway Commissioners held in Melbourne in May, 1909:—"That, in view of the differing conditions in each State, and of the expense involved, it is undesirable to include passenger-mile and ton-mile statistics in the annual reports." The general question as to the desirability of collecting and publishing "passenger-mile" and "ton-mile" statistics by railway companies in the United Kingdom has been made the subject of inquiry by a departmental committee appointed by the President of the Board of Trade. The report of this committee has been published in England as a parliamentary paper.<sup>1</sup>

Information regarding "passenger-miles" and "ton-miles" is available either wholly, or in part, for four of the States only, viz., New South Wales, South Australia, Western Australia, and Tasmania, but is not available at all for either Victoria or Queensland. Of the four States which give particulars of the nature indicated, New South Wales is the only one which furnishes the information in a classified form according to class of passengers and nature of commodities carried. The other three States supply particulars for all classes of passengers and goods together respectively. The mere record of the total number of passenger-miles and ton-miles for all classes of passengers and for all classes of goods respectively, although of considerable value, would appear to be insufficient to enable the whole field of railway operations to be adequately analysed, or the extent to which efficiency has been secured and improvements in working have been effected to be accurately gauged.

(i.) *Passenger-Miles.* Particulars for the whole of the Commonwealth period regarding total "passenger-miles" are available for one State only, namely, Tasmania. For the same period in New South Wales, but exclusive of 1911, particulars are only available for suburban and extended-suburban traffic—i.e., including all stations within 22 miles of Newcastle, within 34 miles of Sydney, and including Richmond and Brantxon. For South Australia particulars are available for each year since 1904. No particulars are available for other States. In the tables given below the average number of passengers carried per "train," etc., is obtained by dividing the number of "passenger-miles" by the number of "passenger-train-miles." The averages given for New South Wales are naturally smaller than those for the other States, since the figures for New South Wales refer to suburban and extended-suburban traffic only.

---

1. See Cd. 4697. This report is also published at length in "The Statist," London, 19th June, 1909, Vol. LXII., No. 1634. In this report it is stated that ton-mile statistics have been used in India for forty years and for a longer period in America. They are now compiled by the railways of nearly all foreign countries; in England, however, they are not generally compiled. Among the more important statistics deduced from ton-miles and passenger-miles the following are mentioned:—(a) The average Train Load of goods and of passengers, obtained by dividing the ton-mileage and the passenger-mileage respectively by the train-mileage. (b) The average Wagon Load and Carriage Load, obtained by dividing the ton-mileage by the wagon-mileage and the passenger-mileage by the carriage-mileage. (c) Ton-miles per Engine Hour. (d) The average Length of Haul for goods and passengers respectively, obtained by dividing the ton-mileage and the passenger-mileage by the tonnage and the total number of passengers conveyed. (e) The average Receipts per Ton per Mile and per Passenger per Mile, obtained by dividing the goods receipts by the ton-mileage and the passenger receipts by the passenger-mileage. (f) The average Density of Traffic per mile of road or per mile of track, obtained by dividing the ton-mileage and passenger-mileage by the length of road or by the length of track.

## SUMMARY OF "PASSENGER MILES," 1902 to 1911.

Year ended the 30th June.	Passenger Train Mileage.	Number of Passenger Journeys.	Total Passenger Miles.	Amount Received from Passengers.	Average Number of Passengers carried per Train.	Average Mileage per Passenger-journey.	Average Receipt per Passenger-mile.	Average Fare per Passenger-journey.
	Miles.	No. (,000 omitted).	No. (,000 omitted).	£	No.	Miles.	d.	d.

\* Not available for suburban lines. † Suburban lines only for years 1902-1910; includes distances within 34 miles of Sydney and including Richmond and Branxton. ‡ Partly estimated. § Compiled on new basis, so as to be uniform with other States. || Exclusive of the returns of the Port Augusta to Oodnadatta line for the six months ended 30th June, 1911.

(ii.) *Ton-Miles.* Particulars regarding total "ton-miles" are available for each year since 1901 for the States of New South Wales, South Australia, and Tasmania; corresponding particulars for Western Australia are available for the last five years only. The average freight-paying load carried per "train" is obtained by dividing the total "ton-miles" in the fourth column by the goods-train mileage in the second column. In New South Wales the tonnage carried is exclusive of coal, on which only shunting and haulage charges are collected, and the amount of earnings specified excludes terminals. In South Australia and Tasmania they include terminals, while in Western Australia they exclude wharfage and jetty dues, but include all other charges.

## SUMMARY OF "TON-MILES," 1902 to 1911.

Year ended the 30th June.	Goods Train Mileage.	Total Tons Carried.	Total "Ton-Miles."	Earnings.	Average Freight-paying Load carried per "Train."	Average Miles per Ton.	Earnings per "Ton-mile."

Exclusive of jetty returns. † Exclusive of live stock. ‡ To 31st December for years 1902 and 1903; to 30th June for succeeding years. § Partly estimated. ¶ Exclusive of the returns of the Port Augusta to Oodnadatta line for the six months ended 30th June, 1911.

(iii.) *Density of Traffic, 1910-11.* The average densities of passenger traffic and of goods traffic, obtained by dividing the passenger-mileage and the ton-mileage respectively by the average length of line worked during year, are shewn in the following table for the year 1910-11 for those States for which particulars are available :—

#### DENSITY OF TRAFFIC PER AVERAGE MILE OF LINE WORKED, 1910-11.

Density of—	N.S.W.	S. Aust. (proper).†	W. Aust.	Tasmania.
Passenger traffic ... ..	244,066	101,940	*	72,716
Goods „ ... ..	218,408	171,374	79,938	34,271

\* Not available. † Exclusive of the returns of the Port Augusta to Oodnadatta line for the six months ended 30th June, 1911.

(iv.) *Classification of Commodity Ton Mileage, 1911.* New South Wales is the only State for which particulars, specifying the ton-mileage and the earnings per ton-mile for various classes of commodities, are available. It is hoped that in future years it will be possible to give corresponding particulars for the other States.

The subjoined statement gives particulars for the last financial year. Miscellaneous traffic consists of timber, bark, firewood, bricks, drain-pipes, coal, road-metal in eight-ton lots, agricultural and vegetable seeds in five-ton lots, and traffic of a similar nature. A and B classes consist of lime, vegetables, tobacco leaf, caustic soda and potash, cement, copper ingots, fat and tallow, water and mining plant in six-ton lots, leather in one and three-ton lots, agricultural implements in five-ton lots, and other traffic of a similar nature. The table does not include 300,769 tons of coal on which only shunting and haulage charges were collected, nor does it include £50,558 for haulage, tonnage dues, etc.

#### NEW SOUTH WALES.—SUMMARY OF TON-MILEAGE FOR THE YEAR ENDED 30th JUNE, 1911.

Particulars.	Total Tons Carried.	Total Miles.	Average Miles per Ton.	Earnings (exclusive of Ter- minals).	Earnings per Ton- Mile.	Percentage on Total Tonnage.

**19. Interest Returned on Capital Expenditure.**—It may be seen from the figures given in the table in paragraph 16 hereof, that the Government railways in Australia have, on the whole, made a substantial profit during each year since the inception of the Commonwealth, but unfortunately the community does not get the full benefit of this profit, owing to the high rates of interest at which money for railways was borrowed in the early days. Though the average rate during the year ended the 30th June, 1911, was 4.44 per cent., an average does not accurately express the position. At an early period the need of constructing railways for the sole purpose of opening up undeveloped districts was recognised, and lines were built which could not possibly pay for some years to come; as these railways always preceded population the money had to be raised at an almost speculative rate of interest, frequently amounting to 6 per cent., while the more recent loans have been effected at less than 4 per cent., hence the railways have been handicapped by a burdensome interest. At the present time also, spur lines are constructed, which can scarcely be expected to instantly return revenue in excess of the expenditure, and so must, for a time at any rate, be a charge on the more developed branches of the railway systems, and tend to increase the ratio of working costs to revenue. It may be noted, however, that although the loans made for expenditure on railway construction and equipment very largely increase the amount of the public debt of the Commonwealth, forming, in fact, more than half the total debt, the money borrowed has not been sunk in undertakings which give no return, but has been expended on works which are increasingly reproductive, yielding in most cases a direct return on the capital expended, and representing a greater value than their original cost. In Europe the national debts of various countries have been incurred principally through the expenses of prolonged wars and the money has gone beyond recovery, but in Australia the expenditure is represented to a large extent by public works which pay a direct return, which is, on the whole, greater than the amount of interest due upon capital invested. In addition to the purely commercial aspect of the figures relating to the revenue and expenditure of the Commonwealth railways, it is of great importance that the object with which many of the lines were constructed should be kept clearly in view; the anticipated advantage in building these lines has been the ultimate settlement of the country rather than the direct returns from the railways themselves, and the policy of the State Governments has been to use the railway systems of the Commonwealth for the development of the country's resources, to the maximum extent consistent with the direct payment by the customers of the railways of the cost of working and interest charges. Further, the money has been spent in developing immense agricultural, pastoral, and mineral resources, which add to the wealth of the community, while the benefits conferred in providing a cheap and convenient mode of transit, and in generally furthering the trade and the best interests of the Commonwealth, are incalculable.

(i.) *Profit or Loss after Payment of Working Expenses and Interest, 1902 to 1911.* The net revenue of the Government railways in each State after payment of working expenses is shewn in paragraph 16 hereof. The following table shews the amount of interest payable on expenditure from loans on the construction and equipment of the railways in each State, the actual profit or loss after deducting working expenses and interest and all other charges from the gross revenue, and the percentage of such profit or loss on the total capital cost of construction and equipment.

In this table the positive sign indicates a profit, the negative a loss. It may be seen that for the Commonwealth as a whole there has been a net profit on the Government railways during each of the last six years of the period dealt with.

The same satisfactory state of affairs applies also to the States of New South Wales, South Australia proper, and Western Australia, and with the exception of the year 1907-8, to Victoria. Tasmania and the Northern Territory both shew a loss for each year of the period 1902 to 1911, as also does Queensland, with the exception of the years 1906-7 and 1910-11.

\* The positive sign indicates a profit, the negative a loss. † Allowing for payment of special expenditure and charges (see paragraph 14 above).

**20. Passenger Fares and Goods Rates.**—Considerable reductions have been made in recent years in passenger fares and in freight rates. These fares and rates are not only changed from time to time to suit the convenience and varying necessities of the railways, but, as traffic is developed and revenue increased, they are also in many cases reduced to an extent consistent with the direct payment by the customers of the railways of the cost of working and interest charges. In New South Wales, a reduction to the amount of £130,000 per annum in rates and fares took effect from the 28th May, 1911. In the same State the accumulated reductions in rates and fares made since October, 1906, amount to £467,000 per annum, and the rebates from the carriage of fodder and starving stock during the three years prior to June, 1909, to about £140,000, while in Victoria the accumulated reduction in rates and fares since February, 1906, represents an annual value of £368,000.

(i.) *Passenger Fares.* On the Australian Government railways two classes are provided for passenger traffic. The fares charged may be classified as follows:—(a) Fares between specified stations (including suburban fares). (b) Fares computed according to mileage rates. (c) Return, season, and excursion fares. (d) Special fares for working-

men, school pupils, and others. Fares in class (a) are issued at rates lower than the ordinary mileage rates. Fares in class (b) are charged between stations not included in class (a). Generally it may be said that mileage-rate fares are computed on the basis of about twopence per mile for first-class and about  $1\frac{1}{2}$  pence per mile for second-class single tickets. In Tasmania, however, the fares are computed on the general basis of  $1\frac{1}{2}$  pence per mile first-class, one penny per mile second-class, with a terminal charge of one penny, with one-sixth added to total. In New South Wales, Victoria, and Queensland the mileage rates are based upon a tapering principle, i.e., a lower charge per mile is made for a long journey than for a short journey. With the exception of New South Wales first-class return fares are generally about  $1\frac{1}{2}$  to  $1\frac{3}{4}$  times the single fare, and the second-class are about 30 to 45 per cent. lower than the first-class fares. In Tasmania, however, return fares (except excursions) are double the single fares. Excursion tickets are issued for the return journey at from about single fare to about  $1\frac{1}{2}$  times the single fare. Season tickets and special fares are issued at reduced rates. In New South Wales passenger fares were reduced on the 28th May, 1911, to the amount of £70,000 per annum, and the issue of return tickets abolished except between stations in the Sydney and Newcastle suburban areas, and between the States and in the tourist districts. In Western Australia special summer recreation fares have been granted by which women and children can travel distances up to 800 miles and return for fares of 25s. and 12s. 6d. respectively. These concessions enable them to escape the heat of the goldfields and spend the summer at one of the coastal towns.

The following table shows the passenger fares for different distances charged in each State, between stations for which specific fares are not fixed :—

\* Ordinary mileage rates are not published; the amounts given are therefore computed from fares between specified stations. † Exclusive of Tasmania for hauls of 300 miles and upwards. ‡ Inclusive of suburban rates for 34 miles.

(ii.) *Parcel Rates.* In all the States parcels may be transmitted by passenger train upon payment of the prescribed rates, which are based upon weight and distance carried. The rates vary slightly in the different States. In New South Wales they range from threepence for a parcel not exceeding 3 lbs. for any distance up to 75 miles, to eleven shillings and threepence for a parcel weighing from 84 lbs. to 112 lbs., for a distance of 500 miles. In Victoria the charge for a parcel weighing from 84 lbs. to 112 lbs. for a distance over 450 miles is twelve shillings. The rate in Queensland for a parcel weighing from 85 to 112 lbs. for 500 miles is twelve shillings and sixpence; in South Australia eleven shillings and threepence; in Western Australia thirteen shillings; and in Tasmania for a distance of 250 miles the rate is five shillings and sixpence.

(iii.) *Goods Rates.* The rates charged for the conveyance of goods and merchandise may generally be divided into three classes, viz.:—(a) Mileage rates, (b) District or "development" rates, and (c) Commodity rates. In each of the States there is a number—ranging from 9 in Victoria to 15 in Tasmania—of different classes of freight. Most of the mileage rates are based upon a tapering principle, *i.e.*, a lower charge per ton-mile is made for a long haul than for a short haul; but for some classes of freight there is a fixed rate per mile irrespective of distance. District rates are charged between specified stations and are somewhat lower than the mileage rates excepting in Western Australia, where the terms refer to a special toll of 1s. per ton on goods travelling over certain "district" railways as part payment of the extra cost of working lines laid for developmental purposes through sparsely settled districts. In addition to the ordinary classification of freights under class (a), certain commodities, such as wool, grain, agricultural produce, and crude ores, are given special rates, lower than the mileage rates, under class (c).

Space will not permit of anything like a complete analysis of goods rates in the several States being here given. As an indication of the range and amount of such rates the subjoined tables are given. The first table shews for each State the truck-load rates charged for hauls of different distances in respect of agricultural produce not otherwise specified; these special rates are here given for this class of produce, since it is generally forwarded in truck-loads.

#### RATES FOR AGRICULTURAL PRODUCE IN TRUCK-LOADS ON GOVERNMENT RAILWAYS, 1911.

\* Exclusive of Tasmania for hauls of 300 miles and upwards. † Less 20 per cent. for artificial manures.

The classification of commodities varies in the several States. Generally the highest-class freight includes expensive, bulky, or fragile articles, while the lowest-class comprises many ordinary articles of merchandise, such as are particularly identified or connected with the primary industries of each State.

In New South Wales, for example, the highest-class freight comprises such articles as boots, drapery, drugs, groceries, furniture, liquors, crockery and glassware, cutlery, ironmongery, confectionery, and carpets. In the same State the lowest-class freight includes agricultural produce, ores, manures, coal, coke, shale, firewood, limestone, stone, slates, bricks, screenings, rabbit-proof netting, timber in logs, and posts and rails.

21. **Numbers and Description of Rolling Stock, 1911.**—The following table shews, so far as possible in a comparable manner, the number of locomotives and of various classes of rolling stock in use on the Government railways in each State. The figures

given are subject to certain limitations, inasmuch as the classification adopted, as well as the various types of rolling stock in use, are not identical in the several States. In Victoria and Queensland, for example, the brake-vans classified under the heading of coaching vehicles are used indiscriminately for coaching and goods traffic. Again, it is believed that in New South Wales the number of passenger vehicles is really greater than that shewn, certain of the other classes of vehicles being used for composite purposes.

\* Not including two passenger motors. † Transferred from the South Australian Government to the Commonwealth Government on 1st January, 1911.

22. **Number of Railway Employees, 1901 to 1911.**—The following table shews the number of employees in the Railway Departments of each State in the year 1901 and in each year from 1907 to 1911 inclusive, classified according to (a) salaried staff, and (b) wages staff.

From these figures it will be seen that there has been a steady increase in the number of persons engaged in the Railway Departments of the several States. During the period from 1901 to 1911, the total for the Commonwealth has increased from 42,321 to 68,003—an increase of 25,682, or about 60.68 per cent. The largest numerical increase for the individual States was that of New South Wales, viz., 11,068.

Separate returns for salaried and wages staff are not available for South Australia; the number of salaried staff is therefore included in the wages staff.

† Not available.

**(c) Graphical Representation of Government Railway Development.**

1. **General.**—Its railways are so important a factor in the development of Australia that it has been deemed desirable to graphically represent the main facts of their progress from their beginning, viz., from 1855 onwards. To this end the graphs shewn on pages 711 to 712 have been prepared. The distribution of the railways is shewn on the map on page 709.

2. **Capital Cost and Mileage Open** (page 711).—The graph shews that the ratio between these elements was, naturally enough, very variable from 1855 to 1870,

consequent upon progressive decrease in cost of construction. It then became subject to a more regular change, implying reduction of average cost.

3. **Cost per Mile Open.**—The fluctuations in cost per mile open are clearly indicated by the graph on page 711. In 1855 the cost per mile open was no less than £28,430; by 1858 it had fallen to £17,752, when it rose again to a maximum of £35,958 in 1862. It then diminished rapidly till 1883—when it reached £10,496 per mile—then slowly till 1887, when it amounted to £10,017 per mile. Again rising, this rate attained to £10,537 in 1892, since when it has, on the whole, been declining, reaching its lowest value, £9497, in 1910.

4. **Gross Revenue.**—This graph (page 711) exhibits considerable irregularities, the most striking of which are the maxima at 1892 and 1902. The fall commencing in 1892 was in consequence partly of the commercial crisis and partly of the then droughty conditions of several of the States, while that of 1902-3 was due to drought. In the latter case the recovery was very rapid.

5. **Working Expenses and Net Revenue.**—The characteristics of these graphs (page 711), are similar to those of "Gross Revenue," and the same remarks apply. It may be noted, however, that the working expenses are increasing at a much slower rate than gross and net revenue.

6. **Percentage of Working Expenses to Gross Revenue.**—This is shewn for each State and for the Commonwealth on page 712, and for the Commonwealth only, on a larger scale, on page 711. The curve shews considerable fluctuations, but points also to the fact that, although a slight rise occurred in 1908, there was from 1903 to 1907 a rapid, and therefore very satisfactory, decline in the percentage of working expenses to gross revenue; since 1907, however, there has been a steady increase. The fluctuations of this percentage, for the individual States, call for no special comment.

7. **Percentage of Net Revenue on Capital Cost.**—For the Commonwealth this graph is shewn on a large scale on page 711 and on page 712 both for Commonwealth and States. After exhibiting somewhat remarkable oscillations in the earlier years, and less marked ones between 1885 and 1900, and also a rapid fall to 1903, the curve from that year shews a well marked increase until the year 1908, a slight fall occurring in the last year. Maxima were reached in 1865, 1877, 1881, 1907, and 1911—viz., 3.44, 3.71, 4.14, 4.36 and 4.44 per cent.

For the individual States the results are in general very satisfactory, the increases in the percentages recently being greatest for Queensland, Western Australia, Victoria, and South Australia, less marked for New South Wales, while a decrease has occurred in Tasmania, owing principally to decrease in coal traffic and a shortage in grain and potato crops.

The remarkable maximum for Western Australia in 1896 is consequent upon the large use made of the western railways at the time of the development of the Western Australian goldfields.

8. **General Indications of Graphs.**—Reviewing the cost of railways, as a whole, it may be noted that for the periods indicated the average cost per mile open on the entire total runs as follows:—

**GOVERNMENT RAILWAYS.—AVERAGE COST PER MILE OF LINE OPEN,  
COMMONWEALTH, 1855 to 1911.**

Period ... ..	1855-1872.	1873-1882.	1883-1892.	1893-1902.	1903-1911.
	£	£	£	£	£
Cost per mile ... ..	24,561	13,700	10,286	10,010	9,641

For the period 1903 to 1907 the fall in percentage of working expenses on gross revenue was from 68.80 to 57.18 per cent., but it then gradually increased to 61.94 per cent. in 1911. The rise of the percentage of net revenue on total capital cost for the years 1903 to 1907 was from 2.53 to 4.36 per cent. For the years 1908 to 1910 it fell off, but rose to 4.44 per cent. in 1911.

While the sinister influence of the drought of 1902 is strikingly shewn in the curves (a) by the fall in the gross and net revenue in 1902-3, (b) by the fall in the percentage of net revenue on capital cost, and (c) by the increase of working expenses on gross revenue, the rapidity of recovery is even more striking, and goes to indicate the great elasticity of the economic condition of the Commonwealth. Still more remarkable is the fact that a group of railways, necessarily constructed largely in accordance with a policy of widespread development of Australia's resources rather than as mere commercial enterprises, and costing so large a sum as £152,855,231 for construction and equipment up to the 30th June, 1911, should, nevertheless, yield so large a revenue, bringing in for the year 1910-11 a return, as already pointed out, of no less than 4.44 per cent.

#### (D.)—Private Railways.

1. **Total Mileage Open, 1911.**—As has been stated in a previous part of this Section (see A. 3) a number of private railway lines have from time to time been constructed in the Commonwealth. By far the greater proportion of such lines, however, has been laid down for the purpose of hauling timber, coal, or other minerals, and is not generally used for the conveyance of passengers or for public traffic; in many cases the lines are often practically unballasted and are easily removable, running through bush and forest country in connection with the timber and sugar-milling industries, and for conveying firewood for mining purposes. Many of these lines may perhaps be said to be rather of the nature of tramways than of railways. Private railways referred to herein include (a) lines open to the public for general passenger and goods traffic; and (b) branch lines from Government railways and other lines which are used for special purposes and which are of a permanent description. Other lines are referred to in the part of this Section dealing with Tramways (see § 3, *Tramways*).

The following table gives particulars of private railways in the Commonwealth open for traffic up to the 30th June, 1911. A classification of these lines according to their gauge has already been given (see A. 6).

**MILEAGE OF PRIVATE RAILWAYS OPEN, 1911.**

5. ZEEHAN TRAM CO.'S LINE— Emu Bay railway to British Queen	3 6	3½	Minerals and occasionally passengers
6. DECK RIVER RAILWAY— Leesville to Parish of Williams†	2 0	2½	Minerals and occasionally passengers
7. MAGNET SILVER MINING CO.'S LINES— Magnet Junction to Magnet	3 6	8	Chiefly timber
	2 0	10	Minerals and passengers
Total for State...	3 6 2 0	180½ 24½	

\* Terminal points not fixed in May, 1908, as extensions still under construction. † Also branch lines as follows:—Electric railway, 1½ miles long, to reduction works, 2 ft. gauge; surface railways, horse, ½ mile long, 2 ft. gauge. ‡ Extensions under construction.

3. **New South Wales.**—In this State the mileage of private railways open to the public for general traffic at the end of 1910 was 141, and of lines used for special purposes, 125 miles. Most of these lines were constructed primarily for the purpose of conveying coal from the mines to the Government railway systems. Particulars for the year 1910 of the operations of lines open for general traffic are given, so far as available, in the table on page 741.

(i.) *Private Railways Open for General Traffic.* The most important of the lines open for general traffic are as follows:—(a) *The Deniliquin-Moama Line.* In 1874 permission was granted by the New South Wales Government to a private company to construct a line forty-five miles long from Deniliquin, in the Riverina district, to Moama, connecting with the Victorian Railway system at the Murray Bridge, near Echuca. The line was opened in 1876, the land required being granted by the Government. (b) *The Cockburn-Broken Hill Line.* This line is owned by the Silverton Tramway Company. It was opened in 1888, and connects Broken Hill with the South Australian railway system, having a total length of 36 miles. (c) *East Greta Line.* This line, belonging to the East Greta Coal Mining Company, runs from East Greta Junction, on the Northern line of the Government railways, to Stanford Merthyr, a distance of 8 miles. (d) *The New Redhead Coal Company's Railway.* The lines owned by this company branch from the Northern line of the Government railways, and run from Adamstown to Burwood Extended Colliery, and from Adamstown to Dudley Colliery, a total distance of 8 miles. The lines are worked by the Railway Department, coal waggons being supplied in part by the coal companies using the line. The colliery companies using the line pay a way-leave for right to run their coal over the line, and the Railway Commissioners allow the New Redhead Company a proportion of the revenue from the passenger and goods traffic. (e) *The Seaham Coal Company's Railways.* This line runs from Cockle Creek to West Wallsend and Seaham Collieries, and has a total length of 6 miles. (f) *Hexham-Minni Railway.* This line branches from the Northern line of the Government railways and has a length of 6 miles. Further particulars are not available. (g) *The Commonwealth Oil Corporation's Railway.* This line runs from Newnes Junction on the Great Western line of the Government railways to the company's refinery, a distance of 32 miles. The Shay geared type of locomotive is in use on this line. (h) *The Warwick Farm Line* is a short line, three-quarters of a mile in length, connecting the Government line near Liverpool with the Warwick Farm Racecourse. Government rolling-stock is used.

In addition to the lines referred to above, legislative sanction was obtained in 1890 for the construction of a private line from the flux quarries at Tarrawingee to the Broken Hill line, a distance of 40 miles. The line was purchased by the Government in 1901, and is operated by the Silverton Tramway Company under lease from the Chief Commissioner, who pays the working expenses and receives the ordinary earnings and one-half the net receipts on special and holiday traffic.

4. **Victoria.**—In Victoria the only private railway open for general traffic is the Kerang-Koondrook tramway, opened in 1889. The cost of construction of this line to the end of September, 1911, was £38,972, paid out of a loan advanced by the Victorian Government. The total length is  $14\frac{1}{4}$  miles. The line is at present controlled by the Kerang Shire Council, but proposals have recently been made for its transfer to the Railway Department.

A line running from Elsternwick to Oakleigh, a distance of about 5 miles, has been constructed by a private company, but is not in use.

5. **Queensland.**—In this State private railways open for general traffic may be grouped under two heads:—(i.) Lines constructed primarily for mining purposes, and (ii.) Shire tramways.

(i.) *Mining Railways.* (a) *The Chillagoe Railway.* The most important of these is the Chillagoe railway, constructed under the Mareeba to Chillagoe Railway Act 1897, and opened in 1901. This line runs from Mareeba, on the Cairns railway, to Musgana, a distance of 103 miles. (b) *The Stannary Hills Line.* This line branches from the

Chillagoe railway at Boonmoo and runs to Rocky Bluff, *via* Stannary Hills, a total distance of 21 miles. The gradients on this line, which has a gauge of 2 feet, range as high as 1 in 27, while the radius of some of the curves is as low as  $1\frac{1}{2}$  chains. An additional length of 8 miles has been surveyed with a view to extending the line. (c) *The Mount Garnet Railway*. This line also branches from the Chillagoe railway at Lappa Junction, and runs for a distance of 33 miles, as far as Mount Garnet.

(ii.) *Shire Tramways*. Under Part XV. of the Local Authorities Act of 1902 provision is made whereby not less than one-third of the ratepayers in any district may petition the local authority to apply to the Governor for the constitution of a tramway area. The Governor may define the area and may also approve of the plans and specifications of the proposed tramway. The amount which may be advanced by the Government for the construction or purchase of a tramway may not exceed a sum equal to £3000 for every mile of its length. As regards repayment of loans, no sum need be paid during the first three years, but after the expiration of that period the principal and interest must be repaid by half-yearly instalments on the basis provided for by the "Local Works Loans Act, 1880 to 1899." For the purpose of raising the money to pay these instalments the local authority may levy a rate upon all ratable property within the tramway area. The money required for the tramway may be raised by the local authorities by the issue of debentures.

6. **South Australia.**—In this State there are no private railways open for general traffic. The only private line is that owned by the Broken Hill Proprietary Company, running from Iron Knob to the seaboard near the head of Spencer's Gulf, a distance of 58 miles. The line is utilised for the carriage of flux for use in connection with the smelting works at Port Pirie.

7. **Western Australia.**—Owing to the Government's past difficulty in constructing lines urgently required for the development of the country, private enterprise was encouraged to undertake the work of construction on the land-grant principle, and two trunk lines were thus constructed. The greater part of the private lines now open, however, have been constructed in connection with the timber industry. (i.) *The Midland Railway*. This line is 277 miles in length, and runs from the Midland Junction, ten miles from Perth, to Walkaway, where it joins the Government line running to Geraldton. It was constructed under a concession of 12,000 acres of land per mile of line constructed, to be selected along the entire route of the railway. (ii.) *The Great Southern Railway*. This line, which was built by private enterprise under the land-grant system, is 242 miles in length, and was acquired by the Government by purchase on the 1st January, 1897. The total price paid, with all the interests of the private company and of the original concessionaire, was £1,100,000, which was divided by the Government for book-keeping purposes into £300,000 for the land and £800,000 for the railway. (iii.) *Millar's Karri and Jarrah Company's Lines*. These lines have mostly been built under special timber concessions and leases. There were, at the end of the year 1909, in all seven lines situated in various parts of the State extending into the bush, whence logs are brought to the mills. At the end of 1909 the total length of these lines was 245 miles. (iv.) *Other Lines*. There are also a number of other lines in various parts of the State used chiefly in connection with the timber industry. These are specified in the tabular statement on page 738.

8. **Tasmania.**—In this State there are three private lines open for general traffic. They are all situated in the western part of the island.

(i.) *The Emu Bay Railway Company*. The lines owned by this company run from Burnie to Waratah, from Guildford to Zeehan, and from Rayna to Dundas, and have a total length of 104 miles.

(ii.) *The Mount Lyell Mining and Railway Company*. The Mount Lyell railway runs from Regatta Point, Strahan, to Queenstown, and the North Mount Lyell line from Kelly Basin to Linda. The former line, 22 miles in length, was constructed in 1895-6, while the latter line, 30 miles long, was taken over from the North Mount Lyell Copper Company on the amalgamation of the two companies in 1903. The line from Kelly Basin to Linda is now run only intermittently.

(iii.) *The Magnet Silver Mining Company's Railway.* This line runs from Magnet Junction, near Waratah, on the Emu Bay Company's line to Magnet, a distance of 10 miles.

9. **Operations of Private Railways, 1910.**—The tabular statement given below shews particulars, so far as returns are available, for the year 1910 of all private railways open to the public for general traffic in the Commonwealth:—

### § 3. Tramways.

1. **General.**—Tramway systems are in operation in all the States of the Commonwealth, and in recent years considerable progress has been made in the adoption of electrical traction, the benefit of which is now enjoyed by a number of the principal towns of the Commonwealth.

There are also in many parts of Australia private tramway lines which are used for special purposes, usually in connection with the timber, mining, or milling industries. Though efforts have been made to collect particulars of these lines, the returns are generally too incomplete for publication.

(i.) *Total Mileage Open and Classification of Lines.* The following table shews the total mileage of tramway lines open for general passenger traffic in each State and in the Commonwealth at the end of the year 1910-11, classified (a) according to the motive power utilised and (b) according to the nature of the authority by which the lines are controlled:—

#### TRAMWAYS.—CLASSIFICATION OF MILEAGE OPEN FOR PASSENGER TRAFFIC, 1910-11.

2. **New South Wales.**—In this State the tramways, with but few comparatively unimportant exceptions, are the property of the Government, and are under the control of the Railway Commissioners.

(i.) *Government Tramways.* In Sydney and suburbs the Government tramways are divided into distinct systems. There were in June, 1911, seven such systems in operation within the metropolitan area, the most important being the city and suburban lines, 97 miles in length (168½ miles single track); the North Shore line, 16½ miles in length (26½ miles single track); and the Manly to The Spit line, 6½ miles in length. All of these systems are now operated by electricity. There are three systems on which the motive power used is steam, namely—(a) the line from Ashfield to Mortlake and Cabarita, 8½ miles long, (b) from Kogarah to Sans Souci, 5½ miles in length, and (c) from Arncliffe to Bexley, 2½ miles long. The line from Manly to Brookvale (3½

miles) has been converted from steam to electric traction (May 1911). There are also Government steam tramways in operation at Newcastle, Broken Hill, Parramatta, from East to West Maitland, and from Sutherland to Cronulla.

(a) *Sydney Tramways.* The first tramway constructed in Sydney ran from Bridge-street to Hay-street via Hunter-street. It was opened in September, 1879, and the motive power was steam. In the following few years these steam tramways were considerably extended. The electric system was not introduced into the city until the close of the year 1899, though it had at that time been in operation for some years in North Sydney. The tramways in the heart of the city, running along King-street to the suburb of Woollahra, as well as those in North Sydney, were originally worked by underground cables, and have since been converted into electric lines on the overhead trolley system. In December, 1899, the electric tramway, extending from the Circular Quay along George-street to the Redfern Station, and thence to the densely-populated district of Pyrmont, was opened for traffic. This tramway is a double track, and is  $3\frac{1}{4}$  miles in length. Single lines have been constructed along Castlereagh and Pitt streets, with the object of relieving the traffic along George-street. The whole of the steam tramways in Sydney and suburbs, with the exception of the Ashfield-Mortlake, the Kogarah-Sans Souci, and the Arncliffe-Bexley, have now been converted into electric lines, and provision for the extra power required for the electrification of the first two of these lines has been made at the central power station. Two new sub-stations have been erected, one at North Sydney and the other at Manly.

(b) *Other Tramway Systems.* In Newcastle the first section of the tramways, from Perkins-street to Plattsburg, was opened in 1887; the total length open on the 30th June, 1911, was  $24\frac{1}{2}$  miles. At Broken Hill and Parramatta the first sections of the tramways were opened in 1902. On the 30th June, 1911, the mileage open at Broken Hill amounted to 9, and at Parramatta to  $6\frac{1}{2}$  miles. The line from East to West Maitland,  $4\frac{1}{2}$  miles long, was opened in February, 1909. There are also three short lengths of tramways in New South Wales run by private companies. Further particulars are given below.

(c) *Particulars of all Government Tramways, 1902 to 1911.* The following table shows the total length, the capital cost, the gross revenue, working expenses, and net earnings, and the percentages of working expenses on gross revenue, and of net earnings on capital cost, for each financial year from 1901-2 to 1910-11 inclusive.

**NEW SOUTH WALES.—PARTICULARS OF WORKING OF GOVERNMENT TRAMWAYS  
1902 to 1911.**

Year ended the 30th June.	Total Length of Lines Open.	Capital Expended on Lines Open.	Gross Revenue.	Working Expenses.	Net Earnings.	Percentage of Working Expenses on Gross Revenue.	Percentage of Net Earnings on Capital Cost.
	Miles.	£	£	£	£	per cent.	per cent.
1902 ...	104	2,829,363	631,757	541,984	89,773	85.79	3.19

1907 ...	128 $\frac{1}{2}$	3,669,524	908,701	727,947	180,754	80.11	4.92
1908 ...	132 $\frac{1}{2}$	3,732,991	1,011,994	809,065	202,929	79.95	5.44
1909 ...	151 $\frac{1}{2}$	4,252,731	1,097,565	875,560	222,005	79.77	5.61
1910 ...	165 $\frac{1}{2}$	4,668,797*	1,185,568	983,587	201,981	82.96	4.33
1911 ...	190	5,121,586*	1,365,631	1,143,949	221,682	83.77	4.33

\* £47,455 of this sum has been paid from the Consolidated Revenue, and no interest is payable thereon.

The net result, after providing for all working expenses and £174,055 for interest on the capital invested, was a surplus of £47,627 in 1910-11, as compared with £45,879 in the preceding year. During the year 1910-11, 230,275,938 passengers were carried without any accident resulting in loss of life to any of the passengers.

(d) *Particulars of Different Systems of Government Tramways, 1910-11.* In the subjoined statement particulars are given of the working of the electric and steam tramways in Sydney, and of the other Government tramways at Parramatta, Sutherland, Newcastle, Maitland, and Broken Hill.

**NEW SOUTH WALES.—PARTICULARS OF THE WORKING OF THE VARIOUS  
GOVERNMENT TRAMWAYS, 1910-11.**

\* The positive sign indicates a profit, the negative a loss.

The total capital cost shewn in the preceding table was made up as follows:—

**CAPITAL COST OF NEW SOUTH WALES GOVERNMENT TRAMWAYS AS AT  
30th JUNE, 1911.**

Permanent Way.	Rolling Stock.	Power-house, Sub-stations, and Plant.	Machinery.	Workshops.	Furniture.	Total.
£2,950,466	£1,072,459	£893,783	£52,960	£149,526	£2,392	£5,121,586

The average cost per mile open was £15,550 for permanent way and £11,442 for all other charges, making a total of £26,992 per mile.

During the year 1910-11, eleven new extensions, amounting in all to a length of 24 $\frac{1}{4}$  miles, were opened for traffic. On the 30th June, 1911, one extension having a total length of 1 $\frac{1}{2}$  miles was under construction, and up to the same date ten additional extensions, amounting to about 11 $\frac{3}{4}$  miles, had been authorised for construction.

(e) *Sydney Electric Tramways.* The total route mileage of the city and suburban lines is 97 $\frac{1}{4}$ , of the North Shore line 16 $\frac{3}{4}$  miles, and of the Manly-The Spit line 6 $\frac{1}{2}$  miles, making the total length of the electric tramways in Sydney 120 $\frac{3}{4}$  miles. The current for the operation of these tramways is generated at the power-house at Ultimo, which has been erected at a total cost of £893,783, including the cost of the sub-stations and plant. The current generated at the power-house is partly continuous and partly alternating, and is used both for lighting and traction purposes. The standard voltage of the continuous current is 600; the alternating current is transmitted by means of high-tension cables to sub-stations, where it is converted to continuous current at the standard voltage. The total output of the power-house, for both lighting and traction purposes, during the year 1910-11, was 66,436,260 kilowatt-hours, of which the direct-current supply was 14,156,554, and the alternating current 52,279,706 kilowatt-hours. The output for traction purposes only was 61,163,079 kilowatt-hours. The following table gives particulars of the working of the electric tramways for each financial year from 1902 to 1911 inclusive:—

**NEW SOUTH WALES.—PARTICULARS OF SYDNEY ELECTRIC TRAMWAYS,

1910 ... ..	1,092,582	888,415	204,167	939	6,065
1911 ... ..	1,256,672	1,033,229	223,443	985	6,667

\* 103½ route miles. † Including £50,500 written off for depreciation, etc.

The net revenue on capital invested was 4.87 per cent. in 1910-11 as against 4.82 per cent. in the preceding year.

(ii.) *Private Tramways.* There are two private tramway lines in New South Wales open for general traffic. (a) There is an electric tramway running from Rockdale to Brighton-le-Sands, a distance of one and a-quarter miles. This line was originally opened as a steam tramway in 1885, but was subsequently converted into electric. The total cost to the end of 1910 was £13,000. During that year the number of tram-miles run was 29,000. (b) A private steam tramway passes through the township of Parramatta. Commencing at the park gates, it runs as far as the Duck River, a distance of 3¼ miles, where it connects with the Parramatta River steamers, conveying passengers and goods to and from Sydney. This line was opened for traffic in 1883. In 1910 the number of tram miles run was about 18,700, and the number of passengers conveyed about 81,494.

Particulars regarding private tramways used for special purposes are not available.

(iii.) *Sydney Harbour Ferries.* As the ferry services on the waters of Port Jackson are mainly subsidiary to the suburban railway and tramway systems, it has been thought advisable to include them here rather than under shipping. Returns for the year 1910 were received from four companies, and shew that these companies had 62 boats in

commission which were licensed to carry a total of 37,367 passengers, or an average of 602 per boat and per trip. The total number of passengers carried during the year is stated as 26,028,347, an average of over 71,300 per day. In addition to the ordinary passenger traffic there are two lines providing for vehicular traffic, which afford the only rapid means of transit between the city and the northern suburbs. The four companies employed during the year a total of 758 persons. The capital expenditure to the end of 1910 amounted to £131,108, the gross revenue during 1910 to £242,219, and the expenditure to £158,305, thus giving a net revenue of £83,914. The services are well managed, and the boats constructed during recent years—double-ended screwboats—are claimed to be superior in size and equipment to boats employed on similar service in any part of the world.

3. **Victoria.**—In Melbourne there is a number of tramway systems carried on under the control of various authorities, the most important being the cable system worked by the Melbourne Tramway and Omnibus Company. There are also four lines of electric tramways, one running from St. Kilda to Brighton, a distance of five and one-eighth miles, belonging to the Government, and under the control of the Railway Commissioners; one from Flemington Bridge to the Saltwater River and Keilor Road, a distance of seven and a-quarter miles, run by a private company; one from Prahran to Malvern, four and a-half miles in length; and one from Chapel Street, Prahran, to Malvern *via* Dandenong Road, two and a-quarter miles in length, both controlled by a joint municipal trust. There is also a private cable tramway, two and a-quarter miles in length, between Clifton Hill and Preston. Two tramways worked by horses—one, seven miles in length, running from Sandringham to Cheltenham *via* Beaumaris, the other, one and a-half miles long, from Brunswick to Coburg, are privately owned, while three similar services are worked by the Melbourne Tramway and Omnibus Company, *viz.*, Victoria Bridge to Kew, Richmond Bridge to Hawthorn, and the Zoological Gardens lines. There is a short steam tramway, about one mile long, at Sorrento. There are also systems of electric tramways at Ballarat and Bendigo, constructed and run by a private company. A number of tramways has been constructed for special purposes in various parts of the State under the provisions of the Tramway Act 1890. The work of constructing electric tramways at Geelong was commenced in January, 1911, and completed in January 1912, when trial runs were made. This system has a length of five and a-quarter miles of single track.

(i.) *Melbourne Cable Tramways.* The Melbourne Omnibus Company began its services by the initiation of omnibus services in 1869, and in 1878 the company changed its name to the Melbourne Tramway and Omnibus Company, with a view to the introduction of a tramway system in the city and suburbs of Melbourne. It was not, however, until the year 1883, when the Melbourne Tramway and Omnibus Company's Act was passed, that the necessary authority was given by Parliament for that purpose. Under this Act the company was empowered to construct tramways in the streets of Melbourne and suburbs, with the consent of the municipalities interested, who had the option of electing to construct the tramways themselves. All the municipalities decided to exercise the option conferred upon them, and, according to the provisions of the Act, a Tramways Trust was formed. This body, which is composed of seven members from the Melbourne City Council and one member each from the councils of eleven of the surrounding municipalities, received full power to construct tramways, and to borrow money for that purpose, secured on the municipal properties and revenues and on the tramways themselves. The Trust raised sufficient funds to pay for the construction of the tramway-tracks and the engine-houses from which the cables are worked. It was required by the original Act, as amended in 1892, to complete the tramways by the end of the year 1893, and to grant a thirty-two years' lease of the tramways to the company, dating from the 1st July, 1884—when the liability for interest on the loans commenced—and expiring on the 1st July, 1916. The company is required to find sufficient

capital to build the rolling-stock and to equip the lines and engine-houses with all necessary working requisites. The company pays to the Trust annually the interest due upon the loans raised, and also a sufficient sum as a sinking or redemption fund, to repay by its accumulation the principal of the loans raised by the Trust, and at the expiration of the lease must hand back the lines in good working order to the Trust. The expenses of the Trust were paid out of the loan up to the end of the year 1903, but since that date have been paid by the company to an amount not exceeding £1000 per annum, the municipalities being liable for the remainder. The total amount the Trust was empowered to buy was £1,650,000, which has been raised in London by means of debentures bearing interest at  $4\frac{1}{2}$  per cent. The premiums received amounted to £55,794, making a total of £1,705,794. This amount had been expended by the end of the year 1893, when further loan expenditure ceased. The first line—that to Richmond—was opened to traffic in November, 1885, and the work being rapidly pushed on, the others were opened at short intervals, and the whole system was completed in 1891. The complete system consists of forty-three and a-half miles of double-track cable lines, using constantly over ninety miles of wire rope, and four and a-half miles of double-track horse lines.

(a) *Particulars of Working, 1902 to 1911.* The subjoined statement shews the tram mileage, the number of passengers carried, and the revenue and expenditure for each year ended the 30th June from 1902 to 1911 inclusive:—

**MELBOURNE CABLE TRAMWAYS.—PARTICULARS OF WORKING, 1902 to 1911.**

\* Including amounts on account of omnibus lines.

It may be noted that the "Wages" item in the above table does not represent all that is paid in wages by the company, as a considerable portion is merged in the item "Repairs and maintenance." The figures under working expenses classed as "Other" comprise feed, fuel, licenses, rates, insurance, law costs, stationery and office expenses, salaries of staff, and directors' and auditors' fees.

(ii.) *Electric Tramways.* There are in Melbourne four electric tramway systems, namely (a) the St. Kilda-Brighton line, (b) the North Melbourne tramways, (c) the Prahran-Malvern line, and (d) the Chapel Street-Malvern line *via* Dandenong Road.

(a) *The St. Kilda-Brighton Line.* Under the St. Kilda and Brighton Electric Street Railways Act 1904 the Board of Land and Works was authorised to construct a tramway from St. Kilda to Brighton. The amount of interest payable on the cost of the land acquired for the tramway was guaranteed by the municipalities of St. Kilda and Brighton for a period of twenty years, and authority was given by the Act to the municipalities to levy either a general or special rate not exceeding one shilling in the pound for the purpose of paying the guarantee. The profit, if any, during the first twenty years is to be set off in reduction of the guarantee. The line was opened for traffic in May,

1906, and the extension to Brighton Beach was opened in the following year. A proposal has been made to extend the line along the foreshore as far as Mordialloc. The capital cost to the 30th June, 1911, exclusive of rolling-stock, was £43,325, and of rolling-stock was £15,682, making a total of £59,007. The subjoined statement gives particulars of the working of this line for the financial years ended the 30th June, 1907 to 1911:—

#### ST. KILDA-BRIGHTON ELECTRIC STREET TRAMWAY, 1907 to 1911.

Year ended 30th June.	Mileage Open.	Capital Cost.	Car Mileage.	Passengers Carried.	Gross Revenue.	Working Expenses.	Interest.	Net Profit or Loss.†
		£			£	£	£	£
1907	5.13	52,939	303,777	1,030,242	9,590	17,392*	1,980	—9,782
1908	5.13	57,523	335,007	1,146,484	10,374	14,299†	2,140	—6,065
1909	5.13	58,054	338,214	1,265,492	10,941	9,075	2,038	—172
1910	5.13	58,612	340,254	1,361,925	11,885	9,860	2,092	—67
1911	5.13	59,007	346,849	1,410,907	12,852	9,819	2,107	+ 926

\* Including an amount of £9941 for replacement of rolling stock, car-shed and equipment destroyed by fire. † Including an amount of £3311 for replacement of rolling-stock, etc., caused by fire. ‡ Profit is indicated by +, Loss by —.

The average fare paid per passenger was 2.19 pence in 1910-11 as against 2.08 pence in 1909-10. The gross revenue in 1910-11 was 8.89 pence per passenger car mile and £2505 per mile of track open. In the same year the percentage of working expenses on gross revenue was 76.4 as against 82.96 in the preceding year.

(b) *The North Melbourne Tramways*, extending through the northern suburbs to the Saltwater River and to Keilor Road, were constructed by a private company, and were opened for traffic towards the end of the year 1906.

(c) *The Prahran-Malvern Tramway*. This line has been constructed under the control of a trust, which consists of five members appointed by the cities of Prahran and Malvern. The total track mileage (including double track 4 miles) is 8½ miles, the total capital cost being £131,894. The current is supplied by the Melbourne Electric Supply Company Limited at a price varying according to the consumption of current and the price of fuel. Any surplus revenue, after providing for operating expenses, interest, sinking fund, and renewal reserve, is to be paid to the municipalities of Prahran and Malvern in proportion to the car mileage run in their respective districts. The lines were opened for traffic on 31st May, 1910. During the year ended 30th September, 1911, the current used for traction purposes was 698,848 kilowatt-hours, and the number of tram miles run was approximately 468,724, the number of passengers carried 3,805,843, the gross revenue £26,314, and the working expenses (excluding interest and renewals reserve) £16,518. The number of cars in use was 20, and the number of persons employed 95. A tramway 2¼ miles in length, and connecting the southern portions of Prahran and Malvern, which will be controlled by the Prahran-Malvern Tramway Trust, has been constructed and was opened for traffic early in 1912.

(d) *The Ballarat and Bendigo Electric Tramways* are under the control of a private company, and run along the main streets and to and from the outlying suburbs of the two cities. The total length of lines open for traffic is 22 miles.

(e) *Particulars of Working of all Electric Tramways, 1904 to 1911*. The following table gives particulars of the working of all electric tramways in Victoria for each year from 1904 to 1911 inclusive:—

## VICTORIA.—PARTICULARS OF WORKING OF ELECTRIC TRAMWAYS, 1904 to 1911.

Year.	Mileage Open for Traffic.	Total Cost of Construction and Equipment.	Current Generated for Traction Purposes at Central Stations.	Tram Miles Run.	Number of Passengers Carried.	Gross Revenue.	Working Expenses.	Number of Cars in Use.	Number of Employees.

\* Incomplete. † Not available. ‡ Exclusive of Prahran-Malvern Tramway, which was opened for traffic on 31st May, 1910. § Exclusive of North Melbourne Tramway.

(iii.) *Private Tramways for Special Purposes.* There are in Victoria a number of tramways used for special purposes, chiefly in connection with the timber, mining, and milling industries. These lines have been constructed either under authority of the Department of Public Works, pursuant to Section 36 of the Tramway Act 1890, or under leases or licenses issued by the Department of Lands and Survey, pursuant to Sections 144 and 145 of the Land Act 1901. Particulars of these lines are too incomplete for publication.

4. *Queensland.*—In this State there is a system of electric tramways running through the streets of the city and suburbs of Brisbane and controlled by a private company which has its head office in London. The total length of the Brisbane system was thirty four and one-third miles at the end of the year 1911. There is also a number of tramways, having a total length of about 640 miles, run in connection with sugar mills. Particulars of Shire tramways have been given in the part of this section dealing with private railways (see pp. 740 and 741).

(i.) *Brisbane Electric Tramways.* These tramways are run on the overhead trolley system, the voltage of the line current being 550. The total cost of construction and equipment to the end of the year 1909 was approximately £1,250,000. The following table gives particulars of these tramways for each calendar year from 1902 to 1911 inclusive:—

## QUEENSLAND.—BRISBANE ELECTRIC TRAMWAYS, PARTICULARS OF WORKING, 1902 to 1911.

Year.	Mileage Open for Traffic.	Current Generated.	Tram Miles Run.	Number of Passengers Carried.	Gross Revenue.	Working Expenses.	No. of Cars in Use.	Number of Persons Employed

\* Not available.

(ii.) *Sugar-Mill Tramways.* There is a number of tramways in various parts of Queensland used in connection with the sugar-milling industry, chiefly for the purpose of hauling cane to the mills. Some of these lines are of a permanent nature, running through sugar-cane plantations, while others are portable lines running to various farms.

5. **South Australia.**—Up to the year 1906 there was a number of horse tramways in the principal streets of Adelaide and suburbs run by various private companies. Power to acquire part of these lines, with a view to their electrification, was given to the Adelaide Corporation by the Municipal Tramways Trust Act 1906. In accordance with the provisions of the Act, a Trust consisting of eight members, of whom two were nominated by the Governor, two elected by the City Corporation, and two each by the Suburban Corporations and the District Councils, was formed in 1907, and a length of forty-nine route miles of horse traction tramways was purchased from the private companies at a cost of £283,357. On the 9th March, 1909, the electric car system was inaugurated on the Kensington route. At the end of July, 1911, a length of 39 route miles had been electrified and opened for traffic; the corresponding length of track opened being 71½ miles. The power-house is located at Port Adelaide, nine miles from the city. It is equipped with three 1500-kilowatt turbo-alternators generating current at 11,000 volts, which are stepped down and passed through rotary converters to direct current at 600 volts. The cost of construction and equipment on the 31st July, 1911, was £1,174,432. At the end of the financial year 1910-11 seventeen miles of track were under construction. The following table gives particulars of the tramways for the year ended 31st July, 1911.

**SOUTH AUSTRALIA.—ADELAIDE ELECTRIC TRAMWAYS.—PARTICULARS OF WORKING, 1910-11.**

\* Inclusive of price of current.

There are also in South Australia nineteen and three-quarter miles of Government horse tramways in country districts, worked in connection with the railway system, and six and one-quarter miles of private tramways used for passenger service. The subjoined statement gives various particulars of these lines:—

**SOUTH AUSTRALIA.—PARTICULARS OF HORSE TRAMWAYS, 1910-11.**

<b>PRIVATE TRAMWAYS.</b>			
Port Adelaide and Alberton	2½	5 3	Passengers.
Glenelg and Brighton	4	4 8½	" "

6. **Western Australia.**—In this State there are a number of horse tramways, amounting in all to a length of twenty-nine and one quarter miles, which are the property of the Government. Of these the most important is the line between Roeburne and Cossack, constructed on a 2 ft. gauge and under the control of the Colonial Secretary's Department. The length of this line is fourteen and three quarter miles. The remaining fourteen and a-half miles belonging to the Government are made up of eleven short lengths varying from eight chains to four and a-half miles, worked in connection with the jetties at various ports for the purpose of providing the necessary communication between such jetties and the goods sheds or warehouses. Most of these short lines are leased at annual rentals, and are under the supervision of the Harbour Master. Their maintenance and improvement is in the hands of the Public Works Department. In addition to these Government lines there are electric tramway systems at Perth and Kalgoorlie carried on by private companies, and at Fremantle, under municipal control.

(i.) *Government Tramways.* Particulars as to the working of the Government horse-tramways or as to the rents received therefrom are not generally available. The following statement, however, shows particulars of the working of the Roeburne-Cossack line for the financial year ended the 30th June, 1911:—

**WESTERN AUSTRALIAN GOVERNMENT TRAMWAYS.—PARTICULARS OF THE  
ROEBURNE-COSSACK LINE, 1910-11.**

Mileage Open.	Cost of Construction and Equipment.	Gross Earnings.	Working Expenses.	Interest.	Loss.
14 $\frac{3}{4}$ .	£42,422	£3,293	£1,594	*	*

\* Not available.

(ii.) *Electric Tramways.* There are now five towns in Western Australia which enjoy the benefits of electric tramway systems, namely, Perth, Fremantle, Kalgoorlie, Boulder City, and Leonora.

(a) *The Perth Electric Tramways* were opened for traffic by a private company in 1899, and the system has since been extended to many of the outlying suburbs. On the 31st December, 1910, there were 22 $\frac{1}{2}$  miles of line open, the total cost of construction and equipment to that date being £476,772.

(b) *The Kalgoorlie and Boulder City Tramways* are also run by a private company, the first line being opened in 1902. At the beginning of 1904 legislative authority was given for the construction of lines in Boulder City and suburbs, and in November, 1904, the last section of the Boulder system was completed. At the end of the year 1910 the total mileage of the whole system—in Kalgoorlie and Boulder City—amounted to 19 miles, the total cost of construction and equipment being approximately £449,106.

(c) *The Fremantle Tramways* were opened in November, 1905, under the control of the municipality. On the 31st August, 1911, there were 8 $\frac{3}{4}$  miles of line open for traffic, the cost of construction and equipment at that date being £102,479.

(d) *The Leonora-Gwalia Tramway*, three miles in length, formerly a steam tramway, was opened for traffic by electrification on 5th October, 1908.

(e) *Particulars of Working of all Electric Tramways, 1901 to 1910.* The subjoined table shews, so far as returns are available, particulars of the working of all electric tramway systems in the State for each year from 1901 to 1910 inclusive:—

## WESTERN AUSTRALIA.—PARTICULARS OF ELECTRIC TRAMWAYS, 1901 to 1910.

Year.	Mileage Open for Traffic.†	Total Cost of Construc- tion and Equip- ment.	Current Generated.	Tram Miles Run.	Number of Passengers Carried.	Gross Revenue.	Working Expenses.	No. of Cars in Use.	No. of Persons Em- ployed.

\* Exclusive of Kalgoorlie tramways, for which returns are not available. † Exclusive of Perth tramways. § Not available. ‡ Including returns for the Fremantle tramways for a period of ten months ended the 31st August, 1906, at which date the municipal financial year ends. † For the years 1907 to 1910 inclusive, miles of route are given; for previous years the figures represent miles of single track. \*\* Exclusive of Leonora Tramway.

7. *Tasmania.*—In Hobart there is a system of electric tramways, amounting in all to a length of nine miles, owned by a private company. Under the authority of the Launceston Tramway Act of 1906 the Launceston City Council entered into an agreement with a private company for the construction of a system of electric tramways in the city and suburbs of Launceston. The agreement provided that the company was to run the tramways for a period of twenty-five years, when the Council could purchase the lines and stock at cost price; the electric power required was to be supplied by the Council. This agreement, however, lapsed, and the Council has constructed the tramways, and is running them as a municipal undertaking. The system, which was opened on the 16th August, 1911, has a route mileage of about 5½ miles. A short extension of half-a-mile to Trevallyn is under consideration. The total cost of construction and equipment to the end of October, 1911, amounted to £52,162. Ten cars with motors and four trailers were in use; and the number of employees totalled 42.

(i.) *Hobart Electric Tramways.* These tramways were opened for traffic in 1893, the total cost of construction and equipment to the 31st December, 1910, being £91,788. The following table gives particulars of the working of this system for each year from 1901 to 1910, inclusive:—

## TASMANIA.—PARTICULARS OF WORKING OF HOBART ELECTRIC TRAMWAYS, 1901 to 1910.

## SECTION XVIII.

## POSTS, TELEGRAPHS, AND TELEPHONES.

## § 1. Posts.

1. **The Commonwealth Postal Department.**—Under the provisions of section 51 of the Commonwealth Constitution Act the Commonwealth Parliament was empowered to make laws with respect to the control of the postal, telegraphic, and telephonic services in Australia, and by proclamation, made under section 69 of the same Act, the six separate State Post and Telegraph Departments were amalgamated and taken over by the Federal Executive on the 1st March, 1901. On the 1st December following, the Commonwealth Post and Telegraph Act 1901 came into operation, and the provisions of the various State Acts referring to the postal and telegraphic services thereby ceased to apply; it was, however, specially provided by the Act of 1901 that until such provisions should be revoked by the Governor-General, all regulations in force and all rates and charges levied under any State Act should continue in force and be applied in the same manner as if such State Act were not affected by the Commonwealth Act. The administration of the Act of 1901 was placed in the hands of a Postmaster-General, a responsible Minister with Cabinet rank, and of a Secretary having chief control of the Department throughout the Commonwealth under the Postmaster-General, whilst a principal officer in each State was provided for under the style of Deputy Postmaster-General. The rates and charges levied in each State for the transmission of letters, telegrams, and postal articles at the date of Federation remained in force until the Post and Telegraph Rates Act came into operation on the 1st November, 1902. This Act secured uniformity throughout the Commonwealth in the rates charged for the conveyance of newspapers by post, and for the transmission of telegrams, but did not alter the charges made in the individual States for the transmission of letters, cards, parcels, and packets. Uniform postage rates now exist in all the States under the Postal Rates Act of 1910, which came into operation by proclamation on the 1st May, 1911. (See paragraph 7 hereof.)

2. **Postal Services in Early Days.**—The first Australian office for postal purposes was established in Sydney by Lieutenant-Governor Paterson under a Government order dated the 25th April, 1809, and the site selected was in High-street (now known as George-street) at the residence of Mr. Isaac Nicholls. The duties of this office were extended in June, 1810, by Governor Macquarie, who established it as a regular post office, at which all parcels and letters, either colonial or foreign, were to be deposited previous to their distribution. After the establishment of this office in Sydney very little improvement in regard to postal matters took place for a number of years, and it was not until 1825 that an Act was passed by Sir Thomas Brisbane, with the advice of the Council, "to regulate the postage of letters in New South Wales." A proclamation under this Act was issued, fixing the rates of postage and the salaries and allowances of postmasters, and inviting tenders for the conveyance of mails between Sydney and Parramatta, Windsor and Liverpool; between Liverpool and Campbelltown; from Parramatta to Emu Plains, and thence to Bathurst. It was not, however, until 1828 that the provisions of the Act were put into full force and a system of general post-office communication was established. In that year rates of postage were fixed, depending

upon the distance and the difficulty of transmission. The lowest single inland rate was threepence and the highest one shilling, the postage on a letter increasing according to its weight, the minimum fee being charged on letters not exceeding a quarter of an ounce. The fee for newspapers was one penny. Letters from New South Wales to Van Diemen's Land were charged threepence each, while other letters by ship were charged fourpence each single rate, and sixpence for any weight in excess. The Act of 1825 was amended by the Postal Act of 1835, under which the Governor was authorised to establish a General Post Office in Sydney, and to make rules and regulations, and to fix rates for the conveyance of letters and parcels. In 1837 a post office was established in Melbourne, and a fortnightly service was established between that city and Sydney. In the same year stamps were introduced in the form of stamped covers or wrappers, which are said to have been the first postage stamps ever used. Post offices were established and a postal service was organised in the other States of the Commonwealth shortly after their settlement, and a tolerably good overland service by horses and mail coaches soon developed between the capitals and the up-country towns, villages, and stations as settlement progressed.

**3. Development of Postal Services.**—In 1841 the number of post offices open in Australia was 102, situated mainly in New South Wales and Tasmania. At the end of ten years 101 post offices were open in New South Wales, 44 in Victoria, 72 in South Australia, and 51 in Tasmania. From the year 1851 onwards a remarkable increase in the number of post offices in Australia took place, until, in 1891, the number open on the mainland and Tasmania totalled 4463, of which 1384 were situated in New South Wales, 1729 in Victoria, 307 in Queensland, 629 in South Australia, 86 in Western Australia, and 328 in Tasmania.

On the 31st December, 1910, the postal business had increased to such an extent that 5506 post offices were open for business, of which number 1911 were situated in New South Wales, 1655 in Victoria, 558 in Queensland, 648 in South Australia, 343 in Western Australia, and 391 in Tasmania.

**4. State, Interstate and Oversea Postages for whole Commonwealth, 1901 to 1910.**—In the following table the matter dealt with is divided into (i.) matter posted in the Commonwealth for delivery within the Commonwealth, (ii.) matter received from places outside the Commonwealth, (iii.) matter despatched to places outside the Commonwealth, and (iv.) total postal matter dealt with by the Commonwealth Postal Department 1901 to 1910, but excluding Interstate Excess.

6. **Postal Facilities, 1910.**—The subjoined statement shews the number of post and receiving offices, the area in square miles and the number of inhabitants to each post office (including receiving offices) in each State and in the Commonwealth at the end of the year 1910. It will be observed that the most sparsely populated States have the greatest number of offices in comparison with their population, but in order to judge the relative extension of postal facilities the area of country to each office must also be taken into account.

**SQUARE MILES OF TERRITORY AND NUMBER OF INHABITANTS TO EACH POST AND RECEIVING OFFICE, 1910.**

State.	N.S.W.	Vic.	Q'land.	S.A.	W.A.	Tas.	C'with.
Number of post and receiving offices...	2,437	2,420	1,380	738	430	429	7,834
Number of square miles of territory to each post office in State ...	127	36	486	1,225	2,270	61	380
Number of inhabitants to each office...	675	538	434	556	644	452	565
Number of inhabitants per 100 sq. miles	530	1,481	89	45	28	739	149

7. **Rates of Postage.**—Prior to the operation of the Postal Rates Act of 1910, the charges made for the postage of newspapers and parcels, and of interstate and foreign letters, were the same in all the States of the Commonwealth. The rates for the transmission of inland letters, however, were not uniform, the Post and Telegraph Act 1901 having specially provided that the rates and charges levied in any State should continue in force. The last-mentioned regulation, however, was repealed by the Postal Rates Act of 1910, which came into force by proclamation on 1st May, 1911.

The following rates on letters, newspapers, and certain other postal articles posted in the Commonwealth for delivery therein came into force on the 1st May, 1911, the date of proclamation of the operation of the Postal Rates Act of 1910 :—

**POSTAL RATES OF CERTAIN ARTICLES POSTED IN THE COMMONWEALTH FOR  
DELIVERY THEREIN ON AND AFTER 1st MAY, 1911.**

Postal Articles.	Rates of Postage.
LETTERS ... ..	1d. per $\frac{1}{2}$ ounce.
LETTER-CARDS ... ..	{ Single, 1d. each. Reply, 1d. each half.
POST CARDS ... ..	{ Single, 1d. each. Reply, 1d. each half.
PRINTED PAPERS AS PRESCRIBED ... ..	$\frac{1}{2}$ d. per 2 ounces or part of 2 ounces.
BOOKS PRINTED OUTSIDE AUSTRALIA ... ..	$\frac{1}{2}$ d. per 4 ounces or part of 4 ounces.
BOOKS PRINTED IN AUSTRALIA ... ..	$\frac{1}{2}$ d. per 8 ounces or part of 8 ounces.
MAGAZINES.—That is to say—	
(a) magazines, reviews, serials, and other similar publications printed and published in Aus- tralia in numbers at intervals not exceed- ing three months ... ..	$\frac{1}{2}$ d. per 8 ounces or part of 8 ounces.
(b) magazines, reviews, serials, and other similar publications (including newspapers) printed and published outside Australia in numbers at intervals not exceeding three months ... ..	$\frac{1}{2}$ d. per 4 ounces or part of 4 ounces.
HANSARD.—That is, reports of Parliamentary Debates printed and published by the authority of the Commonwealth or of a State ... ..	$\frac{1}{2}$ d. per 12 ounces or part of 12 ounces.
COMMERCIAL PAPERS, PATTERNS, SAMPLES, AND MERCHANDISE AS PRESCRIBED ... ..	1d. per 2 ounces or part of 2 ounces.
NEWSPAPERS (without condition as to the number contained in each addressed wrapper) posted by registered newspaper proprietors, or by news- vendors, or returned by an agent or news vendor to the publishing office ... ..	1d. per 20 ounces on the aggregate weight of newspapers so posted by any one person at any one time.
ALL OTHER NEWSPAPERS ... ..	For each newspaper, $\frac{1}{2}$ d. per 10 ounces or part of 10 ounces.

Whilst the bookkeeping sections of the Constitution Act (see Section XIX., § 1, hereinafter) were in force, each State had necessarily to use its own postage stamps, and stamps sold in one State were only allowed to be used on letters posted in that State. The necessity for this arrangement disappeared with the change in the keeping of the Commonwealth accounts, and since the 14th October, 1910, stamps of any State can be affixed to letters, irrespective of the State in which they are posted. With the object of issuing a uniform postage stamp for the Commonwealth, the Postmaster-General has adopted a design for a stamp containing characteristic features of Australia, and arrangements are now being made for printing and issue at an early date.

(i.) *Letters.* Under the Postal Rates Act of 1910, the charge (1d. for every  $\frac{1}{2}$  oz.) for letters posted for delivery within the Commonwealth is now uniform throughout all States. Previous to the 1st May, 1911, various local and interstate rates were in operation within the States. The postage to the United Kingdom was reduced in January, 1891, from sixpence per half-ounce *via* the Red Sea, and fourpence *via* the Cape of Good Hope, to the uniform rate of twopence halfpenny. In 1891 the States were represented at the Congress of the Universal Postal Union held in Vienna, and on the 4th July a convention was signed on their behalf, by which they joined the Union from the 1st October of that year. On that date the rate of postage to all British possessions and to foreign countries included in the Union was reduced to twopence halfpenny. The present charge for postage of interstate letters and of letters to the United Kingdom and to British possessions is now uniformly one penny per half ounce throughout the Commonwealth; the rate on letters to foreign countries (with the exception of

New Hebrides, Banks and Torres Islands, where the rate is twopence per half-ounce) is twopence halfpenny for each half-ounce.

(ii.) *Newspapers.* The different rates charged for the carriage of newspapers in the various States, prior to Federation, continued after the control of the Postal Departments had been taken over by the Commonwealth, until the 1st November, 1902, when a uniform rate was imposed by the Post and Telegraph Rates Act 1902. At present the rates on all newspapers posted for delivery within the Commonwealth (without condition as to the number contained in each addressed wrapper posted) by registered newspaper proprietors, or by newsvendors, or returned by newsvendor or agent to the publishing office, is one penny per twenty ounces on the aggregate weight. On all other registered newspapers posted within the Commonwealth for delivery therein the charge is a halfpenny per ten ounces for each newspaper. At the end of the year 1910 there were in all 1740 publications registered in the Commonwealth under section 29 of the Post and Telegraph Act 1901 for transmission by post as newspapers. The charge on postage of registered newspapers for transmission to the United Kingdom is one penny for each newspaper not exceeding eight ounces in weight by the ordinary route, and one penny for each newspaper not exceeding sixteen ounces in weight by the All-Sea Route. To other parts of the world the rate is one penny up to four ounces, and a halfpenny for every additional two ounces. Newspapers which are not registered are charged at the same rates as other printed papers.

(iii.) *Parcels.* Parcels may not exceed 11 lbs. in weight, 3 ft. 6 in. in length, or 6 ft. in length and girth combined. The rate for the inland postage of parcels is sixpence up to 1 lb., and then threepence for every additional pound. For interstate transmission the rate is eightpence up to 1 lb., and then sixpence per lb., and for transmission to the United Kingdom the rate is one shilling up to 1 lb., and sixpence for every additional pound.

(iv.) *Packets.* The regulations for the conveyance of packets vary in the several States. The ordinary rate is one penny for each two ounces. Packets must not as a rule exceed 2 ft. in length, 1 ft. in breadth or depth; or, if in a roll, 2 ft. 6 in. in length. Special rates are allowed for the conveyance of commercial papers, patterns, samples, etc.

**8. Registered Letters.**—Under section 38 of the Post and Telegraph Act 1901 provision is made for the registration of any letter, packet, or newspaper upon payment of the prescribed fee, and any person who sends a registered article by post may obtain an acknowledgment of its due receipt by the person to whom it is addressed by paying the prescribed fee (see hereunder) in advance at the time of registration in addition to the registration fee.

(i.) *Registration Fees.* The fee payable upon registration of an article is threepence, and the fee payable in order to obtain an acknowledgment of the delivery of the registered article is twopence halfpenny in addition. Registered letters must, as a rule, be handed in at least half-an-hour before the closing of the mails.

(ii.) *Number of Registered Letters Posted, 1910.* The subjoined table shews the number of registered letters posted in each State during the year 1910, classified according to the places to which they were despatched for delivery:—

#### NUMBER OF REGISTERED LETTERS POSTED DURING 1910.

(,000 OMITTED.)

State.	Posted in each State for Delivery within that State.	Posted in each State for Delivery in other States.	Posted in each State for Delivery in Places outside the C'wealth.	Total.

Tasmania ...	183	18	5	206
Commonwealth ...	2,664	304	183	3,151

**9. Ocean Mail Services.**—Regular steamship communication between Australia and Europe was established in 1852 by a service run by the Peninsular and Oriental Company between Singapore and Sydney, *via* King George's Sound, Adelaide, and Melbourne. This service was inaugurated in September, 1852, by the arrival at Melbourne of the "Chusan," and was continued until 1854, when it was stopped in consequence of the Crimean War; in 1856 a line of steamers was again started, and the service was carried on by the Peninsular and Oriental Company, in conjunction with the Royal Mail Company, for some years.

(i.) *Mail Route via San Francisco.* The service *via* the Red Sea did not at that time give much satisfaction to the public, and was looked upon with a certain amount of disfavour in New South Wales and New Zealand. The effect was to stimulate the colonists to agitate for an improved service, and proposals were made for the establishment of a line of mail packets from Sydney to Panama *via* Wellington, by rail across the isthmus, and thence to Great Britain. The result was that in 1866 the line was started, and continued in operation until the end of 1868, when it was terminated through the failure of the company by which it had been carried out. The completion of the railway across the American continent in 1869, with its western terminus at San Francisco, opened up a new and agreeable route, and in that year a monthly service was inaugurated by the Union Steamship Company, in conjunction with the Pacific Steamship Company, from Sydney to San Francisco *via* Auckland. This service was subsidised to the extent of £37,000 per annum, of which New South Wales paid £25,750 and New Zealand £11,250, and was continued until November, 1890, when a new contract was entered into and the amount of the subsidy largely reduced, the amount of the contribution being based upon the weight of mail matter carried. Various extensions of the contract were made, but the last agreement made between the New Zealand Government and the Oceanic Steamship Company of San Francisco expired on the 10th November, 1906, and has not since been renewed. From that date mails were carried at Postal Union rates until the 12th April, 1907, when the service was discontinued. At present mails to and from Europe *via* San Francisco are carried by the Union Steamship Company, which receives a subsidy from the New Zealand Government, and carries Australian mails at Postal Union rates. A four-weekly service has been established.

(ii.) *Route via Suez Canal.* The establishment of a mail route *via* America had the effect of stimulating the steamship owners who were engaged in the service *via* Suez, and from that time there was a marked improvement in the steamers, as well as in the punctuality and speed with which the mails were delivered. The Peninsular and Oriental Company have, with very few interruptions, carried mails from the Australian States almost from the inception of the ocean steam service. Towards the end of 1878, the Orient-Pacific Company commenced carrying mails between Australia and the United Kingdom, and has continued to do so ever since. New contracts were entered into with the Peninsular and Oriental and the Orient-Pacific Companies for a weekly service, subsidised by the Imperial Government and by all the States of Australia, to commence on the 1st February, 1898, for a period of seven years. The total amount of the subsidy was £170,000 per annum, of which £98,000 was payable by the Imperial Government and £72,000 by the Australian States in proportion to their population. These contracts expired on the 31st January, 1905, and pending negotiations for a new contract the mails were carried at poundage rates. On the 1st February, 1905, the Peninsular and Oriental Company commenced its eighth Australian contract with the British Postmaster-General on behalf of the Imperial Post Office only, and in connection with the India and China mail services, one payment being arranged for the whole service, and the Commonwealth Government not, as hitherto, being a party to the contract. Mails are still carried from Australia by the Peninsular and Oriental Company, but are carried at Postal Union rates and not under contract with the Commonwealth. On the 25th April, 1905, the Orient-Pacific Company concluded a new contract with the Commonwealth Government for a fortnightly service between England and Australia. The subsidy was at the rate of £124,880 per annum. This contract has now been replaced by the new mail contract referred to in the next sub-section hereof. Fremantle

has, since the year 1900, been the first and last port of call for the mail steamers to Europe, in lieu of Albany, the original port of call. The Peninsular and Oriental and Orient-Pacific Companies' steamers sail alternately every week both from London and Australia conveying the homeward and outward mails.

(a) *The New Mail Contract.* On the 1st January, 1906, tenders were invited by the Commonwealth Postmaster-General for a fortnightly mail service between Adelaide and Brindisi, to alternate with a similar service to be provided by the Imperial Government, and a contract was entered into with Sir James Laing and Company Limited, providing for a service at an annual subsidy of £125,000. This contract, however, fell through, and new tenders were accordingly called for. On the 15th November, 1907, an agreement was entered into with the Orient Steam Navigation Company Limited providing for a fortnightly service for a period of ten years, commencing in February, 1910. The mail service is to be carried out by existing vessels belonging to the company and by five new mail ships, which have been specially built, and which are each over 12,000 tons gross registered tonnage and of not less than seventeen knots speed. Two more new vessels were to be added within eighteen months and six years respectively from February, 1910, and under this provision the "Orama" entered into running during November, 1911. The vessels are to call at Fremantle, Adelaide, Melbourne, Sydney, and Brisbane, and at least six of them at Hobart during the months of February to May inclusive. The voyage from Taranto to Adelaide is to be completed within twenty-six days fourteen hours, and from Adelaide to Taranto within twenty-seven days two hours, but the latter period may be exceeded by thirty-six hours during the prevalence of the south-west monsoon. The amount of the subsidy is fixed at £170,000 per annum; but, if the earnings of the company be decreased, or the expenses increased, by reason of any Commonwealth shipping legislation passed subsequently to the date of the agreement, to the extent of not less than £5000 a year, the contractors have the right to terminate the agreement unless the subsidy is increased. Insulated space of not less than 2000 tons of forty cubic feet is to be provided in each of the new vessels, and the freights are not to exceed one halfpenny per lb. for butter and sixty shillings per ton for fruit. White labour only is to be employed, and no discrimination is to be made between unionists and non-unionists. If before or during the sixth year of the period of the contract an accelerated service is provided by any competing line of mail ships, the contractors must, if so required by the Postmaster-General, provide a service equal to the competing service, at an increased subsidy, to be determined by agreement or arbitration. The Commonwealth flag must be flown on the mail ships, which the Commonwealth has the right to purchase at a valuation at any time. Within six months of the Postmaster-General establishing a permanent wireless telegraphy station at Rottnest Island, or at any point on the coast between Fremantle and Brisbane, the company must fit the mail ship with wireless telegraphy installations. The new service was inaugurated on the 11th February, 1910.

(b) *French and German Subsidised Mail Services.* Vessels belonging to the Messageries Maritimes and the Norddeutscher Lloyd, which are under contract respectively with the French and German Governments to convey mails monthly between Marseilles and New Caledonia and between Bremen and Sydney, *via* Genoa, also carry mails for the Commonwealth Government from Australia to Europe at Postal Union rates. The Messageries Maritimes service commenced in November, 1882; the amount of the annual subsidy granted by the French Government is £120,000. The first contract for the establishment and maintenance of a mail steamship line between Germany and Australia was made between the Imperial German Government and the Norddeutscher Lloyd in 1885, and the service was inaugurated in July, 1886, with the steamer "Salier."

(iii.) *Route via Vancouver and Canadian-Pacific Railway.* During the year 1893 a direct monthly service was started between Sydney and Vancouver, in British Columbia, *via* Wellington, in New Zealand, and thence to Liverpool *via* the Canadian-Pacific Railway, the New South Wales Government paying an annual subsidy of £10,000 for the maintenance of this service for a period of three years. In 1896 the

agreement was renewed for a further period of three years, and in 1899, was again renewed for four years, subject to the same terms and conditions, except that the route was *via* Brisbane instead of Wellington. The contract was further extended, at an increased subsidy, from time to time until the 31st July, 1911, at a subsidy of £26,626 per annum. This subsidised service has now been discontinued. Mails for Canada are forwarded *via* New Zealand through Sydney at poundage rates.

(iv.) *Other Ocean Mail Services.* In addition to the mails *via* the Suez Canal, a number of other services, both regular and irregular, are maintained between the Commonwealth and various parts of the world, and also between the principal ports in the various States and a number of small ports in the less settled parts of the Commonwealth which are inaccessible by rail. The following statement gives a summary, in so far as returns are available, of all mail services maintained between the Commonwealth and other countries and between ports in the Commonwealth. The amounts of subsidies specified are the amounts payable per annum unless otherwise stated.

#### SUMMARY OF MAIL SERVICES, COMMONWEALTH OF AUSTRALIA, 30th JUNE, 1911.

Description of Service.	Frequency of Service.	Ports between which Service is maintained.	Particulars regarding Subsidies.
1. <i>To and from Europe, via Suez—</i> (a) Peninsular and Oriental* ...	Fortnightly	Adelaide, Fremantle and London, <i>via</i> Brindisi and Marseilles	Subsidised by Imperial Govt. Mails from Aust. at Postal Union rates
(b) Orient-Pacific* ...	"	Adelaide, Fremantle & London, <i>via</i> Taranto	Subsidised. Date of agreement, 15th Nov., 1907. Term from Feb., 1910. Amt. of subsidy £170,000. Subsidy paid by all States on a <i>per capita</i> basis.
(c) Messageries Maritimes ...	13 voyages yearly	New Caledonia and Marseilles, <i>via</i> Fremantle and Adelaide	Subsidised by French Govt. Mails from Aust. at Postal Union rates.
(d) Norddeutscher Lloyd ...	"	Fremantle, Adelaide & Bremen, <i>via</i> Genoa	Subsidised by German Govt. Mails from Aust. at Postal Union rates.
2. (a) <i>To and from Europe, via Vancouver—</i> Canadian Australian Steamship Co.	Every four weeks	Sydney and Vancouver, B.C., <i>via</i> Auckland, Fiji, Honolulu, and once every eight weeks to Fanning Island	Poundage rates.
(b) <i>To and from Europe, via San Francisco—</i> Union Steamship Company	"	Sydney, Wellington and San Francisco	Subsidised by New Zealand Govt. Mails from Aust. at Postal Union rates.
3. <i>To and from New Zealand—</i> (a) Conjointly by Union S.S. Co. and Huddart, Parker Proprietary	Weekly	Sydney, Melbourne, Hobart, Bluff, Dunedin, Christchurch and Wellington	Poundage rates.
(b) Conjointly by Shaw, Savill and Albion Co. & N.Z. Shipping Co.	Fortnightly	Hobart, Bluff, Dunedin, and Wellington	" "
(c) Other Steamers ...	Irregularly, when convenient	Sydney, Wellington, Auckland, and Lyttelton	" "
4. <i>To and from ports in N.S. Wales—</i> (i.) NORTHERN PORTS— (a) North Coast S.N. Co.	Twice weekly	Sydney, Manning River, Port Macquarie, Macleay, Nambucca, Belling River, Coffs Harbour, Clarence River, Byron Bay, and Richmond River	Poundage rates.
(b) Cain's Co-Operative S.S. Co....	Weekly	Sydney & Port Macquarie	" "
(ii.) SOUTH COAST PORTS— Illawarra and S. Coast S.N. Co....	Twice weekly	Sydney, Eden, Bega and Tathra	" "

\* Mails carried also to India *via* Colombo. † Carries also mails to Canada and the United States.

## SUMMARY OF MAIL SERVICES.—(Continued.)

Description of Service.	Frequency of Service.	Ports between which Service is maintained.	Particulars regarding Subsidies.
<b>5. To and from Northern Ports of Qld.—</b>			
(a) Australian United Steam Navigation Co.	Weekly	Brisbane, Gladstone, Townsville, Cairns, Mourilyan, Innisfail, Pt. Douglas & Cook's	Subsidised by agreement dated 29th Nov., 1906, for five years, and one year's extension. Amount of subsidy, £18,450.
(b) Do. do. do.	Once every three weeks	Brisbane, Normanton & Burketown, via Townsville, Cooktown, and Thursday Island	Subsidised by agreement dated 16th Jan., 1906, for five years, extended for two years to Jan., 1913. Amount of subsidy, £6000. Subsidies under 5 (a) and (b) paid by Queensland.
(c) Other steamers ...	Irregularly, when convenient	Various...	Poundage rates
<b>6. To and from Ports in S. Australia—</b>			
<b>(i.) NORTHERN TERRITORY—</b>			
(a) The Eastern and Ausn., and the China Navigation Co.'s	Irregularly	To and from Adelaide, Melbourne, and Sydney, via North Queensland ports, extending to China and Japan	Postal Union Rates.
(b) Burns, Philp and Co.	Monthly		
(c) Nippon Yusen Kaisha	Irregularly		
(d) Jolly and Co.	Four times a year	Port Darwin and Boroloola, calling half-yearly at Roper River	Subsidised by agreement till 30th June, 1912. Amount of subsidy, (d) £385; (e) £150 per voyage.
(e) " " "	Every eight weeks	Pt. Darwin & Wyndham	
<b>(ii.) To SOUTH COAST PORTS—</b>			
(a) Gulf Steamship Co. ...	Weekly	Pt. Adelaide & Kingscote	Subsidised to 31st December, 1913. Amount of subsidy, (a) £595; (b) £299; (c) £293; (d) £149. Subsidised for three years from 1st January, 1911. Amount of subsidy, £1730. Subsidised without agreement. Amount of subsidy, £36. Subsidies under 6 (i.) (d), (e), and (ii.) (a), (b), (c), (d), (e), (f), paid by South Aust.
(b) " " "	Twice a wk.	" Edithburgh	
(c) " " "	"	" Stansbury

17. <i>Ocean and Pleasant Islands</i> — Various steamships ...	"	Sydney, Ocean and Pleasant Islands	" "

10. **Amount of Mail Subsidies Paid, 1910.**—The mail subsidies are paid by the Commonwealth Postal Department, but are debited to the several States. The following table shows the amounts of subsidies for ocean and coastal mail services as existing on 31st December, 1910:—

## MAIL SUBSIDIES.—OCEAN AND COASTAL SERVICES, 1910.

Service ...	Orient Pacific.	Vancouver Service.	Qu'ensland Ports.	South Australian Ports.	Western Australian Ports.	Tasmanian Ports.
	£	£	£	£	£	£
Annual Subsidy ...	170,000	26,627	24,450	5,590	9,000	13,885

The following table shows the amount debited to each State in respect of each ocean mail subsidy during the year ended 30th June, 1910:—

## MAIL SUBSIDIES.—AMOUNT PAID BY EACH STATE IN RESPECT OF EACH OCEAN MAIL SUBSIDY, 1909-10.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wlth.
	£	£	£	£	£	£	£
Commonwealth subsidies—							
Orient-Pacific ...	52,593	42,269	18,573	13,493	8,871	6,060	141,859
Vancouver Service ...	9,907	7,919	3,447	2,536	1,664	1,154	26,627

During the year 1910 the amount paid by the Commonwealth for conveyance of mails at poundage rates by non-contract vessels was £22,704; by road services, £306,193; and by railway services, £303,350.

11. **Average and Fastest Time of Mails to and from London.**—Great progress has been made in regard to the means of postal communication with the United Kingdom and the continents of Europe and America. In 1857 there was an unsatisfactory ocean mail service, which nominally brought monthly mails, with news nearly sixty days old; at the present time, though but fifty years have elapsed, there are four lines of modern ocean steamships, which bring the mails in about twenty-nine days to Adelaide, in addition to services by way of New Zealand, *via* San Francisco and Vancouver. After leaving Fremantle, where the Western Australian mails are landed, the outward mail steamers *via* the Suez Canal all call at Adelaide, where the remaining mails are landed and conveyed to their ultimate destination by rail. The subjoined table shews the average and the fastest times occupied in the conveyance of mails from London to Adelaide and *vice versa* during the year 1910:—

**AVERAGE AND FASTEST TIME OCCUPIED IN CONVEYANCE OF MAILS VIA SUEZ CANAL BETWEEN LONDON AND ADELAIDE, AND VICE VERSA, DURING 1910.**

Service.	London to Adelaide.				Adelaide to London.			
	Average Time.		Fastest Time.		Average Time.		Fastest Time.	
	Days.	Hours.	Days.	Hours.	Days.	Hours.	Days.	Hours.
Peninsular and Oriental S.N. Co., <i>via</i> Brindisi and Colombo ...	28	12	27	11	29	8	28	16
Orient Pacific S. N. Co., <i>via</i> Naples and Suez ...	28	9	28	2	30	14	29	12
*Messageries Maritimes, <i>via</i> Mar- seilles ...	...	...	...	...	33	19	30	20
*Norddeutscher Lloyd, <i>via</i> Genoa	...	...	...	...	32	1	30	14

\* No mails were received from London by the Messageries Maritimes or by the Norddeutscher Lloyd services.

The journey by rail from Adelaide, where the mails for the eastern States are landed, to Melbourne takes 17½ hours; from Adelaide to Sydney, 42 hours, including a stop of about seven hours at Melbourne; while the through journey from Adelaide to Brisbane takes just over three days. The journey from Melbourne to Hobart occupies about 29 hours, *via* Launceston, and about 32 hours direct.

The subjoined table shews the average and the fastest times occupied in the conveyance of mails between Sydney and London and *vice versa* by the mail routes *via* Vancouver during the year 1910:—

**AVERAGE AND FASTEST TIMES OCCUPIED IN CONVEYANCE OF MAILS VIA VANCOUVER BETWEEN LONDON AND SYDNEY, AND VICE VERSA, DURING 1910.**

	Average Time.	Fastest Time.	Average Time.	Fastest Time.
	Days.	Days.	Days.	Days.
Canadian-Australian Line, <i>via</i> Vancouver ...	37½	37	35½	34

12. **Money Orders and Postal Notes.**—The issue of money orders and postal notes in the Commonwealth is regulated by sections 74 to 79 of the Post and Telegraph Act

1901. A money order, which may be issued for payment either within the Commonwealth or abroad, may not be granted for a larger sum than £20, nor a postal note, which is payable only within the Commonwealth, for a larger sum than twenty shillings. Money orders are sent direct from the Commonwealth to the United Kingdom, and to most of the British colonies and possessions; to the German Empire and German colonies; to Italy; and to the United States of America. Money orders, payable in Japan and China, are sent *via* Hong Kong; orders payable in all other countries are sent through the General Post Office in London, where new orders are issued and forwarded to the addresses of the payees, less threepence for every £5, or part thereof. In order that the full amount of the original order may be forwarded to the payee, this extra commission must be paid by the remitter.

(i.) *Value of Orders Issued and Paid and of Notes Sold, 1910.*—The following table shews the total value of money orders issued and paid, and of postal notes sold in each State and in the Commonwealth during the year 1910, together with the total amount of commission on money orders and poundage on postal notes received by the Postal Department:—

**VALUE OF MONEY ORDERS ISSUED AND PAID AND OF POSTAL NOTES SOLD, TOGETHER WITH THE TOTAL AMOUNTS OF COMMISSION AND POUNDAGE RECEIVED IN EACH STATE DURING 1910.**

State.	Value of Money Orders Issued.	Value of Money Orders Paid.	Net Money Order Commission Received.	Value of Postal Notes Sold.	Poundage Received on Postal Notes.

New Zealand and Fiji ...	0 6	1 0	1 6	2 0	2 6	3 0	3 6	4 0	
Papua ...	0 9	0 9	1 6	1 6	2 3	2 3	3 0	3 0	
U. Kingdom & other countries	Sixpence for each £1 or fraction of £1								

Remittances may also be made by telegraph to and from money order offices in the Commonwealth which are also telegraph or telephone offices, and to New Zealand. The charge for a telegraph money order is the cost of the telegram of advice in addition to the ordinary commission. The remitter must also send a telegram to the payee

advising the transmission of the money, which telegram must be produced by the payee when applying for payment.

(iii.) *Rates of Poundage on Postal Notes.* The values of the notes issued have been so arranged that any sum of shillings and sixpences up to £1 can be remitted by not more than two of these notes. Broken amounts not exceeding fivepence (but not fractions of a penny) may be added by affixing postage stamps. The poundage or commission charged on notes of different denominations is as follows:—

**POUNDAGE RATES, POSTAL NOTES, 1911.**

Denomination of Note ...	6d. to 1s. 6d.	2s. to 4s. 6d.	5s.	7s. 6d.	10s. to 20s.
Poundage charged ...	$\frac{1}{2}$ d.	1d.	$1\frac{1}{2}$ d.	2d.	3d.

**13. Number and Value of Money Orders and Postal Notes Issued and Paid, 1901 to 1910.**—The following table shews the total number and face value of money orders and postal notes issued and paid in the Commonwealth during each year from 1901 to 1910:—

**16. The Value Payable Post.**—This is a system under which the Postal Department undertakes to deliver registered articles sent by parcel post within the Commonwealth, and to recover from the addressee on delivery a specified sum of money fixed by the sender, and to remit the sum to the sender by money order, for which the usual commission is charged. The object of the system is to meet the requirements of persons who wish to pay at the time of receipt for articles sent to them, and also to meet the requirements of traders and others who do not wish their goods to be delivered except on payment. In addition to the ordinary postage, commission on the value of the articles transmitted at the rate of twopence on sums not exceeding ten shillings, and one penny for each additional five shillings or part thereof, must be prepaid by postage stamps affixed to the articles distinct from the postage and marked "commission." The registration fee (threepence) and the proper postage must also be prepaid. If the addressee refuse delivery, the parcel is returned to the sender free of charge. Any article that can be sent by parcel post may be transmitted as a value-payable parcel. Letters may also be sent as value-payable parcels, if prepaid at the letter rate of postage and handed to the parcels clerk in the same manner as in the case of parcels. The subjoined statement gives particulars of the number and value of parcels sent through the Value Payable Post in each State during the years 1907 to 1910. From these figures it will be seen that the business in Queensland is greatly in excess of the combined transactions of all the other States, owing to the fact that the system has been established in that State for some years, but was only extended to the whole Commonwealth with the advent of Federal control of the post office.

17. **Transactions of the Dead Letter Office, 1910.**—Under sections 45 to 53 of the Post and Telegraph Act 1901 the Postmaster-General may cause all unclaimed and undelivered postal articles originally posted within the Commonwealth which have been returned from the place to which they were forwarded to be treated as unclaimed articles and opened. Every unclaimed letter and postal article must be kept for the prescribed period at the office to which it has been transmitted for delivery, and must then be sent to the General Post Office. Letters and packets originally posted elsewhere than in the Commonwealth are returned to the proper authorities in the country in which they were so posted, or, if originally posted in another State, are returned to the General Post Office of that State; but unclaimed or undelivered newspapers may be forthwith sold, destroyed, or used for any public purpose. Opened postal articles not containing anything of value are returned to the writer or sender if his name and address can be ascertained, but may otherwise be destroyed forthwith. As regards opened letters and packets containing valuable or saleable enclosures, a list and memorandum of the contents are kept, and a notice is sent to the person to whom the letter or packet is addressed if he be known, or otherwise to the writer or sender thereof if he be known. Upon application within three months of the date of such notice the letter or packet may be claimed by the addressee, or, failing him, by the writer or sender. If unclaimed within three months, the letter and contents may be destroyed or sold, and the proceeds paid into the consolidated revenue fund. The following table shows the total number of letters, postcards, and packets dealt with by the Dead Letter Offices in the Commonwealth during the year 1910, together with the number of inland, interstate, and international letters either returned to writers, delivered, etc., destroyed, or returned as unclaimed:—

20. **Gross Revenue of Postal Department, 1901 to 1910.**—The following table shews the gross revenue of the Postal Department for the years ended 30th June, 1901 to 1910 inclusive, under three heads, viz., the Postal, the Telegraph, and the Telephone branches. In the Postal branch is included the revenue derived from money-order commissions, poundage on postal notes, private boxes and bags, and miscellaneous sources.

## GROSS REVENUE OF POSTAL DEPARTMENT, 1901 to 1910.

Year ended 30th June.	Postal Branch.	Telegraph Branch.	Telephone Branch.	Total.
	£	£	£	£

22. **Royal Commission on Postal Services.**—On 22nd June, 1908, a Royal Commission was appointed to report upon the Postal, Telegraphic, and Telephonic Services of the Commonwealth, and more particularly in relation to the following matters :—(a) Management; (b) Finance; (c) Organisation, including discipline; (d) Extensions in country districts, and particularly in remote or sparsely-populated parts of the Commonwealth; and (e) Complaints in relation to the services. The inquiry was commenced in July, 1908, and occupied 228 sittings. The Commissioners visited every State and took evidence at each State capital and also at Fremantle, Kalgoorlie, and Launceston. In addition, personal visits of inspection were made to all the General Post Office buildings and many branch telephone exchanges and suburban post-offices of Sydney and Melbourne. The number of witnesses examined by the Commissioners was 190, including representatives of public and commercial institutions, experts, and prominent members of the Commonwealth Public Service. Recommendations numbering 175, were made by the Commission in a report laid before Parliament on 30th September, 1910. These refer to a great variety of subjects and matters, but owing to exigencies of space particulars in regard thereto cannot be given in this publication.

## § 2. Telegraphs.

1. **First Lines Constructed.**—The electric telegraph was first introduced into Australia for use by the public in the year 1854, when a line from Melbourne to Williamstown was opened. The first line in South Australia, from Adelaide to Port Adelaide, was opened in 1856, while the first line in New South Wales was brought into operation in 1858, when the line from Sydney to Liverpool, twenty-two miles in length, was opened. In Tasmania the first telegraphic line was completed in 1857, while in the following year communication was established between Sydney, Melbourne, and Adelaide. The first line to be constructed in Queensland was that between Brisbane and Rockhampton, a distance of 396 miles, which was opened in 1864. In Western Australia the first telegraph constructed was from Perth to Fremantle, a distance of twelve miles, which was brought into use in 1869, and in the same year the cable joining Tasmania with the continent of Australia was completed.

2. **Development of Services.**—During the period from 1871 to 1881 great progress was made throughout Australia in the way of telegraphic construction, over 14,000 miles of line, exclusive of railway telegraph lines, being opened for use during the period mentioned, making the total length of the line open at the end of the year 1881, 25,470 miles. In the case of South Australia this increase was to a large extent due to the construction of the transcontinental lines (*a*) from Adelaide to Port Darwin (a distance of 2230 miles), which was completed on the 22nd August, 1872, at a cost of nearly half a million sterling, and (*b*) from Port Augusta to Port Lincoln, and thence along the coast of the Great Australian Bight as far as Eucla, on the Western Australian border. In Queensland there was a large increase resulting from the construction of the line to Normanton, on the Gulf of Carpentaria, while in Western Australia the line from Perth to Albany was extended as far as Eucla on the 9th December, 1877, thus establishing telegraphic communication between the six capital towns, Brisbane, Sydney, Melbourne, Adelaide, Perth, and Hobart. At the present time the systems of telegraph lines throughout Australia are well developed. The longest line extends from Thursday Island, in Torres Straits, by submarine cable to Paterson, on the mainland of Cape York Peninsula; from Paterson the line runs in a southerly direction as far as Brisbane, where it joins the main interstate line to Sydney, Melbourne, and Adelaide; from Adelaide it runs to Port Augusta, then on to Port Lincoln, on Eyre's Peninsula, and thence to Eucla, on the Western Australian boundary; from Eucla the line extends along the coast of the Great Australian Bight to Albany, and thence it runs adjacent to the west coast of Western Australia as far as Onslow, *via* Perth, Geraldton, and Carnarvon. From Onslow connection extends to Broome, in Roebuck Bay, from which place communication is made to Singapore by the Eastern Extension Company's cable. From Roebuck Bay the line crosses the Kimberley district in an easterly direction, and then runs north as far as the terminus at Wyndham. In Queensland a line runs to Burketown, near the coast of the Gulf of Carpentaria, *via* Normanton; another line extends to Cloncurry and Urundangi, in the extreme west of the State. Branch lines extend to all important coastal and inland towns, while considerable networks of lines converge from the country districts towards the centres of population. From Adelaide the transcontinental line, referred to above, runs in a northerly direction to Port Darwin, from which place communication is provided with Europe by submarine cable by way of Batavia, Singapore, and Madras. In Western Australia a line runs from Eucla to the Coolgardie goldfields *via* Balladonia and Dundas, and from Coolgardie communication is provided with Perth and with Sir Samuel, in the East Murchison district.

3. **Number of Telegraph Offices and Length of Lines and Wire Open, 1901 to 1910.**—The following table shews the number of telegraph offices and the length of telegraphic lines and of telegraph wire, exclusive of railway telegraphs, available for use in the Commonwealth at the end of the year 1901, and from 1905 to 1910 inclusive:—

**NUMBER OF TELEGRAPH OFFICES, LENGTH OF LINE AND WIRE, AVAILABLE FOR USE, 1901 to 1910.**

Particulars.				1901.	1906.	1907.	1908.	1909.	1910.

\* Including interstate cablegrams.

**6. Rates for Transmission of Telegrams.**—The present rates for the transmission of telegrams within the Commonwealth were fixed by section 7 of the Post and Telegraph Rates Act 1902, and came into force on the 1st November, 1902. Under this Act charges are made for telegrams according to whether they are "ordinary" or "press" telegrams. "Press" telegrams are defined to mean those the text of which consists of political, commercial, etc., information, and of news intended for publication in a newspaper. The telegram must be sent by an authorised correspondent, and must be addressed to a registered newspaper or recognised news agency. The subjoined tables shew the scales of charges:—

#### SCALE OF CHARGES FOR ORDINARY TELEGRAMS, 1911.

Particulars.	Town and Suburban, within Prescribed Limits, or within 15 Miles from the Sending Station.	Other Places within the State, except Town and Suburban.	Interstate.
	s. d.	s. d.	s. d.
Including address and signature—			
Not exceeding 16 words ... ..	0 6	0 9	1 0
Each additional word ... ..	0 1	0 1	0 1

Double the foregoing rates are imposed for the transmission of telegrams on Sunday, Christmas Day, and Good Friday, and between the hours of 8 p.m. and 9 a.m., and for telegrams sent on "urgent" forms.

#### SCALE OF CHARGES FOR PRESS TELEGRAMS, 1911.

Every additional 50 words ... ..	...	...	0 6

**7. Wireless Telegraphy.**—Under the Wireless Telegraphy Act 1905 the Postmaster-General is given the exclusive privilege of establishing and using stations and appliances for receiving and transmitting messages by wireless telegraphy within Australia. The Postmaster-General is empowered to grant licenses to establish and use stations and appliances for wireless telegraphy, on the fulfilment of the prescribed conditions and payment of the prescribed fees. The Act does not apply to ships belonging to the King's Navy. In December, 1911, the Postmaster-General intimated that he intended to have erected by the Radio-Telegraph branch of the department radio-telegraph stations in or about Melbourne, Sydney, Brisbane, Adelaide, Fremantle, Hobart, Thursday Island,

and Port Moresby, and that these stations would be completed by the end of March, 1912. These stations will form part of a scheme which includes the erection of other stations at intervals round the coast of Australia. The stations are to be of standard type, having a working range of 500 miles by day, and 1500 by night. The rate charged is 10½d. or 11d. per word, allocated as follows:—6d. for land station, ½d. or 1d. for land line, and 4d. for the ship station charge; but a reduction of these rates is being considered.

On the 9th February, 1912, the first official wireless station was declared open at Melbourne by the Governor-General and communication was established with Hobart; whilst, at the time of writing, the station at Sydney is undergoing official trials, Fremantle is nearing completion, and Brisbane and Adelaide are in course of construction.

In December, 1909, a conference of representatives of the Commonwealth, New Zealand, the High Commissioner for the Western Pacific, Fiji, the Admiralty, and the Pacific Cable Board was convened at Melbourne to report upon the establishment of wireless telegraphy in the Pacific. The chief recommendations of this Conference were:—(a) That high-power stations be established at Sydney, Doubtless Bay (New Zealand), Suva (Fiji), and Ocean Island, and (b) that medium-power stations be established at Tulagi (Solomon Islands), and Vila (New Hebrides). The total cost of construction of the scheme covered by these recommendations was £42,000, while the total annual cost was estimated at £13,820 for a continuous service, and £9970 for a restricted service. It was proposed to apportion the cost between Great Britain, New Zealand, Fiji, and Australia. These recommendations were adopted by the Commonwealth Government, but the British Government would not agree to the erection of high-power stations at Suva and Ocean Island. Further consideration, however, was to be given to the scheme for connection between Suva, Vila, Tulagi, and Ocean Island by a series of medium-power stations. In 1911 wireless stations under the control of the Pacific Cable Board were opened at Suva and Wellington. The New Zealand Government have in process of erection two high-power stations at Doubtless Bay and the Bluff, and four low-power stations at Wellington, Gisborne, New Plymouth, and Christchurch.

### § 3. Submarine Cables.

1. **First Cable Communication with the Old World.**—As far back as 1857 the question of connecting Australia with the old world by means of submarine cables was brought forward in South Australia. No steps, however, were taken in the direction of constructing the cable until the year 1869, when various schemes were proposed. About this time the British Australian Telegraph Company was formed for the purpose of laying a cable to Australia without subsidy or guarantee. Communication had already been provided between London and Singapore *via* Bombay and Madras, and also through Java from Batavia to Banjoewangie. The proposal of the above company was to lay cables from Singapore to Batavia, and from Banjoewangie to Port Darwin, from which place connection would be made overland with the Queensland telegraph system at Normanston. It was, however, subsequently decided that the company's line should end at Port Darwin, the South Australian Government undertaking to construct an overland line from Port Augusta to Port Darwin, a distance of 1971 miles. In November, 1871, the submarine cable was completed, and communication was established between Port Darwin and London. On the 22nd August, 1872, the construction of the line from Port Darwin to Adelaide was accomplished at an expenditure of nearly £500,000. The cable from Port Darwin is now under the control of the Eastern Extension Telegraph Company.

2. **The Tasmania-Victoria Cables.**—In the meantime the cable joining Tasmania to the continent of Australia had been laid, and was open for use in 1869, the total length being 170 miles. The line was owned by the Eastern Extension Telegraph Company, and was subsidised by the Tasmanian Government until the year 1909. On the 28th February, 1908, the Postmaster-General entered into an agreement with Messrs. Siemens Brothers and Company Ltd., of London, for the manufacture and laying of two submarine cables between Tasmania and Victoria. The new cables were taken over on the 24th March, 1909, and opened to the public on the 1st May, 1909, the day following the expiration of the agreement with the Eastern Extension Company. Their aggregate length is approximately 350 nautical miles of main cable, and 20 nautical miles each of intermediate and shore end cable, making a total of 390 nautical miles. The contract price was £52,447.

3. **The Eastern Extension Company's Cables.**—In addition to the first Victoria-Tasmania cable and the original cable from Port Darwin referred to above, the Eastern Extension Company has constructed several other cables connecting with various places in the Commonwealth. (a) In 1879 the original cable *via* Banjoewangie was duplicated, the States of New South Wales, Victoria, South Australia, Western Australia and Tasmania having agreed to pay the above company a subsidy of £32,400 per annum for a period of twenty years, the amount to be divided between the States on a population basis. (b) In 1881 a cable was constructed connecting Broome, in Roebuck Bay, W.A., with Banjoewangie; from Broome there is direct telegraphic communication with Perth, from which place communication is made with the Eastern States by the interstate line *via* Albany, Eucla, and Port Augusta. (c) In July, 1899, the company offered to lay a cable direct to Great Britain *via* the Cape of Good Hope, and also offered reductions in the rates charged, if the States would agree to certain conditions giving the company the right of direct dealing with the public. The States of South Australia, Western Australia and Tasmania accepted the terms offered, and New South Wales entered into the agreement in January, 1901. The cable was opened *via* Fremantle and Durban in October, 1901. (d) Another submarine cable from Fremantle to Adelaide forms an alternative line of communication between the eastern States and Western Australia. (e) There is an alternative route, partly belonging to the Eastern Extension Company and connecting the Port Darwin-Singapore cable with London, *via* Hong Kong, Shanghai, Possiet Bay (Pacific Russia), Liban (Russian Baltic), and Newbiggin (England). (f) In 1909 a cable was laid from Java to Cocos Island, thus affording another route from Australia to South Africa, whilst in April, 1911, a powerful wireless station was opened at Cocos Island, thus strengthening the line of communication between Australia and the East.

4. **The Pacific Cable.**—In July, 1898, a conference of representatives of Great Britain, Canada, New South Wales, Victoria, Queensland, South Australia and New Zealand was held for the purpose of considering a project for a cable to be laid across the Pacific Ocean, touching only British territory on its way from Australia to Canada, thus providing an "All Red" route, as it is termed, for a cable system between England and Australia. In the following year it was agreed at a meeting held by representatives of the countries interested that the cable should be laid and that Great Britain and Canada should each pay five-eighteenths of the cost, and the States of New South Wales, Victoria, Queensland, and the Dominion of New Zealand should each pay one-ninth. The construction and management of the cable were placed under the control of a Board composed of seven members—two each from Great Britain, Canada, and Australia, and one from New Zealand—called the Pacific Cable Board. The Australian shore-end of the cable was landed at Southport, Queensland, in March, 1902, and the cable was completed on the 31st October, 1902, and opened for traffic on the 7th December of the same year. There are cable-stations at Norfolk Island, Fiji, and Fanning Island, and a branch cable runs from Norfolk Island

to New Zealand. In 1910 the Board leased a wire from Bamfield, British Columbia, to Montreal, thus extending the Pacific cable system from Queensland to Montreal. The traffic is then carried across the Atlantic to the United Kingdom by the cables of the Anglo-American and Commercial Companies. The following table shews particulars of the revenue, expenditure, total loss, and the proportion of the loss payable by the Commonwealth for each financial year since the opening of the cable:—

**REVENUE, EXPENDITURE, AND LOSS ON WORKING OF PACIFIC CABLE.**  
**1903 to 1911.**

1910 ...	111,724	171,312	59,588	19,863
1911 ...	138,678	186,888	48,210	16,070

The total cost of construction to the 31st March, 1911, was £1,997,576, originally paid by Great Britain. The proportions of this cost payable by the other countries are to be paid off by 50 annual instalments. The total amount of the annuity paid to Great Britain during the year 1910-11 was £77,545, while the amount paid to the renewal fund was £30,000.

5. **New Zealand Cables.**—A submarine cable joining New Zealand to the Australian Continent was laid in 1876. The line is 1191 miles in length. The Australian shore-end of the cable is at Botany Bay, while the New Zealand terminus is at Wakapuaka, near Nelson, in the Middle Island, from which place another cable, 109 miles in length, is laid to Wanganui, in the North Island. For a period of ten years after its opening the cable was subsidised by the New South Wales and New Zealand Governments, the total contributions amounting to £10,000 a year. The branch from Norfolk Island to New Zealand of the Pacific cable was opened on the 23rd April, 1902. The length of this cable is 597 miles, the New Zealand terminus being at Doubtless Bay in the north of the North Island. During 1911 a scheme to lay a second cable between New Zealand and Australia (Auckland to Sydney) was adopted by the various Governments concerned, and the necessary machinery legislation was passed. The new cable will have the effect of shortening the distance between the two Dominions and will also improve the connection between Australia and Canada by reducing by two the number of transmitting stations.

6. **The New Caledonian Cable.**—In April, 1892, a French company, known as the Compagnie Française des Câbles Télégraphiques, entered into an agreement with the French, the New South Wales, and the Queensland Governments to lay down a submarine cable between New Caledonia and Queensland in return for guarantees by the French Government to the extent of £8000, and by the Governments of New South Wales and Queensland to the amount of £2000 each annually for a period of thirty years. The cable was opened for use in October, 1893, the Australian shore-end being at Bundaberg. The Governments of New South Wales and Queensland are entitled to use the cable for the transmission of official messages up to the amount of their guarantees.

7. **Number of Cablegrams Received and Despatched, 1908 to 1910.**—The subjoined table shows the number of cablegrams received and despatched in the Commonwealth from 1908 to 1910:—

**CABLEGRAMS RECEIVED AND DESPATCHED, COMMONWEALTH, 1908-10.**

Particulars.	Cablegrams Received.			Cablegrams Despatched.			Total Cablegrams Received and Despatched.		
	1908.	1909.	1910.	1908.	1909.	1910.	1908.	1909.	1910.
Number...	221,976	221,442	241,723	231,214	231,701	254,666	453,190	453,143	496,389

The following table shows the total number of cablegrams received and despatched in each State during the year 1910. The figures given are exclusive of interstate cablegrams, which are classed as interstate telegrams (see § 2 hereof):—

**NUMBER OF CABLEGRAMS RECEIVED AND DESPATCHED IN EACH STATE, 1910.**

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.*	C'wealth.

Canada to Ireland ...	2,450		
Total ...	14,323	Total ...	17,932

9. **Cable Rates.**—In 1872 the cable rate to England was nine guineas for twenty words, but when word rates were brought into general use in 1875, the rate between Great Britain and Australia was fixed at ten shillings and sixpence, subsequently altered to ten shillings and eightpence. This remained the standard rate for eleven years, when the Eastern Extension Telegraph Company reduced it in 1886 to nine shillings and fourpence a word for ordinary messages, to seven shillings and a penny for Government messages, and to two shillings and eightpence a word for press messages. At a conference of the postal and telegraphic authorities held in March, 1891, the proposal to reduce the rates to four shillings a word for ordinary messages, three shillings and eightpence for Government, and one shilling and tenpence for press messages was agreed to, the States of New South Wales, Victoria, South Australia, Western Australia, and Tasmania undertaking to make good half the loss which the Eastern Company might suffer through such reductions. The States guaranteed to the company one-half of the amount of receipts short of the sum of £237,736—the amount received by the company in 1889 in respect of cable charges—the other half to be borne by the company. The Government of South Australia was also guaranteed by the other contracting States against any loss to the revenue which the lower cable rates might cause in the working of the overland lines. Queensland subsequently joined the other States in these guarantees. Owing to various circumstances the cable traffic did not respond to the reductions, and heavy losses were incurred. It was therefore decided at a conference held at Melbourne to increase the rates for ordinary messages to four shillings and ninepence per word. The new rates came into force on the 1st January, 1893, concurrently with an agreement under which New Zealand joined the guarantees to the company and to South Australia.

With a view to affording additional cable facilities and to keeping the Pacific Cable fully occupied during the whole twenty-four hours, proposals were made by the Postmaster-General's Department for the adoption of a system of deferred cablegrams, *i.e.*, for cablegrams to be delivered after a lapse of twenty-four hours at reduced rates of one shilling and sixpence per word for cablegrams in code, and one shilling per word for cablegrams in plain language. A meeting of representatives of the Administrations and companies concerned was held in London in November, 1910, and the new rates came into force on the 1st January, 1912. Messages can only be transmitted after non-urgent private cablegrams and press cablegrams. Those which have not reached their destination within a period of twenty-four hours from the time of handing in are transmitted in turn with cablegrams charged full rate. They may be sent *via* the Pacific or Eastern routes to all countries to which the ordinary rate exceeds tenpence per word.

On the 15th December, 1911, a system of deferred press cablegrams between Vancouver and Australia was instituted. The rate charged is one penny three-farthings per word, and the conditions of despatch are the same as those for private deferred cablegrams.

(i.) *Present Rates to Great Britain.* On the acceptance by three of the States of the terms offered by the Eastern Extension Telegraph Company for the construction of a cable *via* South Africa the rate for ordinary messages was reduced in May, 1900, to four shillings a word. It was further reduced to three shillings and sixpence in January, 1901, and to three shillings in January, 1902, at which amount the standard rate by all routes for cablegrams to Great Britain has since remained. The scale of reductions is governed by a revenue standard, and when the latter averages £330,000 per annum a further reduction to two shillings and sixpence will be made. In July, 1909, the "through" charge for press cables was reduced from one shilling to ninepence per word.

(ii.) *Rates to New Zealand.* As a result of the completion of the New Zealand branch of the Pacific cable in 1902, the rates charged for cablegrams between Australia and New Zealand, except to and from Tasmania, were uniformly reduced to fourpence-halfpenny per word. Between New Zealand and Tasmania the charge was fixed at

fivepence-halfpenny a word, but it has since been reduced to fourpence-halfpenny. The charge for ordinary cablegrams from New Zealand to Great Britain was reduced from the 1st June, 1902, from five shillings and twopence to three shillings and fourpence a word, and has since been further reduced to three shillings a word.

**10. Subsidised Press Cable Service.**—In October, 1909, a Select Committee of the Commonwealth Senate was appointed to report upon the question of the supply, conditions of sale, and distribution, which control the Press Cable Service within and from outside the Commonwealth. A majority report of this Committee was issued in December, 1909, and recommended (a) the completion of an "All Red" cable route *via* Canada, (b) the conditional subsidisation of a press cable association, (c) the utilisation of the High Commissioner's office for the dissemination in Australia of Empire news, and (d) the amendment of the Copyright Act in regard to cables.

In accordance with the recommendations of this Committee the Commonwealth has granted a subsidy of £6000, extending over a period of three years, to the Independent Press Cable Service, on the conditions that at least 6000 cable words are supplied each week, to be sent *via* Pacific, and that any newspaper proprietary in the Commonwealth is permitted to become a subscriber at rates approved by the Government.

w

**11. Cable Subsidies paid by each State, 1901 to 1910.**—The agreement between the State Governments and the Eastern Extension Telegraph Company expired on the 30th April, 1900. Since the year 1895 the amounts guaranteed—£237,736 to the company and £37,552 to South Australia—have been met by the receipts, and the contracting States have, therefore, not been called upon to contribute.

(i.) *Total Subsidies Paid, 1901-10.* The following table shews the total amounts paid by way of cable subsidies for the calendar year 1901, and from 1904 to 1910 inclusive:—

**TOTAL AMOUNT OF CABLE SUBSIDIES PAID, 1901 to 1910.**

Year.	1901.	1904.	1905.	1906.	1907.	1908.	1909.	1910.
Amount ... £	13,207	37,911	35,160	24,997	30,837	29,313	40,898	26,537

(ii.) *Subsidies Paid by each State, 1910.* The total amount of cable subsidies paid prior to the year 1910 included the subsidy paid in respect of the Tasmania-Victorian cable service, which in 1909 amounted to £11,265.

As the agreement in connection with the Tasmanian cable expired in 1909, and as new cables have been laid by the Commonwealth Government (see page 780 *ante*), the guarantees were, in the course of the year 1910, reduced to those in connection with the New Caledonia and Pacific cables. Of the amount of cable subsidies paid by the Commonwealth in 1910, New South Wales and Queensland each contributed £2000 in connection with the New Caledonian cable, while New South Wales paid £6768, Victoria £7000, and Queensland £8769 towards the Pacific cable service subsidy.

## § 4. Telephones.

**1. Development of Telephone Services.**—The Postal Department has established telephone services in all the capital towns and in many of the important centres of population throughout the Commonwealth. Particulars as to the revenue from telephone services in each State for the years 1901 to 1910 are given on page 774 *ante*, while particulars of the expenditure on telephone works in each State for the year 1910 are given in a table on page 786.

(i.) *Number of Telephone Exchanges, etc., in Commonwealth, 1901 to 1910.* The following table shows the number of telephone exchanges, the number of telephone connections, and the length of telephone wire, exclusive of telegraph and railway telephone wire, in the Commonwealth at the end of the year 1901 and from 1906 to 1910 inclusive:—

**NUMBER OF TELEPHONE EXCHANGES AND CONNECTIONS AND LENGTH OF WIRE,  
1901 to 1910.**

Particulars.	1901.	1906.	1907.	1908.	1909.	1910.
Telephone Exchanges ... No.	119	178	226	285	328	*678
„ Connections ... „	24,583	38,152	47,205	54,512	62,091	74,975
Length of Wire ... miles	47,276	78,854	119,052	145,572	166,489	220,174

\* In 1910, all places at which two or more subscribers were connected were classified by the Postmaster-General's Department as "telephone exchanges." Prior to that year the classification in the several States was not uniform.

(ii.) *Number of Telephone Exchanges, etc., in each State, 1910.* The following table gives corresponding particulars for each State at the end of 1910:—

**TELEPHONE EXCHANGES, CONNECTIONS, AND LENGTH OF WIRE IN EACH STATE,  
1910.**

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wlth.
Tel. Exchanges* No.	268	198	71	74	42	25	678
„ Connections „	30,574	20,221	8,343	6,099	7,319	2,419	74,975
Length of Wire miles	83,018	83,451	22,504	13,219	15,265	2,717	220,174

\* See note to previous table.

**2. Telephone Rates.**—The charges mentioned in the table hereunder are payable for the different classes of telephone services specified therein:—

**TELEPHONES.—RENTAL CHARGES, 1910-11.**

In Telephone Networks having a Population of—	Radius of Network with Main Exchange as Centre.	Minimum Annual Charge—		
		For an Exclusive Service.	For each Subscriber or Instrument on a Two-party Line.	For each Subscriber or Instrument on a Three or more party Service.
	Miles.	£ s. d.	£ s. d.	£ s. d.
From 1 to 10,000 ...	5	3 0 0	2 10 0	2 0 0
„ 10,001 to 100,000 ...	10	3 10 0	2 15 0	2 5 0
„ 100,001 upwards ...	10	4 0 0	3 0 0	2 10 0

It is provided that for all effective calls originated the subscriber will be charged the following rates:—(a) For calls not exceeding 2000 half-yearly, two calls for one penny; and (b) for calls above 2000 half-yearly, three calls for one penny.

Another regulation permits persons occupying offices in the same building, or occupying the same private residence, to subscribe jointly under one exchange number (in addition to rental as for one person at the respective rates prescribed) of £1 per

annum for each additional subscriber. This fee covers the insertion of the additional subscriber's name in the telephone list. If additional instruments are required the subscribers must pay the rates prescribed for party lines.

3. **Miscellaneous Particulars, 1910.**—The following table gives various interesting particulars of the operation of the telephone services in each State for the year 1910 :—

\* See note to first table on previous page. † Comprises slot machines within telephone networks. The information furnished under this heading for 1909 (see Year Book No. 4, page 793) included public telephone stations, i.e., trunk line offices. The latter have now been omitted, as it is thought that they do not rightly come under the heading of "public telephones." ‡ For the year ended 30th June, 1910.

In 1910 the mileage of telephone cables (aerial and underground) was 1150, the length of telephone conduits in duct miles 389.07, whilst the mileage of telephone tunnels was 12.12. The total mileage of telephone trunk lines for the Commonwealth for the same period was 27,319, of which number 4878 were composed of single wire circuits, 7371 metallic circuits, and 15,070 superimposed circuits.

4. **Financial Position of Telephone Branch.**—In 1909 an investigation into the financial position of the telephone branch of the Postmaster-General's Department was commenced, and in December of that year a report was issued dealing with the telephone accounts of the system in the State of Victoria. This report shews that during each of the years 1901 to 1908 there was a profit on the working of the system, amounting in all to £150,580; in the financial year 1908-9 there was a loss of £7789, giving a net profit up to the 30th June, 1909, of £142,791.

## SECTION XIX.

## COMMONWEALTH FINANCE.

## § 1. General.

**1. Financial Provisions of the Constitution.**—The main provisions of the Constitution relating to the initiation and development of the financial system of the Commonwealth are those contained in Chapter IV., "Finance and Trade," being sections 81 to 105 of the Constitution Act. Two other sections which have a most important bearing on questions of Commonwealth finance are sections 69 and 51.

**2. Departments Transferred or Transferable under Constitution.**—In section 69 it is provided that the Departments of Customs and Excise in each State should become transferred to the Commonwealth on its establishment, and that on a date or dates to be proclaimed by the Governor-General after the establishment of the Commonwealth the following departments should become transferred:—

- (i.) Posts, telegraphs, and telephones.
- (ii.) Naval and military defence.
- (iii.) Lighthouses, lightships, beacons and buoys.
- (iv.) Quarantine.

Under proclamation dated 12th February, 1901, and published in the Commonwealth *Gazette* of the 14th of that month, the Departments of Posts, Telegraphs, and Telephones in each State became transferred to the Commonwealth as from the 1st March, 1901, while under a similar proclamation dated 19th February, 1901, and gazetted on the 20th, the Departments of Naval and Military Defence in each State also became transferred to the Commonwealth as from 1st March, 1901. In the case of Quarantine, an Act (No. 3 of 1908) has been passed and control has tentatively been assumed by the Commonwealth.

The requisite proclamation of transfer has not yet been made in the case of departments dealing with "Lighthouses, lightships, beacons, and buoys," nor has any legislation relative thereto been passed by the Federal Parliament, although the matter was before the legislature, in the form of a bill, during the sessions of 1909 and 1910. These departments, therefore, still remain under State control.

**3. Departments Transferable by Means of Commonwealth Legislation.**—In addition to the departments here mentioned which pass to the Commonwealth either automatically or by proclamation, there are several others whose duties the Commonwealth is empowered to undertake after the passing by the Commonwealth of the legislation necessary to authorise the assumption of such duties. These are referred to in section 51 of the Constitution, which contains a statement of all matters respecting which power is (subject to the Constitution) conferred on Parliament "to make laws for the peace, order and good government of the Commonwealth." The matters contained in this section include those already mentioned as being covered by section 69. The principal matters involving for the due performance of the duties connected therewith the creation or transfer of departments of the Public Service are:—

- (i.) Trade and commerce.
- (ii.) Taxation.
- (iii.) Bounties on production or export of goods.
- (iv.) Postal, telegraphic, telephonic, and other like services.
- (v.) Naval and military defence.
- (vi.) Lighthouses, lightships, beacons, and buoys.
- (vii.) Astronomical and meteorological.
- (viii.) Quarantine.
- (ix.) Census and statistics.
- (x.) Bankruptcy and insolvency.
- (xi.) Copyrights, patents, and trade marks.
- (xii.) Naturalisation and aliens.
- (xiii.) Marriage.
- (xiv.) Divorce and matrimonial causes.
- (xv.) Invalid and old-age pensions.
- (xvi.) Immigration and emigration.
- (xvii.) Conciliation and arbitration.

4. **Commonwealth Departments.**—As a result of legislation passed from time to time in accordance with section 51, various departments and sub-departments have been transferred from the States to the Commonwealth, whilst other departments necessary for the due performance of the Commonwealth functions have been brought into existence. In the former class are such departments as those of Patents, Trade Marks, Copyrights, Designs, Naturalisation and Meteorology, while in the latter are the Ministerial Departments of External Affairs, Home Affairs, Treasury, Trade and Customs, Defence, Attorney-General and Postmaster-General, as well as such general departments as Public Service Commissioner's Office, Treasury, Audit Department, Crown Law Department, Bureau of Census and Statistics, Federal Land Tax Office, and Prime Minister's Department. It may, therefore, be said that, so far as its financial aspect is concerned, the effect of Federation up to the present time has been the transfer from States to Commonwealth of the revenue obtainable from the great revenue-producing Departments of Customs and Excise, and of the expenditure connected with various departments whose number is gradually increasing, and that, in addition, the various functions of the Commonwealth have necessitated further new expenditure.

5. **Adjustment of Accounts between Commonwealth and States.**—The fact that the Departments of Customs and Excise were responsible in the several States for the production of a very large proportion of the total revenues of the States, and that the financial relief afforded to the States by means of the transfer of expenditure to the Commonwealth would not, at least initially, be at all commensurate with this transfer of revenue, naturally led to the inclusion in the Constitution of a provision for the repayment to the States of surplus Commonwealth revenue. The means to be adopted for securing an equitable allocation of such repayment amongst the several States received very extensive consideration at the several conventions at which the framing of the Constitution took place, and the basis ultimately agreed upon was that involving for at least ten years after the establishment of the Commonwealth the provisions of what was generally known as the Braddon clause (section 87), and for at least five years after the imposition of uniform duties of Customs, the scheme of allocation which became known as the "*book-keeping system*." (Sections 89 and 93.)

6. **The "Braddon" Clause.**—This clause (section 87 of the Constitution) was so called after Sir Edward Braddon, a Tasmanian delegate to the Federal Convention of 1897 and 1898, by whom it was introduced. In its original form the clause provided that for all time the Commonwealth should return to the States not less than three-fourths of the net revenue of the Commonwealth from duties of Customs and Excise, not prescribing, however, what should be returned to *each* State. At the Melbourne session of the Federal Convention, held in 1898, provision was made that surplus revenue, instead of

being returned to a State, might be applied towards the payment of interest on debts of that State taken over by the Commonwealth, and at the Premiers' Conference, held in Melbourne in 1899, a further amendment of the clause was effected by limiting its operations to a "period of ten years after the establishment of the Commonwealth, and thereafter until Parliament otherwise provides." The provisions of this clause *per se* were held to be complied with if the total amount returned to the States as a whole was not less than three-fourths of the total net revenue from Customs and Excise, and the Commonwealth was not under an obligation to return to each State three-fourths of the net Customs and Excise revenue collected in respect thereof. Thus, since the establishment of Federation, although the total amount of surplus Commonwealth revenue distributed amongst the States had in every year except 1907-8, 1908-9, and 1909-10 largely exceeded three-fourths of the total net revenue from Customs and Excise, the amount paid to one of the States, viz., Queensland, in several of these years fell short of three-fourths of the net Customs and Excise revenue collected in respect of that State. This occurred in the years 1901-2, 1903-4, 1904-5, 1907-8, 1908-9, and 1909-10, and was due in a large measure to the heavy expense involved in working the Commonwealth departments in that State. The amount returned to Tasmania for 1907-8, 1908-9 and 1909-10, also fell short of three-fourths of the net Customs and Excise revenue collected in respect of that State, while a similar shortage occurred in the two latter years in Victoria and Western Australia. In 1910-11 the payments to the States were for the first time made upon the new basis which will be treated more fully in paragraph 14.

7. **The "Book-keeping System."**—The scheme set forth in the Constitution for determining the amount to be paid to the several States was contained in sections 89 and 93, the former of which related to the period prior to the imposition of uniform duties of Customs, the latter to the first five years after the imposition of such duties, and thereafter "until Parliament otherwise provides." The principle involved in this scheme was that of crediting each State with the Commonwealth revenue collected in respect of that State, and of debiting it with the expenditure incurred on its behalf in connection with transferred departments, as well as its share on a *per capita* basis of the new expenditure of the Commonwealth. On this account the method of allocation provided by the Constitution became very generally known as the "*book-keeping system*." As the imposition of uniform duties of Customs and Excise took place throughout the Commonwealth on 9th October, 1901, the five years provided for in section 93 expired on 8th October, 1906, and consequently the "*book-keeping system*," though remaining in force until 30th June, 1910, was liable to be changed at any time by the Commonwealth Parliament. In section 93 provision was made that the duties chargeable on goods imported into one State and consumed in another should be credited to the consuming State, the evident intention being that of safeguarding the interests of such States by allowing to each the revenue which its citizens actually contributed, since presumably the duty ultimately falls upon the consumer. The balance in favour of any State was payable monthly by the Commonwealth.

8. **Western Australian Sliding Scale.**—Owing to the exceptional circumstances of Western Australia, and the fact that the immediate introduction of interstate freetrade would seriously interfere with the development of the State, through the diminution in the funds at the disposal of its Treasurer, provision was made in section 95 of the Constitution for the retention of interstate duties by Western Australia during the five years after the imposition of uniform duties, such duties to be collected by the Commonwealth. It was stipulated that during the first of these years the duty so imposed on any goods should not exceed the duty chargeable on the goods under the law of Western Australia in force at the imposition of uniform duties, and that during the succeeding years the amount imposed should not exceed four-fifths, three-fifths, two-fifths, and one-fifth respectively, and should cease at the expiration of the fifth year. This special concession to Western Australia, known as the "*Western Australian Special Tariff*," came to an end on 8th October, 1906, since when trade between all the States has been

ree. The amount collected under this special tariff during the five years of its operation from 9th October, 1901, to 8th October, 1906, was as follows:—

**DUTY COLLECTED UNDER W.A. SPECIAL TARIFF, 1901-2 to 1906-7.**

Year ... ..	1901-2.	1902-3.	1903-4.	1904-5.	1905-6.	1906-7.	Total.
Amount ... £	201,569	233,467	196,936	142,549	77,666	16,776	868,963

It will be noticed on reference to paragraph 14 hereinafter that by section 5, subsection (a) of "The Surplus Revenue Act of 1910," a special concession to Western Australia has been granted in the new financial arrangement, similar in principle to the "Western Australian Special Tariff."

**9. Special Assistance.**—A clause (section 96 of the Constitution) which has a very important bearing on the financial relations of the States and the Commonwealth was inserted by the Premiers' Conference of 1899. This clause provided that the Commonwealth Parliament may grant financial assistance to any State on such terms and conditions as the Parliament thinks fit. It is said to have been introduced with the object of rendering the Constitution more elastic in the matter of aid to the States than would be possible if the Braddon clause and the book-keeping system were rigidly adhered to. No claim for such special assistance was made on the part of any of the States up to the year 1911, although it appears that the framers of the clause anticipated that it might be required during the early years of Federation. A claim, however, has now been made by Tasmania, and during the session of 1911 a Royal Commission, which had been constituted to investigate it, issued a report. It recommended a payment to Tasmania of £900,000, spread out over a period of ten years in view of the dislocation of the State finances due to Federation. The Government has intimated that during the session of 1912 a proposal will be submitted to Parliament granting Tasmania the sum of £500,000, spread out over a period of ten years.

**10. Transfer and Consolidation of State Debts.**—Under section 105 of the Constitution power is given to the Commonwealth Parliament to take over from the States either the whole of the public debts of the States as existing at the establishment of the Commonwealth, or a proportion of those debts calculated on a population basis, and to defray the interest payable in respect of such debts from the portions of the surplus revenue of the Commonwealth payable to the several States. The prospective savings in the matter of interest to be effected by means of the consolidation of the State debts formed a strong argument in pre-federal days for those supporting the federal movement. A drawback to the scheme provided for in the Constitution lay in the fact that under it the maximum amount of debt which could be assumed by the Commonwealth was slightly more than two hundred millions, as existing at the establishment of the Commonwealth, whereas since that date an addition of upwards of fifty millions had been made to the debts of the States. A "proposed law" to provide for an amendment of the Constitution, allowing the Commonwealth unlimited power to assume States debts, was passed by the Federal Parliament in the session of 1909, and the requisite referendum in connection with the amendment took place at the General Elections on 13th April, 1910, when the proposed law received the endorsement of the electorate.

**11. Disadvantages of the Book-keeping System.**—Under the book-keeping system of regulating the financial relations of the States and Commonwealth an endeavour was made to distribute the surplus revenue in the exact proportion in which it had been contributed by the several States. If these be regarded as States which had merely transferred some of their ordinary functions to the Commonwealth, the crediting each with the revenue received in respect to itself, and debiting it with the expenditure which the administration of Commonwealth affairs on its behalf had occasioned, might be

deemed to be as equitable as any method that could be suggested. There were, however, certain practical objections to such a system, which may be summarised as follows :—

- (i.) The trouble and expense which the necessary record entailed.
- (ii.) The practical impossibility of ensuring that in every case a consuming State would be duly credited with revenue collected on its behalf in a distributing State.
- (iii.) The difficulty involved in equitably determining the amount to be debited to the several States in respect of general Commonwealth expenses.
- (iv.) The uncertainty on the part of the State Governments as to the amount which would become available.
- (v.) The impossibility of securing independent State and Commonwealth finance.

**12. Proposals to Modify Book-keeping System.**—Various proposals were from time to time made for modifying the “book-keeping” system in such a manner as to obviate certain of its inherent disadvantages. The principal of these proposals were those which may be classified under the following heads :—

- (i.) A *per capita* distribution of surplus.
- (ii.) Payment of a fixed annual sum.
- (iii.) Payment of a fixed annual amount per head.
- (iv.) Increase in liability transferred to Commonwealth.

Some of the proposals that were made involved features of more than one of the systems here specified, and in certain cases combined them with those of the book-keeping system. A dissertation on the merits and demerits of any of the proposals would be beyond the scope of the present publication, but it may be noted that the scheme put forward by Sir George Turner when Commonwealth Treasurer was based on an increase in the liability transferred to the Commonwealth; that the scheme of Sir John Forrest and that of Sir William Lyne were based mainly on the payment of a fixed annual sum; while the scheme agreed to by the Commonwealth and State authorities in conference in 1909 and subsequently approved by the Federal Parliament was based on the payment of a fixed annual amount (25s.) per head of population. The scheme finally adopted by Mr. Fisher and ultimately assented to on 2nd September, 1910, retains this fixed annual payment of 25s. per head of population for a period of ten years.

**13. Interstate Conferences.**—Since the establishment of the Commonwealth, conferences of State Ministers have been held from time to time, at which proposals for adjusting the financial relations between the States and the Commonwealth were considered. At the conference held in Melbourne in October, 1906, and that held in Brisbane in May, 1907, the scheme put forward by Sir John Forrest was very fully discussed, and, in so far as the proposals for the allocation of surplus Commonwealth revenue are concerned, was, with some minor amendments, agreed to. The proposals made by Sir John Forrest for the transfer of State debts did not, however, meet with the approval of the conferences. After the retirement of Sir John Forrest from the Commonwealth Ministry, his scheme was abandoned by the Commonwealth Government. A fresh proposal by Sir William Lyne was substituted for it, and was considered by the Conference of Premiers held in Melbourne in 1908, who expressed their dissent from its provisions. A further Conference of Premiers was held in Hobart in March, 1909, at which a scheme was drawn up providing for the unlimited extension of the Braddon clause in an amended form, the amount returnable to the States to be not less than three-fifths of the gross revenue from Customs and Excise nor less than £6,750,000 in any one year, and a special concession to be made in the case of Western Australia. In August, 1909, a conference between Commonwealth and State authorities was held in Melbourne at which an agreement was arrived at between the Prime Minister of the Commonwealth and the Premiers of the several States. This Agreement was subsequently made the basis of a proposed law for amending the Federal Constitution, which,

during the session of 1909, was passed by the statutory majority in both Houses of the Federal Parliament. It is not necessary to reproduce the exact provisions of the Agreement, which were given *in extenso* in the third issue of the Year Book. The proposed law was submitted to a referendum at the elections of 13th April, 1910, and rejected.

**14. Financial Arrangement between Commonwealth and States.**—The financial relations between Commonwealth and States are now regulated by the "Surplus Revenue Act 1910," which amended the "Surplus Revenue Act 1908." The most important sections are given hereunder in full:—

3. "From and after 31st December, 1910, section 87 of the Constitution shall cease to have effect, so far as it affects the power of the Commonwealth to apply any portion of the net revenue of customs and excise towards its expenditure, and so far as it affects the payment of any balance by the Commonwealth to the several States, or the application of such balance towards the payment of interest on the debts of the several States taken over by the Commonwealth."
4. (a) "The Commonwealth shall during the period of ten years beginning on 1st July, 1910, and thereafter until the Parliament otherwise provides, pay to each State by monthly instalments, or apply to the payment of interest on debts of the State taken over by the Commonwealth, an annual sum amounting to twenty-five shillings per head of the number of the people of the State:—

Provided that in the six months ending the 30th June, 1911, the Commonwealth may deduct from the amounts payable in pursuance of this section the amounts set out in the Schedule."

- (b) "If in order to comply with section 87 of the Constitution the sums paid and applied under this section during the six months ending on 31st December, 1910, amount to more than twelve shillings and sixpence per head of the number of the people of the several States, the amounts paid and applied under this section during the next six months shall be correspondingly reduced, so that the amounts so paid and applied during the whole of the financial year ending on 30th June, 1911, shall not amount to more than twenty-five shillings per head of the number of the people of the several States, less the deductions provided for in the proviso to the last subsection."
5. (a) "The Commonwealth shall during the period of ten years beginning on the 1st July, 1910, and thereafter until Parliament otherwise provides, pay to the State of Western Australia, by monthly instalments, an annual sum which in the first year shall be two hundred and fifty thousand pounds, and in each subsequent year shall be progressively diminished by the sum of ten thousand pounds.
- (b) One-half of the amount of the payments so made shall be debited to all the States (including the State of Western Australia) in proportion to the number of their people, and any sum so debited to a State may be deducted by the Commonwealth from any amount payable to the State in pursuance of this Act."

Section 6 provides for the final payment of any surplus revenue there may be to the States "in proportion to the number of their people."

Section 7 provides that "the number of the people" in any financial year shall be deemed for the purposes of this Act to be the number estimated by the Commonwealth Statistician as existing on the 31st December falling in that financial year.

The Schedule referred to in section 4, sub-section (a) is as follows:—

### THE SCHEDULE.

Amounts to be deducted from payments to the States in the financial year ending 30th June, 1911.

New South Wales	...	...	...	£178,973
Victoria	...	...	...	143,092
Queensland	...	...	...	63,788
South Australia	...	...	...	30,529
Western Australia	...	...	...	20,113
Tasmania	...	...	...	13,505
				<hr/>
				£450,000

## § 2. Consolidated Revenue Fund.

### (A) Nature of Fund.

The provisions made for the formation of a Commonwealth Consolidated Revenue Fund, and the means to be adopted for operating on that fund, are contained in sections 81, 82, and 83 of the Constitution. In section 81 it is provided that "All revenues or moneys raised or received by the Executive Government of the Commonwealth shall form one Consolidated Revenue Fund, to be appropriated for the purposes of the Commonwealth in the manner and subject to the charges and liabilities imposed by this Constitution." A strictly literal interpretation of this section would appear to require all loan and trust moneys received by the Commonwealth Executive to be paid to Consolidated Revenue. It is, however, held by Quick and Garran, in their "Annotated Constitution," that the "generic word *moneys* must be controlled by the preceding specific word *revenues*, and limited to moneys in the nature of revenue." This is the view of the matter which has been adopted by the Commonwealth Treasury in the preparation of its accounts. At present the Commonwealth has no Loan Account, but certain moneys received, which are not of the nature of revenue, are paid to Trust Account. As regards expenditure from the Consolidated Revenue Fund, section 82 provides that the costs, charges, and expenses incident to the collection, management, and receipt of the Consolidated Revenue Fund should form the first charge thereon, while section 83 stipulates that "no money shall be drawn from the Treasury of the Commonwealth except under appropriation made by law." Such appropriations are either special, and as such are provided for by means of a permanent Act, or are annual, and provided for in an annual Appropriation Act.

### (B) Revenue.

1. **Total Collections.**—The consolidated revenue of the Commonwealth, which in 1901-2, the first complete financial year under the new régime, amounted to £11,296,985, had, in 1910-11, reached a total of £18,806,237, an increase in nine years of £7,509,252.

Particulars concerning the total amount of revenue collected by the Commonwealth Government from 1st July, 1906, to 30th June, 1911, are contained in the following table:—

## CONSOLIDATED REVENUE OF THE COMMONWEALTH, 1906-7 to 1910-11.

—	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
Commonwealth ...	£ 12,832,891	£ 15,019,034	£ 14,350,793	£ 15,540,669	£ 18,806,237

The revenue collected by the Commonwealth during the financial year 1907-8 was higher than in any preceding year, the large increase being mainly due to the additional revenue collected in connection with the new tariff introduced on the 8th August, 1907. For 1908-9 the revenue was lower than that for the preceding year, but the total for the Commonwealth shews a substantial excess over any year prior to 1907-8. For 1909-10 the revenue in all the States shewed a marked increase, and the total for the Commonwealth was the largest collected until in its turn it was largely exceeded by the total for 1910-11.

2. **Collections per Head.**—In the table given hereunder particulars are furnished of the amount of revenue per head of population collected in respect of the Commonwealth for the last five years:—

## COMMONWEALTH REVENUE PER HEAD OF POPULATION, 1906-7 to 1910-11.

—	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
Commonwealth ...	£ s. d. 3 2 7	£ s. d. 3 12 2	£ s. d. 3 7 9	£ s. d. 3 11 11	£ s. d. 4 5 0

3. **Sources of Revenue.**—The following table furnishes particulars concerning the Commonwealth revenue derived from each source during the years 1906-7 to 1910-11:—

## SOURCES OF COMMONWEALTH REVENUE, 1906-7 to 1910-11.

Sources of Revenue.	1906-7.	1907-8.	1908-9.	1909-11.	1910-11.
	£	£	£	£	£
Customs ... ..	7,660,874	9,341,108	8,626,521	9,505,855	10,507,080
Excise ... ..	1,987,682	2,304,244	2,217,546	2,087,310	2,473,364
Postal ... ..	3,128,574	3,300,096	3,409,426	3,731,741	3,906,015
Defence ... ..	5,112	13,565	5,024	21,847	57,520
Patents ... ..	18,017	17,421	15,367	16,644	21,235
Trade Marks, Copyrights, and Designs	6,390	8,657	6,110	4,790	5,365
Quarantine ... ..	...	...	...	4,724	7,068
Coinage ... ..	...	...	...	69,646	198,893
New revenue ... ..	12,529	25,837	35,978	63,076	...
Miscellaneous ... ..	13,713	8,106	...	...	35,954
Public Service Pension Funds, Repayments and Transfers	...	...	34,821	35,036	61,405
Land Tax ... ..	...	...	...	...	1,370,344
Northern Territory ... ..	...	...	...	...	10,521
Credit Balance Northern Territory Funds	...	...	...	...	151,513
Total ... ..	12,832,891	15,019,034	14,350,793	15,540,669	18,806,237

The maximum annual collection of Customs revenue during the period was the total of £10,507,080 obtained during 1910-11, the nearest approach to this figure being that of £9,505,855 obtained during the financial year 1909-10. The Customs revenue for 1906-7 was practically identical with that for 1901-2. The minimum annual collection was £7,660,874 in 1906-7. In the case of Excise a maximum for the period was attained in 1910-11. In the case of Postal revenue the amounts collected have increased almost continuously from year to year, the Postal revenue for 1910-11 exceeding that for 1906-7 by 25 per cent.

4. **Customs.**—As already noted, several of the provisions of the Constitution were made dependent for their date of commencement on the imposition of uniform duties of Customs. Thus the book-keeping system and the Western Australian special tariff provisions both hinged upon the date on which the uniform duties of Customs were imposed. The Bill to provide for the collection of such duties was introduced in the Commonwealth House of Representatives on 9th October, 1901, and, in accordance with the usual practice, a resolution to protect the revenue and provide for the collection forthwith of the duties specified in the Bill, was duly carried. This date, 9th October, 1901, is consequently that on which the uniform duties of Customs are considered as having been imposed. A reference to the various enactments of the Commonwealth Legislature relative to the imposition of Customs duties will be found in Section XV., "Commerce," pages 597 to 601.

5. **Customs Revenue for Past Five Years.**—Particulars for the Commonwealth as a whole, for the five years 1906-7 to 1910-11, are furnished in the following table:—

COMMONWEALTH CUSTOMS REVENUE, 1906-7 to 1910-11.

Classes.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
	£	£	£	£	£
Stimulants ... ..	2,223,431	2,281,424	2,252,380	2,330,215	2,564,101
Narcotics ... ..	941,337	1,057,996	961,411	994,077	1,089,932
Sugar ... ..	143,830	51,499	140,343	506,385	170,822
Agricultural products ... ..	738,612	806,526	886,612	855,313	869,708
Apparel and textiles ... ..	1,578,414	2,063,674	1,630,490	1,872,832	2,068,922
Metals and machinery ... ..	625,227	1,030,519	932,944	997,973	1,264,986
Oils, paints, etc. ... ..	141,314	197,840	206,688	199,377	239,229
Earthenware, etc. ... ..	170,332	278,201	230,795	247,491	334,834
Drugs and chemicals ... ..	60,365	77,281	71,589	76,898	92,857
Wood, wicker, and cane ... ..	219,433	360,699	336,361	324,197	463,289
Jewellery, etc. ... ..	210,818	256,835	198,196	222,749	263,818
Leather, etc. ... ..	172,459	218,918	208,120	253,376	303,988
Paper and stationery ... ..	145,241	193,813	164,677	167,531	204,009
Vehicles ... ..	101,782	148,003	95,888	122,212	170,940
Musical instruments ... ..	60,117	90,905	72,128	82,949	109,423
Miscellaneous articles ... ..	97,403	191,782	205,697	220,580	258,953
Other receipts ... ..	30,759	35,193	32,202	31,700	37,269
Total Customs ... ..	7,660,874	9,341,108	8,626,521	9,505,855	10,507,030

It will be seen that throughout the period here dealt with the Customs revenue from stimulants and narcotics has represented, approximately, 40 per cent. of the total Customs revenue. The other principal articles from which Customs revenue was derived were "apparel and textiles," "metals and machinery," and "agricultural products." The most marked increase in the amount of duty collected is in the class of "metals and machinery," the revenue under this head for 1910-11 exceeding that for 1906-7 by £639,759.

In all cases except those of "Sugar," "Agricultural products," "Oils, paints, etc.," and "Miscellaneous articles," the revenue for 1908-9 fell short of that for 1907-8, owing mainly to the somewhat abnormal collections of 1907-8, consequent on the tariff of that year.

6. **Excise Collections, 1906-7 to 1910-11.**—Particulars concerning the amount of Excise collected under each head during each of the years ending 30th June, 1907 to 1911, are given hereunder:—

## COMMONWEALTH EXCISE REVENUE, 1906-7 to 1910-11.

Particulars.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
	£	£	£	£	£
Beer ... ..	513,473	555,720	551,859	584,503	617,178
Spirits ... ..	285,295	351,763	243,736	267,877	331,024
Starch ... ..	27,321	25,917	23,558	3,897	507
Sugar ... ..	546,590	741,928	750,776	548,716	794,645
Tobacco ... ..	604,960	618,599	638,017	673,437	720,305
Licenses ... ..	10,043	10,250	9,667	8,880	9,705
Agricultural machinery ...	...	67	Dr. 67	...	...
Total Excise ...	1,987,682	2,304,244	2,217,546	2,087,310	2,473,364

Comparing the Excise collections for 1910-11 with those for 1906-7 it will be seen that the increase in the revenue from sugar was about 45 per cent., that from beer and tobacco about 20 per cent. each, and that from spirits about 16 per cent., while decreases were experienced in starch and licenses.

**7. Commonwealth Taxation.**—Under section 51, sub-section (ii.) of the Constitution, power is given to the Commonwealth Parliament to make laws with respect to taxation, but so as not to discriminate between States or parts of States. Section 90 of the Constitution makes the power of the Commonwealth Parliament to impose Customs and Excise duties an exclusive one, but it would appear that as regards all other forms of taxation the States and Commonwealth possess concurrent powers. The question of the imposition by the Commonwealth Parliament of direct taxes such as land and income taxes is one which has been the subject of considerable discussion, and the opinion has been expressed that the intention of the framers of the Constitution was that of restricting the powers of taxation of the Commonwealth to the imposition of Customs and Excise duties except in cases of great national peril. Whatever the intention of the framers may have been in this matter, the Constitution itself contains no such provision, and the Commonwealth Parliament is given an absolutely free hand in the imposition of taxation. Up to the end of the financial year 1909-10 the only taxes so levied were those of Customs and Excise, referred to in detail in the foregoing paragraphs. During the 1910 session of the Federal Parliament, however, an Act—assented to on 17th November, 1910—was passed, giving to the Commonwealth the power of levying a tax upon the unimproved value of all lands within the Commonwealth which were owned by taxpayers, and not specially exempted. Detailed reference to this Act is appended.

**8. Commonwealth Land Tax.**—(i.) *Legislation.* As previously indicated, the land taxation, as far as the Commonwealth is concerned, is regulated by "The Land Tax Assessment Act 1910," No. 22 of 1910, which received assent on 17th November, 1910. Under this Act the taxable value of all the land owned by any person is deemed to be (a) in the case of an absentee—the total sum of the unimproved value of each parcel of the land; (b) in the case of an owner not an absentee—the balance of the total sum of the unimproved value of each parcel of the land, after deducting the sum of £5000. Every part of a holding which is separately held by any occupier, tenant, lessee, or owner, is deemed to be a separate parcel. All land owned by a company is considered to be owned by the shareholders of the company as joint owners, in the proportion of their interests in the paid-up capital. It may be noted that a company is never treated as an absentee, but individual shareholders who are absentees are separately assessed and liable as such. Land owned by a Mutual Life Assurance Society (except such as it holds as mortgagee in possession, or which it has acquired by virtue of a mortgage) is deemed to be owned by the Society as trustee for the Australian policyholders in proportion to the surrender value of their policies. The amount of the tax collected during the financial year ending 30th June, 1911, was £1,370,344.

(ii.) *Exemptions.* The following are the principal exemptions:—

- (a) All land owned by a State or Municipal or other public authority.
- (b) All land owned by any Society registered under a State Act as a friendly society, or trades-union, or building society; excepting, in the case of the latter, such land as it might acquire through the foreclosure of a mortgage.
- (c) All land held in trust for a charitable or educational institution not carried on for the purposes of gain.
- (d) All land used as a site for—
  - (1) A place of worship or place of residence for clergy, or ministers, or order of a religious society;
  - (2) a public library, institute, or museum;
  - (3) a show ground;
  - (4) a public cemetery;
  - (5) a public garden, recreation ground, or reserve;
  - (6) a public road;
  - (7) a fire-brigade station.

(iii.) *Rates.* The rates of taxation are set forth in the Land Tax Act 1910 (No. 21 of 1910) according to the following schedules:—

#### FIRST SCHEDULE.

*Rate of tax when owner is not an absentee.*

For so much of the taxable value as does not exceed £75,001 the rate of tax per pound sterling shall be one penny where the taxable value is one pound sterling, and shall increase uniformly with each increase of one pound sterling in the taxable value, in such manner that—

the increment of tax between a taxable value of £15,000 and a taxable value of £15,001 shall be 2d.; the increment of tax between a taxable value of £30,000 and a taxable value of £30,001 shall be 3d.; the increment of tax between a taxable value of £45,000 and a taxable value of £45,001 shall be 4d.; the increment of tax between a taxable value of £60,000 and a taxable value of £60,001 shall be 5d.; and the increment of tax between a taxable value of £75,000 and a taxable value of £75,001 shall be 6d.

For every pound sterling of taxable value in excess of £75,000 the rate of tax shall be 6d.

#### SECOND SCHEDULE.

*Rate of tax when owner is an absentee.*

For so much of the taxable value as does not exceed £5000 the rate of tax per pound sterling shall be one penny.

For so much of the taxable value as exceeds £5000 but does not exceed £80,001 the rate of tax per pound sterling shall be 2d. where the excess is one pound sterling, and shall increase uniformly with each increase of one pound sterling in the taxable value in such manner that—

the increment of tax between a taxable value of £20,000 and a taxable value of £20,001 shall be 3d.; the increment of tax between a taxable value of £35,000 and a taxable value of £35,001 shall be 4d.; the increment of tax between a taxable value of £50,000 and a taxable value of £50,001 shall be 5d.; the increment of tax between a taxable value of £65,000 and a taxable value of £65,001 shall be 6d.; and the increment of tax between a taxable value of £80,000 and a taxable value of £80,001 shall be 7d.

For every pound sterling of taxable value in excess of £80,000 the rate of tax shall be 7d.

*Formation of the Land Tax Office.* Immediately after the passage of the legislation referred to in the preceding paragraphs, a Commissioner was appointed to administer the Act, and a Land Tax Office was created with branches in every State. At the very inception of the office its existence was threatened by litigation—the outcome of a feeling in certain quarters that the Federal Government, in entering the field of direct taxation, had exceeded the powers entrusted to it by the Constitution. With the object

of testing the legal position, a case was brought before the High Court [*Osborne v. The Commonwealth*] which resulted in favour of the Government.

*The First Assessments.* The first assessments were completed and the first tax paid in the financial year ending 30th June, 1911. The following table, compiled from returns furnished by the Commissioner of Land Tax shews the amounts of tax assessed and paid as at 30th June, 1911, for each State. A distinction has been drawn between resident and absentee assessments; and—as far as the payment of tax is concerned—a still further subdivision has been effected into town and country properties.

**PARTICULARS OF LAND TAX ASSESSMENT FOR EACH STATE FOR YEAR  
ENDING 30th JUNE, 1911.**

GRAND TOTAL—							
Resident ... ..	12,968	173,286,378	110,499,705	432,563	909,647	1,342,210	
Absentee ... ..	2,283	5,160,320	5,142,067	25,569	37,190	62,759	
	15,271	178,446,698	115,641,772	458,132	946,837	1,404,969	2.92

Although in the first column the total number of returns assessed appears as 15,271, the actual number of taxpayers was only 14,210. The difference is due to the fact that,

where the landowner is possessed of an estate in more than one State of the Commonwealth, one return is counted in each State affected for the interest concerned. The total number of taxpayers does not include those who are known as secondary taxpayers, viz., those who pay as company shareholders, or through trusts in cases where they own no land in severalty. The columns which relate to the amount of tax assessed and paid as at 30th June, 1911, will be subject to considerable modification, owing to the effect of the High Court's decisions in connection with the assessment of trust estates and secondary taxpayers. The work of re-assessment is not yet complete.

On reference to the first column, it will be seen that the number of absentee assessments is 2283, or about 15 per cent. of the total for the Commonwealth. When reference is made, however, to the total amount of tax paid it is found that only about  $4\frac{1}{2}$  per cent. is contributed by absentee owners, and this in spite of the fact that their estates are not favoured by any statutory deduction. This points to the fact that, on the whole, the absentee owners possess estates of comparatively low taxable value.

On comparing town and country properties it is seen that the former contributes about one-third of the total amount of tax, and the latter about two-thirds. In fact, the country assessments largely exceed the town assessments in every State, except Western Australia. With regard to the respective shares of the different States, New South Wales contributes about half the tax, or about 9s. per head of population; Victoria, with its much closer settlement, comes next with about one quarter of the tax, or 5s. 6d. per head; South Australia, Queensland, Western Australia, and Tasmania contribute to the balance in the order named.

The last column shows the amount paid in each State, per £ of taxable value. The influence of the large aggregations of property in New South Wales is at once apparent, for that State with 3.07d. per £ not only heads the list, but is actually the only State which exceeds the Commonwealth average.

The following table shows the area of land in each State and the areas held under the different kinds of tenure. To each column a subsidiary column is attached shewing the percentage which the total for the State bears to the total for the Commonwealth:—

### COMPARISON OF TENURES, TAXABLE AREAS, AND TAX AT 30th JUNE, 1911.

State.	Area.		Area of Alienated Land.		Area in process of Alienation (part only taxable).		Area held under Lease or License (part only taxable).		Area included in Taxable Returns.		Tax Assessed.

C'wealth ...	1,903,731,840	100.0	96,681,694	100.0	43,473,868	100.0	816,155,103	100.0	72,528,271	100.0	1,404,969	100.0

The areas given in this table are from the latest Lands Departments' Reports available. The column "Area of Alienated Land" refers to land held under deed only. Land in process of alienation does not include conditional leases in New South Wales which are taxable as leases. It includes, however, the tenure known as Conditional Purchase Lease in Victoria, which is the equivalent of a conditional purchase in New South Wales. Conditional Purchases are only taxable when all conditions except payment of balances have been fulfilled. With regard to areas held under lease or license, the total areas of this class in the several States are indicated.

It was only to be expected that there would be some movement of land consequent upon the operations of the Land Tax Act. The following table shews the number and unimproved value of estates bought and sold by taxpayers, for the period of nine months preceding 30th June, 1911 :—

**PURCHASES AND SALES BY TAXPAYERS OF TAXABLE LANDS FROM  
1st OCTOBER, 1910, to 30th JUNE, 1911.**

State.	Sales.		Purchases.	
	Number.	Unimproved Value.	Number.	Unimproved Value.
		£		£
Victoria and Central* ...	7,032	7,684,221	1,601	3,798,275
New South Wales... ..	7,134	6,931,090	1,151	3,496,973
Queensland ... ..	1,109	1,027,206	166	511,328
South Australia ... ..	2,059	1,798,545	744	1,135,069
Western Australia... ..	656	391,555	107	121,022
Tasmania ... ..	298	355,676	105	203,839
Total ... ..	18,288	18,188,293	3,874	9,266,506

\* Central returns relate to returns that include properties in more than one State.

It will be seen that there are many more sellers than buyers of the tax-paying class, but the average value of the purchases largely exceeds that of the sales.

The information necessary for grouping the estates into classes, according to their taxable value, is not yet available for publication.

9. **Details of Postal Revenue, 1906-7 to 1910-11.**—Particulars concerning the postal revenue of the Commonwealth for each of the financial years from 1906-7 to 1910-11 are contained in the following table :—

**COMMONWEALTH POSTAL REVENUE, 1906-7 to 1910-11.**

10. **Revenue from Patents.**—Under the Commonwealth Patents Act 1903, which was assented to on 22nd October, 1903, and came into force on 1st June, 1904, the complete control of the Patents administration of Australia passed from the several State Governments to that of the Commonwealth, which, under section 19 (a) of the Act

mentioned, was authorised to collect for each State the fees to which it was entitled under the State Act in respect of proceedings then pending.

The revenue collected since the Act came into force is shewn in the following table:—

**COMMONWEALTH PATENTS REVENUE, 1903-4 to 1910-11.**

	*1903-4.	1904-5.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
	£	£	£	£	£	£	£	£
Revenue ...	1,518	10,559	23,936	18,017	17,421	15,367	16,644	21,295

\* June only.

It may be noted that, in their financial statement for 1903-4, the Commonwealth Treasury has credited the patents revenue for that year partly to "Miscellaneous Receipts" and partly to "New Revenue."

**11. Revenue from Trade Marks, etc.**—Under the several Acts of the Commonwealth Legislature relating to trade marks, copyrights, and designs, the Commonwealth Government has assumed the exclusive administration of such matters, and now collects all revenue accruing therefrom. The following table gives particulars of the amounts since this item first appeared in the Commonwealth accounts:—

**COMMONWEALTH TRADE MARKS, COPYRIGHTS, AND DESIGNS REVENUE,  
1906-7 to 1910-11.**

	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
	£	£	£	£	£
Revenue ...	6,390	8,657	6,110	4,790	5,265

**12. Defence Revenue.**—The revenue appearing under the head of "Defence" comprises the receipts derived from the sale of stores and clothing, from fines, etc., and for 1910-11 amounted to £57,520.

**13. Coinage.**—The revenue for the Commonwealth under this head is derived from the profit on coin issued; and is made up of £191,509 from silver coin and £7384 from bronze coin.

**(C) Expenditure.**

**1. Nature of Commonwealth Expenditure.**—The disbursements by the Commonwealth Government of the revenue collected by it fell naturally, under the "book-keeping" system, into three classes, viz.:—

- (a) Expenditure on transferred services.
- (b) Expenditure on new services.
- (c) Payment to States of surplus revenue.

Of these three, only the two first were actual expenditure, the last being merely a transfer, the actual expenditure being incurred by the States. In accordance with the provisions of the Constitution the expenditure on transferred services was, under the "book-keeping" system, debited to the several States in respect of which such expenditure was incurred, while the expenditure on new services was distributed *per capita*. Surplus Commonwealth revenue was paid to the States monthly. During the earlier years of Federation, viz., until the end of the year 1903-4, new works, etc., for transferred

departments were treated as transferred expenditure, and were charged to the States on whose behalf the expenditure had been incurred. In subsequent years all such expenditure was regarded as expenditure on new services and was distributed amongst the States *per capita*. Under the new system of keeping the accounts there is no further debiting of expenditure to the several States.

2. **Total Expenditure.**—The total expenditure by the Commonwealth Government during the period 1906-7 to 1910-11 is shewn in the following table :—

**COMMONWEALTH EXPENDITURE, 1906-7 to 19 0-11.**

	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
	£	£	£	£	£
Commonwealth ...	4,987,317	6,162,129	6,420,398	7,499,516	13,158,529

The expenditure for 1910-11 was higher than that for any preceding year, and was considerably higher than the expenditure for 1906-7.

3. **Expenditure per Head.**—Particulars concerning the Commonwealth expenditure per head are furnished hereunder :—

**COMMONWEALTH EXPENDITURE PER HEAD, 1906-7 to 1910-11.**

	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Commonwealth ...	1 4 5	1 9 7	1 10 4	1 14 8	2 19 6

4. **Details of Expenditure.**—During the five years between 1905-6 and 1910-11 the total cost of the several departments increased from £4,497,542 to £13,158,529, an increase of £8,660,987, or about 193 per cent. The expenditure in the Department of Trade and Customs increased during the period by £37,612, or about 14 per cent., and in the case of Defence by £446,203, or 47 per cent. Advances under other heads amounted to £782,845, or 28 per cent., in that of the Postal Department, and no less than £6,642,500, or 1305 per cent., in the case of remaining expenditure. It should be noted in this connection, however, that the increase of £782,845 in the postal expenditure was accompanied by an increase of £1,130,351 in the postal revenue, and that a very considerable portion of the increase in the remaining expenditure was due to the heavy annual appropriations for Invalid and Old Age Pensions and also for fleet construction.

5. **New Works, etc.**—As previously mentioned, the Commonwealth expenditure on new works, etc., for transferred departments was, prior to 1904-5, included under the head of "transferred" expenditure, but in that and subsequent years up to 1909-10 has been treated as "other" expenditure and debited to the States *per capita*. Particulars of the expenditure on new works, etc., during the last five years are given in the following table :—

**COMMONWEALTH EXPENDITURE ON NEW WORKS, etc., 1906-7 to 1910-11.**

Departments.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
	£	£	£	£	£
Trade and Customs ...	1,162	8,972	20,019	5,124	...
Defence ...	195,159	440,918	101,020	337,961	...
Postal ...	275,737	427,006	541,809	555,557	...
Sundry departments ...	...	52	4,339	2,526	2,452,960
Total ...	472,058	876,948	667,187	901,168	2,452,960

It will be seen that the Commonwealth expenditure under this head has increased considerably in recent years, the total for 1910-11 being more than five times as great as that for 1905-6. The main cause of the great increase in 1910-11 was the large expenditure on fleet construction.

6. **Cost of Departments, etc.**—Arranged in such a manner as to shew under each Department the expenditure on behalf of that Department, the cost of the several branches of the Commonwealth service for the years 1906-7 to 1910-11 was as follows:—

**COST OF COMMONWEALTH DEPARTMENTS, etc., 1906-7 to 1910-11.**

Departments, etc.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
	£	£	£	£	£

Postmaster-General ... ..	2,966,098	3,359,290	3,625,402	3,786,755	3,559,785
All other Expenditure ... ..	1,420	211,511	489,816	882,913	4,290,135
<b>Total ... ..</b>	<b>4,987,317</b>	<b>6,162,129</b>	<b>6,420,398</b>	<b>7,499,516</b>	<b>13,158,529</b>

The largeness of the expenditure under the head of Parliament in the years 1906-7 and 1909-10 was in great measure due to the fact that the general elections were held in those years, while the expenditure in connection with the sugar bounties is mainly responsible for the variations which have taken place in the cost of the Department of Trade and Customs. The amount paid in Old-Age and Invalid Pensions is included in Treasury expenditure for the first time in 1910-11. It may be noted that the great increase in the item "all other expenditure" for the year 1910-11 is owing to the inclusion in it for the first time of the expenditure on "new works" which had formerly been debited to the departments in which it had been incurred. More detailed reference to the items included under the above general heads is furnished in the succeeding paragraphs.

7. **Governor-General.**—In section 3 of the Constitution it is enacted that, until the Commonwealth Parliament otherwise provides, there shall be payable out of the Consolidated Revenue Fund for the salary of the Governor-General an annual sum of ten thousand pounds, and a proviso is made that the salary of the Governor-General shall not be altered during his continuance in office. The total expenditure in connection with the Governor-General and his establishment for the five years 1906-7 to 1910-11 is as follows:—

**EXPENDITURE, GOVERNOR-GENERAL AND ESTABLISHMENT, 1906-7 to 1910-11.**

8. **Parliament.**—Under this head have been grouped all the items of expenditure connected with the Parliamentary Government of the Commonwealth, including the

salaries of the Ministers and the allowances to senators and members of the House of Representatives. Details for the five years 1906-7 to 1910-11 are furnished in the table given hereunder:—

### EXPENDITURE, COMMONWEALTH PARLIAMENT, 1906-7 to 1910-11.

In section 66 of the Constitution provision is made that there shall be payable out of the Consolidated Revenue Fund of the Commonwealth, for the salaries of Ministers of State, an annual sum which, until Parliament otherwise provides, shall not exceed £12,000. This provision is still in force. Allowances to senators and members of the House of Representatives are also provided for in the Constitution, section 48 of which specifies that until Parliament otherwise provides each such allowance shall consist of £400 a year, reckoned from the day on which the member takes his seat. During the second session of the Commonwealth Parliament in 1907 the question of allowances to members was under consideration, and an Act was passed raising the annual allowance from £400 to £600, such increase to date from 1st July, 1907.

9. **External Affairs.**—Under the control of the department of External Affairs is placed the expenditure in connection with the Executive Council, the London Office, Papua and the Northern Territory. The expenditure in connection with the Northern Territory is exclusive of the Customs and Postal expenditure. Particulars for the five years 1906-7 to 1910-11 are as follows:—

### EXPENDITURE, EXTERNAL AFFAIRS DEPARTMENT, 1906-7 to 1910-11.

10. **Northern Territory.**—The Department of External Affairs assumed control of the administration of the Northern Territory from 1st January, 1911, and separate accounts were issued in the Treasurer's statement for the financial year ending 30th June, 1911. The chief source of revenue for the year was the Customs and Excise, amounting to £12,366. The Postal revenue amounted to £2691, and the railway receipts for the half-year to £5567, whilst the total revenue was £25,578. The chief items of expenditure were as follows:—Postal Department, £15,797; goldfields and mining, £5425; railways, £5882; and police, £4388. The last three items represented expenditure for half a year only, and the total expenditure was £52,103. The Commonwealth received £151,513 from South Australia as the credit balance of the Northern Territory funds, but at the same time assumed responsibility for interest on loans and redemptions, which for the half-year ending 30th June, 1911, amounted to £291,844. Consequently at 30th June, 1911, there was a deficiency of £166,856.

11. **Papua.**—The sums shewn in the above table as expenditure in connection with Papua represent the Commonwealth grants towards the cost of administering that territory, as well as certain additional amounts. The ordinary revenue and expenditure of Papua are kept distinct from those of the Commonwealth. Apart from the Commonwealth contribution the principal source of revenue is the Custom House. Details for the five years 1906-7 to 1910-11 are as follows:—

PAPUAN REVENUE, 1906-7 to 1910-11.

Details.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11. (estimated).

Total ... ..	41,813	51,019	50,706	61,918	60,888

One of the largest items of Papuan expenditure is the maintenance, etc., of vessels and boats, including the steam yacht "Merrie England," the total outlay under this head for 1910-11 being no less than £6043. The expenditure on public justice for 1910-11 totalled £19,847, comprising "magistrates, etc.," £10,173; "armed native constabulary," £7200, and "gaols," £2474; on public works, £7420; and on the Department of Agriculture, £2479. The total expenditure for each of the five years 1906-7 to 1910-11 was as follows:—

PAPUAN EXPENDITURE, 1906-7 to 1910-11.

Total expenditure ... ..	45,336	48,525	51,036	64,874	60,888

12. **Attorney-General's Department.**—The rapid growth in the expenditure connected with this Department during 1906-7 and 1907-8 was brought about in large measure by the extension of the Federal High Court, the total cost of which, including the Court of Conciliation and Arbitration, for the year 1910-11 amounted to £25,850. Details for the five years 1906-7 to 1910-11 are furnished hereunder:—

**13. Home Affairs Department.**—The creation of new departments such as the Bureau of Census and Statistics, and the Meteorological Bureau, and the extension of the field of operations of the Public Works branch, all of which are grouped for general administrative purposes under the Department of Home Affairs, have led to a considerable increase in the expenditure. The heaviness of the expenditure of this department for 1908-9 was, in a large measure, due to the cost incurred by the Commonwealth in connection with the reception of the American fleet; whilst that of 1910-11 was mainly due to the appropriation for the census. Particulars for the five years 1906-7 to 1910-11 are as follows :—

**EXPENDITURE, HOME AFFAIRS DEPARTMENT, 1906-7 to 1910-11.**

**14. Treasurer's Department.**—The sub-departments under the control of the Commonwealth Treasurer are the Treasury, the Audit Office, the Old Age Pensions Department, and the newly-formed Land Tax Office. During the financial year 1908-9 the expenditure under this department was swelled by a donation of £10,000 to the Sicily Earthquake Relief Fund, and in 1909-10 by the increased expenditure on salaries, etc., in the Old Age Pensions Department. The statements in previous Year Books have been rearranged so as to include expenditure on Invalid and Old Age Pensions from 1907-8; consequently, from that year onward until 1910-11 the amounts given below differ from those on page 803 by the item "Invalid and Old Age Pensions." Details of the expenditure of this department for each of the five years 1906-7 to 1910-11 are furnished hereunder :—

## EXPENDITURE, TREASURER'S DEPARTMENT, 1906-7 to 1910-11.

15. **Trade and Customs.**—Under this head have been included the expenditure of all the sub-departments under the control of the Minister of Trade and Customs, as well as the amounts payable as sugar bounties and the expenses in connection therewith. The large divergencies in the total expenditure which these figures exhibit for recent years have been mainly due to variations in the amount payable in respect of sugar bounties. Particulars for the five years 1906-7 to 1910-11 are given in the following table:—

## EXPENDITURE, TRADE AND CUSTOMS DEPARTMENT, 1906-7 to 1910-11.

Total ... ..	634,328	914,973	837,741	777,788	1,051,497

16. **Cost of Collection.**—Excluding from the above the expenditure incurred in connection with Patents, Trade Marks, Copyrights, Quarantine, Fisheries, Analyst, and Sugar and other Bounties, the balance may be considered as representing approximately the cost entailed by the collection of the Customs and Excise revenue of the Commonwealth. Details for the five years 1906-7 to 1910-11 are as follows:—

## COST OF CUSTOMS AND EXCISE COLLECTION, 1906-7 to 1910-11.

Particulars.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
	£	£	£	£	£
Gross Customs and Excise revenue ... ..	9,648,556	11,645,352	10,844,067	11,593,164	12,980,444
Cost of collection ... ..	284,397	312,207	329,583	313,887	330,318
Net revenue ... ..	9,364,159	11,333,145	10,514,484	11,279,277	12,650,126
Percentage of cost of collection on gross revenue ... ..	2.95%	2.68%	3.04%	2.71%	2.54%

It will be seen that throughout the period the cost of collecting the Customs and Excise revenue has been rather less than 3 per cent. of the revenue collected, varying only between 2.68 per cent. in 1907-8 and 3.04 per cent. in 1908-9.

17. **Defence.**—The Commonwealth expenditure in connection with Defence, which in 1901-2 amounted to £861,218, had by 1907-8 grown to £1,334,744, but there was a decrease in 1908-9 of nearly £300,000 on the previous year which was more than counterbalanced by a large rise in 1909-10. A slight fall was experienced in 1910-11 owing to the loss of the item "new works." The largeness of the expenditure for 1907-8 was due mainly to the provision made in that year for new works. Particulars for the five years 1906-7 to 1910-11 are as follows:—

## EXPENDITURE, DEFENCE, 1906-7 to 1910-11.

Details.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.

Total ... ..	1,035,795	1,334,744	1,050,590	1,534,881	1,395,798

18. **Postal.**—From a total of £2,966,098 in 1906-7 the cost of the department under the control of the Postmaster-General advanced to £3,559,785 in 1910-11, an increase of £593,687. Details for the five years 1906-7 to 1910-11 are furnished hereunder:—

## EXPENDITURE, POSTAL DEPARTMENT, 1906-7 to 1910-11.

Details.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.

Total ... ..	2,966,098	3,359,290	3,625,402	3,786,755	3,559,785

19. **Miscellaneous.**—In addition to the foregoing there are certain items which do not come under any of the heads enumerated. For 1910-11 the total expenditure under this heading was £4,290,135, made up of £2,452,959 for new works, and two equal payments of £918,588 into the trust fund for the purposes respectively of old-age pensions and the construction of the fleet. The entire expenditure for new works now appears as a separate item instead of being debited to the different departments.

(D) **Subsidy Paid to States.**

1. **Net Revenue.**—As mentioned in sub-section 1 of this section, the Constitution provided under sections 87, 93 and 95 for the payment to the States of all surplus revenue of the Commonwealth, such payment to amount in the aggregate during the continuation of the Braddon clause to not less than three-fourths of the net revenue from Customs and Excise. The expression "net revenue" used in section 87 has been taken to mean the gross revenue less drawbacks and refunds, and less also cost of collection. This view, adopted by the Commonwealth Government, was that indicated by Quick and Garran in their "Annotated Constitution of the Australian Commonwealth," in which they say: "The net revenue from duties of Customs and Excise is the total receipts from these sources after deducting the cost of collection. No attempt was made in the Constitution to define the deductions which may be made in order to arrive at the net revenue; this is a matter of book-keeping, which is left wholly to the Executive Government." In actual practice the statutory three-fourths of net Customs and Excise revenue was ascertained by the Commonwealth Treasury by deducting from the total Customs and Excise revenue (less drawbacks and refunds) the "transferred" expenditure of the Department of Trade and Customs and the expenditure on new works for that department, and taking three-fourths of the result.

2. **Payments to the Several States.**—In the following table are furnished particulars relative to the amounts actually paid to the several States on account of each of the financial years 1906-7 to 1910-11:—

**COMMONWEALTH SUBSIDY PAID TO STATES, 1906-7 to 1910-11.**

State.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
	£	£	£	£	£
New South Wales ...	3,025,137	3,617,472	3,326,276	3,480,314	1,954,986
Victoria ...	2,201,013	2,377,708	1,987,435	2,109,379	1,617,572
Queensland ...	938,935	1,038,267	1,027,047	1,099,383	691,625
South Australia ...	644,564	791,664	716,957	842,508	514,622
Western Australia ...	774,882	751,735	627,933	707,672	591,243
Tasmania ...	261,043	280,059	244,747	253,180	233,143
Total ...	7,845,574	8,856,905	7,930,395	8,492,436	5,603,191

Taking the States as a whole the surplus Commonwealth revenue paid on account of the year 1907-8 was higher than that paid on account of any other financial year. As regards the individual States the maximum payment took place in New South Wales and Victoria in 1907-8, in Queensland and South Australia in 1909-10, in Western Australia in 1902-3, and in Tasmania in 1901-2. The largeness of the amount returned by the Commonwealth to the States in respect of 1907-8 was in great measure due to the increased Customs and Excise revenue collected under the new tariff of that year. For 1908-9 the surplus revenue paid to the States was lower in all cases than that for 1907-8. This was due in part to the fact that the 1907-8 payments were somewhat abnormal, and in part to the retention by the Commonwealth in 1908-9 of all revenue in excess of the statutory three-fourths of net Customs and Excise Revenue. In 1909-10 the surplus revenue returned to the States was higher in every case than in 1908-9. In 1910-11 owing to the new system of allotting the Commonwealth subsidy the amounts received by each State were the smallest for the period under review.

2. **Distribution.**—The amounts to credit of Trust Fund in the several States on 30th June, 1911, were as follows :—New South Wales, £490,297 ; Victoria, £10,669,688 ; Queensland, £175,902 ; South Australia, £92,138 ; Western Australia, £50,964 ; and Tasmania, £51,317.

3. **Australian Notes Account.**—After the passage of the Australian Notes Act, Australian notes began to appear in circulation in December, 1910. For the first half of the calendar year 1911, they circulated side by side with bank notes and Queensland Treasury notes. On 30th June, 1911, the notes issued and unredeemed amounted to £8,031,217. Against this there was a reserve in gold coin of £3,352,281 and other assets, of which the most important were investments in Government Stock and fixed deposits, totalling £4,642,500, and returning an annual income of £157,070. After 30th June, 1911, the penal clauses of the Notes Act came into operation and the banks and the Queensland Government began to withdraw their notes from active circulation. By the end of the year the process was virtually complete and the situation became normal.

The position, according to a Treasury return issued at the end of the March quarter of 1912, was as follows :—

**COMMONWEALTH NOTES ISSUED AND UNREDEEMED AT 27th MARCH, 1912.**

						£
£1	...	...	...	...	...	3,368,592
£5	...	...	...	...	...	3,235,360
£10	...	...	...	...	...	1,714,440
£20	...	...	...	...	...	382,780
£50	...	...	...	...	...	913,900
£100	...	...	...	...	...	433,400
						<hr/> 10,048,472

The amount of the gold reserve was £4,841,536, representing 48.18 per cent. of the liability. Out of this amount of Commonwealth notes the banks hold about £6,000,000, the balance being in active circulation.

The subject is also dealt with at some length in Section XXI., Sub-section 2, Banking.

## SECTION XX.

## STATE FINANCE.

## § 1. General.

1. **Functions of State Governments.**—In any comparison of the finances of the several States due recognition must be made of the actual functions assumed by the respective Governments, and also of the local conditions and requirements in each case. Direct comparisons of public expenditure are thus rendered difficult, owing to the fact that functions which in one State are assumed by the Central Government are in another State relegated to local governing bodies, and further by the fact that costly developmental work may, under certain conditions, be not only economically justifiable, but may be an essential of progress, whilst parsimonious expenditure may be a serious economic blunder. A large expenditure may, therefore, be an indication either of gross extravagance and bad economy on the one hand or healthy and vigorous progress and good economy on the other.

Similarly, as regards revenue, imposts which in some States are levied by the Central Government are in others considered as matters to be dealt with locally. Under these circumstances care is needed in instituting comparisons between the several States, and the particulars contained in this section should be read in connection with those contained in the section dealing with Local Government. It should also be noted that in many ways the budgets of the Australian Governments differ materially from those of most European countries, owing to the inclusion therein of the revenue and expenditure of departments concerned in rendering public services, such for instance as railways, tramways, water supply, etc., which, in the other countries referred to, are often left to private enterprise.

2. **Accounts of State Governments.**—The various financial transactions of the States are in each case concerned with one or other of three Funds—the “Consolidated Revenue Fund,” the “Trust Funds,” and the “Loan Funds.” All revenue collected by the State is placed to the credit of its Consolidated Revenue Fund, from which payments are made under the authority of an Annual Appropriation Act passed by the Legislature, or by a permanent appropriation under a special Act. The hypothecation of the revenue from a specific tax to the payment for some special service is not practised in Australia, all statutory appropriations ranking on an equality as charges on the Consolidated Revenue Fund. The Trust Funds comprise all moneys held in trust by the Government, and include such items as savings bank funds, sinking funds, insurance companies’ deposits, etc. The Loan Funds are credited with all loan moneys raised by the State, and debited with the expenditure therefrom for public works or other purposes.

3. **Inter-relation of Commonwealth and State Finance.**—The principal alteration in State finance, brought about by Federation, has been that the States have transferred to the Commonwealth the large revenue received by the Customs and Postal Departments, and have been relieved of the expenditure connected with these and the Defence Departments, while, on the other hand, a new item of State revenue has been introduced, viz., the payment to the States of a Commonwealth subsidy. Provision for the taking over by the Commonwealth of certain of the public debts of the States is made

in section 105 of the Constitution, and a proposed law extending this provision to the whole of the State indebtedness, which passed both Houses of the Federal Legislature by the statutory majority, was submitted to a referendum at the election in April, 1910, and received the requisite endorsement by the electorate.

## § 2. State Consolidated Revenue Funds.

### (A) Receipts.

1. **Sources of Revenue.**—The principal sources of State revenue are:—

- (a) Taxation.
- (b) The public works and services controlled by the State Governments.
- (c) Sale of and rental from Crown lands.
- (d) The Commonwealth subsidy.
- (e) Miscellaneous sources, comprising fines, fees, interest, etc.

Of these sources that yielding the largest revenue for the States as a whole is the group of public works and services, the principal contributor being the Government railways and tramways. Next in magnitude comes the payment of the subsidy by the Commonwealth, followed in order by Taxation and Land Revenue.

2. **Amount Collected.**—The following table furnishes particulars of the total amount of consolidated revenue received by the several States during the ten years 1901-2 to 1910-11:—

STATE REVENUES, 1901-2 to 1910-11.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
	£	£	£	£	£	£	£
1901-2 ...	11,007,356	6,997,792	3,535,062	2,477,431	3,354,123	826,163	28,197,927
1902-3 ...	11,296,069	6,954,619	3,526,465	2,530,568	3,630,238	734,663	28,672,622
1903-4 ...	11,248,328	7,319,949	3,595,440	2,568,100	3,550,016	857,668	29,139,501
1904-5 ...	11,336,918	7,515,742	3,595,399	2,798,849	3,615,340	852,681	29,714,929
1905-6 ...	12,283,082	7,811,475	3,853,523	2,866,308	3,558,939	900,657	31,273,984
1906-7 ...	13,392,435	8,345,534	4,307,912	3,252,705	3,401,354	970,843	33,670,783
1907-8 ...	13,960,763	8,314,480	4,488,298	3,722,090	3,376,641	1,005,274	34,867,646
1908-9 ...	13,646,126	8,247,684	4,769,172	3,591,260	3,268,993	934,405	34,457,640
1909-10	14,540,073	8,597,992	5,119,254	4,032,891	3,657,670	1,008,932	36,956,812
1910-11	13,839,139	9,204,503	5,320,008	4,181,472	3,850,439	970,092	37,365,653

The figures given in this table relate in each instance to the financial year ended 30th June, except in the case of Tasmania, where the figures shown for 1901-2, 1902-3, and 1903-4 relate respectively to the years ended 31st December, 1901, 1902, and 1903.

During the nine years from 30th June, 1901-2 to 30th June, 1910-11, the aggregate revenues of the States increased by no less a sum than £9,167,726, or a little over 32 per cent. Increases were in evidence in all the States, the largest increase being that of £2,831,783 in New South Wales.

It will be noticed that in all the States, except Queensland, the revenue for 1908-9 was lower than that of the preceding year, largely owing to the fact that the revenue for 1907-8 was swelled by the payment of Customs duties in anticipation of, or in consequence of, the new tariff imposed on 8th August, 1907.

3. **Revenue per Head.**—Details concerning the revenue per head of population, collected in the several States of the Commonwealth during the ten years 1901-2 to 1910-11, are furnished in the table given hereunder. It will be seen that throughout the period Western Australia has collected by far the largest amount per head, and that Tasmania has collected the least.

## STATE REVENUE PER HEAD OF POPULATION, 1901-2 to 1910-11.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	All States.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1901-2 ...	8 0 1	5 15 8	6 19 6	6 16 1	17 6 6	4 14 3	7 7 5
1902-3 ...	8 1 2	5 15 1	6 17 8	7 0 0	17 2 6	4 1 11	7 8 0
1903-4 ...	7 17 11	6 1 6	6 18 11	7 2 2	15 15 11	4 13 9	7 8 10
1904-5 ...	7 15 9	6 4 8	6 17 0	7 14 0	15 2 0	4 15 1	7 9 6
1905-6 ...	8 5 1	6 9 1	7 5 0	7 16 4	14 4 7	4 16 8	7 15 1
1906-7 ...	8 16 0	6 16 10	7 19 10	8 15 7	13 6 7	5 4 8	8 4 7
1907-8 ...	8 18 10	6 14 11	8 4 6	9 17 3	13 5 9	5 6 0	8 7 7
1908-9 ...	8 12 4	6 11 11	8 11 3	9 4 5	12 11 9	4 17 6	8 2 10
1909-10 ...	9 0 2	6 14 8	8 17 2	10 3 6	13 15 4	5 4 6	8 10 11
1910-11 ...	8 8 5	7 1 5	8 17 8	10 3 11	13 18 2	5 0 1	8 8 11

In all the States, except Western Australia, the four years up to 1909-10 witnessed a marked increase in the State revenue collections per head, the most noticeable advances being £2 7s. 2d. in the case of South Australia and £1 12s. 2d. in that of Queensland. The Western Australian decline was continuous until 1908-9, though recovering in 1909-10, and for 1910-11 the revenue per head in that State exceeded the Commonwealth average by more than 60 per cent. Three States, viz., Western Australia, South Australia, and Queensland, exceeded the Commonwealth average for 1910-11, while the other three States fell short of it.

4. **Details for 1910-11.**—Classifying the revenue of the several States in the manner indicated in § 2 (A) 1 above, particulars for the year 1910-11 are as follows:—

## DETAILS OF STATE REVENUE, 1910-11.

Particulars.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	All States.
	£	£	£	£	£	£	£
Taxation ...	1,027,519	1,344,573	667,196	545,986	325,246	284,965	4,195,485
Public Works & Services ...	8,713,375	5,304,562	2,816,075	2,471,603	2,319,079	327,071	21,951,765
Land ...	1,838,917	352,918	805,106	473,791	393,313	98,026	3,962,071
Commonwealth subsidy ...	1,942,245	1,617,572	688,063	510,373	569,577	228,118	5,555,948
Miscellaneous ...	317,063	584,878	343,568	179,719	243,224	31,912	1,700,384
Total ...	13,839,139	9,204,503	5,320,008	4,181,472	3,850,439	970,092	37,365,653

It will be noted that the amounts returned under the heading "Commonwealth subsidy" do not quite agree with those given in the chapter on Commonwealth Finance, page 809. This arises from the fact that the State figures shew the amount for which credit was taken by the State during the financial year 1910-11, whilst the Commonwealth figures shew the amounts paid to State Treasurers on account of that financial year.

5. **Revenue per Head, 1910-11.**—Particulars concerning the revenue per head of population in each State derived from the several sources enumerated in the preceding paragraph are given hereunder:—

## STATE REVENUE PER HEAD, 1910-11.

Particulars.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tas.	All States.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Taxation ...	0 12 6	1 0 8	1 2 3	1 6 8	1 3 6	1 9 5	0 19 0
Public Works & Services ...	5 6 0	4 1 6	4 14 0	6 0 6	8 7 6	1 13 9	4 19 2
Land ...	1 2 4	0 5 4	1 6 11	1 3 1	1 8 4	0 10 1	0 17 11
Commonwealth subsidy ...	1 3 8	1 4 11	1 3 0	1 4 11	2 1 3	1 3 7	1 5 1
Miscellaneous ...	0 3 11	0 9 0	0 11 6	0 8 9	0 17 7	0 3 3	0 7 9
Total ...	8 8 5	7 1 5	8 17 8	10 3 11	13 18 2	5 0 1	8 8 11

The magnitude of the revenue per head from public works and services in the case of Western Australia is mainly due to the fact that the number of miles of railway in that State is large compared with the population, and that the revenue-earning power of the railways is also high.

**6. Relative Importance of Sources of Revenue.**—The following table furnishes an indication of the relative importance of the different sources of revenue in the several States, the figures given being the percentage which each item of revenue bore to the total for the State for the year 1910-11:—

PERCENTAGE OF TOTAL STATE REVENUE, 1910-11.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	%	%	%	%	%	%	%
Taxation ... ..	7.42	15.83	12.54	13.05	8.45	29.38	11.23
Public Works and Services ...	62.96	56.41	52.93	59.11	60.23	33.72	58.75
Land ... ..	13.29	3.83	15.14	11.33	10.21	10.10	10.60
Commonwealth Subsidy ...	14.04	17.57	12.93	12.21	14.79	23.52	14.87
Miscellaneous ... ..	2.29	6.36	6.46	4.30	6.32	3.28	4.55
Total ... ..	100.00	100.00	100.00	100.00	100.00	100.00	100.00

One of the most noticeable features of the figures here given is the comparatively low percentage for "public works and services" and the high percentage for "taxation" in the case of Tasmania. In New South Wales and Queensland land revenue is an important item, while in Queensland the revenue from "public works and services" falls considerably below the Commonwealth average. There has been in all States a fall in the percentage derived from the Commonwealth in 1910-11, due to the new system of allocation.

**7. State Taxation.**—(a) *Details, 1910-11.* Prior to the inauguration of Federation the principal source of revenue from taxation was the imposition of duties of Customs and Excise. At the present time the most productive forms of State taxation are the income tax, which is now imposed in all the States (Western Australia, the last of the States to adopt this method of taxation, having passed the necessary legislation during the Parliamentary session of 1907), and probate and succession duties. For 1910-11 stamp duties occupied third place. In addition to these a State land tax is now collected in all the States except Queensland, and license fees of various kinds are collected in all the States, while a dividend tax is collected in Western Australia, and an "ability" tax<sup>1</sup> in Tasmania. The total revenue from taxation collected by the States during the year 1910-11 was £4,195,485, details of which are set forth in the table given hereunder:—

STATE REVENUE FROM TAXATION, 1910-11.

Taxation.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.A.	Tas.	All States
	£	£	£	£	£	£	£
Probate and succession duties	357,750	433,104	71,637	109,698	23,124	27,459	1,022,772
Other stamp duties ... ..	268,091	275,314	174,051	109,274	79,404	61,118	967,252
Land tax ... ..	7,438	210,640	...	135,614	37,871	64,332	456,495
Income tax ... ..	...	...	...	...	49,579	...	...
Dividend tax ... ..	269,142	395,998	348,513	168,707	84,496	115,836	1,432,271
Ability tax ... ..	...	...	...	...	...	...	...
Licenses ... ..	125,098	21,982	57,600	22,693	43,033	13,685	284,091
Other taxation ... ..	...	7,535	15,395	...	7,739	1,935	32,604
Total ... ..	1,027,519	1,344,573	667,196	545,986	325,246	284,965	4,195,485

1. The "ability" tax is based upon the annual value of the house occupied by the taxpayer, or upon the amount payable by him for board and lodging.

The most productive forms of taxation in the several States during the year 1910-11 were as follows:—New South Wales and Victoria, probate and succession duties; Queensland and South Australia, income tax; Western Australia, dividend tax; and Tasmania, land tax.

(b) *Summary, 1901-2 to 1910-11.* The total amount raised by means of taxation by the several State Governments during the ten years 1901-2 to 1910-11 is given in the following table:—

#### STATE REVENUE FROM TAXATION, 1901-2 to 1910-11.

Year.	New South Wales.	Victoria.	Queensland.	S. Australia.	W. Aust.	Tasmania.	All States.
	£	£	£	£	£	£	£
1901-2	1,108,770	748,216	276,771	267,791	173,582	111,515	2,686,645
1902-3	1,108,781	878,591	415,688	398,941	221,247	105,402	3,128,650
1903-4	1,100,193	938,147	475,184	353,432	235,114	150,091	3,252,161
1904-5	1,114,408	897,870	454,574	442,030	221,738	216,953	3,347,573
1905-6	1,297,776	990,735	494,165	369,756	260,609	248,799	3,661,840
1906-7	1,381,305	1,110,411	540,737	411,867	266,152	276,450	3,986,922
1907-8	1,077,534	977,620	525,540	477,637	277,463	265,656	3,601,450
1908-9	907,249	1,072,228	535,194	450,250	296,599	250,835	3,512,355
1909-10	1,223,521	1,088,353	584,997	481,003	336,396	303,390	4,017,660
1910-11	1,027,519	1,344,573	667,196	545,986	325,246	284,965	4,195,485

During the nine years between 30th June, 1901-2, and 30th June, 1910-11, the aggregate State revenue from taxation increased by nearly 60 per cent., the increase varying considerably in the several States. Thus while New South Wales shewed a decrease of 8 per cent., and Victoria an increase of 80 per cent., the Queensland revenue advanced by 140 per cent., and that of Tasmania by 156 per cent. The total increase in State taxation for the year amounted to £177,825.

The revenue from State taxation per head of population, collected in the several States during each of the years 1901-2 to 1910-11, was as follows:—

#### STATE TAXATION PER HEAD, 1901-2 to 1910-11.

Year.	New South Wales.	Victoria.	Queensland.	S. Australia.	W. Aust.	Tasmania.	All States.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1901-2	0 16 1	0 12 4	0 10 11	0 14 8	0 17 11	0 13 0	0 14 1
1902-3	0 15 10	0 14 6	0 16 3	1 2 0	1 0 10	0 11 9	0 16 2
1903-4	0 15 5	0 15 7	0 18 4	0 19 7	1 0 10	0 16 5	0 16 7
1904-5	0 15 4	0 14 11	0 17 4	1 4 4	0 18 6	1 3 5	0 16 10
1905-6	0 17 5	0 16 4	0 18 7	1 0 2	1 0 10	1 6 8	0 18 2
1906-7	0 18 2	0 18 2	1 0 1	1 2 3	1 0 10	1 9 10	0 19 6
1907-8	0 13 9	0 15 10	0 19 3	1 5 3	1 1 10	1 8 0	0 17 3
1908-9	0 11 6	0 17 2	0 19 2	1 3 1	1 2 10	1 6 2	0 16 7
1909-10	0 15 2	0 17 0	1 0 3	1 4 3	1 5 4	1 11 5	0 18 7
1910-11	0 12 6	1 0 8	1 2 3	1 6 8	1 3 6	1 9 5	0 19 0

Taking the States as a whole the State taxation increased by four shillings and elevenpence per head during the nine years from 1901-2 to 1910-11, the most marked increase being that of sixteen shillings and fivepence per head in the case of Tasmania. In Queensland the increase amounted to eleven shillings and fourpence, in South Australia to twelve shillings, in Western Australia to five shillings and sevenpence, in Victoria to eight shillings and fourpence, while in New South Wales a decline of three shillings and sevenpence took place, owing in large measure to the reductions made in that State in the imposition of income tax and stamp duties and the loss of revenue consequent on the transfer of land tax receipts to local bodies. State taxation per head is at present highest in Tasmania and lowest in New South Wales.

**8. Commonwealth and State Taxation.**—For the purpose of obtaining an accurate view of the extent of taxation imposed on the people of the Commonwealth by the central governing authorities it is necessary to add together the Commonwealth and State collections. This has been done in the table given hereunder, which contains particulars concerning the total taxation for each of the years 1906-7 to 1910-11, as well as the amount per head of population:—

**COMMONWEALTH AND STATE TAXATION, 1906-7 to 1910-11.**

Particulars.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
	£	£	£	£	£
Commonwealth taxation ...	9,648,556	11,645,352	10,844,067	11,593,164	14,350,788
State taxation ...	3,986,922	3,601,450	3,512,355	4,017,660	4,195,485
 Total ...	 13,635,478	 15,246,802	 14,356,422	 15,610,824	 18,546,273
 Taxation per head ...	 £3 6 2	 £3 12 8	 £3 7 2	 £3 11 2	 £4 3 10

Whilst the Commonwealth taxation increased during the period by £4,702,232, the State taxation advanced by £208,563, the aggregate increase being £4,910,795. The amount has, however, fluctuated somewhat during the period, and has ranged between a minimum of £3 6s. 2d. per head in 1906-7 and a maximum of £4 3s. 10d. per head in 1910-11. The large increase in Commonwealth taxation in 1910-11 is mainly due to the appearance for the first time of the Federal Land Tax.

**9. Public Works and Services.**—A very large proportion of the revenue of all the States of the Commonwealth is made up of the receipts from the various public works and services under the control of the several Governments. The principal of these are railways and tramways, harbour works, and water supply and sewerage, while in addition, State batteries for the treatment of auriferous ores exist in Western Australia, and various minor revenue-producing services are rendered by the Governments of all the States. For the year 1910-11 the aggregate revenue from this source totalled £21,951,765, or nearly 60 per cent. of the revenue from all sources. Details of revenue from public works and services for the year 1910-11 are as follows:—

**STATE REVENUE FROM PUBLIC WORKS AND SERVICES, 1910-11.**

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£

\* Water Supply only.

**10. Land Revenue.**—The revenue derived by the States from the sale and rental of Crown lands has, with few exceptions, been treated from the earliest times as forming part of their respective Consolidated Revenue Funds, and has been applied to meet ordinary current expenses. Where the rentals received are for lands held for pastoral or for residential purposes, such application of the revenue appears perfectly justifiable. On the other hand, where the rentals are those of mineral and timber lands, and in all cases of sales of lands, such a proceeding is essentially a disposal of capital in order to defray current expenses. As a matter of financial procedure such a course is open to criticism. In the following table particulars of revenue derived from sales and rental of Crown lands are given for the year 1910-11:—

## STATE LAND REVENUE, 1910-11.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	All States.
	£	£	£	£	£	£	£
Sales ...	1,028,531	219,789	217,099	340,731	253,961	60,894	2,121,005
Rentals ...	810,386	133,129	588,007	133,060	139,352	37,132	1,841,066
Total ...	1,838,917	352,918	805,106	473,791	393,313	98,026	3,962,071

11. **Commonwealth Subsidy.**—The payments to the States of Commonwealth subsidy represent in each instance a considerable proportion of the State's revenue, and for the year 1910-11 aggregated £5,555,948. This represents a great decline from the amounts of previous years, owing to the new system of allotting the subsidy. The percentage which the subsidy received by each State for 1910-11 was of the total revenue of that State is shewn in the following table:—

## COMMONWEALTH SUBSIDY PAID TO STATES DURING 1910-11.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£
Commonwealth subsidy ...	1,942,245	1,617,572	688,063	510,373	569,577	228,118	5,555,948
Total revenue ...	13,839,139	9,204,503	5,320,008	4,181,472	3,850,439	970,092	37,365,653
Percentage of subsidy on revenue ...	%	%	%	%	%	%	%
	14.04	17.57	12.93	12.21	14.79	23.52	14.87

The amount of subsidy here shewn is that for which the several States took credit during the year 1910-11. (See also page 814.)

12. **Miscellaneous Items of Revenue.**—In addition to the foregoing sources of revenue there are in each State several miscellaneous ones, including such items as interest, fines, fees, etc., which for the year 1910-11 aggregated £1,700,384.

## (R) Disbursements.

1. **Heads of Expenditure.**—The principal heads of State expenditure from Consolidated Revenue Funds are:—

- (a) Interest and sinking funds in connection with public debt.
- (b) Working expenses of railways and tramways.
- (c) Justice.
- (d) Police.
- (e) Penal establishments.
- (f) Education.
- (g) Medical and charitable.
- (h) All other expenditure.

Of these items that of working expenses of railways and tramways was the most important, and for the year 1910-11 represented about 33 per cent. of the aggregate expenditure from the Consolidated Revenue Fund. Next in order for that year was the item of interest and sinking fund in connection with the public debt, then education, medical and charitable, police, other public works, and lands and surveys in the order named.

2. **Total Expenditure.**—The total expenditure from Consolidated Revenue Funds in the several States during each of the years 1901-2 to 1910-11 is furnished in the table given hereunder:—

**STATE EXPENDITURE FROM CONSOLIDATED REVENUE FUNDS, 1901-2 to 1910-11.**

Year.	N.S. Wales.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£
1901-2 ...	11,020,105	7,398,832	3,967,001	2,823,578	3,151,427	870,442	29,231,385
1902-3 ...	11,467,235	6,759,960	3,717,806	2,641,789	3,521,763	850,685	28,959,238
1903-4 ...	11,319,888	7,339,608	3,607,864	2,707,254	3,698,312	879,356	29,552,282
1904-5 ...	11,195,075	7,343,742	3,581,403	2,860,894	3,745,224	840,184	29,566,522
1905-6 ...	11,386,864	7,261,475	3,725,712	3,004,974	3,632,318	853,147	29,864,490
1906-7 ...	11,876,657	7,679,143	3,911,797	3,394,999	3,490,182	913,762	31,266,540
1907-8 ...	12,095,593	7,862,246	4,373,097	3,862,336	3,379,006	929,885	32,502,163
1908-9 ...	12,893,662	8,240,177	4,759,231	3,760,005	3,370,530	960,237	33,983,842
1909-10 ...	13,038,150	8,579,980	5,113,578	4,196,493	3,447,732	997,321	35,373,254
1910-11 ...	13,807,538	9,194,157	5,314,737	4,181,472	3,734,448	1,016,963	37,249,315

As in the case of the table previously given for revenue, the above figures relate to the year ended 30th June, except in the cases of 1901-2, 1902-3, 1903-4, which contain Tasmanian figures for the years ended 31st December, 1901, 1902, and 1903 respectively.

3. **Expenditure per Head.**—Owing to the varying conditions of the several States and the extent to which the different functions of Government are distributed therein between central and local governing authorities, the expenditure per head from Consolidated Revenue Funds differs materially in the several States, being highest in the case of Western Australia and lowest in that of Tasmania. Three of the States, viz., Western Australia, South Australia and Queensland, are above the Commonwealth average per head, and the other three States below. The expenditure per head of population for each State for the years 1901-2 to 1910-11 is as follows:—

**STATE EXPENDITURE PER HEAD, 1901-2 to 1910-11.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1901-2 ...	8 0 3	6 2 4	7 16 7	7 15 2	16 5 7	4 19 4	7 12 10
1902-3 ...	8 3 7	5 11 11	7 5 2	7 6 2	16 12 3	4 14 10	7 9 6
1903-4 ...	7 18 10	6 1 10	6 19 4	7 9 11	16 9 1	4 16 2	7 10 11
1904-5 ...	7 13 10	6 1 10	6 16 5	7 17 4	15 12 10	4 10 9	7 8 9
1905-6 ...	7 13 1	6 0 0	7 0 2	8 3 11	14 10 5	4 11 6	7 8 1
1906-7 ...	7 16 1	6 5 11	7 5 2	9 3 4	13 13 7	4 18 6	7 12 10
1907-8 ...	7 14 11	6 7 6	8 0 3	10 4 8	13 5 6	4 18 1	7 16 2
1908-9 ...	8 2 10	6 11 9	8 10 10	9 13 1	12 19 7	5 0 2	8 0 7
1909-10 ...	8 1 7	6 14 4	8 17 0	10 11 9	12 19 6	5 3 3	8 3 7
1910-11 ...	8 8 0	7 1 3	8 17 5	10 3 11	13 9 9	5 4 11	8 8 4

In all the States with the exception of South Australia increases in the expenditure per head took place during the year 1910-11, ranging from 10s. 3d. per head in the case of Western Australia to 5d. per head in that of Queensland. In South Australia a decrease of 7s. 10d. per head was experienced.

4. **Details of Expenditure for 1910-11.**—The following table furnishes for the year 1910-11 particulars as to the expenditure of the several States under each of the principal heads:—

## DETAILS OF STATE EXPENDITURE, 1910-11.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£

5. **Expenditure per Head, 1910-11.**—The expenditure per head of population of the several States for the year 1910-11, under each of the principal items, is given hereunder :—

## STATE EXPENDITURE PER HEAD, 1910-11.

Particulars	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Public debt. (interest, sink- ing fund, &c.) ... ..	2 4 6	1 14 1	2 15 1	3 5 7	3 15 7	2 4 11	2 6 11
Railways and tramways (working expenses) ... ..	2 18 7	2 6 7	2 12 5	3 2 3	4 9 4	1 2 3	2 14 10
Justice ... ..	0 3 3	0 2 9	0 2 9	0 1 7	0 4 2	0 1 2	0 2 10
Police ... ..	0 5 10	0 4 11	0 7 5	0 4 6	0 8 4	0 4 2	0 5 9
Penal establishments ... ..	0 1 0	0 0 9	0 0 10	0 0 10	0 1 9	0 0 7	0 0 11
Education ... ..	0 14 9	0 15 6	0 13 2	0 11 6	0 15 10	0 9 4	0 14 3
Medical and charitable ... ..	0 7 4	0 7 7	0 8 8	0 6 8	0 11 9	0 5 6	0 7 9
All other expenditure ... ..	1 12 9	1 9 1	1 17 1	2 11 0	3 3 0	0 17 0	1 15 1
<b>Total</b> ... ..	<b>8 8 0</b>	<b>7 1 3</b>	<b>8 17 5</b>	<b>10 3 11</b>	<b>13 9 9</b>	<b>5 4 11</b>	<b>8 8 4</b>

In three of the States, viz., Western Australia, South Australia, and Queensland, the average State expenditure per head exceeded that for the Commonwealth as a whole, falling short of it in the other three States.

6. **Relative Importance.**—The relative importance of the items of expenditure enumerated above varies considerably in the several States. This will readily be seen from the following table, giving for each State the percentage of the expenditure under the various items, on the total expenditure for the State :—

## PERCENTAGE ON TOTAL STATE EXPENDITURE, 1910-11.

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	%	%	%	%	%	%	%
Public debt (interest, sink- ing fund, &c.) ... ..	26.51	24.14	31.25	32.13	28.02	42.81	27.85

Taken together, the interest and sinking fund on the public debt, and the working expenses of the railways and tramways, represented for the year 1910-11 about 60 per cent. of the aggregate State expenditure.

(c) **Balances.**

1. **Position on 30th June, 1911.**—On various occasions in each of the States the revenue collected for a financial year has failed to provide the funds requisite for defraying the expenditure incurred during that year, the consequence being a deficit which is usually liquidated either by cash obtained from trust funds, or by the issue of Treasury bills. In some of the States a number of such deficits has occurred, interspersed with occasional surpluses, the result being an accumulating overdraft, which in certain instances assumed very large proportions. Thus during the period of financial stress resultant upon the crisis of 1893 and the drought conditions of succeeding years, the accumulated overdrafts of several of the States grew very rapidly. The very favourable financial conditions of recent years have enabled the various Treasurers to considerably reduce such liabilities from time to time, and at 30th June, 1911, the position of the balances of the several Consolidated Revenue Funds was as set forth in the table hereunder:—

**STATE CONSOLIDATED REVENUE FUND BALANCES, 30th JUNE, 1911.**

State.	Cash Credit Balances.	Debit Balance.		Net Result.
		Cash Overdraft.	Overdraft liquidated by Treasury Bills

(D) **Principal State Taxes.**(a) **Probate and Succession Duties.**

1. **General.**—Probate duties have been levied for a considerable time in all the States of the Commonwealth. From the provisions of the several State Acts governing the payment of duty which are outlined hereunder, it will be seen that both the ordinary rates and those which apply to special beneficiaries differ widely in several cases. In the following table the amount under which the estates of deceased persons were sworn, is shewn for the years 1906 to 1910:—

**VALUE OF ESTATES OF DECEASED PERSONS, 1906 to 1910.**

\* Approximate.

**2. New South Wales.**—(i.) *Legislation.* The Acts relative to probate and succession duties at present in force in New South Wales are, in chronological order, as follows:—

- (a) Wills, Probate and Administration Act 1898.
- (b) Stamp Duties Act 1898, and Amendment of, 1904.
- (c) Probate Duties (Amendment) Act 1899.
- (d) Administration (Validating) Act 1900.
- (e) Companies (Death Duties) Act 1901.
- (f) Administration Amending Act 1906.

The first-named Act, assented to on 27th July, 1898, repealed, amongst others, the Probate Act of 1890 (two sections excepted), and also the Probate Amendment Act of the same year. On the same day, 27th July, assent was also given to the Stamp Duties Act, the rates of duty contained in which were in force until the passing of the Probate Duties (Amendment) Act on 22nd December, 1899, when its schedule was repealed and a new rate of duty was imposed.

The Administration (Validating) Act of 1900 was passed in order to validate certain orders of the Supreme Court giving power or leave to sell, mortgage or lease, the real estate of deceased persons.

The Companies (Death Duties) Act of 1901 relates to the registration of any company incorporated according to the laws of some country other than New South Wales carrying on the business (a) of mining for any minerals in New South Wales, or (b) of pastoral or agricultural production or timber-getting in New South Wales, and to the imposition of duties on the death of shareholders of those companies.

(ii.) *Rates of Duty.* In lieu of the duties payable on probate and letters of administration as provided for by the Stamp Duties Act of 1898, the following rates are now payable on the total value of the estate of a deceased person after the deduction of all debts, as enacted by the Amending Act of 1899, viz.—Up to £1000, nil; above £1000 and up to £5000, 2 per cent.; then up to £6000, 3 per cent.; then increasing  $\frac{1}{2}$  per cent. for each £1000 up to £10,000, for each £2000 up to £40,000, and for each £4000 up to £100,000, the last group, £96,000 to £100,000, being subject to  $9\frac{1}{2}$  per cent. Above £100,000 the duty is 10 per cent. Property left by the deceased to his widow or children is subject to half the foregoing rates, if the total value of the estate, after the deduction of all debts, does not exceed £50,000.

**3. Victoria.**—(i.) *Legislation.* The Acts contained in the subjoined list regulate the probate and succession duties of Victoria:—

- (a) No. 1060, Administration and Probate Act 1890, with its amendments of 1891, 1892, 1898, 1903, and 1907.
- (b) No. 1419, Intestate Estates Act 1896.
- (c) No. 1827, Probate Charges Act 1903, and its amendment No. 1970 of 1905.
- (d) No. 1862, Administration and Probate Duties Act 1903, with its amendments of 1904, 1905, 1906, 1907, 1908, and 1909.

The principal Act, the Administration and Probate Act 1890, was assented to on 10th July, 1890, and came into force on 1st August of the same year. It repealed Acts Nos. 338, 403, 427, 523, 900, 928, 1035 and 1053, and enacted a scale of duties which was enforced until 1st January, 1903, when the Administration and Probate Act of 1903 came into force.

(ii.) *Rates of Duty.* The last-mentioned Act provides for the following scale of duties on the estate, real and personal, of deceased persons, after the deduction of all debts, viz.:—Less than £200, nil; above £200 and up to £300,  $1\frac{1}{2}$  per cent.; then increasing  $\frac{1}{2}$  per cent. for each £100 up to £600; then, increasing  $\frac{1}{3}$  per cent. for each £200 up to £1000; above £1000 and up to £1500,  $\frac{1}{4}$  per cent.; then increasing  $\frac{1}{4}$  per cent. for each £500 up to £6000; then increasing  $\frac{1}{5}$  per cent. for each £1000 up to £19,000; with the exception of the two stages £10,000 to £11,000 and £14,000 to £15,000, which involve an increase of  $\frac{2}{3}$  per cent. and whose rates are respectively  $7\frac{1}{3}$  and  $8\frac{1}{3}$  per cent.; over £19,000 and up to £20,000,  $9\frac{1}{2}$  per cent.; and over £20,000, 10 per cent. is charged.

The rates of duty as shewn above also apply to all settlements of property, both real and personal, where the person taking the property is a brother or sister, or descendant of a brother or sister, or by any other person in any other degree of collateral consanguinity to the settlor, but duty at the rate of 10 per cent. is payable on the value of property taken by a stranger in blood to the settlor or donor.

(iii.) *Special Rates.* Property left by the deceased to his widow, children or grandchildren, is subject to the following rates, except that in cases where the total value of the estate after payment of all debts does not exceed £2000 half these rates only are charged:—Up to £500, nil; over £500 and up to £1000, 1 per cent.; over £1000 and up to £2000, 3 per cent.; then increasing by  $\frac{1}{3}$  per cent. for each £1000 up to £5000, and by  $\frac{1}{2}$  per cent. for each £1000 up to £8000; over £8000 and up to £10,000, 5 per cent.; increasing thence by  $\frac{1}{3}$  per cent. for each £2000 up to £24,000, for each £4000 up to £80,000, and for each £5000 up to £100,000, the last group £95,000 to £100,000 being subject to  $9\frac{1}{2}$  per cent.; over £100,000, the amount payable is 10 per cent.

4. *Queensland.*—(i.) *Legislation.* The collection of probate and succession duties in Queensland is governed by the following Acts:—

- (a) The Succession and Probate Duties Act 1892.
- (b) The Succession Act Amendment Act 1895.
- (c) The Succession and Probate Duties Amendment Act 1895.
- (d) The Succession and Probate Duties Act 1904.
- (e) The Succession Act 1906.
- (f) The Succession and Probate Amendment Act 1906.

The principal Act, the Succession and Probate Duties Act of 1892, which was assented to on 4th October, 1892, and taken as coming into force on 7th September previous, repealed the Succession Duties Act of 1886, and enacted a scale of duties which is still levied.

(ii.) *Rates of Succession Duty.* If the whole succession or successions derived from the same predecessor, and passing upon death to any person, amount in money or principal value to less than £200, no duty is payable; where the value is £200 and less than £1000, 2 per cent. is due; £1000 and less than £2500, 3 per cent.; £2500 and less than £5000, 4 per cent.; £5000 and less than £10,000, 6 per cent.; £10,000 and less than £20,000, 8 per cent.; and when the value is £20,000 or upwards, 10 per cent. is charged.

(iii.) *Special Rates.* Duty at one-half of the above rates is payable when the successor is the wife or husband, or the lineal issue of the predecessor; and at double the rates if the successor is a stranger in blood to the settlor.

(iv.) *Probate and Administration.* In addition to the foregoing succession duties a probate duty of 1 per cent. is payable on all estates having a net value of £300 or over. When the net value of the property of a deceased person does not amount to £300 it is exempt from duty.

(v.) *Exemptions.* Bequests for educational and charitable purposes in Queensland are exempt from taxation.

**5. South Australia.**—(i.) *Legislation.* Under the four Acts given hereunder the probate and succession duties are collected in South Australia:—

- (a) No. 537, The Administration and Probate Act 1891.
- (b) No. 567, The Succession Duties Act 1893.
- (c) No. 819, The Administration and Probate Act 1903.
- (d) No. 854, The Administration and Probate Amendment Act 1904.

On 25th October, 1893, the Succession Duties Act was assented to, and by it the Probate and Succession Duty Act of 1876, and its two amendments, Nos. 225 of 1881 and 361 of 1885, were repealed.

(ii.) *Rates of Duty.* On the property derived by any beneficiary the duties are assessed on the net value, and the following scale applies where the person taking the property is the widow, widower, descendant or ancestor of the deceased; and likewise where the property is given or accrues to any of the above-mentioned persons under a settlement or deed of gift:—Under £500, *nil*; over £500 and up to £700,  $1\frac{1}{2}$  per cent.; over £700 and up to £1000, 2 per cent.; over £1000 and up to £2000, 3 per cent.; over £2000 and up to £3000,  $3\frac{1}{2}$  per cent.; increasing thence by  $\frac{1}{2}$  per cent. for each £2000 up to £7000; over £7000 and up to £10,000, 5 per cent.; increasing thence by  $\frac{1}{2}$  per cent. for each £5000 up to £20,000, for each £10,000 up to £40,000, for each £20,000 up to £100,000, and for each £50,000 up to £200,000, the duty from £150,000 to £200,000 being  $9\frac{1}{2}$  per cent.; above £200,000 the duty is 10 per cent.

Where the person taking the property is a brother, sister, descendant of a brother or sister, or any person in any other degree of collateral consanguinity to the deceased person, or where the property is given or accrues to any of the aforesaid persons under a settlement or deed of gift, the duty is reckoned on the net present value of such property, and is payable at the rates shewn hereunder:—Under £200, 1 per cent.; up to £300,  $1\frac{1}{2}$  per cent.; up to £400, 2 per cent.; up to £700, 3 per cent.; up to £1000,  $3\frac{1}{2}$  per cent.; up to £2000, 4 per cent.; thence increasing 1 per cent. up to each of the following amounts:—£3000, £5000, £10,000, £15,000, and £20,000; above £20,000 10 per cent. is payable.

If the person taking the property, either by will or under a settlement or deed of gift, is a stranger in blood to the deceased or the settlor or donor, as the case may be, duty is charged at the rate of 10 per cent. on the net present value of the property.

(iii.) *Special Rates.* Duty at one-half the rates shewn above is levied when the person who takes is the child under twenty-one years of age or the widow of the deceased or the settlor or donor, provided that the net value of the whole estate be under £2000.

**6. Western Australia.**—(i.) *Legislation.* The only Acts relating to probate and succession duties at present in force in Western Australia are the Administration Act of 1903, which was assented to on 31st December, 1903, and the Administration Act Amendment Act 1909. The former repealed a number of Acts, including the Real Estates Administration Act 1893 and the Duties on Deceased Persons' Estates Act 1895. The latter levied the following scale of duties:—

(ii.) *Rates of Duty.* When the total value of the estate, real or personal, of a deceased person, or of the property given or accruing to any person under a settlement or deed of gift, does not, after the deduction of all debts, exceed £500, duty is payable at

the rate of 1 per cent.; where the value exceeds £500, but does not exceed £1000, 2 per cent. is charged; £1000 and under £2500, 3 per cent.; £2500 and under £4500, 4 per cent.; £4500 and under £6000, 5 per cent.; £6000 and under £7000, 6 per cent.; £7000 and under £8000, 6½ per cent.; £8000 and under £9000, 6¾ per cent.; £9000 and under £10,000, 6⅝ per cent.; £10,000 and under £11,000, 7¼ per cent.; £11,000 and under £12,000, 7½ per cent.; £12,000 and under £13,000, 7¾ per cent.; £13,000 and under £14,000, 7⅞ per cent.; £14,000 and under £15,000, 8¼ per cent.; £15,000 and under £16,000, 8½ per cent.; £16,000 and under £17,000, 8¾ per cent.; £17,000 and under £18,000, 8⅞ per cent.; £18,000 and under £19,000, 9 per cent.; £19,000 and under £20,000, 9¼ per cent.; £20,000 and above, 10 per cent.

(iii.) *Special Rates.* Half the above rates are charged the parent, issue, husband, wife, and issue of husband or wife, who are *bona-fide* residents of, and domiciled in, Western Australia.

7. **Tasmania.**—(i.) *Legislation.* The duties imposed in connection with probates and letters of administration in Tasmania are provided for by the following Acts:—

- (a) The Deceased Persons' Estates Act of 1874 and 1881.
- (b) The Probate (Foreign) Act 1893.
- (c) The Probate Act 1893, with amendment in 1906.
- (d) The Deceased Persons' Estate Management Act 1903.
- (e) The Deceased Persons' Estates Duties Act 1904.
- (f) The Death Duties (Deductions) Act 1909.

The Probate Duties Act of 1868 levied a scale of rates which remained in force until the passing of the Deceased Persons' Estates Duties Act in 1904, when the former Act was repealed and a new schedule came into operation. The Death Duties (Deductions) Act provides for the deduction from death duties of the amount of duty payable in the United Kingdom in respect of property situated therein.

(ii.) *Rates of Duty.* Duty at the rates given below is payable on the property derived from a deceased person, or comprised in a settlement or deed of gift in so far as it includes, or is a portion of—

- (a) His real and personal property in Tasmania, including that over which he had a general power of appointment, exercised by his will, or by the settlement or deed of gift, if the deceased was, at the time of his death, domiciled in Tasmania.
- (b) His personal property, as above, including all debts, money, etc., recoverable in action by the executor in Tasmania, if the deceased was, at time of death, domiciled elsewhere than in Tasmania; and
- (c) Property accruing to any husband by virtue of his right as husband on the decease of his wife.

When the value of the property of the deceased person, settlor, or donor, as the case may be, at the time of his death exceeds £500, and does not exceed £1000, 2 per cent. is payable; exceeding £1000 and not exceeding £2000, 2½ per cent.; £2000 and not over £5000, 3 per cent.; £5000 and not over £20,000, 4 per cent.; £20,000 and not over £100,000, 5 per cent.; and over £100,000, 10 per cent.

(iii.) *Special Rates.* Double the above rates are charged when the property is derived by, or given or accrues to a brother or sister, or the child of a brother or sister of the deceased person, settlor, or donor, but in no case is a duty of more than 10 per cent. payable. When the property is derived by a stranger in blood to the deceased person, settlor, or donor, or accrues to any collateral relation beyond the third degree, the duty is 10 per cent. on the value of the property of any value whatever. No duty is payable in respect of any money which is payable to any person by a friendly society upon the death of a member or his wife or child.

#### (b) Stamp Duties.

1. **Legislation in the Several States.**—The principal Acts at present in force in the several States relating to stamp duties are as follows:—

- (a) *New South Wales.* Stamp Duties Act 1898, with amendments in 1900, 1904, and 1907.
- (b) *Victoria.* Stamps Act 1890, with amendments in 1892, 1900, 1904, and 1908.
- (c) *Queensland.* Stamp Act 1894, with amendment in 1904.
- (d) *South Australia.* Stamp Act 1886, with amendment in 1902.
- (e) *Western Australia.* Stamp Act 1882, with amendments in 1905 and 1906.
- (f) *Tasmania.* Stamp Duties Act 1882, with amendments in 1886, 1888, 1892, 1900 and 1904.

These Acts provide for the payment of duty on bank notes, bills of exchange, and promissory notes, deeds, leases, policies, receipts, transfers, and so forth, all of which with the exception of bank notes are required to be stamped either by an impressed or adhesive stamp, as the case may be.

The revenue derived by the several States of the Commonwealth from the imposition of stamp duties for the years 1906-7 to 1910-11 is shewn in the accompanying table:—

**STAMP REVENUE (EXCLUSIVE OF PROBATE AND SUCCESSION DUTIES),  
1906-7 to 1910-11.**

State.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
	£	£	£	£	£
New South Wales ...	343,666	254,538	205,022	222,720	268,091
Victoria ...	240,373	240,535	237,681	250,358	275,314
Queensland ...	119,397	142,573	132,073	145,556	174,051
South Australia ...	75,034	79,547	89,160	97,877	109,274
Western Australia ...	63,634	59,617	58,065	62,714	79,404
Tasmania ...	57,198	58,832	53,713	54,741	61,118
Commonwealth ...	899,302	835,642	775,714	833,966	967,252

2. **Bank Notes.**—Promissory notes issued by any bank are not required to bear a duty stamp either impressed or adhesive, and may be reissued as often as thought fit. An annual composition has, however, to be paid in lieu of stamp duty. This composition is payable quarterly, and is the same in all States, being at the rate of £2 per annum on every £100 or part thereof of the average annual amount of bank notes in circulation. On 2nd June, 1893, the Treasury Notes Act of Queensland was assented to, by which the issue of Treasury notes payable on demand was authorised. These notes were used exclusively by the banks in that State, but their issue has been prohibited by the Federal Bank Note Tax Act, and they have now almost passed out of circulation. (See Section xxi., Private Finance.)

The issue of bank notes by any bank is likely to be seriously restricted in the future by this Act, which passed the Federal Parliament in the session of 1910, and was assented to on 10th October, 1910. Further reference is made to the Act in the section dealing with Private Finance. It is enough to say here that it imposes a tax of 10 per cent. per annum on all bank notes issued or reissued by any bank in the Commonwealth after the commencement of the Act and not redeemed.

3. **Bills of Exchange and Promissory Notes.**—(i.) *Rates.* In all the States except New South Wales, when a bill of exchange or promissory note is payable on demand, the rate charged is one penny. When the bill was not payable on demand the duty levied in New South Wales, until the Amendment Act of 1907 came into force on 1st January, 1908, was sixpence for every £25 or part thereof, but under this Act no duty is now payable on bills of exchange or promissory notes in that State. The rate in Victoria for all bills of exchange was sixpence for every £25\* up to £100, and one shilling for every £50 over £100, but under the Act of 1908 these rates only apply to those bills both drawn in and payable in Victoria, all others being free from duty. One shilling is charged in Queensland for every £50. For every £25 the duty in South Australia is sixpence if the bill is

\* "Or fractional part thereof" is to be understood after all amounts mentioned.

negotiable in the Commonwealth, but when a bill is drawn in South Australia and payable in any place beyond the Commonwealth, one shilling is charged for every £100, in which case an adhesive stamp only is to be used. In Western Australia, when the amount of the bill does not exceed £25 the duty payable is sixpence, when it exceeds £25 the duty is increased by sixpence for every £25 up to £100, and when it exceeds £100, one shilling for every £50 is charged. An amount of threepence is levied in Tasmania for a bill not exceeding £5; sixpence for one exceeding £5 and under £25; and an additional sixpence for every succeeding £25.

(ii.) *Exemptions.* The chief classes of bills which are exempt from taxation are Government debentures, Treasury notes, drafts on account of Public Service, drafts by banker on banker, letters of credit in the State, etc.

4. **Bills of Lading.**—(i.) *Rates.* The charge made for a bill of lading or copy thereof is sixpence in four of the States, viz., New South Wales, Victoria, South Australia, and Tasmania. In Queensland the rate is one shilling, and for a receipt of a bill of lading sixpence, whilst in Western Australia the duty is threepence if the goods do not exceed half a ton in weight or measurement, and sixpence if the goods exceed that quantity. The Acts provide that no bill of lading is to be stamped after its execution.

5. **Receipts.**—(i.) *Rates.* The duty payable on receipts given on payment of the amount of £2 or upwards in the States of Victoria, South Australia and Western Australia is one penny. Under the provisions of the Stamp Duties Act of 1898 the rate in New South Wales was twopence for £2 or over, but this was repealed by the Stamp Duties Amendment Act of 1907, and no duty is now payable on receipts in that State. Acknowledgments for payment of £1 or upwards were taxed one penny in Queensland under the 1894 Act, but by Amendment Acts of 1901, 1903 and 1904, the first two of which have since been repealed, it was provided that amounts of £1 and less than £2 were to be taxed one penny; £2 and less than £50, twopence; £50 and less than £100, threepence; and £100 or over, sixpence for every £100 or part thereof. By the 1904 Amendment Act of Tasmania, receipts for sums amounting to £2 and not over £5 are subject to a duty of one penny, and when the amount exceeds £5, one penny is charged for every additional £10 or part thereof, provided that the maximum duty on any receipt is fourpence.

(ii.) *Exemptions.* The exemptions from payment of duty on receipts vary considerably in the several States, and amongst others may be mentioned the following:—On His Majesty's Service, banker's receipt for bill of exchange or promissory note, current accounts, savings bank accounts, municipal rates, money orders and postal notes, wages received by labourers, workmen, menial servants, etc.

#### (c) Land Tax.

1. **General.**—Queensland is the only State in the Commonwealth in which a State land tax is not levied, although it was not until as recently as 1907 that the first tax on land was imposed in Western Australia. In all of the other States the tax dates back to a much earlier period.

The following table shews the amount collected by means of such taxes during the financial years 1906-7 to 1910-11 in the States in which a land tax was imposed:—

LAND TAX COLLECTIONS, 1906-7 to 1910-11.

State.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
	£	£	£	£	£
New South Wales ... ..	345,497	178,889	80,794	9,066	7,438
Victoria ... ..	92,438	89,496	85,559	114,357	210,640
South Australia ... ..	90,200	93,762	92,158	94,126	135,614
Western Australia ... ..	...	11,140	33,120	34,344	37,871
Tasmania ... ..	56,065	57,742	59,651	79,021	64,932
Commonwealth ... ..	584,200	431,029	351,282	330,914	456,495

2. **New South Wales.**—(i.) *Legislation.* The following Acts relating to the levying, assessment, and collection of land tax are at present in force in New South Wales :—

- (a) Land and Income Tax Assessment Act 1895, with amendments in 1896, 1897, 1898, and 1904.
- (b) Land Tax Act 1895, with amendments in 1899, 1900, and 1902.
- (c) Local Government Act 1906.

The principal Act, the Land and Income Tax Assessment Act of 1895, which was enacted for the purpose of establishing a system of direct taxation by means of a tax on land, as well as for other objects, was assented to on 12th December of that year. The Land Tax Act of 1895, assented to on the same day as the above-mentioned Act, provided for a tax which was amended in respect of certain leased lands by the amending Act of 1902, and suspended in cases, which will hereinafter be referred to, by the Local Government Act of 1906.

(ii.) *Rates.* Under the provisions of the principal Act a tax is levied on the unimproved value of all land after the deduction of £240, which deduction is only made once in the case of an owner of more estates than one. Land that is subject to mortgage is liable to a deduction each year from the tax on the unimproved value of a sum equal to the income tax leviable for that year on the interest derivable from the whole mortgage on the land, improvements included. A tax of one penny in the £ of the unimproved value was declared by the Land Tax Act of 1895. The Act of 1902, which only applies to land while it is subject to a lease from the owner which was current at the end of the year 1902, and of which not less than thirty years were at such time unexpired, and land that is subject to a lease from the owner made after the commencement of the Act for a term of not less than thirty years, provided for a similar tax to be paid conjointly by owners and lessees, according to an adjustment made by the Commissioners. Under the Local Government Act of 1906 the operation of the land tax is suspended in the case where a shire or municipality has levied a tax on the unimproved capital value of the ratable land within its boundaries.

(iii.) *Exemptions.* Some of the principal lands on which no taxation is payable are as follows :—

- (a) Crown lands which are not liable to right of purchase, and lands held by way of conditional or special lease and homestead selections under any Crown Lands Act.
- (b) Lands vested in His Majesty or in any person for or on behalf of His Majesty.
- (c) Lands vested in the Railway Commissioners.
- (d) Public roads and thoroughfares; reserves for health, recreation or enjoyment, parks, cemeteries, etc.
- (e) Lands occupied or used exclusively for public hospitals, benevolent and charitable institutions, churches, universities, affiliated colleges, mechanics' institutes, etc., and lands on which are erected public markets, town halls, etc., and land vested in any council, municipality, hospital, or affiliated college.
- (f) Land vested in trustees for the use of agricultural, horticultural, pastoral or zoological show purposes.
- (g) Land used exclusively for the site of a residence of a minister of religion ministering at some place of public worship and land used as a site for a school attached to, or connected with, any place of public worship.

3. **Victoria.**—(i.) *Legislation.* The Land Tax Act of 1910, which repealed the Act of 1890, now governs the taxation of land in Victoria. Under this Act a tax is levied on all land whose unimproved value exceeds £250. As the unimproved value rises above £250 the exemption diminishes at the rate of £1 for every £1 of excess, so as to leave no exemption at £500. There is a uniform rate of  $\frac{1}{2}$ d. per £ of unimproved value, and no amount less than two shillings and sixpence is collected.

The subjoined is a list of the principal lands that are free from taxation :—

- (a) Land, the property of His Majesty the King.
- (b) Land used for public worship, recreation, or educational purposes ; all parks, show-grounds, etc. ; the University and its affiliated Colleges.
- (c) Land vested in a municipality or a church.
- (d) Land vested in Railway Commissioners, Commissioner of Savings Banks, Melbourne and Geelong Harbour Trusts, Melbourne and Metropolitan Board of Works, etc.

4. **South Australia.**—(i.) *Legislation.* The administration of the land tax in South Australia is governed by the following Acts :—

- (a) Taxation Act 1884, with amendments in 1885, 1887, 1894, 1900, 1902, 1903, 1904, and 1905.
- (b) Increase of Taxes Act 1902.

On 14th November, 1884, the principal Act, viz., the Taxation Act, was assented to. It provided for a tax to be paid on the unimproved value of any land in the State of South Australia, but the rate was increased by subsequent Acts, as will be shown below.

(ii.) *Rates.* The principal Act declared a tax of one half-penny for every £1 sterling in the amount of the taxable value, and the amending Act of 1894 imposed an additional tax of one half-penny for every £1 exceeding the amount of £5000 of the total assessed unimproved value owned by any party. Under the provisions of the Increase of Taxes Act of 1902 the general rate was augmented by one farthing in the £1 for the year 1903 only. This was repeated in 1904 for the year 1905 only. The last-mentioned Act also increased by one farthing the tax payable on land valued over £5000, as provided in the Act of 1894 for the one year only, the present rate payable on property exceeding £5000 in value being, therefore, one penny for every £1 of the total assessed unimproved value over that amount. In the case of absentees an addition of 20 per cent. to these rates is provided for under the Amending Act of 1894. Under this Act absenteeism consisted of absence from the State of South Australia for the period of two years prior to the date on which the tax became due, but the duration of absence was reduced to twelve months by the Amendment Act of 1904.

(iii.) *Exemptions.* The subjoined is a list of lands that are free from taxation :—

- (a) Land of the Crown which, for the time being, is not subject to any agreement for sale or right of purchase.
- (b) Park lands, public roads, cemeteries, and reserves.
- (c) Land used solely for religious or charitable purposes, or by any public institute.

5. **Western Australia.**—(i.) *Legislation.* The Land and Income Tax Assessment Act of 1907—the first Act relating to the payment of a tax on land in Western Australia—was assented to on 20th December, and came into force on 1st January following. A tax on the unimproved value of land was imposed by the Land Tax and Income Tax Act, which received assent and came into force on the same day as the above-mentioned Act.

(ii.) *Rates.* A tax at the rate of one penny for every pound sterling of the unimproved value of land is charged, provided that the aggregate value of the land held exceeds £50. A rebate of one half of the tax levied is allowed to every owner of improved land.

(iii.) *Exemptions.* The lands specified below are exempt from assessment for taxation :—

- (a) All lands held by or on behalf of His Majesty.
- (b) Public roads and thoroughfares, public reserves for health, recreation, or enjoyment, and public parks, university endowments, cemeteries and commons.
- (c) Land used in connection with any public hospital, benevolent, charitable or religious institution, mechanics' institute, school of arts, etc., and land on which is erected any State market, town hall, or municipal chambers.

- (d) All lands held as mining tenements, and lands dedicated to, or vested in trustees, and used for zoological, agricultural, pastoral, or horticultural show purposes, or other public scientific purposes.
- (e) Land, the unimproved value of which does not exceed £50.

**6. Tasmania.**—(i.) *Legislation.* The Land Tax and Income Tax Act of 1910 governs this form of taxation in Tasmania. According to it a land-owner pays in respect of every pound sterling of unimproved value according to the following scale.

(ii.) *Rates.* When the total unimproved value is less than £2500, 1d. in the pound is payable; £2500 and under £5000, 1½d.; £5000 and under £15,000, 1¾d.; £15,000 and under £30,000, 1¾d.; £30,000 and under £50,000, 2d.; £50,000 and under £80,000, 2½d.; £80,000 and above, 2¾d.

(iii.) *Exemptions.* The number of exemptions as contained in the principal Act is too lengthy to be given in detail, and a few of the most important only are herewith appended:—

- (a) Lands of the Crown which, for the time being, are not subject to lease, sale, etc., and land the property of and occupied by or on behalf of His Majesty.
- (b) Botanical gardens at Hobart and Launceston.
- (c) Public roads, cemeteries, reserves, and recreation grounds.
- (d) Land on which is built any public library, museum, hospital or any building used solely for charitable or religious purposes, or State Schools.
- (e) Any land owned by any local authority, or any local governing or statutory public body.

(d) **Income Tax.**

**1. General.**—A duty on the income of persons, whether it be derived from personal exertion or from the produce of property, is now imposed in all the States of the Commonwealth. As will be seen in dealing with the different States, the rates, exemptions, etc., are widely divergent, but the general principle of the several Acts is strikingly consistent. The Dividend Duties Acts of Queensland and Western Australia—the former of which is now repealed—supplied to a certain extent the place of an income tax in those States in former years, but, with the increasing demands upon the State Treasury, the levying of a direct income tax has been resorted to.

In the following table particulars are furnished concerning the total amount collected in the several States during the years 1906-7 to 1910-11. In the case of Queensland and Western Australia the amount of dividend duty collected is included, as is also the amount of ability tax in Tasmania, these taxes being closely allied to the income tax.

**INCOME, DIVIDEND, AND ABILITY TAXES, 1906-7 to 1910-11.**

(STATES.)

State.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.

2. **New South Wales.**—(i.) *Legislation.* The Acts under which the administration of the income tax is carried out in New South Wales are as follows:—

- (a) Land and Income Tax Assessment Act 1895, with amendments in 1896, 1897, 1898, 1904, and 1911.
- (b) Taxation Amending Act 1905.

The Land and Income Tax Assessment Act, which was assented to on 12th December, 1895, and came into force on the first day of the following year, is the principal Act. Under this Act the amount of taxable income from all sources for the year immediately preceding the year of assessment is the amount on which tax is payable, except in the case of income earned outside the State of New South Wales, which is not subject to taxation. The 1898 Act declared that for the purposes of taxation, the extracting from the soil, winning, producing, or manufacturing in the State of any product, commodity or substance and its export, is part of the carrying on of such trade in New South Wales, and the value of such product, etc., when exported, is income earned in the said State. The 1911 Act repealed the Income Tax Act of 1895 with its amendment of 1907, and also the Taxation Amending Act of 1906. It also amended the Taxation Amending Act of 1905, and entirely altered the rates originally imposed by the Income Tax Act of 1895.

(ii.) *Rates.* Under the Act of 1911 the rates payable in New South Wales are as follows:—

- (a) Tax payable by a company, 1s. 2d. in the £.
- (b) In the case of a person, not a company, in possession of an income not exceeding £700 per annum, 6d. in the £. There is an addition of one-third if the person is an absentee, and an addition, or further addition, in any case, of one-third on such part of income as is derived from property.
- (c) If income exceeds £700 then tax is as in following schedule:—£700 to £1700, 7d.; £1700 to £2700, 8d.; £2700 to £4700, 9d.; £4700 to £6700, 10d.; £6700 to £9700, 11d.; and above £9700, 1s. in the £. In addition, the same rates as regards absentees, etc., mentioned in (b) above also apply.

(iii.) *Exemptions.* The subjoined is a list of incomes, revenues, and funds which are exempt from the payment of income tax:—

- (a) Income not exceeding £300 per annum.
- (b) Revenues of municipal corporations or other local authorities.
- (c) Incomes of mutual life assurance societies, and of other companies or societies not carrying on business for purposes of profit or gain.
- (d) Dividends and profits of the Savings Bank of New South Wales, the Post-office Savings Bank, and the income of registered friendly societies.
- (e) Incomes and revenues of all ecclesiastical, charitable, and educational institutions of a public character.
- (f) Income derived from the ownership, use, or cultivation of land subject to land tax.

The exemptions declared in sub-sections (b) to (e) above do not extend to the salaries and wages of persons employed by such corporations, companies, etc.

(iv.) *Deductions.* In the case of a company the person liable to taxation in respect of an income exceeding £300 is, under the Act of 1911, entitled to a deduction of £300 in the assessment of such income. This Act also provides that there shall be a reduction of £50 for each child who is wholly maintained by a taxpayer, and who at the commencement of the year in respect of which the tax is levied is under the age of 18 years. Any such reduction shall in the first place be made from so much of the income as is derived from personal exertion. But where the income so derived is less than the amount of reduction authorised, the reduction shall be made to the full extent of such income, and the

balance not so applied shall be deducted from the income derived from property. Where there is no income derived from personal exertion, the deduction is made from income from property.

In addition to the above, deductions are allowed on account of losses, repairs, cost of earning incomes, etc., and also on account of expenditure not exceeding £50 per annum on life insurance.

3. **Victoria.**—(i.) *Legislation.* The principal Act in Victoria, the Income Tax Act of 1895, was assented to on 29th January of that year. On the 24th December following the Income Tax Rate Act received assent, and since then, with one exception, an Act has been passed each year declaring rates for the year ending 31st December following the date on which the Act came into force. The first scale of taxation was provided for by the Income Tax Rate Act 1895, and remained in force until 1st January, 1903, when the first amendment of 1903 came into force. The rates contained in the latter Act were superseded when the second amendment of 1903 came into operation, and were further altered by the 1904 Act, the rates of which are in force at present.

(ii.) *Rates.* Under the provisions of the last-mentioned Act a person, not being a company, is subject to the following rates of duty on the amount of his income from personal exertion, viz.—For every £1 up to £500, threepence; over £500 and up to £1000, fourpence; £1000 and up to £1500, fivepence; and over £1500, sixpence; with double these rates if the income be derived from property. Incomes not exceeding £156 were exempt from taxation under this Act, and this exemption was, under the 1906 Act, increased to £200, at which sum it still stands. The minimum income subject to tax is thus £201. Incomes between £201 and £500 are allowed an exemption of £150, while those above £500 pay tax on the full amount. The Act of 1908 provided that the amount of income tax, computed on the above basis, to be payable by a person, not being a company, for the year ending 31st December, 1909, should be reduced by 20 per cent., but this reduction was repealed in 1910. Land used as a residence by the owner is deemed to return 4 per cent. on its actual capital value.

(iii.) *Special Rates.* (a) A tax of sevenpence is levied on the income of any company liable to tax, not being a life assurance company, for every pound sterling of the taxable amount thereof, and a similar tax of eightpence on a company which carries on in Victoria the business of life assurance; and (b) a tax assessed on five pounds in every £100 of the amount payable to him for the carriage of passengers, live stock, mails, or goods shipped in Victoria, is imposed on every owner or charterer of a ship whose principal place of business is out of Victoria.

(iv.) *Exemptions.* Some of the most important exemptions from taxation are as follows:—

- (a) Persons whose income does not exceed £200.
- (b) Income of a Governor, a Minister of the Crown as such, Board of Land and Works, Railway Commissioners, Harbour Trust, Board of Works, Fire Brigades, Savings Bank, University, Working Men's College, or any Public College affiliated to the University.
- (c) Incomes of religious bodies, registered friendly, provident, building and trade union societies.
- (d) Trust societies, associations, etc., not carrying on business for purposes of gain to members; mutual fire insurance companies and fire or marine insurance companies, licensed under the Stamps Acts, whose head office is in Australia, and mining companies.
- (e) Interest accruing to any person not resident in Victoria from stock, debentures or Treasury bonds of the Government of Victoria, or issued by any public or municipal trust, body or corporation.

(v.) *Deductions.* Expenditure incurred in Victoria by any taxpayer in the production of his income, and all taxes payable by him (income tax excepted) are allowed to be deducted from the gross amount of his income, as is also the amount of all premiums not exceeding £50 paid by a taxpayer in respect of life assurance policies; but no deduction by way of exemption from income tax is permitted to a person who has been out of the State for six consecutive months in the year during which the income was received, or for any sum expended on repairs of premises, implements, etc., used for the purpose of trade, or for bad debts and the maintenance of the families of taxpayers.

4. **Queensland.**—(i.) *Legislation.* The laws under which the income tax of Queensland is regulated are contained in the Income Tax Act of 1902, and its amendments of 1902, 1904, 1905, 1906, and 1907. The first-named, which is the principal Act, was assented to on 1st December, 1902. The Dividend Duty Act of 1890, which imposed a tax on the dividends declared by public companies having their head office or place of business in Queensland, was repealed by the Income Tax Amendment Act of 1904, and in lieu thereof the rates that are shewn in (c) below are enforced.

(ii.) *Rates.* The present rates of duty as laid down in the Amendment Acts of 1906 and 1907 are as follows, provided that the total income of a person, not being a company or an absentee, exceeds £200 :—

- (a) On the income derived from personal exertion :—Where the total income does not exceed £500 the tax levied is sixpence for every pound; where it exceeds £500 and does not exceed £1000, sixpence for every pound of the first £500 and sevenpence for every pound over £500; where it exceeds £1000 and does not exceed £1500, sevenpence for every pound of the first £1000 and eightpence for every pound over £1000; and when the income exceeds £1500, eightpence for every pound is payable.
- (b) On the income derived from the produce of property the rate is ninepence for every pound.
- (c) On the income of all companies, or of an absentee, that is, a person not domiciled in Australia, one shilling in the pound is charged, provided that in the case of a company whose head office is in Queensland, the income is assessed at not less than the amount of dividends declared during the year, and if the profits remain undistributed amongst the shareholders, only sixpence in the pound is payable upon such undistributed profits. In the case of foreign companies, that is, companies whose head office is outside Queensland, special rules are given in the Act for determining the taxable amount of income.

(iii.) *Exemptions.* Included in the list of exemptions are the following incomes which are free from taxation :—

- (a) Income of a person, not being a company, which does not exceed £200.
- (b) Income of the Governor of Queensland, and the revenues of local bodies derived for purposes of local self-government.
- (c) Incomes of societies and institutions not carrying on business for purposes of profit or gain, and of any registered friendly societies.
- (d) Incomes and revenues of religious, charitable, and educational institutions of a public character.
- (e) Incomes arising or accruing from debentures, stock or Treasury Bills issued by the Government of Queensland, or derived as dividends from any company which has paid in Queensland income tax on the profits from which such dividends are paid.

(iv.) *Deductions.* When the income of a person, not being a company or an absentee, exceeds £200 per annum, the deduction of £200 is, in the first place, made from the

income, if any, derived from personal exertion. The amount of all premiums not exceeding £50 paid by a taxpayer in respect of life assurance policies, or into any superannuation fund, etc., and all losses and outgoings actually incurred in Queensland by him in production of his income, are also amongst the deductions which are allowed.

5. **South Australia.**—(i.) *Legislation.* Under the Acts given herewith the income tax of South Australia is collected :—

- (a) Taxation Act 1884, with amendments in 1885, 1887, 1894, 1900, 1902, 1903, 1904, 1905, and 1908.
- (b) Additional Income Tax Act 1893.
- (c) Income Tax Continuance Act 1893, with amendments in 1897 and 1898.
- (d) Increase of Taxes Act 1902.

On the 14th November, 1884, the principal Act, the Taxation Act, was assented to. The rates of duty enforced thereby were superseded in order by the Additional Income Tax Act of 1893, the Amendment Act of 1894, the Increase of Taxes Act of 1902, and the Amendment Act of 1903, the scale enacted by the latter Act still remaining in operation.

(ii.) *Rates.* Under the last-mentioned Act the income of every person of the value of £200 or over is subject to a tax of fourpence half-penny for every pound up to and inclusive of £800, and sevenpence for every pound above that amount if the income be derived from personal exertion; but if the income consist of the produce of property, the rate is ninepence for every pound up to and inclusive of £800, and thirteence half-penny for every pound above the sum of £800. A tax of £5 on every £100 received by foreign shipping companies is imposed under the Act of 1908.

(iii.) *Exemptions.* The following incomes are not subject to the payment of income tax :—

- (a) Income of every person under the value of £200.
- (b) Income of municipal corporations and district councils.
- (c) Income of companies, public bodies and societies, not carrying on business for the purpose of gain to be divided among the shareholders, and the income of all friendly societies.
- (d) Income derived from land on which land tax is payable, provided that such income does not exceed 5 per cent. of the actual value thereof.
- (e) Income derived from land and produced by personal exertion where the land does not exceed £1000 in unimproved value.

(iv.) *Deductions.* All expenses, etc., actually incurred by a taxpayer in the production of his income are deducted from the gross amount of his income. If he has been out of South Australia for twelve consecutive months prior to the date on which the tax falls due, or if his net income from all sources exceed £400, no deduction of any kind is allowed. In the case of an income which exceeds £200, that sum is deducted from the net amount of income derived from the produce of property, but if such income does not amount to £200, the difference is taken from that derived from personal exertion. No deductions are allowed for (a) cost of maintenance of a taxpayer and his family or establishment; (b) cost of implements, etc., for purposes of the trade, except renewals for wear and tear; or (c) domestic and private expenses.

6. **Western Australia.**—(i.) *Legislation.* On the 20th December, 1907, the first Income Tax Act of Western Australia received assent under the title of the Land and Income Tax Assessment Act 1907, and on the same day the Land Tax and Income Tax Act was passed, declaring rates for the year ending 30th June, 1908. A similar Land Tax and Income Tax Act is passed each year declaring the rates to be levied for the current financial year.

(ii.) *Rates.* A tax of fourpence in the pound is levied on the annual amount of all incomes exceeding £200 per annum. An additional 50 per cent. is payable on the income of any person who has not been resident in the Commonwealth of Australia during any part of the year preceding the year of assessment, provided that he has not been absent on public service.

(iii.) *Exemptions.* The following are the most important cases of incomes, revenues, and funds exempt from income tax :—

- (a) Incomes not exceeding £200 per annum.
- (b) Revenues of municipal corporations, road boards, or other statutory public bodies.
- (c) Incomes of life assurance companies and of companies or societies not carrying on business for the purpose of profit or gain.
- (d) Dividends and profits of companies subject to duty under the Dividend Duties Act, and of the Government Savings Bank and Agricultural Bank.
- (e) Income of the Governor of Western Australia, and of all ecclesiastical, charitable and educational institutions of a public character.
- (f) Incomes arising or accruing to any person from Western Australian Government debentures, inscribed stock, and Treasury Bills.
- (g) Income derived from land on which land tax is payable.

(iv.) *Deductions.* Sums expended by a taxpayer for repairs of premises, and expenses, etc., incurred in the production of his income are deducted from the amount on which duty is payable; as are also sums not exceeding £50 in the aggregate which are paid as life assurance premiums or in connection with fidelity guarantees or bonds. The amount paid to a taxpayer's sons and daughters, over the age of sixteen years, employed in his trade or occupation, and a sum representing ten pounds for each child under the age of sixteen residing with, and dependent upon him, are also allowed to be deducted from his income.

(v.) *Dividend Duties Act in Western Australia.* This Act was passed in order to impose a tax on the dividends or profits of incorporated companies, and repealed the Company Duties Act passed in 1899. The Dividend Duties Act was passed on 20th December, 1902, and an amendment was assented to on 14th December, 1906. The principal Act provides that within seven days after the declaration of a dividend by a company carrying on business in Western Australia such company shall pay to the Colonial Treasurer a duty equal to one shilling for every pound of the amount or value of such dividend. A company that carries on in the State any insurance or assurance business exclusively (not being a life assurance company) is required to pay, on or before 1st March in each year, a sum equal to twenty shillings for every £100 of premiums, and a proportionate sum for every fraction of £100 of such premiums. The rates payable by shipping companies are 5 per cent. of 5 per cent. on all inward or outward traffic, including passenger fares, and 5 per cent. of the profits on sales of coal or other goods, or of the profits of vessels trading exclusively within the State.

7. *Tasmania.*—(i.) *Legislation.* The Land Tax and Income Tax Act of 1910 which repealed the Income Tax Act of 1902 and its amendment, governs this form of taxation in Tasmania. The tax is levied according to the following scale :—

(ii.) *Rates.* In the case of income derived from personal exertion the scale is as follows :—Under £125, 4d.; between £125 and £150, 4½d.; between £150 and £250, 4¾d.; between £250 and £350, 5½d.; between £350 and £400, 5¾d.; between £400 and £700, 6d. on first £400 and 7d. on the remainder; between £700 and £900, 6d. on first £400, 7d. on next £200, and 8d. on remainder; between £900 and £1000, 6d. on first £400, 7d. on next £200, 8d. on next £200, and 10d. on remainder; above £1000, 6d. on first £400, 7d. on next £200, 8d. on next £200, 10d. on next £200, 1s. on next £500, 1s. 2d. on next £500, and 1s. 4d. on remainder.

The duty levied by the principal Act is one shilling for every pound sterling of the taxable amount derived from the produce of property, provided that the income is £100 or over per annum. The same scale also applies to the income of any company except those that are specially mentioned below, and to dividends.

(iii.) *Exemptions.* The exemptions from taxation in this State comprise the following :—

- (a) Income of any person, not being a company, under £100 per annum, provided that such income is not received as a prize in any lottery authorised by law in Tasmania.
- (b) Revenues of Municipal Corporations, Road Trusts, Town and Marine Boards, Water Trusts and other local government bodies.
- (c) Incomes of companies, societies, etc., not carrying on business for the purposes of gain to the shareholders, and registered friendly societies.
- (d) Income of the Governor of Tasmania.
- (e) Income derived as rent for the use and occupation of land that is subject to land tax.
- (f) Income of every person arriving in Tasmania for a period of six months after his arrival.

(iv.) *Deductions.* Incomes under £80 are exempt in cases of unmarried persons, or under £100 in cases of married persons, widowers, and widows maintaining at least one child under the age of sixteen years. For incomes between £80 and £400 the following deductions are allowed :—Between £80 and £110, £70; between £110 and £125, £60; between £125 and £150, £50; between £150 and £250, £40; between £250 and £350, £30; between £350 and £400, £20. Also every tax-payer, the taxable amount of whose income is less than £150, can claim a rebate of two shillings and sixpence for every child under the age of sixteen.

(v.) *Ability Tax in Tasmania.* The Taxation Act of 1904 provided for the levying of a tax upon persons in proportion to their means or ability. It was assented to on 1st November, 1904, and an Amending Act was passed on 30th November, 1906. The assessment of the taxable amount was determined according to the annual value of the property occupied or the amount paid for board and lodging, as the case may be, and varied in the case of property from one penny to sixpence in the pound of annual value, with a minimum of two shillings and sixpence, and in the case of board and lodging from three halfpence to sixpence in the pound on the amount payable annually for board and lodging. This Act was repealed by the Land and Income Taxation Act of 1910.

**8. Taxation of Commonwealth Salaries and Allowances.**—On 8th October, 1907, the Commonwealth Salaries Act, passed by the Federal Parliament, received the Governor-General's assent. By this Act it is declared that salaries and allowances paid by the Commonwealth are liable to taxation by the States. The tax is payable in the State in which the officer resides and the salary is earned, and in the case of a member of the Parliament of the Commonwealth, in the State in which he was elected. The only exemption from taxation is the salary of the Governor-General. This Act was the outcome of considerable litigation, brought about by the refusal of persons in receipt of Federal salaries and allowances to pay income tax in respect thereof.

### § 3. Trust Funds.

**1. Nature.**—In addition to the moneys received by the several State Governments as revenue, and paid to the credit of their respective Consolidated Revenue Funds, considerable sums are held by the Governments in trust for various purposes. One of the chief sources of these trust funds is the State Savings Bank, which exists in each State, either as a Government department or under the control of a Board acting under Government supervision or Government guarantee. In most of the States also, sinking funds

for the redemption of public debt are provided, and the moneys accruing thereto are paid to the credit of the appropriate trust funds. A similar course is followed in the case of municipal sinking funds placed in the hands of the Government. In all the States except New South Wales, life assurance companies carrying on business are required to deposit a substantial sum in cash or approved securities with the Government, and these deposits go to further swell the trust funds. Various other deposit accounts, superannuation funds, suspense accounts, etc., find a place in these funds. The trust funds have at various times enabled the several State Treasurers to tide over awkward financial positions, but the propriety of allowing deficits to be frequently liquidated in this manner is worthy of very serious consideration.

2. **Extent of Funds.**—The amount of such funds held by the several State Governments on 30th June, 1911, was as follows:—

**TRUST FUNDS ON 30th JUNE, 1911.**

Particulars.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	All States.
	£	£	£	£	£	£	£
Amount of trust funds	4,522,915	7,355,548	5,419,422	796,407	8,471,687	561,647	27,127,626

**§ 4. Loan Funds.**

1. **Nature.**—As early in the history of Australia as 1842 it was deemed expedient to supplement the revenue collections by means of borrowed moneys, the earliest of the loans so raised being obtained by New South Wales for the purpose of assisting immigration, at rates of interest varying from 2½d. to 5½d. per £100 per diem, or approximately from 4½ per cent. to 8 per cent. per annum. The principal reason for Australian public borrowing, however, has been the fact that the Governments of the several States have, in addition to ordinary administrative duties, undertaken the performance of many functions which, in other countries, are usually entrusted to local authorities, or left to the initiative of private enterprise. Principal amongst these have been the construction of railways and the control of the railway systems of the several States, while the assumption by the State Governments of responsibilities in connection with improvements to harbours and rivers, and the erection of lighthouses, as well as the construction of works for the purposes of water supply and sewerage, have materially swelled the amounts which it has been considered expedient to obtain by means of loans. The Australian loan expenditure and public debt thus differ very materially from those of most European countries, where such expenditure is very largely incurred for purposes of defence, or absorbed in the prosecution of war. The debt of Australia, on the other hand, consists in the main of moneys raised and expended with the object of assisting the development of the resources of the Commonwealth, and is, to a very large extent, represented by tangible assets such as railways, tramways, waterworks, etc.

2. **Loan Expenditure, 1910-11.**—During the year ended 30th June, 1911, the actual expenditure of the Australian States from loan funds amounted to £11,926,123, New South Wales with a total of £3,921,758 being the principal contributor to this amount, while Victoria, whose expenditure amounted to £2,657,271, ranked second. The chief item of expenditure for the year was that of railways and tramways, which represented a total of £6,884,430, water supply and sewerage works contributing the amount of £1,383,070; the expenditure on harbours, rivers, etc., and roads and bridges totalling £743,918, and land purchases for settlement, £1,748,354, were the most important of the remaining items. Details for the year for each State are given in the following table:—

## STATE LOAN EXPENDITURE, 1910-11.

Heads of Expenditure.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.

\* Credit.

3. **Aggregate Loan Expenditure.**—The total loan expenditure of the Australian States from the initiation of the borrowing system to the 30th June, 1911, has amounted to no less a sum than £260,988,517. The manner in which this sum has been spent in the several States is furnished in the following table:—

## AGGREGATE STATE LOAN EXPENDITURE TO 30th JUNE, 1911.

Heads of Expenditure.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.

Total ...	95,269,537	59,775,564	41,176,760	31,947,690	21,995,539	10,823,407	260,988,517

\* Exclusive of £1,866,168 for "Loans in aid of Revenue."

It must be noted that the figures furnished in this table represent the amounts actually spent, and consequently differ somewhat from those given later in the statements relating to the public debt, which represent amount of loans still unpaid at a given date. The loan expenditure statement includes all such expenditure, whether the loans by means of which the necessary funds were raised have been repaid or are still in existence. On the other hand, in the public debt statement loans repaid are excluded, but in the case of loans still outstanding each is shown according to the amount repayable at maturity, not according to the amount originally available for expenditure.

4. **Relative Importance of Loan Items.**—The relative importance of the different items of loan expenditure given in the foregoing table varies considerably in the several States, but in each instance the expenditure on railways and tramways predominates, the percentage of this item on total expenditure ranging between the limits of 41 per cent. in the case of Tasmania and 70 per cent. in that of Victoria. The following table gives for each State the percentage of each item on the total loan expenditure of that State to 30th June, 1911:—

**PERCENTAGE OF EACH ITEM ON TOTAL LOAN EXPENDITURE OF THE STATES  
TO 30th JUNE, 1911.**

Heads of Expenditure.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.

1908-9 ...	2,906,507	1,098,360	1,247,821	832,114	1,012,452	334,200	7,431,454
1909-10 ...	3,246,640	1,209,505	1,486,216	978,082	1,028,995	435,104	8,384,542
1910-11 ...	3,921,758	2,657,271	1,995,301	1,567,210	1,484,367	300,216	11,926,123

Throughout the ten years under review the loan expenditure of New South Wales exceeded that of any other of the States, and for the years 1901-2 and 1902-3 represented more than half of the aggregate loan expenditure of Australia. The large loan expenditure of New South Wales in 1901-2, 1902-3, 1908-9, 1909-10 and 1910-11 was incurred chiefly in connection with railway construction and the resumption of the foreshores and adjoining properties of Darling Harbour. In Victoria the large expenditure of 1901-2 was in great part due to railway construction, that of 1905-6 resulted in large measure from the purchase of lands for closer settlement, while the construction of railways, and water supply and sewerage works was mainly responsible for the high expenditure of 1908-9 and 1909-10. In 1910-11 the large

amount was mainly accounted for by heavy expenditure on railways and land purchased for settlement. In the case of the large loan expenditure of Queensland in 1901-2 and 1902-3, as well as that of 1906-7, 1907-8, 1908-9, 1909-10 and 1910-11, railway construction was the principal contributing item. In Western Australia the heavy loan expenditure of 1901-2, 1902-3, and 1908-9 was principally in connection with railway construction and water supply.

**6. Loan Expenditure per Head.**—The loan expenditure per head of population varies materially in the different States and in different years, reaching its highest point for the ten years under review in Western Australia in 1901-2 with £7 19s. 8d. per head, and its lowest in Victoria in 1904-5 with 6s. 2d. per head. Particulars concerning the loan expenditure per head for the ten years 1901-2 to 1910-11 are given hereunder:—

#### LOAN EXPENDITURE PER HEAD, 1901-2 to 1910-11.

### § 5. Public Debt.

**1. The Initiation of Public Borrowing.**—The earliest of the loans raised in Australia for Government purposes was that obtained by New South Wales in 1842. This and nine other loans raised prior to 1855 were all procured locally. In the last-mentioned year Australia's first appearance on the London market occurred, the occasion being the placing of the first instalment of the New South Wales 5 per cent. loan for £683,300. Victoria first appeared as a borrower in 1854, and made its first appearance on the London market in 1859. In the remaining States the first public loans were raised in the following years:—Queensland 1861, South Australia 1854, Western Australia 1845, and Tasmania 1867.

**2. Nature of Securities.**—All the earlier loans raised by the Australian States were obtained by the issue of debentures, some of which were repayable at fixed dates, and others by annual or other periodical drawings. In more recent years, however, the issue of debentures has given place to a great extent to that of inscribed stock, the inscription in the case of local issues being carried out by the State Treasuries, and in the cases of loans floated in London being mainly performed by the Bank of England and the London and Westminster Bank. The issue of debentures has not, however, been entirely discontinued, for within the last seven years debentures to the amount of upwards of £2,000,000 were placed on the market by the Government of New South Wales. In other States also, recent issues of debentures have taken place, the occasions usually being those in which the term of the loan is less than that ordinarily attaching to issues of

inscribed stock. Another form of security is that variously known as the Treasury bill or Treasury bond. This is usually merely a short term debenture having a currency in most instances of from three to five years. The bonds are issued in certain cases to liquidate deficiencies in revenue, and in others to obtain moneys for the purpose of carrying on public works at a time when it is deemed inexpedient to place a permanent loan on the market. The amount of the public debt of the several States held in each of these forms of security is furnished in the table hereunder:—

## PUBLIC DEBT OF AUSTRALIAN STATES, 30th JUNE, 1911.

State.	Debentures.	Inscribed Stock.	Treasury Bills.		Total Amount Outstanding.
			For Public Works and Services.	In aid of Revenue.	
	£	£	£	£	£
New South Wales ...	2,197,250	92,910,760	1,400	414,516	95,523,926

" 1911 ...	31,148,162	222,343,184	8,939,771	3,946,166	267,127,283*

\* See footnotes to preceding table.

During the nine years between 30th June, 1902, and 30th June, 1911, the public debt of the States increased by £52,872,074, or at the rate of nearly £6,000,000 per annum. The amount of debentures comprised in the total debt diminished by £13,043,663 during the period, while the amount held as inscribed stock increased by £60,669,426, and as Treasury bills by £4,496,311.

3. Increase in Indebtedness of the Several States.—The table given hereunder furnishes particulars of the increase which has taken place during the past nine years in the public debts of the several States:—

## PUBLIC DEBT OF AUSTRALIAN STATES, 30th JUNE, 1902 to 1911.

\* On 31st December, 1901 and 1902, respectively.

The States in which the greatest increase in indebtedness was experienced during the period are New South Wales and Western Australia, the former advancing by £23,931,441, the latter by £8,761,643. On the other hand the public debt of Tasmania increased by only about £2,000,000.

4. **Indebtedness per Head.**—The indebtedness per head of population varies considerably in the several States, being highest in the case of South Australia, and lowest in that of Victoria. Details for the period from 30th June, 1902, to 30th June, 1911, are as follows:—

## PUBLIC DEBT OF AUSTRALIAN STATES PER HEAD, 30th JUNE, 1902 to 1911.

\* On 31st December, 1901 and 1902, respectively.

5. **Flotation of Loans.**—The early loans of the Australian States, usually for comparatively small amounts, were raised locally, but, with the increasing demand for loan funds and the more favourable terms offering in the London than in the local money market, the practice of placing Australian public loans in London came into vogue, and for many years local flotations, except for short terms or small amounts, were comparatively infrequent. In more recent years, however, the accumulating stocks of money in Australia seeking investment have led to the placing of various redemption and other loans locally, with very satisfactory results. In the following table are given particulars of loans of the several States outstanding on 30th June, 1911, which had been floated in London and Australia respectively:—

## PUBLIC DEBT OF AUSTRALIAN STATES, 30th JUNE, 1911.

State.	Floated in London		Floated in Australia.		Total Public Debt.
	Amount.	Percentage on Total Debt.	Amount.	Percentage on Total Debt.

\* Including Northern Territory debt, and Port Augusta-Oodnadatta railway debt.

The following table, giving corresponding particulars for the aggregate indebtedness of the Australian States at the end of each of the financial years 1901-2 to 1910-11, furnishes an indication of the rapidity with which the local holdings of Australian securities have grown in recent years:—

### PUBLIC DEBT OF AUSTRALIAN STATES, 30th JUNE, 1902 to 1911.

Date.	Floated in London.		Floated in Australia.		Total Public Debt.
	Amount.	Percentage on Total Debt.	Amount.	Percentage on Total Debt.	
	£	%	£	%	£
30th June, 1902 ...	181,493,170	84.71	32,762,039	15.29	214,255,209
" 1903 ...	186,507,721	83.68	36,364,044	16.32	222,871,765
" 1904 ...	188,165,495	82.62	39,582,117	17.38	227,747,612
" 1905 ...	188,918,820	81.88	41,819,851	18.12	230,738,671
" 1906 ...	190,887,001	80.06	47,540,819	19.94	238,427,820
" 1907 ...	185,579,389	77.28	54,570,398	22.72	240,149,727
" 1908 ...	183,321,256	75.18	60,514,233	24.82	243,835,489
" 1909 ...	189,410,036	75.23	62,363,497	24.77	251,773,533
" 1910 ...	191,972,479	74.52	65,651,184	25.48	257,623,663
" 1911 ...	189,067,671	70.78	78,059,612	29.22	267,127,283

It will be seen that in the course of nine years the London indebtedness of the States has increased by £7,574,501, while the local indebtedness has increased by no less than £45,297,573. In other words, whilst on 30th June, 1902, the Australian portion of the debt represented only about 15 per cent. of the total, the proportion had on 30th June, 1911, grown to 29 per cent.

6. **Rates of Interest.**—As mentioned above, the highest rate of interest paid in connection with the earliest Australian public loans was fivepence farthing per £100 per diem or, approximately, 8 per cent. per annum. At the present time the three principal rates of interest payable on Australian public securities are 4 per cent.,  $3\frac{1}{2}$  per cent., and 3 per cent., most of the loans raised during recent years bearing interest at the rate of  $3\frac{1}{2}$  per cent. The average rate payable on the aggregate indebtedness of the Australian States is about  $3\frac{1}{4}$  per cent. For the separate States the average rate payable varies considerably, being lowest in the case of Western Australia and highest in that of Queensland; the difference between these two average rates is  $\frac{1}{4}$  per cent. In the table given hereunder particulars are furnished of the rates of interest payable on the public debt of the several States of the Commonwealth on 30th June, 1911:—

### RATES OF INTEREST PAYABLE ON PUBLIC DEBT OF STATES, 30th JUNE, 1911.

\* Including Northern Territory debt, £3,657,385; and Port Augusta-Oodnadatta Railway debt, £2,240,011.

The rapid increase which has taken place in recent years in the amount of Australian Government securities, bearing interest at  $3\frac{1}{2}$  per cent., is clearly shewn in the table hereunder, which gives particulars concerning the aggregate amount of the Australian indebtedness, at the several rates of interest, on 30th June in each of the years 1907 to 1911:—

**RATES OF INTEREST PAYABLE ON PUBLIC DEBT OF STATES, 30th JUNE,  
1907 to 1911.**

Rate of Interest.	30th June, 1907.	30th June, 1908.	30th June, 1909.	30th June, 1910.	30th June, 1911.

Average rate % payable ... ..	£3 12 1	£3 11 9	£3 11 6	£3 11 5	£3 11 4

During the four years between 30th June, 1907, and 30th June, 1911, the Australian State Government 4 per cent. securities decreased by £23,538,591, and the 3 per cent. securities by £1,382,233, while the  $3\frac{1}{2}$  per cents. advanced by £33,156,009, and the  $3\frac{1}{4}$  per cents. by £19,074,196. During the same period the total amount at all other rates than the four here mentioned declined by about 48 per cent. from £992,650 to £517,893.

**7. Interest Payable per Head.**—The relative burden of the debts of the several States in respect of interest payments will be seen from the following table, which gives for the 30th June, 1911, the amount of interest payable annually on the debt of each State as outstanding at that date, and also the corresponding amount per head of population:—

**ANNUAL INTEREST PAYABLE ON PUBLIC DEBT OUTSTANDING AT 30th JUNE,  
1911.**

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	All States.
	£	£	£	£	£	£	£

Annual interest payable per head	£1 19 1	£1 10 1	£2 14 2	£2 9 0	£2 16 3	£2 1 3	£2 0 7

**8. Dates of Maturity.**—An important point in which the securities of the Australian Governments, whether in the form of inscribed stock, debentures, or Treasury bills, differ from such a well-known form of security as British consols, consists in the fact that whereas the latter are interminable, the Australian Government securities have in almost all cases a fixed date for repayment, the exceptions being the State of New South Wales, which includes in its public debt an amount representing interminable securities totalling on 30th June, 1911, £532,890; the State of Victoria, which includes £4,346,151 payable at the option of the Government at any time after 29th September, 1917; and the State of South Australia, which includes £5,122,845, similarly repayable after 1st January, 1916. The terms of the loans raised by the issue of debentures and inscribed stock have varied considerably in the different States, ranging between fifteen and fifty years, while loans obtained by means of Treasury bills have usually been for such short terms as from six months to five years. In the case of the majority

of the loans the arrival of the date of maturity means that arrangements for renewal are necessary in respect of the greater portion of the loan, as it is only in exceptional cases that due provision for redemption has been made. The condition of the money market at the date of maturity has an important bearing on the success or otherwise with which the renewal arrangements can be effected and consequently, in order to obviate the necessity for making an application to the market at an unfavourable time, several of the States have now adopted the practice of specifying a period of from ten to twenty years prior to the date of maturity within which the Government, on giving twelve, or in some cases six, months' notice, has the option of redeeming the loan. By such means advantage may be taken by the Government during the period of opportunities that may offer for favourable renewals. Particulars concerning the due dates of the loans of the several States outstanding on 30th June, 1911, are given in the following table:—

**DUE DATES OF THE PUBLIC DEBTS OF THE SEVERAL STATES OF THE  
COMMONWEALTH OUTSTANDING ON 30th JUNE, 1911.**

Total	95,523,926	57,983,764	44,613,197	34,224,653	23,703,953	11,077,790	267,127,283

In the above table those loans in the case of which the Government has the option of redemption during a specified period, have been in each instance classified according to the latest date of maturity. During the fifteen years from 1911 to 1925 inclusive, the amount falling due represents a total of no less than £138,697,872, or nearly 52 per cent. of the total outstanding at 30th June, 1911.

**9. Sinking Funds.**—The practice of providing for the ultimate extinction of the public debt by means of the creation of sinking funds, receiving definite annual contributions from Consolidated Revenue, and accumulating at compound interest, has only been consistently adopted in the case of Western Australia. This State has established, in connection with each of its loans, sinking funds varying from 1 per cent. to 3 per cent. per annum of the nominal amount of the loan. These funds are placed in the hands of trustees in London, by whom they are invested in the securities of the British, Indian, and Colonial Governments, and applied from time to time in the redemption of loans falling due. In the remaining States the sinking fund provision made is varied, consisting in certain instances of the revenues from specified sources, in others of the Consolidated Revenue Fund surplus, and in others again of fixed annual amounts. In the following table are given particulars of the sinking funds of each State, and the net indebtedness of each after allowance for sinking fund has been made, the details given being those for 30th June, 1911:—

**STATES SINKING FUNDS AND NET INDEBTEDNESS, 30th JUNE, 1911.**

State	Gross Indebtedness.	Sinking Fund.	Net Indebtedness.	Net Indebtedness per head.

\* Including Northern Territory debt, £3,657,385; and Port Augusta-Oodnadatta Railway debt, £2,240,011.

**10. London Prices of Australian Stocks.**—In examining the prices quoted for Australian State Government securities, particularly if the examination is made with the object of comparing the prices at a given time of different stocks, or the prices at different times of the same stock, several points in connection with the securities need to be kept in view; the principal of these are—(a) the rate of interest payable, (b) the date of maturity, and (c) the date at which interest is payable.

In the following table particulars are given of the London prices of some of the principal  $3\frac{1}{2}$  per cent. stocks of the several States during 1911. The quotations given are the middle prices, taken from the *Economist*, and are for the last Friday in each quarter:—

**LONDON QUOTATIONS FOR AUSTRALIAN  $3\frac{1}{2}$  PER CENT. STOCKS DURING 1911.**

State.	Rate of Interest Payable.	Year of Maturity.	Months in which Interest is Payable.	London Prices (cum dividend) on—			
				25th Mar. 1911.	21st June 1911.	30th Sept. 1911.	30th Dec. 1911.
New South Wales	$3\frac{1}{2}$ %	1918	Mar.—Sept.	98 $\frac{1}{2}$	99	98	98
Victoria ...	$3\frac{1}{2}$ %	1923	Jan.—July	98 $\frac{1}{2}$	97 $\frac{1}{2}$	98	96 $\frac{1}{2}$
Queensland ...	$3\frac{1}{2}$ %	1924-30	Jan.—July	98	96 $\frac{1}{2}$	96 $\frac{1}{2}$	96 $\frac{1}{2}$
South Australia ...	$3\frac{1}{2}$ %	1939	Jan.—July	98	98	98	97
West. Australia ...	$3\frac{1}{2}$ %	1915-35	May—Nov.	98	97	97	95 $\frac{1}{2}$
Tasmania ...	$3\frac{1}{2}$ %	1920-40	Jan.—July	97 $\frac{1}{2}$	96	97 $\frac{1}{2}$	96 $\frac{1}{2}$

Throughout the year the prices of Australian  $3\frac{1}{2}$  per cent. stocks on the London market were, on the average, about the same as those for the corresponding periods of the preceding year.

## SECTION XXI.

## PRIVATE FINANCE.

## § 1. Currency.

1. **The Three Australian Mints.**—Soon after the discovery of gold in Australia steps were taken for the establishment of a branch of the Royal Mint in Sydney. The formal opening took place on the 14th May, 1855, the mint being located in the southern part of the building once known as the "rum hospital," where it has remained up to the present. It is now proposed, however, to erect more suitable buildings for its accommodation in some other part of the city. The Melbourne branch of the Royal Mint was opened on the 12th June, 1872, and the Perth branch on the 20th June, 1899. The States of New South Wales, Victoria, and Western Australia provide an annual endowment, in return for which the mint receipts are paid into the respective State Treasuries, and it may be said that, apart from expenditure on buildings, new machinery, etc., the amounts paid into the Treasuries fairly balance the mint annuities.

2. **Receipts and Issues in 1910.**—(i.) *Assay of Deposits Received.* The number of deposits received during 1910 at the Sydney Mint was 1687, of a gross weight of 644,445 ozs.; at the Melbourne Mint, 3981, of a gross weight of 813,826 ozs.; and at the Perth Mint, 5977, of a gross weight of 1,484,422 ozs. The average composition of these deposits in Sydney was, gold 872.9, silver 84.7, base 42.4 in every 1000 parts; Melbourne, gold 918.8, silver 40.9, base 40.3 in every 1000 parts; and Perth, gold 817.6, silver 113.8, base 68.6 in every 1000 parts. As many parcels have, however, undergone some sort of refining process before being received at the mint, the average assay for gold shews higher in these figures than for gold as it naturally occurs.

(ii.) *Receipts.* Practically all the gold coined at the Australian mints is the produce of either the Commonwealth or of the Dominion of New Zealand. The following table shews the origin of the gold received at the three mints during 1910:—

ORIGIN OF GOLD RECEIVED AT MINTS DURING 1910.

Origin of Gold.	Sydney Mint.	Melbourne Mint.	Perth Mint.
	ozs.	ozs.	ozs.
New South Wales ... ..	128,777.18	3,107.91	...
Victoria ... ..	2,007.35	620,882.08	2
Queensland... ..	376,721.10	4,217.63	1
South Australia ... ..	1,807.98	13,168.44	...
Western Australia ... ..	402.01	15,856.34	1,482,170
Tasmania ... ..	1,593.06	26,278.81	...
Northern Territory ... ..	...	...	1,201
New Zealand ... ..	122,743.80	107,838.81	...
Other countries, origin not stated, and light gold coin ... ..	10,392.67	22,475.49	1,048
Total ... ..	644,445.15	813,825.51	1,484,422

It will be seen that practically all gold produced in New South Wales and Queensland, about one-half of that produced in New Zealand, and about one-eighth of the South Australian produce, found its way to the Sydney Mint, while the Melbourne Mint received all Victorian and about seven-eighths of the South Australian gold, together with nearly all of the Tasmanian and about one-half of the New Zealand production, and the Perth Mint coined practically all Western Australian gold with the exception of a small portion sent to Sydney and Melbourne.

(iii.) *Issues.* The Australian mints, besides issuing gold coin in the shape of sovereigns and half-sovereigns, also issue gold bullion, partly for the use of local manufacturers (jewellers and dentists), and partly for export, India taking annually a considerable quantity of gold cast into 10-oz. bars. The issues during 1910 are shewn in the table below:—

#### ISSUES OF GOLD FROM MINTS DURING 1910.

Mint.	Coin.			Bullion.	Total.
	Sovereigns.	Half-sovereigns.	Total.		
	£	£	£	£	£
Sydney ...	2,135,000	237,000	2,372,000	27,352	2,399,352
Melbourne ...	3,054,547	...	3,054,547	121,837	3,176,384
Perth ...	4,690,625	...	4,690,625	462,196	5,152,821
Total ...	9,880,172	237,000	10,117,172	611,385	10,728,557

In addition to the issue of gold the Mints are also charged with the issue of silver and bronze coin struck in London. The total value of silver coin issued in 1910 was £16,400, viz.—£6000 in half-crowns, £800 in shillings, £5400 in sixpences, and £4200 in threepences. The value of bronze coin issued was £17,680, viz., £13,940 in pence, and £3740 in halfpence.

(iv.) *Withdrawals of Worn Coin.* The mints receive light and worn coin for recoinage, gold being coined locally, while silver is forwarded to London. The value of gold coin so received in 1910 amounted to £93,033, viz.—Sydney, £32,130; and Melbourne, £60,903. The value of worn silver coins received during 1910 was £31,563, viz.—Sydney, £16,216; Melbourne, £15,347.

**3. Total Receipts and Issues.** (i.) *Receipts.* The total quantities of gold received at the three mints since their establishment are stated in the gross as follows:—Sydney, 34,349,068 ozs.; Melbourne, 33,603,747 ozs.; and Perth, 14,777,399 ozs. As the mints pay for standard gold (22 carats) at the rate of £3 17s. 10½d. per oz., which corresponds to a value of £4 4s. 11½d. per oz. fine (24 carats), it is possible to arrive at the number of fine ounces received from the amounts paid for the gold received. These amounts were:—Sydney, £126,631,982; Melbourne, £132,358,355; Perth, £52,256,673; corresponding to—Sydney, 29,811,704 ozs. fine; Melbourne, 31,159,807 ozs. fine; and Perth, 12,302,267 ozs. fine. Silver found in assaying is paid for if it exceeds 8 per cent.; in Sydney it has been paid for at the rate of one shilling and sixpence per oz. fine since 12th May, 1902; in Melbourne the price is fixed monthly by the Deputy-master of the Mint; and in the Perth accounts it has been taken at one shilling per oz.

(ii.) *Issues.* The total values of gold coin and bullion issued by the three mints were as shewn in the table on page 849. It may be said that about one-half of the total gold production of Australasia has passed through the three Australian mints, the production of the Commonwealth States to the end of 1910 being valued at £525,645,357, and that of New Zealand at £76,294,646, or a total of £601,940,003:—

## TOTAL ISSUES OF GOLD FROM MINTS TO END OF 1910.

Mint.	Coin.			Bullion.	Total.
	Sovereigns.	Half-sovereigns.	Total.		
	£	£	£	£	£
Sydney ...	116,611,500	3,685,000	120,296,500	6,360,226	126,656,726
Melbourne ...	121,311,632	883,948	122,195,580	10,163,425	132,359,005
Perth ...	47,705,857	124,048	47,829,905	4,415,954	52,245,859
Total ...	285,628,989	4,692,996	290,321,985	20,939,605	311,261,590

The total issues of silver coins to the end of 1910 were £2,415,200, viz.:—Crowns, £3500; double florins, £4585; half-crowns, £722,600; florins, £528,215; shillings, £606,200; sixpences, £253,220; and threepences, £296,880.

Bronze coins to the value of £178,950 were issued, viz.:—Pence, £126,040; halfpence, £52,710; and farthings, £200.

(iii.) *Withdrawals of Worn Coin.* Complete figures as to the withdrawal of gold coin can be given for the Sydney Mint, where they amounted to £1,058,699; at the Melbourne Mint the coins withdrawn since 1890 were worth £481,154. In the case of Perth the withdrawal of worn gold coin since the opening of the Mint amounted to £344.

Withdrawals of worn silver coin amounted to £280,576 in Sydney, to £348,718 in Melbourne, and to £909 in Perth.

4. **Standard Weight and Fineness of Coinage.**—The coinage of the Commonwealth is the same as that of the United Kingdom, and the same provisions as to legal tender hold good, viz., while gold coins are legal tender to any amount, silver coins are only so for an amount not exceeding forty shillings, and bronze coins up to one shilling. As will be seen from the table below, the standard weights of the sovereign and half-sovereign are respectively 123.27447 grains and 61.63723 grains, but these coins will pass current if they do not fall below 122.5 grains and 61.125 grains respectively.

## STANDARD WEIGHT AND FINENESS OF COMMONWEALTH COINAGE.

Denomination.	Standard Weight.	Standard Fineness.
	Grains.	
<b>GOLD—</b>		
Sovereign ...	123.27447	Eleven-twelfths fine gold, viz.:— Gold ... 0.91667 } 1.00000 Alloy ... 0.08333 }
Half-sovereign ...	61.63723	
<b>SILVER—</b>		
Crown ...	436.36363	Thirty-seven-fortieths fine silver, viz.:— Silver ... 0.925 } 1.000 Alloy ... 0.075 }
Double florin ...	349.09090	
Half-crown ...	218.18181	
Florin ...	174.54545	
Shilling ...	87.27272	
Sixpence ...	43.63636	
Threepence ...	21.81818	
<b>BRONZE—</b>		
Penny ...	145.83333	Mixed metal, viz.:— Copper ... 0.95 } 1.00 Tin ... 0.04 Zinc ... 0.01 }
Half-penny ...	87.50000	
Farthing ...	43.75000	

5. **Prices of Silver and Australian Coinage.**—(i.) *Prices of Silver.* The value of silver has greatly decreased since its demonetisation and restricted coinage in almost the whole of Europe. Its average price in the London market is shewn in the subjoined table:—

**AVERAGE PRICE OF SILVER IN LONDON MARKET, 1873 to 1910.**

Year.	Price per Standard Oz.	Year.	Price per Standard Oz.	Year.	Price per Standard Oz.
	d.		d.		d.
1873 ...	59.2500	1886 ...	45.3750	1899 ...	27.5000
1874 ...	58.3125	1887 ...	44.6250	1900 ...	28.3125
1875 ...	56.8125	1888 ...	42.8750	1901 ...	27.2500
1876 ...	53.0000	1889 ...	42.6875	1902 ...	24.1250
1877 ...	54.7500	1890 ...	47.7500	1903 ...	24.7500
1878 ...	52.5625	1891 ...	45.0625	1904 ...	26.3750
1879 ...	51.1875	1892 ...	39.8125	1905 ...	27.8125
1880 ...	52.2500	1893 ...	35.6250	1906 ...	30.8750
1881 ...	51.7500	1894 ...	29.0000	1907 ...	30.1875
1882 ...	51.8125	1895 ...	29.8750	1908 ...	24.3750
1883 ...	50.5625	1896 ...	30.7500	1909 ...	23.6875
1884 ...	50.6875	1897 ...	27.5625	1910 ...	24.6875
1885 ...	48.6250	1898 ...	26.9375		

The monthly fluctuations during the year 1910 were as follows:—

**AVERAGE PRICE OF SILVER IN LONDON MARKET, 1910.**

Month.	Price per Standard Oz.	Month.	Price per Standard Oz.	Month.	Price per Standard Oz.
	d.		d.		d.
January ...	24.1250	May ...	24.8125	September ...	24.8750
February ...	23.7500	June ...	24.6250	October ...	25.5625
March ...	23.6875	July ...	25.0000	November ...	25.6875
April ...	24.5000	August ...	24.4375	December ...	25.1875

(ii.) *Profits on Coinage of Silver.* As sixty-six shillings are coined out of one pound troy of standard silver, the silver required to produce £3 6s. of coin was only worth £1 4s. 8d. during 1910; the difference of £2 1s. 4d. represents, therefore, the gross profit or seigniorage made on the coinage of every £3 6s. This gross profit is equivalent to over 62 per cent., but from it the expenses of coining (including interest on cost of machinery) and of withdrawals of worn coin must be deducted. Still, given a large annual demand for new silver coin, even the net profit amounts to a considerable sum. Negotiations, therefore, took place for a number of years between the Imperial authorities and the Governments of New South Wales and Victoria, which in 1898 resulted in permission being granted to the two Governments named to coin silver and bronze coin at the Sydney and Melbourne Mints for circulation in Australia. No steps were, however, taken in the matter, and as section 51 of the Commonwealth Constitution makes legislation concerning "currency, coinage, and legal tender" a federal matter, the question remained in abeyance until the latter part of 1908, when the Commonwealth Treasurer announced his intention of initiating the coinage of silver in the near future.

(iii.) *Coinage Bill.* In 1909 a coinage bill was introduced in the Commonwealth Parliament, which provided that the future Australian coinage should consist of the

following coins:—In gold, £5, £2, £1, and 10s.; in silver, 2s., 1s., 6d., and 3d.; and in bronze, 1d. and  $\frac{1}{2}$ d. Gold was to be legal tender up to any amount, silver up to 40s., and bronze up to 1s. Ultimately the coinage was to be undertaken in Australia, but for the time an agreement was made with the authorities of the Royal Mint in London, under the terms of which the coinage was to be done in London on account of the Commonwealth Government. Orders were given for the immediate coinage of £200,000 worth of silver, viz., one million florins, one million shillings, one million sixpences, and two million threepences. The coins bear on the obverse H.M. the King's head, with the Latin inscription which appears on the British coins, and on the reverse the Australian coat-of-arms, with the denomination and the date. The Imperial authorities undertook to withdraw £100,000 worth of the present silver coinage per annum at its face value. The first consignment of the new coinage arrived in Australia early in 1910, and in a short time all the silver coins contracted for were supplied to the Royal mints, Australia. Copper coins of the value of £10,000, viz., 1,560,000 pennies and 1,680,000 half-pennies, of a design similar to that of the silver coins, were ordered. It is not, however, intended to withdraw any of the present copper coins, but merely to make good the "leakage," which is considerable. Possibly the time is not far distant when the copper coinage will be replaced by a nickel coinage.

**6. Decimal Coinage.**—Considered apart from the cognate subject of decimal weights and measures, the introduction of a decimal coinage would present no great difficulties. Of the various systems that have been advocated from time to time, the one that appears to meet with most favour and presents the maximum advantage, would retain the sovereign as the unit, but would divide it into a thousand parts instead of the present 960 farthings. In such a system there would be the following coins (adopting the name of "cent" for the hundredth part of the sovereign):—Sovereign = 100c. (gold); half-sovereign = 50c. (gold); 20c. = 4s. (gold or silver); 10c. = 2s. (silver); 5c. = 1s. (silver); 2c. = 4.8d. (silver); 1c. = 2.4d. (silver or nickel); 0.5c. or 5 mils. = 1.2d. (nickel or bronze), 0.2c. or 2 mils. = 0.48d. (nickel or bronze); 0.1c. or 1 mil. = 0.24d. (bronze). As only the subdivisions of the present shilling would be altered, such a system could be introduced with less disturbing effects on the arrangements of trade than other proposals, *e.g.*, one which would make the present farthing its unit. It will be seen from the terms of the Coinage Act, as quoted in the preceding paragraph, that no provision has been made for the introduction of a decimal coinage, apart from the omission of the half-crown.

**7. Circulation of Specie.**—Many conflicting estimates have from time to time been made as to the amount of coin in private hands. In 1892 the general manager of one of the Sydney banks estimated the coin in private hands in New South Wales at only £725,000, while the estimate of the Deputy-master of the Mint for the same period was £4,416,000, the truth lying, no doubt, somewhere between those two estimates. In 1906 the Deputy-master of the Perth Mint conducted an enquiry with the object of obtaining information on the condition of the currency in Australia. His estimate was—sovereigns, £2,500,000; half-sovereigns, £500,000; silver and bronze coin, £1,200,000. This estimate appears, however, very low, amounting only to a little over £1 per head of population. In this connection it may be of interest to notice that two similar estimates have recently been made in England and Germany respectively. The report for 1910 of the Comptroller of the British Imperial Mint contains an estimate of the amount of gold coin in active circulation in the United Kingdom in 1910, which is put at £113,000,000 or £2 10s. per head. More recently still a German economist, Dr. Arnold of the Reichsbank, estimated the amount of gold coin in active circulation in Germany at about £110,000,000, or £1 15s. per head. If the German ratio is supposed to prevail in Australia (the British ratio is almost certainly too high), this would lead to an estimate of about £8,000,000 for the amount of gold coin in active circulation in the Commonwealth. The coin in private hands amounts, however, only to a comparatively small part of the total in the country, the value of coin held by the banks during the quarter

ended 30th June, 1911, being £32,330,705. To the active currency must be added the notes in circulation, which for the same period amounted to £3,718,458, exclusive of Queensland Treasury notes. For particulars relative to Australian notes, see page 853.

8. **Imports and Exports of Coin and Bullion.**—A table is appended shewing the imports into, and exports from, the Commonwealth of coin and bullion during the year 1910, distinguishing the countries of import and export :—

### COMMONWEALTH IMPORTS AND EXPORTS OF COIN AND BULLION, 1910.

## § 2. Banking.

1. **Banking Facilities.**—(i.) *Head Offices of Banks.* Of the twenty-one banks trading in the Commonwealth, four have their head offices in London, viz., the Bank of Australasia; the Union Bank of Australia Limited; the English, Scottish and Australian Bank Limited; and the London Bank of Australia Limited. The head offices of the following four banks are in Sydney—The Bank of New South Wales, the Commercial Banking Company of Sydney Limited, the Australian Joint Stock Bank Limited (now the Australian Bank of Commerce Limited), and the City Bank of Sydney. Five

banks have their head offices in Melbourne, viz., the National Bank of Australasia Limited, the Commercial Bank of Australia Limited, the Bank of Victoria Limited, the Colonial Bank of Australasia Limited, and the Royal Bank of Australia Limited. Brisbane is the headquarters of three banks, viz., the Queensland National Bank Limited, the Royal Bank of Queensland Limited, and the Bank of North Queensland Limited. Only one bank has at present its head office in Adelaide, viz., the Bank of Adelaide; and one in Perth, viz., the Western Australian Bank. Of the two Tasmanian banks the Commercial Bank of Tasmania Limited has its head office in Hobart, and the National Bank of Tasmania Limited in Launceston. The remaining bank, the Bank of New Zealand, has its headquarters in Wellington. It is proposed, in the few instances where the banks are referred to by name, to arrange them in the order just given.

(ii.) *Establishments in Different States.* Only three of the banks have establishments in all six States of the Commonwealth, the total number of their branches and sub-branches being 534. One bank with a total of 246 branches is trading in five States, and two with 336 branches are established in four States. One bank has 61 branches distributed over three States, but has now also opened a branch in a fourth State, while seven banks with a total of 507 branches, confine their operations to two States. The remaining seven banks, with 317 branches, trade only within the State where their head offices are located. Two banks also have each a branch in the Northern Territory. Of this total of 2003 banking establishments, New South Wales contains 604, Victoria 661, Queensland 273, South Australia 236, Western Australia 171, Tasmania 56, and Northern Territory 2. In addition to the branches in the Commonwealth, four of the banks have a total of 283 establishments in New Zealand, while fourteen have each an office in London. Only three of the banks are established in the Pacific Islands, with a total of eight branches. The total for the Commonwealth amounts to about one bank to every 2250 inhabitants, which does not appear out of proportion when the general sparseness of the Australian population is taken into consideration. There is, however, a difference between the various States which is not easy of explanation, but which seems to be due chiefly to the desire of a few of the banks to open up branches wherever there is a prospect of a small amount of business, while other banks are more conservative in this respect. Thus the proportion in New South Wales is about 2704 inhabitants per bank, while in Victoria it is only 1940. This is probably owing to the fact that in Victoria, with its closer settlement, there are more centres where business can be made profitable. In Western Australia, where the proportion is lowest and amounts to one in 1585, there are, of course, exceptional circumstances which explain this apparent disproportion.

**2. Banking Legislation.**—Under section 51 of the Commonwealth Constitution Act the Commonwealth Parliament has power to legislate with respect to "Banking, other than State banking; also State banking extending beyond the limits of the State concerned, the incorporation of banks, and the issue of paper money." Until quite recently the only Commonwealth banking legislation passed was Act No. 27 of 1909, "An Act relating to Bills of Exchange, Cheques, and Promissory Notes," which came into force on the 1st of February, 1910. In the session of 1910, however, two Acts relating to banking were passed by the Federal Parliament. The first was the Australian Notes Act No. 11 of 1910, assented to on the 16th September, 1910, and proclaimed 1st November, 1910; and the second the Bank Notes Tax Act No. 14 of 1910, assented to on 10th October, 1910, and proclaimed 1st July, 1911. Under the first of these Acts the Commonwealth Treasurer is empowered to issue notes which shall be legal tender throughout the Commonwealth, and redeemable at the seat of Federal Government. The notes are issued in denominations of 10s., £1, £5, £10, or any multiple of £10. The Act directs the Treasurer to hold the following reserve of gold coin :—

- (a) An amount not less than one-fourth of the amount of Australian notes issued up to seven million pounds;
- (b) An amount equal to the amount of Australian notes issued in excess of seven million pounds.

For the purpose of estimating the reserve, notes which have been redeemed are not included amongst those issued.

The portion of the Act relating to the reserve has been amended by Act No. 21 of 1911, which was assented to on 22nd December, 1911. According to this amending Act the clause relating to the reserve now reads as follows:—"The Treasurer shall hold in gold coin a reserve of not less than one-fourth of the amount of Australian notes issued." It was intended that this amendment should come into force on 1st July, 1912, but the Federal Treasurer has since announced that its operation will be deferred until after the Commonwealth elections of 1913.

The Australian Notes Act prohibits the circulation of notes issued by a State six months after the commencement of the Act, and such notes will then cease to be legal tender. In addition the Bank Notes Act imposes a tax of 10 per cent. per annum in respect of all bank notes issued or re-issued by any bank in the Commonwealth after the commencement of this Act and not redeemed.

The Notes Act and the Bank Notes Act were supplemented in the following year by the passing of No. 18 of 1911, "An Act to provide for a Commonwealth Bank," which passed both Houses and was assented to on 22nd December, 1911. The bank thus authorised has no power to issue notes, but in every other respect it has the functions of an ordinary bank of issue. It is to be managed by a governor and a deputy-governor, who are to be appointed by the Governor-General and will hold office during good behaviour for a period of seven years, after which they will be eligible for reappointment. A novel feature is the establishment of a department dealing with savings bank business only. No further reference need be made here to this department; the framers of the Act have largely followed the lines laid down by the respective State Savings Bank Acts, particularly the Western Australian Act No. 9 of 1906. The capital of the bank is to be one million pounds, to be raised by the issue and sale of debentures. These debentures will be for ten pounds or some multiple of ten pounds and redeemable at par, the Commonwealth guaranteeing interest and principal. Up to the time of writing the bank has not come into operation, but in all likelihood the appointment of governor will be made at an early date. All expenses incidental to the establishment of the bank will be met by an advance from the Consolidated Revenue Fund, such advance to be ultimately repaid with interest at the rate of three-and-a-half per cent.

Under the existing laws banks are required to furnish quarterly statements of their average assets and liabilities, but these statements are not equally complete in all the States. Until the close of 1907 these quarterly statements, together with the periodical balance-sheets of the banks (generally half-yearly, but in a few cases yearly), were the only information available in regard to banking business. During the year 1908 the Commonwealth Statistician, under the provisions of the Census and Statistics Act, asked the banks for quarterly returns giving slightly more detailed information than had previously been obtained. As, however, a few of the banks have found it impossible up to the present to give all the particulars required, while promising to do so in future, the returns for the years 1908, 1909, 1910, and 1911 have been practically left in the same condition as those for 1907 and previous years.

The Acts under which the various banks are incorporated are not all of the same nature, but it may be stated that while most of the older banks were incorporated by special Acts, *e.g.*, the Bank of New South Wales, by Act of Council 1817; the Bank of Australasia, by Royal Charter; the Bank of Adelaide, by Act of the South Australian Parliament; and the Bank of New Zealand, by Act of the General Assembly of New Zealand, the newer banks are generally registered under a "Companies Act," or some

equivalent Act. This is also the case with those banks which, after the crisis of 1893, were reconstructed.

3. **Capital Resources of Banks.**—The paid-up capital of the twenty-one banks, together with their reserve funds, and the rate per cent. and the amount of their last dividends, is shewn in the table hereunder. The information relates to the balance-sheet last preceding the 30th June, 1911. In regard to the reserve funds it must be stated that in the case of some of the banks these are invested in Government securities, while in other cases they are used in the ordinary business of the banks, and in a few instances they are partly invested and partly used in business.

For 12 months.

4. **Liabilities and Assets of Banks.**—(i.) *Liabilities of Banks for Quarter ended 30th June, 1911.* As already stated, the banks transacting business in any State are obliged, under the existing State laws, to furnish a quarterly statement of their assets and liabilities, which contains the averages of the weekly statements prepared by the bank for that purpose, and have, during the years 1908, 1909, 1910 and 1911, furnished quarterly statements to the Commonwealth Statistician. As all other financial returns in this work embrace, so far as possible, a period ended 30th June, 1911, it seems advisable to give the banking figures for the quarter ended on that date, and, where they are shewn for a series of years, similarly to use the figures for the June quarter of each year. The liabilities are those to the general public, and are exclusive of the banks' liabilities to their shareholders, which are shewn in the preceding table:—

**AVERAGE LIABILITIES OF BANKS IN EACH STATE OF THE COMMONWEALTH AND THE NORTHERN TERRITORY FOR THE QUARTER ENDED 30th JUNE, 1911.**

State.	Notes in Circulation, not bearing interest.	Bills in Circulation, not bearing interest.	Balances Due to other Banks.	Deposits.			Total Liabilities.

1911	32,330,705	1,140,065	4,937,437	1,279,714	1,698,097	118,179,425	159,565,443

\* Including Queensland Treasury notes, Government and Municipal securities, and Australian notes.

The figures do not call for much comment. As the table shews, the increase in the total amount of assets is mainly due to an increase in the amount of specie held by the banks against liabilities at call and advances.

**5. Percentage of Coin and Bullion to Liabilities at Call.**—(i.) *Commonwealth.* Although it is not strictly correct to assume that the division of deposits into those bearing interest and not bearing interest would in every case coincide with a division into fixed deposits and current accounts, the division, in default of a better one, must be adopted, and in the following table "liabilities at call" are therefore understood to include the note circulation of the banks and the deposits not bearing interest:—

**PERCENTAGE OF COIN AND BULLION TO LIABILITIES AT CALL, COMMONWEALTH  
BANKS, 1902 to 1911.**

1909 ...	3,512,629	46,812,632	50,323,261	24,943,910	1,353,933	26,297,843	52.26
1910 ...	3,745,482	55,233,862	58,982,344	28,826,729	1,322,899	30,149,628	51.12
1911 ...	3,713,458	62,226,897	65,945,355	32,330,705	1,140,065	33,470,770	50.76

It would appear from the figures just given that the banks generally consider it advisable to hold about half the amount of liabilities at call in coin and bullion. The drop to 47.10 per cent. in 1907 was due to the very large increase in the amount of deposits during the year, and to the fact that the increase in the coin and bullion held, considerable though it was, did not keep pace therewith.

(ii.) *Queensland Treasury Notes.* No bank-notes are issued by any of the banks in Queensland, where a Treasury note has taken the place of bank-notes since 1893. These Treasury notes are disregarded in the quarterly statements of the banks; according to Treasury returns the amount outstanding on 30th June, 1911, was £263,817, partly in circulation, and the balance held by the banks. Under the Australian Notes Act, the issue of notes by a State is now prohibited.

(iii.) *States.* The proportion of coin and bullion to liabilities at call varies considerably in the different States, and is generally highest in Western Australia, and lowest in Queensland and Tasmania. A table is appended shewing the percentages for each State for the quarter ended 30th June in each of the years 1902 to 1911 :—

**PERCENTAGE OF COIN AND BULLION TO LIABILITIES AT CALL, COMMONWEALTH BANKS, 1902 to 1911.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.

1911 ...	52.28	45.05	43.60	51.64	86.55	35.13	50.76

6. **Deposits and Advances.**—(i.) *Total Deposits.* The total amount of deposits held by the banks shews a steady advance during the period under review, although the totals for 1903 and 1904, when the country was slowly recovering from the effects of the drought, were slightly below those for 1902 :—

**TOTAL DEPOSITS IN COMMONWEALTH BANKS, 1902 to 1911.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	N. Ter.	C'wealth.

(ii.) *Deposits per Head of Population.* To shew the extent to which the population makes use of the banking facilities afforded to it, a table is given hereunder shewing the amount of total deposits per head of mean population for each of the years 1902 to 1911. The figures must not be taken to shew part of the savings of the people, as a large

proportion of the deposits is non-interest-bearing and therefore presumably used in the business of the banks' customers, together with a small part of the interest-bearing deposits.

(iii.) *Total Advances.* In the quarterly statements furnished by the banks the column headed "all other debts due to the banks," which usually average from 75 to 80 per cent. of the total assets, is made up of such miscellaneous items as bills discounted, promissory notes discounted, overdrafts on personal security, overdrafts secured by deposit of deeds or by mortgage, etc. The quarterly returns furnished to the Commonwealth Statistician in 1908 and 1909 provided for a division of the amounts contained under this heading into a number of sub-headings, but all the banks were not in a position to make the necessary division, so that under present circumstances it is impossible to separate these items, and the total amounts contained in the column must, therefore, be treated as advances. The following table shows the totals for each State during the years 1902 to 1911 :—

### ADVANCES BY COMMONWEALTH BANKS, 1902 to 1911.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania	Northern Territory.	C'wealth.

(iv.) *Proportion of Advances to Deposits.* The percentage borne by advances to total deposits shews to what extent the needs of one State have to be supplied by the resources of another State, and where the percentage for the Commonwealth as a whole exceeds 100, as it did in 1901, 1902, and 1903, the banks must have supplied the deficiency from their own resources, or from deposits obtained outside the Commonwealth. The following figures shew, however, that the banking business of the Commonwealth has been practically self-contained during the period under review :—

**PERCENTAGE OF ADVANCES TO TOTAL DEPOSITS, COMMONWEALTH BANKS,  
1902 to 1911.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	C'wealth.
	%	%	%	%	%	%	%
1902	115.75	98.72	98.82	71.37	69.08	69.23	100.59
1903	116.06	97.35	111.36	67.07	76.97	68.81	101.68
1904	100.54	94.35	110.68	69.05	83.69	75.85	95.80
1905	88.86	84.99	104.64	69.56	83.47	72.64	87.39
1906	81.99	80.78	101.36	67.25	82.11	67.75	82.51
1907	82.11	83.07	101.51	67.24	93.47	76.86	84.29
1908	87.00	88.59	99.46	67.16	114.00	81.93	88.70
1909	78.10	81.47	89.84	58.59	107.95	74.08	80.34
1910	69.59	79.08	81.33	59.60	96.07	72.99	74.74
1911	70.63	77.20	79.66	72.06	100.65	74.37	75.69

**7. Clearing Houses.**—The Sydney Banks' Exchange Settlement and the Melbourne Clearing House, at which two institutions settlements are effected daily between the banks doing business in New South Wales and Victoria respectively, publish figures of the weekly clearances effected. From these figures it appears that in 1911 the total clearances in Sydney amounted to £304,488,000, and in Melbourne to £290,113,000. These figures represent in both cases an increase on those for 1910, the increase in Sydney amounting to £30,144,000, and in Melbourne to £28,730,000. Owing to the different distribution of the banking business in the two cities these figures do not, however, afford a fair comparison of the volume of banking business transacted in Sydney and Melbourne.

### § 3. Companies.

**1. General.**—Returns in regard to registered companies are defective, and, with few exceptions, are not available for Tasmania. They embrace (a) Returns relating to Trustees, Executors and Agency Companies; (b) Returns relating to Registered Building and Investment Societies; and (c) Returns relating to Registered Co-operative Societies.

**2. Trustees, Executors and Agency Companies.**—Returns are available of seven Victorian, two New South Wales, one Queensland, one South Australian, one Western Australian, and two Tasmanian companies. The paid-up capital of these fourteen companies amounted to £411,922; reserve funds and undivided profits to £327,503; other liabilities, £89,148; total liabilities, £828,573. Among the assets are included:—Deposits with Governments, £140,100; other investments in public securities, fixed deposits, etc., £226,208; loans on mortgage, £109,942; property owned, £219,638; other assets, £132,685. The net profits for the year were £67,760, and the amount of dividends and bonuses £35,576. Returns as to the amount at credit of estates represented by assets are available for only six companies, viz.:—Two Victorian, one New South Wales, one Queensland, one South Australian, and one Western Australian, the total shewn being £25,211,715.

Probably nearly £20,000,000 would have to be added to this amount for the remaining eight companies, so that the total amount is probably not far short of £45,000,000. None of these companies receive deposits, and advances are only made under exceptional circumstances, and to a very limited extent, the total so shewn in the last balance-sheets being only £51,949.

**3. Registered Building and Investment Societies.**—Returns have been received of a total of 167 societies, viz., 85 in New South Wales, 27 in Victoria, 14 in Queensland, 25 in South Australia, 12 in Western Australia, and 4 in Tasmania. The balance-sheets cover various periods ended during the second half of 1910 and the first half of 1911, so that the returns may be assumed to roughly correspond to the financial year 1910-11. The liabilities of the societies are stated as follows:—

## LIABILITIES OF REGISTERED BUILDING AND INVESTMENT SOCIETIES, 1910-11.

State.	Paid-up Capital or Subscriptions.	Reserve Funds.	Deposits.	Bank Over-drafts and other Liabilities.	Total Liabilities.
	£	£	£	£	£
New South Wales	634,545	81,326	450,025	56,793	1,222,689

\* Not available. † Exclusive of Tasmania. ‡ Exclusive of Tasmania and New South Wales.

## § 4. Savings Banks.

1. **General.**—The total number of savings banks, with their branches and agencies, in the Commonwealth, closely approximates to that of banks of issue, and, at the middle of 1911, numbered 1891, distributed as follows:—New South Wales, 662; Victoria, 423; Queensland, 249; South Australia, 257 (exclusive of 186 school penny savings banks); Western Australia, 155 (exclusive of 172 school penny savings banks); and Tasmania, 145.

In the following tables the figures for Victoria, Queensland, South Australia and Western Australia refer to financial years ended 30th June, and those of New South Wales to calendar years ended 31st December next preceding. In the case of Tasmania figures for the two joint-stock savings banks are made up to the last day of February in each year, and those for the Government Savings Bank to the 31st December, except in 1906-7, 1907-8, 1908-9, 1909-10, and 1910-11, where they relate to the year ended 30th June.

2. **Depositors.**—The total number of depositors, *i.e.*, of persons having accounts open, not of those making deposits, in each of the last ten years is shewn in the following table:—

**NUMBER OF DEPOSITORS IN SAVINGS BANKS, 1901-2 to 1910-11.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
1901-2 ...	306,311	410,126	84,685	132,084	45,108	44,527	1,022,841
1902-3 ...	323,212	418,511	80,043	137,147	48,008	46,451	1,053,372
1903-4 ...	331,956	432,867	80,959	141,572	54,873	47,904	1,090,131
1904-5 ...	355,824	447,382	84,165	146,366	59,764	49,438	1,142,939
1905-6 ...	364,039	466,752	88,026	152,487	63,573	50,731	1,185,608
1906-7 ...	392,050	491,318	92,912	161,855	66,737	53,817	1,258,689
1907-8 ...	421,928	511,581	100,324	*174,289	†72,178	55,620	1,335,920
1908-9 ...	436,029	532,425	106,627	†187,482	§77,748	58,145	1,398,456

1910-11 ...	498,658	595,424	127,219	†216,480	§99,017	63,314	1,600,112

\* Inclusive of 2011 depositors in school penny savings banks.

†	"	2645	"	"	"	
†	"	4607	"	"	"	in 1909, 6681 in 1910, and 8436 in 1911.
†	"	4590	"	"	"	6781 " " 9578 "

. The subjoined table shews the above figures in relation to the population of the States ; it must, of course, be borne in mind that savings bank accounts are not restricted to the adult population, but that it is, on the contrary, a very usual practice to open accounts in the name of children. Even so, the proportion is a large one, amounting in the case of the Commonwealth to more than one-third, and rising in Victoria to four-ninths, and in South Australia to more than one-half.

**DEPOSITORS IN SAVINGS BANKS PER THOUSAND OF POPULATION, 1901-2 to 1910-11.**

3. **Administration of Savings Banks.**—The following table, relating to the Government Savings Banks of the several States, gives information on such points as administration, maximum and minimum deposits, rate of interest allowed, investment of funds, etc.

## PARTICULARS RELATING TO

State, Bank and Acts in Force.	Administration and Management.	Appointment of Administrators or Managers.	Payment of Administrators or Managers.	Quorum.	Departments and Branches.	Minimum and Maximum Deposits.
<b>New South Wales</b> <i>Savings Bank of N.S.W.</i> Acts Nos. 53 & 99 of 1902.	Managed by trustees, not exceeding 18, in addition to the Governor as President.	Trustees appointed by Governor, who also nominates the Vice-President. The managing Trustee is appointed by Governor on the nomination of the Trustees.	The managing Trustee is paid out of the funds of the Bank. Other Trustees and district Trustees may not receive emolument.	Four Trustees.	The Trustees may appoint an Accountant for each district for which district Trustees are appointed.	From 1s. to £200.
<i>Government Savings Bank.</i> Act No. 48 of 1906.	Administered, governed, and managed by 3 Commissioners, of whom one is President.	Appointed by the Governor by commission in His Majesty's name; to hold office during ability and good behaviour. Provision to appoint deputies in case of illness, suspension, or absence.	The President is paid £1200 per annum; each of the other Commissioners £900 per annum.	Two Commissioners.	(i.) Savings Bank Department. (ii.) Advances Department. Commissioners may establish branches and agencies; these may be at post-offices, subject to such terms as may be agreed upon between Governor and Governor-General.	(Not specified in Act).
<b>Victoria—</b> <i>The Savings Bank.</i> Acts Nos. 1138 of 1890, 1481 of 1896, 1709 and 1722 of 1900, 1778 of 1901, 1878 of 1903, and 2280 of 1910.	General control of administration and the sole investment of funds in the hands of 5 Commissioners. General management is in hands of Inspector-General.	Commissioners appointed by Governor-in-Council; the Chairman is also appointed annually by the Governor-in-Council on the nomination of a majority of the Commissioners. The Inspector-General is appointed by the Commissioners with the approval of the Governor-in-Council. Commissioners to hold office during good behaviour; provision for appointment of deputy Chief Commissioner in case of illness, etc.	Each Commissioner is paid 2 guineas and the Chief-Commissioner 3 guineas for each attendance, but the amount paid to any one Commissioner must not exceed £210 per annum, nor to the Chief Commissioner, £315 per annum. The salary of the Inspector-General may not exceed £1500 per annum.	Three Commissioners.	(i.) Savings Bank Department. (ii.) Advances Department. Commissioners may establish banks at any place in Victoria; each bank to be a separate and independent institution having separate and distinct Trustees and officers. Trustees (two or more in number) are appointed by Commissioners.	From 1s. to £1000.

## ADMINISTRATION OF SAVINGS BANKS.

Interest.		Management and Investment of Funds.	Loans on Mortgage.	Reserve and other Funds.	Borrowing and Security of Depositors.
Rate.	Amount on which Payable.				
To be fixed from time to time by Trustees.	Any sum over £1, but the Trustees may limit the interest so as not to be payable on the surplus over £100.	The Trustees may (i.) deposit funds either (a) in the Colonial Treasury or (b) in any bank in N.S.W., or (ii.) may invest funds in debentures and other securities, or (iii.) may purchase bills of exchange drawn on any bank in N.S.W. to an amount not exceeding one-quarter of the funds.	Trustees may lend money on mortgage provided (i.) no mortgage to any one person may exceed £24,000, and (ii.) not more than three-fourths of the total deposits may be lent on mortgage. The land must be held in fee-simple and unencumbered.	The Trustees must set aside annually out of the profits such sum, being not less than one-twentieth nor more than one-fifth of the total interest produced during the year, as they think proper, towards the establishment of a security fund, to equalise rate of interest and meet losses or deficiency.	The Trustees may borrow the amount required to meet the demands of depositors and the Governor or may guarantee its repayment. The amount borrowed and outstanding at any time so guaranteed may not exceed £50,000, without the previous consent of the Legislative Assembly. Special loans to meet any sudden demand upon the funds, may be raised upon the security of the property and revenues of the bank.
Commissioners must fix rate of interest, and may fix differential rates according to amount of deposit.	Any sum from £1 to £500, and over the latter amount in case of accounts of (i.) Friendly Societies, etc., and (ii.) the Advance Department.	All moneys received to be invested and held (i.) as to 15% to consist of cash and deposits at Treasury and in banks of issue in N.S.W. available at call or short notice, and (ii.) as to the balance to be invested in business premises of the Commissioners, mortgages, Government securities of any State of the Commonwealth, debentures of the Advance Dept., debentures of any municipality in N.S.W.	Loans may be on first mortgage from £30 to £25,000 to any one person. Any one loan may not exceed three fifths of the value of the interest of the borrower in the lands and buildings. The mortgage must be registered and dates must be fixed for repayment of principal and interest.	Same provisions as above, provided that the Governor may suspend the operations of such provisions.	The Commissioners may borrow, and the Governor may guarantee repayment of moneys required to meet demands of depositors; the Governor shall obtain from Commissioners such security as he may deem necessary. The Governor may, upon like security, direct advances to be made out of Consolidated Revenue. Such advances must be reported to both Houses of Parliament.
To be fixed from time to time by the Commissioners but may not exceed 5 per cent.	Interest allowed on sums from £1 to £250, and is added yearly on 30th June. (Acts provide that interest may not be paid on surplus over £500, or such other less sum as the Commissioners may appoint.)	All deposits must within one week of their receipt be paid into the appointed bank in Melbourne. Deposits in the country banks must be remitted to the Commissioners. Funds must be invested as follows:—(i.) Not more than 15% to be deposited with the Government Bankers. (ii.) Not more than three-tenths of the balance in mortgages or municipal loans. (iii.) As nearly as possible seven-tenths of such balance in Treasury Bills, mortgage bonds, and debentures.	The Commissioners may lend any sum on first mortgage of fee-simple lands, and may lend to corporations of Melbourne or Geelong and to the council of any shire or borough any sums not exceeding in the aggregate the average revenues for the period of three years. The amount lent to any one person is limited to £25,000, and may not exceed three fifths of the value of property mortgaged.	No provision except in regard to Advances Dept.	The Governor with the advice of the Executive Council may guarantee the repayment of any loan necessary to meet the demands of depositors, but the loans outstanding at any time may not exceed £100,000.

## PARTICULARS RELATING TO

State, Bank and Acts in Force.	Administration and Management.	Appointment of Administrators or Managers.	Payment of Administrators or Managers.	Quorum.	Departments and Branches.	Minimum and Maximum Deposits.
<b>Queensland—</b> <i>Government Savings Bank.</i> Acts Nos. 24 of 1853 (N.S.W.), 25 of 1854 (N.S.W.), 8 of 1861, 2 of 1864, 17 of 1865, 10 of 1870, 6 of 1872, 2 of 1882, 31 of 1894, 20 of 1895, 4 of 1896, and 8 of 1897.	Administration controlled by the Colonial Treasurer. The actual management in hands of a "manager."	Appointed by Governor.	Not specified.	...	On the application of ten or more house or landholders, the Governor - in - Council may by a proclamation establish a Savings Bank in any town in Queensland having not less than 500 inhabitants. Police magistrates and other officers may be directed by the Governor - in - Council to receive deposits of not less than 5 shillings.	From 1s. to £200.
<b>South Australia—</b> <i>Government Savings Bank.</i> Acts Nos. 22 of 1875, 824 of 1903, and 925 of 1907.	Managed by 6 Trustees, 2 of whom retire every 2 years.	Appointed by the Governor. Chairmen elected by Trustees. The Board must meet at least once in each week except in the month of December.	Each Trustee is paid 2 guineas for each meeting attended, provided that no Trustee may receive more than one fee for any one week.	Four Trustees.	(i.) Trustees may establish branches at such places in the State as they may select. (ii.) They are also empowered to establish a department designated "The Penny Bank Department."	From 1s. to £500, but deposits of Friendly Societies are unlimited. In the Penny Bank Dept. any sum not less than one penny may be deposited.
<b>Western Australia</b> <i>Government Savings Bank.</i> Act No. 9 of 1906	Managed by a "Manager" under the control of the Treasurer	Appointed by Governor.	Not specified.	...	Governor may arrange with Governor - General for performance of duties in respect of the Savings Bank by officers of the P.M.G.'s Dept. and the Governor may authorise such officers, or any other person, to receive deposits for remittance to the head office.	From 1s. to £1000, but a Friendly Society may in any one year deposit any amount not exceeding £1000.
<b>Tasmania—</b> <i>Government Savings Bank*</i> Act No. 9 of 1910	Managed by an "Actuary" under the control of the Treasurer	Actuary and other officers subject to the Public Service Act.	No provision.	...	Same as W.A.	Not less than 1s. No maximum is specified.

\* There are also the Hobart Savings Bank and the Launceston

## ADMINISTRATION OF SAVINGS BANKS—Continued.

Interest.		Management and Investment of Funds.	Loans on Mortgage.	Reserve and other Funds.	Borrowing and Security of Depositors.
Rate.	Amount on which Payable.				
To be fixed by Governor-in-Council, but not to be more than 5 per cent.	No interest on deposits exceeding £500, except in case of funds of registered Friendly Societies or any other Society or Corporation excepted by the Governor-in-Council.	Deposits must be paid within 24 hours into the appointed bank in Brisbane. (i.) Two-thirds at least of the funds must be invested in Government Debentures or Treasury bills. (ii.) The remaining third to be retained by Colonial Treasurer to carry on business of the Bank. Debentures and bills to vest in President of Legislative Council, Speaker of Legislative Assembly, and the Colonial Treasurer. The Governor may authorise the issue of 3½ per cent. (or less) Savings Bank Stock to an amount up to £2,000,000, redeemable in 1945.	...	...	The Governor may guarantee upon the security of the general revenue of the State the repayment of any money, the loan of which is necessary to meet the demands of depositors. Loans outstanding may not exceed £10,000 without previous consent of the Legislative Council.
To be fixed by Trustees.	No interest on deposits exceeding £250, but in case of Friendly Societies interest at a rate not exceeding one-half the ordinary rate is paid on the surplus over £250.	Funds may be invested in (i.) Government securities of any State or the Commonwealth. (ii.) Securities of any Municipal Corporation in S. A. (iii.) Deposits in any other bank in S. A. (iv.) Deposits in the Treasury.	Trustees may lend money on mortgage of estates in fee-simple, but no new mortgage may be taken by Trustees, so long as one-half of funds of the bank are invested on mortgage.	Trustees may set apart annually any sum not exceeding one-fifth of the net profits to a reserve fund (which may not exceed 4 per cent. of the total deposits) for the purpose of meeting any loss or deficiency. Appropriations may be made from this fund to meet depreciations in the investments. Trustees may also use the fund for purpose of carrying on business of Bank.	...
To be fixed by Governor.	To be fixed by Governor.	All funds, except such portion as the Treasurer deems sufficient to meet withdrawals, must be invested: (i.) On deposits in any bank in W. A. (ii.) In securities of the Government of W. A. (iii.) In debentures issued by any local authority in W. A. (iv.) Upon first mortgages of any lands in W. A.	The aggregate amount invested on mortgage may not exceed one-third of the total of funds; no more than three-fifths of the amount of valuation may be advanced; and the interest must be not less than 5 per cent.	After payment of interest to depositors and of expenses of maintenance and administration, any surplus income forms part of the Consolidated Revenue Fund.	Deposits are charged upon the Consolidated Revenue Fund. If moneys received are not sufficient to meet the lawful claims of depositors the Governor may authorise the issue of the amount of the deficiency out of the Consolidated Revenue Fund.
To be fixed by Governor.	No interest to be paid in excess of deposits over £250.	All funds not required to meet withdrawals must be invested in Tasmanian Government securities or deposited in a bank in Tasmania.	...	After providing for payment of interest due to depositors the surplus income forms part of the Consolidated Revenue.	Same as in W. A.

Bank for Savings, both under control of Trustees.

4. **Deposits.**—The total amount of deposits in the savings banks of the six States reaches the large sum of nearly sixty million pounds, and would no doubt be even larger if the banks did not restrict interest-bearing deposits to certain limits. It must be remembered that though not granting him facilities to draw cheques, the Australian savings banks practically afford the small tradesman all the advantages of a current account, in addition to which they also allow him interest on his minimum monthly balance, instead of charging him a small fee for keeping his account, as the banks of issue do. The rates of interest allowed, and the limits of interest-bearing deposits, are as follows:—New South Wales, Government Savings Bank, 3 per cent. up to £500; Savings Bank of New South Wales, 3½ per cent. up to £200; Victoria, 3½ per cent. on first £100, and 3 per cent. on excess from £101 to £250; Queensland, 3 per cent. up to £500; South Australia, 2½ per cent. on accounts closed during the year, and 3½ per cent. up to £250 on accounts remaining open; Western Australia, 3 per cent. up to £1000; Tasmania, Government Savings Bank, 3 per cent. up to £250; Hobart Trustees' Savings Bank, 4 per cent. up to £50, 3½ per cent. on the excess from £50 to £150; Launceston Trustees' Savings Bank, 3½ per cent. up to £150. The savings banks of four of the States—New South Wales (Government Savings Bank), Victoria, South Australia, and Western Australia—have, for the further benefit of depositors, entered into a reciprocity arrangement, under which money deposited in one State may be drawn out in another State, and even by telegraph.

The table below shews the total amounts at credit of depositors in each of the last ten years:—

#### DEPOSITS IN SAVINGS BANKS, 1901-2 to 1910-11.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£	£	£	£	£	£	£
1901-2 ...	11,808,710	10,131,604	4,118,337	3,988,649	1,889,082	1,092,047	33,028,429
1902-3 ...	12,425,464	10,341,857	3,772,686	4,187,590	1,988,624	1,194,157	33,910,378
1903-4 ...	12,344,623	10,582,808	3,741,967	4,217,836	2,079,763	1,249,760	34,216,757
1904-5 ...	12,982,648	10,896,741	3,875,197	4,398,041	2,207,296	1,263,542	35,623,465
1905-6 ...	13,963,635	11,761,179	4,142,791	4,766,907	2,316,161	1,332,546	38,286,219
1906-7 ...	15,320,532	12,792,590	4,543,104	5,320,872	2,633,135	1,488,056	42,098,289
1907-8 ...	17,530,157	13,428,676	4,921,881	5,820,344	2,885,463	1,560,951	46,147,472
1908-9 ...	18,805,082	14,101,710	5,158,219	6,347,271	3,059,738	1,605,919	49,077,939
1909-10 ...	20,150,574	15,417,888	5,622,986	6,791,320	3,481,764	1,652,966	53,117,498
1910-11 ...	22,453,924	17,274,423	6,376,969	7,435,772	4,092,504	1,760,090	59,393,682

A comparison between the tables shewing the number of depositors and the amount of deposits reveals the fact that the average amounts to the credit of each depositor are considerably larger in some States than in others; in other words, that in one State a comparatively larger proportion of the population makes use of the savings banks, and that the natural result is a smaller amount to the credit of the individual depositor. Within the same State there is little variation in the figures from year to year.

#### AVERAGE AMOUNT PER DEPOSITOR IN SAVINGS BANKS, 1901-2 to 1910-11.

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1901-2 ...	38 11 0	24 14 1	48 12 7	30 3 11	41 17 7	24 10 6	32 5 10
1902-3 ...	38 8 10	24 14 3	47 2 8	30 10 8	41 8 5	25 14 2	32 3 10
1903-4 ...	37 3 9	24 9 0	46 4 5	29 15 10	37 18 0	26 1 9	31 7 9
1904-5 ...	36 9 9	24 7 2	46 0 10	30 1 0	36 18 8	25 11 2	31 3 4
1905-6 ...	38 7 2	25 4 1	47 1 3	31 5 3	36 8 8	26 5 4	32 5 10
1906-7 ...	39 1 7	26 0 9	48 17 11	32 17 6	39 9 1	27 13 0	33 8 11
1907-8 ...	41 10 11	26 5 0	49 1 2	33 7 11	39 19 6	28 1 4	34 10 10
1908-9 ...	43 11 2	26 9 9	48 7 6	33 17 1	39 7 1	27 12 5	35 4 1
1909-10 ...	43 15 8	27 10 1	49 0 4	33 14 10	40 8 2	27 5 1	35 16 1
1910-11 ...	45 0 7	29 0 3	50 2 6	34 7 0	41 6 7	27 16 0	37 2 4

The average amount deposited per head of population shows a satisfactory increase during the period under review. In 1901-2 it ranged from £10 19s. 2d. in South Australia to £6 4s. 8d. in Tasmania, while in 1910-11 the amount in South Australia had risen to £18 2s. 7d., and in Tasmania to £9 1s. 9d. The following table gives the figures for each year:—

**SAVINGS BANK DEPOSITS PER HEAD OF POPULATION, 1901-2 to 1910-11.**

Year.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1901-2 ...	8 11 8	8 7 6	8 2 6	10 19 2	9 15 2	6 4 8	8 12 8
1902-3 ...	8 17 3	8 11 2	7 7 4	11 11 8	9 7 7	6 13 1	8 15 0
1903-4 ...	8 13 3	8 15 8	7 4 7	11 13 6	9 5 1	6 16 8	8 14 9
1904-5 ...	8 18 5	9 0 9	7 7 8	12 1 11	9 4 5	6 16 6	8 19 3
1905-6 ...	9 7 8	9 14 5	7 15 11	13 0 0	9 5 2	7 3 0	9 9 10
1906-7 ...	10 1 4	10 9 9	8 8 7	14 7 3	10 6 5	8 0 6	10 5 9

1908-9 ...	11 17 5	11 5 6	9 5 2	16 6 0	11 15 8	8 7 6	11 11 11
1909-10...	12 9 8	12 1 6	9 14 7	17 2 8	13 2 1	8 11 2	12 5 8
1910-11...	13 13 2	13 5 6	10 12 11	18 2 7	14 15 8	9 1 9	13 8 5

**5. Annual Business.**—The annual volume of business transacted by the Australian savings banks is very large when compared with the total amount of deposits. This is mainly due to the fact already pointed out of many accounts being used as convenient current accounts. Thus, during the last year of the period under review, the total amount deposited and withdrawn (exclusive of interest added) amounted to nearly 150 per cent. of the total amount of deposits at the end of the previous year, while the amount at credit of depositors (inclusive of interest added) increased by only 11½ per cent. during the same year. The following table shews the business transacted during the year 1910-11:—

**SAVINGS BANK TRANSACTIONS DURING THE YEAR, 1910-11.**

State.	Total Deposits at End of Year 1909-10.	Amounts Deposited during Year 1910-11.	Interest Added during Year 1910-11.	Total	Amounts Withdrawn during Year 1910-11.	Total Deposits at End of Year 1910-11.

**§ 5. Life Assurance.**

**1. General.**—Under section 51 of the Commonwealth Constitution Act, the Commonwealth Parliament is empowered to legislate in regard to "insurance, other than State insurance; also State insurance extending beyond the limits of the State concerned." With the exception of Act No. 12 of 1905, "an Act relating to assurance on the lives of children by life assurance companies or societies," no legislation relating to life

insurance has been passed by the Commonwealth Parliament, and life assurance companies carry on their business under State laws where such laws are in existence, or otherwise under the provisions of various companies or special Acts. A Royal Commission consisting of the Honourable J. H. Hood, one of the judges of the Supreme Court of Victoria, and G. H. Knibbs, Esquire, Commonwealth Statistician, was, however, appointed in 1908, "to inquire into and report upon the law relating to and the methods of operating Fire, Life, Industrial, and other Insurance in Australia." The Commission was originally required to report the result of its inquiry before the 30th June, 1909. A progress report was issued before that date, and the time for the final report extended to the 30th June, 1910. The report relating to Life Assurance was published on 15th March, 1910, and that relating to Fire Insurance on 15th October, 1910. On the conclusions contained in these reports future Commonwealth legislation will probably be based. In addition to these a report on Social Insurance was prepared by the Commonwealth Statistician and issued on 9th September, 1910.

Returns for the year 1910 have been directly collected from life assurance societies by the Commonwealth Statistician, with results which are in the main satisfactory. Figures for 1910 refer to business in the Commonwealth only, and do not include New Zealand business.

**2. Companies Transacting Business in the Commonwealth.**—The total number of companies at present established in the Commonwealth is fifteen, of which the following five have their head offices in New South Wales:—The Australian Mutual Provident Society, the Mutual Life and Citizens' Assurance Company Limited, the City Mutual Life Assurance Society Limited, the Australian Metropolitan Life Assurance Company Limited, and the People's Prudential Assurance Company Limited. The Standard Life Association Limited is now omitted, since a controlling interest in it has been purchased by the Colonial Mutual Life Assurance Society, and almost all of its policy-holders have transferred themselves to the latter corporation. The Mutual Life and Citizens' Assurance Company Limited was formed in 1908 by the amalgamation of the Mutual Life Association of Australasia and the Citizens' Life Assurance Company Limited. During 1910 it increased in size by amalgamating with the Australian Widows' Fund Life Assurance Society Limited, which is therefore no longer included in the list of independent corporations. Five companies have their head offices in Victoria, viz.—The Australian Alliance Assurance Company, the National Mutual Life Association of Australasia Limited, the Victoria Life and General Insurance Company, the Colonial Mutual Life Assurance Society Limited, and the Australasian Temperance and General Mutual Life Assurance Society Limited. The head office of the Provident Life Assurance Company is in New Zealand, and that of the Liverpool and London and Globe Insurance Company in England. The remaining three societies belong to the United States, viz.—The Equitable Life Insurance Society of the United States, the Mutual Life Insurance Company of New York, and the New York Life Insurance Company.

Most of the Australian companies are purely mutual; the Victoria Life and General (which takes no new life business), the Mutual Life and Citizens', the Metropolitan, and the Prudential, are the only companies which are partly proprietary, the shareholders' capital amounting to £40,000, £56,788, £11,740 and £4791 respectively. Of foreign companies transacting business in the Commonwealth, the Liverpool and London and Globe, the Provident, and the Equitable are partly proprietary, the shareholders' capital amounting to £245,640, £10,000 and £20,550 respectively.

**3. Ordinary and Industrial Business.**—Of the societies enumerated in the preceding paragraph the following five in 1910 transacted both ordinary and industrial business:—The Australian Mutual Provident Society, the Mutual Life and Citizens' Assurance Company Limited, the Australasian Temperance and General Mutual Life Assurance Society Limited, the Australian Metropolitan Life Assurance Company Limited, and the Colonial Mutual Life Assurance Society.

The People's Prudential Assurance Company Limited and the Provident Life Assurance Company formerly restricted their operations to industrial business, but have now established an ordinary department.

The remaining nine societies transacted ordinary life assurance business only, with the exception of those companies which have fire and accident branches, etc.

It has been attempted in this section to keep returns relating to ordinary and to industrial business apart, so far as it is possible to do so, and figures relating to companies whose head offices are in New Zealand or in Europe or America refer to the Australian business only of those companies.

**4. Ordinary Business: Australian Business in Force, 1910.**—The subjoined table shews the ordinary life business in force at the latest dates available in the fifteen societies conducting operations in the Commonwealth:—

#### ORDINARY LIFE ASSURANCE.—AUSTRALIAN BUSINESS IN FORCE, 1910.

\* Decrease.

7. **Expenses of Management of Insurance Societies, 1910.**—(i.) *Ordinary Business.* In the following table the expenses of management (including commission, expenses of management, license fees, and taxes) of the several societies transacting ordinary life

business are shewn, together with the proportion these expenses bear to premium income and to gross receipts. The People's Prudential Company is included amongst the industrial companies in a subsequent table, as that company transacts mainly industrial business, and as its returns include both ordinary and industrial business.

### ORDINARY LIFE ASSURANCE.—EXPENSES OF MANAGEMENT IN AUSTRALIA, 1910.

Society.	Expenses of Management.	Proportion to Premium Receipts.	Proportion to Gross Receipts.
	£	%	%

New York Life Insurance Society ...			

\* Not available

(ii.) *Industrial Business.* The Australasian assurance societies have, in common with assurance societies elsewhere, found by experience that industrial business is much more expensive than ordinary business. This is, of course, principally due to the great expenses in connection with collection and commission. The subjoined table shews particulars in regard to this business, the figures again including commission, expenses of management, license fees, and taxes:—

### INDUSTRIAL LIFE ASSURANCE.—EXPENSES OF MANAGEMENT IN AUSTRALIA, 1910.

Society.	Expenses of Management.	Proportion to Premium Receipts.	Proportion to Gross Receipts.
	£	%	%
Australian Mutual Provident Society ...	40,964	50.75	48.64
Mutual Life and Citizens' Assurance Company ...	89,151	47.36	40.39
Australian Metropolitan Life Assurance Company ...	14,781	77.95	74.17

Provident Life Assurance Company ...	806	19.69	18.88

\* Including ordinary business.

8. *Liabilities and Assets of Insurance Societies, 1910.*—The liabilities of the Australasian societies consist mainly of their assurance funds; as already mentioned, only five of the societies are partly proprietary, viz., the Mutual Life and Citizens', with a paid-up

capital of £56,788; the Metropolitan, with a paid-up capital of £11,740; the Prudential, with a paid-up capital of £4791; the Victoria Life and General, with a paid-up capital of £40,000; and the Provident, with a paid-up capital of £10,000. With the exception of the Victoria Life and General, this paid-up capital belongs in every case to the industrial branch of the respective societies. The capital of the Provident (£10,000) is held in New Zealand, that of the Liverpool and London and Globe (£245,640) in England, and that of the Equitable Life (£20,550) in the United States. Neither of these three amounts appears, therefore, in the two subjoined tables where the capital of the Australian societies is included with the assurance funds. The assets consist mainly of loans on mortgage and policies, Government, municipal, and similar securities, shares, freehold property, etc. As in some cases the Australian liabilities exceed the Australian assets it may be pointed out that this table should be taken in connection with the table on page 875, which sets out the total liabilities and assets. Loans on personal security are granted by only very few of the Australian societies.

(i.) *Ordinary Business.* The following table shews the liabilities and assets of the societies transacting ordinary life business:—

**ORDINARY LIFE ASSURANCE.—AUSTRALIAN LIABILITIES AND ASSETS, 1910.**

\* Including industrial business. As the business of these two societies is mainly ordinary life business they have been included in this table. † Not available. ‡ Several life offices have a considerable portion of their assets invested outside the Commonwealth (see table on page 875).

(ii.) *Industrial Business.* As stated in the footnote to the preceding table, the Australian Mutual Provident Society and the Australasian Temperance and General Mutual Life Assurance Society, which transact a certain amount of industrial business, but whose business is mainly ordinary life business, have been included with those societies doing only ordinary life business. On the other hand, the People's Prudential Assurance Company, in whose case industrial business greatly predominates over ordinary life business, has been included in the following table. Incomplete as the table is, it shews that the funds appropriated to industrial business are very insignificant in comparison with those pertaining to ordinary life business. Taking the table in conjunction with the statements of revenue and expenditure, the question may well be asked whether in the case of some of the societies industrial business is worth catering for at all.

## INDUSTRIAL LIFE ASSURANCE.—AUSTRALIAN LIABILITIES AND ASSETS, 1910.

Society.	Liabilities.			Assets.		
	Total Funds, including Paid-up Capital.	Other Liabilities.	Total.	Loans on Mortgages and Policies.	Securities, Freehold Property, etc.	Total.

Provident Life Assurance Company	3,101	...	3,101	...	5,592	5,592

\* Including ordinary business.

(iii.) *Total Liabilities and Assets.* It has been thought advisable to confine the figures relating to life assurance to business in the Commonwealth. Several of the companies whose head offices are in Australia transact, however, a large amount of business elsewhere, viz., in New Zealand, in South Africa, and in the United Kingdom, while in the case of the foreign companies, the Australian business is insignificant compared with that done elsewhere. Particulars as to this foreign business of both Australian and foreign companies will be found in "Finance Bulletin, No. 5," and a short table only is inserted here, shewing the total liabilities and assets (which balance in every case) of the various companies, so that the deficiencies in the Australian assets shewn in the previous tables for those companies doing business elsewhere may not be misunderstood:—

† Including ordinary business.

## § 6. Fire Insurance.

1. **General.**—Returns as to fire insurance are very defective, and only for Sydney and Melbourne and the country districts of Victoria have some figures been given which are worth reproducing. The Royal Commission mentioned above under "Life Assurance" has reported upon fire insurance matters, and Commonwealth legislation may, therefore, be expected at an early date.

2. **Sydney.**—Under the Fire Brigades Act 1902 the cost of the Metropolitan Fire Brigade is defrayed by equal payments on the part of the Colonial Treasurer, the municipal councils within the area under the jurisdiction of the Fire Brigades Board, and the insurance companies represented in Sydney. The companies divide their share proportionately to the amount held at risk. Under this arrangement the amount payable by the companies for the year 1909 was £19,100, divided amongst sixty-five companies, of which not more than six had their head office in Sydney. The amounts thus held at

risk at the close of the last four years for which returns are available were, in 1905, £78,108,749; in 1906, £81,364,129; in 1907, £86,563,304; and in 1908, £89,071,992. A new Act, which came into force on the 1st January, 1910, was passed in 1909. This Act substituted a Board of Fire Commissioners for New South Wales for the present Metropolitan Fire Brigades Board, and divides the whole State into eight fire districts for the greater facilitation of working.

3. **Melbourne.**—In Melbourne the Metropolitan Fire Brigades Board assesses the amount payable by the insurance companies on the amount of premiums returned. These premiums for the last four years averaged about £300,000 per annum, while the contributions paid by the companies amounted to about £13,000, or about £4 6s. 8d. for every £100 of premiums. It may be said, therefore, that the companies have to devote about  $4\frac{1}{2}$  per cent. of their premium income from metropolitan insurances to the maintenance of the fire brigade.

The annual value of ratable property is nearly £5,500,000, and the amounts contributed by the municipalities—as in the case of the insurance companies, one-third of the amount required by the Fire Brigades Board, the remaining one-third being contributed by the State Treasurer—are equal to about  $\frac{1}{2}$ d. per £1 of ratable value. In addition to this contribution insurance companies doing business in Victoria have to take out an annual license at a cost of  $1\frac{1}{2}$  per cent. of the gross premium income, which is probably equal to about  $1\frac{3}{4}$  per cent. on net income.

4. **Country Districts of Victoria.**—The country districts are divided into nine areas for fire insurance purposes, and the contributions to be paid vary in these areas according to the actual requirements of the Country Fire Brigades Board. The annual values of ratable property for the last four years were slightly over £1,500,000. The premium income of the insurance companies from country business during the year 1910 was about £167,000, and the contributions of the companies £4250, equal to about  $2\frac{1}{2}$  per cent. of the premium income.

5. **Brisbane.**—A similar arrangement holds good in Brisbane, under which the cost of the Fire Brigade Board, amounting to about £6000 per annum, is paid in equal shares by the Government, the Brisbane City Council, and the insurance companies.

6. **Adelaide.**—The Fire Brigades Board of South Australia is incorporated under "The Fire Brigades Act 1904"; "The Fire Brigades Act Amendment Act 1905"; and "The Fire Brigades Act Further Amendment Act 1910." The cost is distributed as follows:—Three-ninths to the Government; four-ninths to the insurance companies; and two-ninths to the municipalities and districts which come under the operations of the board. The insurance companies are assessed in proportion to that portion of their premium incomes derived from the insurance of property (re-insurance within the State excepted) situated within the limits of the municipalities and districts coming under the operations of the board. The respective contributions for 1910 were as follows:—The Government, £6942; the companies, £9256; the municipalities, £4628.

7. **Perth.**—A District Fire Brigades Bill was reported on by a committee of the Legislative Assembly during 1909, and it was recommended that all brigades should in future be controlled by one board, and that the expense should be met by contributions at the following rate:—By Government, two-eighths; by the municipalities, three-eighths; and by the Insurance companies, three-eighths. These provisions were incorporated in an Act, "The District Fire Brigades Act 1909," which was assented to on 21st December, 1909, and came into force on the 1st day of January, 1910. This Act, however, does not apply to Perth or the other districts in which the Fire Brigades Act 1898 is still operative. According to the provisions of the latter Act the expenditure is allocated as follows:—One-ninth to the Government; four-ninths to the insurance companies; and four-ninths to the municipalities. It is provided that the Governor may, at any time, on the petition of the council of any municipality, declare by proclamation that the provisions of the Act of 1898 shall cease to be in force in that municipal district.

**8. Australian Insurance Business.**—Returns are available shewing the revenue and expenditure, assets and liabilities, and investments of sixteen insurance companies having their head offices either in the Commonwealth or in New Zealand. These companies are:—(a) with head-office in Sydney—the Australian Mutual Fire Insurance Company, the City Mutual Fire Insurance Company, the Mercantile Mutual Fire Insurance Company, the Queensland Insurance Company Limited, and the United Insurance Company; (b) with head-office in Melbourne—the Australian Alliance Assurance Company, the Colonial Mutual Fire Insurance Company, the Commonwealth Insurance Company Limited, the Victoria Insurance Company, and the Victoria General Insurance and Guarantee Company Limited; (c) with head-office in Hobart—the Derwent and Tamar Fire and Marine Assurance Company Limited; (d) with head-office in Launceston—the Mutual Fire Insurance Company of Tasmania; (e) with head-office in Auckland—the New Zealand Insurance Company, and the South British Fire and Marine Insurance Company of New Zealand; and (f) with head-office in Dunedin—the National Fire and Marine Insurance Company of New Zealand, and the Standard Fire and Marine Insurance Company of New Zealand. As their names imply, the majority of these companies transact marine insurance and in some cases guarantee and other business in addition to fire insurance business, and the returns relating to the latter cannot be separated from the former.

The accounts cover two periods of one year, the second year ending at various dates from 30th June, 1910, to 31st March, 1911. The figures for the first year are put in brackets.

The premiums, less reinsurances and returns, amounted to £1,861,915 (£1,799,303); losses were £1,018,987 (£1,064,464). Expenses and commission came to £624,540 (£603,572), and there was, therefore, a profit on trade operations of £218,388 (£131,267). As, however, interest, rent, fees, etc., amounted to £152,214 (£147,803), the total profit was £370,602 (£279,070). Dividends and bonuses came to £198,476 (£175,179). The ratio to premium income of losses was, therefore, 54.73 per cent. (59.16 per cent.), ranging from 28.81 per cent. to 74.25 per cent.; and of expenses and commissions, 33.54 per cent. (33.54 per cent.). The resulting ratio of trade surplus to premium income was 11.73 per cent. (7.30 per cent.).

The paid-up capital of the sixteen companies was £1,310,347 (£1,295,347); reserve and reinsurance funds, £2,176,027 (£2,041,435); undivided profits, £177,781 (£150,346). The total paid-up capital and reserves were, therefore, £3,664,155 (£3,487,128). In addition to these liabilities there were others, viz.:—Unsettled losses, £191,918 (£183,940); sundry creditors, £155,918 (£126,853); dividend to pay, £125,887 (£115,672); and, in the case of one company, a life assurance fund, £170,109 (£181,741), thus bringing the total liabilities to shareholders and to the general public up to £4,307,987 (£4,095,334).

The corresponding amount of assets is made up of investments, £3,738,341 (£3,556,645), viz.:—Loans on mortgage, £1,141,440 (£1,097,196); Government securities, debentures, shares, etc., £1,038,897 (£1,016,244); landed and other property, including furniture, £799,123 (£763,931); fixed deposits, £652,935 (£577,751); in the case of one company doing a mixed business—loans on its own life policies, etc., £15,055 (£15,338); other investments, £91,891 (£86,185). The balance of assets consisted of cash in bank, on hand, and bills receivable, £176,438 (£171,082); and sundry debtors, etc., £357,100 (£367,607).

The financial position of the companies is undoubtedly a strong one, owing to the steady accumulation of reserves, and the high ratio borne by capital and reserves to premium income must be a cause of satisfaction to policyholders.

## § 7. Marine Insurance.

No returns are available in regard to Marine Insurance. It may, however, be stated that the Commonwealth Parliament in 1909 passed an Act (No. 11 of 1909, An Act relating to Marine Insurance) which was assented to on the 11th November, 1909. This

Act materially alters some of the conditions under which marine policies have heretofore been issued.

## § 8. Friendly Societies.

1. **General.**—Friendly societies are an important factor in the social life of the community, as probably nearly one-third of the total population of the Commonwealth comes either directly or indirectly under their influence. Their total membership is about 400,000, but as certain benefits, such as medical attendance and free medicine and in many cases funeral expenses, are granted to members' families as well as to members themselves, this figure must, even when due allowance is made for young and unmarried members, be multiplied by four at the least to arrive at the total number of persons more or less connected with these societies. Legislation has conferred certain privileges on friendly societies, but, on the other hand, it insists on their registration, and it is the duty of the Registrars in the various States, prior to registering a new society, to see that its rules are conformable to the law, and that the scale of contributions is sufficiently high to enable the promised benefits to be conferred on members. Societies are obliged to forward annual returns as to their membership and their finances to the Registrar, and elaborate reports are published in most of the States dealing with the returns thus received.

In the following tables the figures refer to the year 1910, except those for South Australia, which refer to 1906.

2. **Number of Societies, Lodges, and Members.**—The total number of societies registered in New South Wales is 64; in Victoria, 48; in Queensland, 16; in South Australia, 16; in Western Australia, 17; and in Tasmania, 11. No total is given of these figures for the Commonwealth, as the societies shewn in one State are in most cases represented in all the other States. The number of different lodges, the total number of benefit members at the end of the year, and their average number during the year are shewn in the following table:—

FRIENDLY SOCIETIES.—LODGES AND MEMBERS, 31st DECEMBER, 1910.\*

State.	Number of Lodges.	Benefit Members at End of Year.	Average No. of Benefit Members during Year.
New South Wales ... ..	1,659	130,406	121,811
Victoria ... ..	1,475	142,275	139,308
Queensland ... ..	489	42,246	41,069
South Australia ... ..	506	52,165	51,226
Western Australia ... ..	262	16,397	16,220
Tasmania ... ..	173	21,063	20,602
Commonwealth ... ..	4,564	404,552	390,236

\* See, however, paragraph 1, above.

3. **Sickness and Death.**—Sick pay is generally granted for a number of months at full rates, then for a period at half rates, and in some societies is finally reduced to quarter rates. The following table shews the total number of members who received sick pay during the year, the number of weeks for which they received pay in the

aggregate, and the average per member sick, and further the number of benefit members who died during the year, together with the proportion of deaths per thousand average members:—

## FRIENDLY SOCIETIES.—SICKNESS AND DEATH, 1910.\*

State.	Number of Members who received Sick Pay.	Total Number of weeks Sick Pay granted.	Average No. of weeks per Member sick.	Deaths of Benefit Members and Wives.	Proportion of Deaths to 1000 average Benefit Members.
New South Wales	26,743	163,887	6.13	910	7.47
Victoria ...	27,740	214,026	7.72	1,631	11.71
Queensland ...	7,460	43,079	5.77	278	6.77
South Australia ...	8,851	84,707	9.57	698	13.63
Western Australia	2,462	13,261	5.39	102	6.23
Tasmania ...	4,210	22,703	5.39	147	7.14
Commonwealth	77,466	541,663	6.99	3,766	9.65

\* See, however, paragraph 1.

4. **Revenue and Expenditure.**—The financial returns are not made up in the same way in each State, but an attempt has been made in the subjoined table to group the revenue under the main headings:—

## FRIENDLY SOCIETIES.—REVENUE, 1910.\*

State.	Entrance Fees.	Members' Contributions.	Levies.	Interest, Dividends, and Rents.	All other Income.	Total Revenue.
	£	£	£	£	£	£
New South Wales	†	372,125	†	59,312	32,561	463,998
Victoria ...	2,973	402,911	†	81,701	47,031	534,616
Queensland ...	†	136,646	†	19,965	...	156,611
South Australia ...	1,535	122,643	§	29,464	†59,227	212,869
Western Australia	1,175	44,869	1,175	7,901	23,603	83,723
Tasmania ...	1,009	68,479	†	6,692	10,535	86,715
Commonwealth	1,155,540			205,035	177,957	1,538,532

\* See, however, paragraph 1. † Included under "Members' contributions." ‡ Including Levies. § Included under "All other income."

The returns relating to expenditure are more complete than those relating to revenue, and can be shewn in full for every State. The figures shew that the excess of revenue, amounting in the aggregate to £286,649, was divided amongst the six States as follows:—New South Wales, £84,316; Victoria, £110,185; Queensland, £43,062; South Australia, £23,101; Western Australia, £16,201; and Tasmania, £9784. The revenue exceeded the expenditure by about fourteen shillings and ninepence per average benefit member, a margin which cannot be called very large.

## FRIENDLY SOCIETIES.—EXPENDITURE, 1910.\*

State.	Sick Pay.	Medical Attendance and Medicine.	Sums Paid at Death of Members & Members' Wives.	Administration.	All other Expenditure.	Total Expenditure.
	£	£	£	£	£	£
New South Wales	124,789	128,627	25,424	54,170	46,672	379,682
Victoria ...	146,351	142,365	28,463	69,263	37,989	424,431
Queensland ...	32,452	47,291	11,234	22,572	†	113,549
South Australia ...	49,370	27,130	24,325	33,545	55,398	189,768
Western Australia	10,865	16,755	2,007	11,497	26,398	67,522
Tasmania ...	18,065	18,420	13,959	9,618	16,869	76,931
Commonwealth	381,892	380,588	105,412	200,665	183,326	1,251,883

\* See, however, paragraph 1. † Included in "Administration."

It appears from the above figures that sick pay averaged about fourteen shillings and one penny per week, but, as the returns include pay at half and quarter rates, and as the proportion of these to full rates is not stated, the average given must be taken for what it is worth. Medical attendance and medicine came to about nineteen shillings and sixpence per average benefit member, or to nearly £4 15s. per member who received sick pay during the year. Funeral expenses averaged £27 1s. 11d. per death of a member or wife of a member during the year, but this average also must be taken for what it is worth, as the funeral expenses allowed in the case of the death of a member are generally much higher than those allowed in the case of the death of a member's wife.

5. **Funds.**—The two foregoing tables shew that the surplus of revenue over expenditure amounted to £286,649 for the year, and a small surplus must, of course, result annually in every society which levies adequate contributions to enable it to meet all possible claims. These accumulations of profits are generally invested, and the subjoined table shews for all of the six States the division into invested and uninvested funds :—

## FRIENDLY SOCIETIES.—FUNDS, 31st DECEMBER, 1910.\*

State.	Invested Funds.	Uninvested Funds.	Total Funds.
	£	£	£
New South Wales ...	1,341,531	78,164	1,419,695
Victoria ...	2,017,812	104,790	2,122,602
Queensland ...	520,964	25,466	546,430
South Australia ...	714,719	29,076	743,795
Western Australia ...	147,665	10,902	158,567
Tasmania...	185,023	13,056	198,079
Commonwealth ...	4,927,714	261,454	5,189,168

\* See, however, paragraph 1.

The total funds amounted, therefore, to £12 16s. 6d. per member at the close of the year under review.

# § 9. Probates.

1. Number of Probates and Letters of Administration and Value of Estates.—The value of the estates left by deceased persons gives a fair view of the distribution of property among the general population. There occurred in 1910 the deaths of 31,119 adult persons, while the total number of probates and letters of administration granted during the same period was 10,156. It would therefore appear that about one in every three adults who died during the year was possessed of sufficient property to necessitate the taking out of probate. The details for each State are shewn in the table hereunder:—

## PROBATES AND LETTERS OF ADMINISTRATION, 1910.

State	Number of Estates.			Value of Estates.		
	Probates.	Letters of Administration.	Total.	Probate	Letters of Administration.	Total.
				£	£	£
New South Wales	2,261	1,075	3,336	7,649,944	1,184,990	8,834,934
Victoria ...	2,864	1,264	4,128	7,430,949	*	7,430,949
Queensland ...	518	186	704	1,516,037	136,654	1,652,691
South Australia ...	876	245	1,121	2,186,350	236,169	2,422,519
Western Australia	290	202	492	728,251	140,387	868,638
Tasmania ...	302	73	375	712,824	84,615	797,439
Commonwealth	7,111	3,045	10,156	20,224,355	1,782,815	22,007,170

\* Included with Probates.

In addition to the foregoing, intestate estates to the value of £125,571 were placed under the control of the Curator during the year, and £26,894 unclaimed money paid into Consolidated Revenue. The details for each State are shewn hereunder:—

## INTESTATE ESTATES, 1910.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	C'with.
Intestate estates placed under control of Curator during 1910							
Number ...	625	275	539	196	304	100	2,039
Value ... £	40,181	21,470	18,938	23,948	11,716	9,318	125,571
Unclaimed money paid into consolidated revenue by curator during 1910 ... £	5,693	11,713	6,445	1,891	962	190	26,894

This would make the average value of each estate £2167, and the average value of property left by each adult who died in 1910, £707.

2. **Private Wealth.**—The probate figures have sometimes been used as a means for estimating the private wealth of a country. There are, however, many reasons why no reliance can be placed on such estimates. Generally, estates under a certain minimum value do not require to pass through the probate office. Settlements and deeds of gift, although liable to probate duty, occasionally evade detection. The falling in of several, or even of one very large estate, may vitiate the figures not only of one year but of a series of years. All these errors can, however, be more or less guarded against, while the assumption that each adult living is possessed of the same average amount of property as each adult who died during the year or during a series of years, an assumption on which the whole calculation is based, remains. But as it is certain that the accumulated wealth of an individual generally advances with age, and is probably in most cases greater at death than at any previous period, it will be seen that the results obtained by such a calculation must be unduly inflated. If the calculation were made for the Commonwealth and based on the figures of 1910 it would shew the average property of each adult to be £707, and of the 2,500,000 adults, which were approximately included in the population of the Commonwealth at the end of 1910, about £1,770,000,000, an estimate probably considerably in excess of the truth. .

## SECTION XXII.

## PUBLIC INSTRUCTION.

## § 1. Evolution of Primary Education in Australia.

1. *Primary Systems of the States.*—(i.) *Place of New South Wales in Australian Education.* The first settlement in Australia being in New South Wales, it is but natural that Australian education should have had its beginning in that State. In the evolution of educational method and system in Australia, New South Wales also has played a leading part, and has had practically a dominating influence. For that reason an account of the evolution of education in this State contains, as it were, the key to the understanding of the Australian attitude to this question. The subject is dealt with in some detail in No. I. and No. II. issues of the Commonwealth Official Year Book, but it is not proposed to repeat it in the present volume.

(ii.) *Primary Systems of other Commonwealth States.* A more or less detailed account of the origin and development of the primary educational systems of the other States also appears in No. I. and No. II. issues of the Year Book.

(iii.) *Present Position of Primary Education in Australia.* Throughout Australia primary education is compulsory and free, while there exists in most of the States a liberal provision of scholarships and bursaries to the Higher State Schools, to the Secondary Schools, and to the Universities.<sup>1</sup> Provided that the requisite standard is reached, it is of course permissible for children to receive home tuition, or to attend so-called private schools. Considerable interest is taken in educational matters by the people of the Commonwealth, and within the last few years several of the States have sent qualified representatives to inspect and report on the methods adopted in the chief countries of Europe and America. The reports of these Commissioners, especially those of New South Wales, have been widely studied, and various improvements have been made in accordance with their recommendations. The orientation, lighting, and ventilation of school buildings are being modernised. In all of the States periodical medical inspection of the children is in force. (A detailed statement of the work being done in this direction will be found in the chapter dealing with Public Hygiene.) Methods of training teachers are now better developed, and although the "pupil teacher" system and its effects have not been wholly eliminated, it appears to be in process of evanishing. The methods adopted in the various States for the selection and training of teachers are described in some detail in § 2, par. 10, hereinafter. There has been a wider employment of kindergarten principles in the early stages, and the more or less purely abstract teaching of the older days has been largely replaced by concrete methods. Such subjects as nature study, manual training, music, and drawing have received a general impetus. Greater attention has been given to the scientific classification of pupils. Lastly, the system of inspection has been considerably remodelled. Under the old system, the inspector was little more than an examining officer, but, under the present régime, the primary duty of these officers consists in guiding and directing the teaching in accordance with approved methods.

(iv.) *Co-ordination of Educational Activities.* Although as pointed out in (iii.) the primary systems may be considered as fairly well organised, there is still need for a

1. Universities have been in existence for some time in New South Wales, Victoria, South Australia, and Tasmania. The University of Queensland was opened in March, 1911, and a University will shortly be founded in Western Australia.

more effective co-ordination of the entire educational activities of the States. At the present time, the brighter pupils from the State Schools may, through the medium of an excellent scheme of scholarships and bursaries, gain entrance to the Secondary Schools and to the Universities, but the average boy or girl simply leaves the State School at the age of fourteen or thereabouts, and in most cases the State no longer concerns itself with their further educational advancement. A small proportion attends evening schools or technical classes, others persevere in private study, but many make no further attempt at progress. The natural disadvantage of this condition of affairs has been recognised, and efforts have been made to meet it by providing additional evening schools, extending the facilities for technical instruction, arranging for University extension lectures, etc. It may be noted further, that, while the bulk of the primary education and the whole of the University education is under the control of the State, intermediate secondary education is largely in private hands. There are, of course, some excellent State Higher Schools, together with semi-private subsidised Grammar Schools, but a fully co-ordinated scheme of public education has yet to be created. The various Departments of Public Instruction are virtually departments controlling primary education, though they are associated more or less with the Universities and with technical education. In some of the States, attention has recently been devoted to the question of State control of the entire educational activity of the community, but the project is regarded with disfavour by the private school authorities, whose schools had to be established to meet public wants. The essential difficulty however of the private secondary school system is that its expense is prohibitive to people of limited income.

## § 2. State Schools.

1. **Introductory.**—The State Schools, or, as they are sometimes termed, the “public” schools, of the Commonwealth comprise all schools directly under State control, in contradistinction to the so-called “private” schools, the bulk of which, though privately managed, nevertheless cater for all classes of the community.

2. **Enrolment and Attendance.**—The following table shews the number of State Schools, together with the teachers employed and the enrolment and “average attendance” in each State during the year 1910:—

### STATE SCHOOLS, TEACHERS, AND SCHOLARS, 1910.

(COMMONWEALTH.)

State.	Schools.	Teachers.*	Scholars Enrolled.	Average Attendance
New South Wales ... ..	3,105	5,791	218,539	157,498
Victoria ... ..	2,036	5,028	206,263	145,968
Queensland ... ..	1,189	2,606	89,695	69,439
South Australia ... ..	733	1,316	52,929	37,549
Western Australia ... ..	455	967	32,664	27,442
Tasmania ... ..	390	799	27,820	17,974
Commonwealth ... ..	7,908	16,507	627,910	455,870

\* Exclusive of sewing mistresses.

Unfortunately, the schemes of enrolment and of the computation of “average attendance” are not identical in each State, so that the comparisons are imperfect. That the educational statistics of each State of the Commonwealth should be made up in the same way is much to be desired.

The enrolment and average attendance at the State Schools in the Commonwealth are given below for the year 1891, and for each year of the period 1900 to 1910:—

## ENROLMENT AND ATTENDANCE AT STATE SCHOOLS, 1891 to 1910.

(COMMONWEALTH.)

Year.	Total Population.	Enrolment.	Average Attendance.	Year.	Total Population.	Enrolment.	Average Attendance.
1891	3,240	561,153	350,773	1905	4,032	621,534	442,808
1900	3,765	623,707	441,924	1906	4,091	609,592	442,440
1901	3,824	638,478	450,246	1907	4,161	611,990	444,001
1902	3,875	636,888	455,482	1908	4,232	618,836	446,146
1903	3,916	629,269	446,539	1909	4,323	624,236	458,260
1904	3,974	625,594	445,709	1910	4,425	627,910	455,870

1. In thousands.

It will be seen from the above table that, despite the increase of population, the official figures of enrolment and average attendance at the State Schools of the Commonwealth shew unsatisfactory results, although an upward tendency is evident in the figures for 1909. An examination of the graphs on pages 256 to 258, shewing birth-rate, will make it apparent that this is at least in part due to the diminished birth-rate of past years.

3. **Births and School Attendance.**—The table below gives the total births in each State and in the Commonwealth during each of the eight-year periods 1890-97, 1891-98, 1892-99, 1893-1900, 1894-1901, 1895-1902, 1896-1903, 1897-1904 and the average attendance at State Schools for each year from 1903 to 1910:—

## COMPARISON OF BIRTHS AND SCHOOL ATTENDANCE.

4. **Centralisation of Schools.**—The question of centralisation of schools adopted so successfully in America has received some attention in the Commonwealth, and particularly in New South Wales. It is recognised that a single adequately-staffed and well-equipped central institution can give more efficient teaching than a congeries of small scattered schools in the hands of less highly-trained teachers, and the small schools in some districts were therefore closed and the children conveyed to the central institution. The principle was first adopted in New South Wales in 1904, when the conveyance of

pupils was authorised in the case of twelve schools. In 1910 subsidy was paid for conveyance to sixty-three schools.

**5. Education in Sparsely-settled Districts.**—It has always been the aim of the State to carry the benefits of education into the remotest and most sparsely-settled districts. This is effected in various ways. (i.) By the establishment of Provisional Schools, *i.e.*, small schools in which the attendance does not amount to more than about a dozen pupils, these institutions merging into the ordinary public school list when the attendance exceeds the minimum. (ii.) When there are not enough children to form a provisional school what are known as Half-time Schools are formed, the teacher visiting them on alternate days. In still more sparsely-peopled districts an itinerant teacher goes from house to house within a certain radius. Thus in Queensland during 1910 the twelve itinerant teachers covered 366,224 square miles of country and travelled 34,851 miles. In New South Wales parents in the thinly-peopled areas are also allowed to club together and build a school, which receives aid from the Government in the form of a yearly subsidy and grant of school material. An experiment on the part of New South Wales, the result of which was awaited with some interest, was the establishment in 1908 of a "travelling" school. A van was provided in which the teacher travelled, carrying with him a tent for himself and one to be used as a school, together with such books and apparatus as are required in a primary school. So far very satisfactory results have been attained. In 1910 there were also three railway camp schools in operation on the sites of extensive railway works.

**6. Evening Schools.**—Evening Public Schools have been in existence for many years in some of the States, but their progress has been uncertain. In New South Wales, at latest available date, there were 36 schools with an average attendance of 548; Victoria had nine schools with enrolment of 1194 and an average attendance of 357; Queensland had evening continuation classes attended by 54 pupils; and Western Australia had two schools with an enrolment of 103 district students. Up to the end of 1910 the evening schools in New South Wales aimed chiefly at giving primary instruction, but in October of that year evening continuation schools of two types were established—(i.) Artisan Schools for boys learning trades; and (ii.) Commercial Schools for boys starting in business. So far the venture has proved successful and it is proposed to have at least fifty of these schools in operation at the end of 1911.

**7. Higher State Schools.**—(i.) In *New South Wales* public schools, which provide advanced courses of instruction for two years for pupils who have completed the primary course, are classed as *Superior Schools*. There were 145 of these schools in existence at the end of 1910, with an enrolment of about 96,000 scholars. Provision has also been made for the more advanced education of children in country centres by the establishment of twenty-eight district schools. These schools are specially staffed and undertake the work of preparing students for admission to the training colleges. There are also five *High Schools* in the State—two for boys, two for girls, and one for boys and girls. These had an enrolment in 1910 of 1168 pupils, with an average attendance of 826. From the beginning of 1911 the upper sections of the girls' and boys' schools at Fort Street have been graded as *High Schools*. In order to provide teachers of agriculture, provision is made for ten teacher-students annually to attend the second year's training at the Hawkesbury Agricultural College.

The Sydney Grammar School (not a "State" School in the ordinary acceptance of the term), which receives a State endowment of £1500 a year, had in 1910 a quarterly enrolment of 572 pupils and an average attendance of 536.

(ii.) In *Victoria*, what are termed "*Continuation Schools*" have been established at Melbourne, Ballarat, Bendigo, Castlemaine, and Geelong for the purpose of giving preliminary training to young people who propose to join the ranks of the teaching service, and it is hoped that ere long the supply from this source will preclude the necessity for the employment of inexperienced pupil teachers. Agricultural High Schools to which teacher students are also admitted, are referred to in (8) hereafter. The enrolment of these High State Schools in 1910 was 1338, of whom 722 were girls.

(iii.) Prior to the year 1911 *Queensland* did not possess any distinctly secondary schools under State control, but High Schools have now been established in the more important centres. There are, moreover, ten Grammar Schools—six for boys, and four for girls, each of which is subsidised by the State to the extent of £750 per annum, and in addition receives a payment of £250 per annum for providing district scholarships. These scholarships, fifty in number, are granted to State School pupils. The enrolment at the Grammar Schools in 1910 was 1300, and the average attendance 1160. Since the year 1909 these schools have been regularly examined by the Inspector-General of the Education Department. The Government proposes to take over the schools at an early date.

(iv.) *South Australia*. The Adelaide High School was opened on the 24th September, 1908, and the Advanced School for Girls, which had been carried on with much success since its opening in 1879, was merged into it, as was also the Pupil Teachers' School, which had been successfully carried on for eight years. Pupils in attendance at the combined school in 1910 numbered 506. Of these, 82 were student teachers, 162 were improving their general education prior to beginning work, 197 were studying for University examinations, and 65 were taking a commercial course. District High Schools were carried on in 1910 at eighteen centres with a total attendance of 1578 pupils.

(v.) *Western Australia*. A Modern School designed to give a four years' course sufficient to qualify for entrance to the University was opened in Perth early in 1911. Accommodation was provided for 250 pupils, and the available places have all been eagerly sought for. During 1909 the upper classes of schools in the largest centres of population were brought together into central schools, in order to secure more economical and effective teaching, and it is intended that these central institutions shall form the nucleus of future High Schools. Evening Schools are held in various parts of the State, but the work carried on is mainly primary. The Perth High School for boys is subsidised by the State to the extent of £1000 annually.

(vi.) *Tasmania*. No direct provision has hitherto been made by Tasmania for public education of a standard intermediate between that of the State School and the University, but a few pupils are prepared in the ordinary State Schools for the Junior Public Examination of the University. It is intended to encourage this work in future, and the scheme of scholarships, which was discontinued for many years, has recently been revived. For a period of thirty years, from 1860 to 1890, there was in force in Tasmania a system under which the State, without actually providing educational agencies, did much to foster education within the range of the generally accepted High School curriculum, for the Council of Education during this period conducted public examinations of various grades, at which scholarships for juniors to "superior" schools were awarded, as well as exhibitions to British Universities. The Council also granted the degree of "Associate of Arts" in imitation of the similar Oxford title. Later on the Council of Education evolved and expanded into the University of Tasmania.

**8. Agricultural Training in State Schools.**—The question of agricultural training in ordinary schools has received considerable attention in *New South Wales*. In 1905 a teacher of school agriculture was appointed to visit schools and districts for the purpose of giving instruction to teachers and scholars in the subject, the officer selected possessing the dual qualifications of a thorough acquaintance with agricultural work and school methods. The Education Department makes grants of seeds of various kinds to the schools having gardens, and in some instances has installed windmill plants to provide an adequate water supply. Under the direction of a capable head master, a college has also been opened at Hurlstone, near Sydney, at which practical lessons are given in elementary agriculture, and the institution also serves as a stepping-stone to the Hawkesbury Agricultural College. During the year 1910 there were 58 students enrolled, of whom 31 were in residence. The Department has also organised Rural Camp Schools for the purpose of giving teachers and scholars first-hand knowledge of country

industries. Schools of this nature were held in 1910 at Nowra and Bathurst. The former was attended by 516 boys and 45 teachers, and the latter by 685 boys and 52 teachers.

The subject of agricultural colleges and experimental farms is dealt with in the section relating to Agriculture. (See page 412.)

In *Victoria* what are termed Agricultural High Schools have been established at Warrnambool, Sale, Shepparton, Wangaratta, Ballarat, Colac, and Mansfield. Pupils must be at least fourteen years of age, and have obtained a certificate of merit from the local school, or else be able to afford satisfactory proof that they are qualified to profit by the instruction offered. A local council is to be appointed for each school, and will exercise a general oversight over its operations. The experimental plots at these schools have aroused much interest among the farmers from the surrounding districts. A Supervisor of Agriculture reports and gives advice on the teaching of agriculture in the State Schools. The elementary principles of agriculture are now taught in about 400 State Schools.

Although *Queensland* possesses an Agricultural College and several experimental farms, there is no agricultural institution directly connected with the Education Department. The Government, however, provides a small grant to encourage the study of agriculture, horticulture, and kindred subjects in the State Schools, while a departmental teacher of agriculture visits the schools and gives assistance in agricultural, horticultural, and nature study work. Some excellent experimental work has been carried out at a few of the schools, while gardens have been established wherever circumstances permitted. Short courses of instruction for teachers have been instituted at the Gatton College. A large number of teachers have gained a practical knowledge of milk and cream testing, and the subject is now added to the programme of instruction in several of the dairying districts.

In *South Australia* the Public Schools' Floral and Industrial Society, founded in 1880, holds annual exhibitions of school work from all parts of the State. In addition, it has for some years undertaken the distribution of flower seeds among school children at a very cheap rate, and has thus fostered the love of horticulture with remarkable success. A special instructor has been appointed to give assistance to teachers desirous of making their school gardens aid in nature study work.

In *Western Australia* an advisory teacher of nature study visits the schools and gives advice in regard to proper methods in horticulture and experimental agricultural work. The number and usefulness of the gardens and experimental plots attached to State schools shew marked improvement each year.

**9. Teachers in State Schools.**—The distribution of the teaching staff in the State Schools during the year 1910 was as follows:—

### TEACHING STAFF IN STATE SCHOOLS, 1910.

(COMMONWEALTH.)

State.	Principal Teachers.		Assistants.		Pupil or Junior Teachers.		Sewing Mis- tresses.	Total.		
	Males.	Fem.	Males.	Fem.	Males.	Fem.		Males.	Fem.	Total.
New South Wales	2,241	544	1,013	1,957	8	28	109	3,262	2,638	5,900
Victoria ...	1,525	652	267	868	412	1,304	413	2,204	3,237	5,441
Queensland ...	713	480	277	586	210	340	—	1,200	1,406	2,606
South Australia ...	309	376	83	367	59	122	112	451	978	1,429
Western Australia	266	181	89	317	15	99	64	370	661	1,031
Tasmania ...	180	189	24	159	57	190	—	261	538	799
Commonwealth	5,234	2,422	1,753	4,254	761	2,083	699	7,748	9,458	17,206

It will be observed that there is a fairly large number of junior teachers, or pupil teachers, as they are called in most of the States. The pupil teachers will, however, in time disappear, and their places will be filled by young people who have undergone a course of training in schools specially provided for the purpose. Allusion to the methods of training will be found in the next paragraph.

**10. Training Colleges.**—The development of the training systems of the various States has been alluded to at some length in preceding issues of the Year Book. The present position is as follows :—

(i.) *New South Wales.* During 1910, the total number of students in the Blackfriars Training College was 303, women students numbering 149. A branch institution was opened early in 1911 at Hereford House for the training of candidates for the position of teacher or assistant at small country schools. At the various district schools there were during 1910, 167 first-year and 209 second-year probationary students. Of the latter, 206 passed the entrance examination for the Training College. There were still remaining 36 so-called pupil teachers at the end of 1910.

(ii.) *Victoria.* The teachers in this State are trained by means of what is known as the "junior-teacher" system, i.e., training of junior teachers in the State Schools by the head masters, or by a two years' course in a Junior Training College—otherwise known as a Continuation School or Agricultural High School—supplemented by a course of training for two years in the Senior Training College at Melbourne. There are eleven Continuation Schools now in operation, of which seven give training in elementary agriculture. The junior teacher is, of course, not sensibly different from the pupil teacher of New South Wales. The present Training College dates back to 1874, but during the retrenchment period, viz., from 1893 to 1900, it was closed. The institution was reopened in February, 1900, with an enrolment of fifty-seven students. By the 30th June, 1910, the number had increased to 106. Since its reopening the College has also given attention to the training of kindergarten teachers, and the course of study prescribed for infant teachers has received the sanction of the Education Department and also of the Kindergarten Association. The College receives students for training from private schools. In 1910 a Summer School was held at Portsea, the attendance of teachers thereat being 230. A Sloyd School for country teachers was also held at the Continuation School.

(iii.) *Queensland.* There is no Training College in Queensland at the present time, but it is hoped ere long to establish one at Brisbane in affiliation with the University of Queensland. Young people of both sexes are admitted to the service as pupil-teachers at the age of fourteen years, the only training received being that given by the principals of the schools to which they are appointed. The school for infants at Kangaroo Point has, however, been specially staffed and equipped for training Kindergarten teachers. It is proposed to establish similar institutions at Rockhampton and Townsville.

(iv.) *South Australia.* During the year 1910 the system of training in force in South Australia was remodelled and improved. Prior to this year students had devoted themselves chiefly to academic studies, but in 1910 provision was made for increased attention to the theory and practice of teaching. District courses of training were established to prepare teachers for work in primary and infant schools, and an advanced course was outlined for those who will become High School teachers. Each of these courses extends over a year. Students in the primary course who shew special ability may be granted a second year's training. The special course for Secondary Schools will give students an opportunity of obtaining the diploma of education. There were 64 students in the Training College in 1910. At the Adelaide High School 44 pupil-teacher students remained from 1909 and 38 new candidates were admitted. Fifty candidates passed the prescribed test for monitors during the year. A School of Instruction at which 40 teachers attended was held at Adelaide for two weeks after the June vacation in 1910.

(v.) *Western Australia.* A Training College for teachers was opened at Claremont in 1902. The original building provided accommodation for sixty students, but extensions were opened in 1908, and the number in training during 1910 was 66. The course in the Training College lasts two years. Central classes for "monitors" (*i.e.*, pupil teachers) were established at Perth in 1903, and monitors outside the metropolitan area are instructed by correspondence. A Normal School was established in Perth in 1907 for the purpose of providing a two years' course of higher instruction for a limited number of children who had completed the State School course and intended to become teachers. The pupils in attendance during 1910 numbered 59, of whom 33 were girls. In February, 1911, the Normal School was closed and replaced by a better equipped institution known as the Modern School. To assist teachers of small schools to gain some experience of the best method of school management, a Model School has been established at Gosnell's, and arrangements have been made for intending teachers, as well as those actually in charge of small schools, to spend a portion of their time at this institution. Schools of instruction for teachers in charge of the smaller country schools are held in different centres by district inspectors as well as in Perth, while an advisory teacher visits the schools in outlying districts and instructs the teachers in the best method of school management.

(vi.) *Tasmania.* The system of training adopted in Tasmania is as follows:—(a) The candidate is selected at fourteen years of age by a head teacher, and assists as a "monitor" for about a year, during which period he must give proof of suitability for training. (b) At the end of this period there is a two years' course of training in the Training College. (c) The candidate then returns to his own school and teaches there for two years, the head teacher being responsible for his training in practical work, while the Training College authorities give lessons by correspondence. (d) The last stage is a final year in the Training College as a senior student. Some of the more advanced are granted a second year's training, and it is proposed to allow at least one each year to qualify for the Diploma of Education at the Melbourne Training College.

11. **School Savings Banks.**—Returns shew that these institutions are in existence in three States. In New South Wales, there were 696 banks at the end of 1910, the deposits amounting to £26,062 and withdrawals to £25,048. Since the establishment of the banks in 1887, deposits totalled £375,640, and withdrawals £364,718. Of the latter sum £90,604 was placed to children's accounts in Savings Banks. In South Australia, 179 schools had 7520 depositors with £2107 to their credit; and in Western Australia, there were 150 school banks with 7246 depositors and £6808 at credit.

12. **Expenditure on State Schools.**—The net expenditure in each State on primary education during each year of the period 1901 to 1910 is shewn below. The figures do not include expenditure on buildings, which is shewn separately in a subsequent table.

#### EXPENDITURE ON MAINTENANCE, STATE SCHOOLS, 1901 to 1910.

(COMMONWEALTH.)

Year.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£	£	£	£	£	£	£
1901 ...	623,734	656,907	256,245	152,006	89,694	37,710	1,816,296
1902 ...	652,860	681,282	261,317	151,462	103,898	48,161	1,898,980
1903 ...	677,683	669,376	256,325	147,297	122,016	48,300	1,920,997
1904 ...	693,954	670,182	261,583	147,842	134,064	50,018	1,957,643
1905 ...	699,789	663,580	278,972	151,242	139,043	44,974	1,977,600
1906 ...	727,471	663,302	286,629	152,713	153,010	45,683	2,028,808
1907 ...	816,249	677,701	297,210	152,400	159,122	52,830	2,155,512
1908 ...	934,603	692,410	299,227	152,950	164,456	60,407	2,304,053
1909 ...	940,534	726,020	309,704	164,863	166,103	73,532	2,380,756
1910 ...	979,775	788,246	323,372	177,827	172,470	74,907	2,516,597

The expenditure per head of average attendance for each of the years given above will be found in the succeeding table. As the figures shew, Western Australia has the highest average, followed by New South Wales and Victoria, the lowest rate being in Tasmania.

### COST PER HEAD OF AVERAGE ATTENDANCE, STATE SCHOOLS, 1901 to 1910.

(COMMONWEALTH.)

Year.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1901 ...	4 0 10	4 7 0	3 12 9	3 9 5	5 9 3	2 12 11	4 0 8
1902 ...	4 3 9	4 10 8	3 11 9	3 9 8	5 12 8	3 6 3	4 3 5

1910 ...	6 4 5	5 8 0	4 13 2	4 14 9	6 5 8	4 3 4	5 10 5

Expenditure on school buildings in each of the years quoted was as follows:—

### EXPENDITURE ON STATE SCHOOL BUILDINGS, 1901 to 1910.

(COMMONWEALTH.)

Year.	N.S.W.	Victoria.	Qld.	S. Aust.	W. Aust.	Tasmania.	C'wealth.
	£	£	£	£	£	£	£
1901 ...	57,663	36,040	33,421	13,656	49,073	7,762	197,615
1902 ...	76,793	81,946	9,443	11,250	32,669	11,931	224,032
1903 ...	100,955	39,369	9,006	11,805	35,953	6,710	203,798
1904 ...	72,051	19,502	14,489	9,056	32,892	4,427	152,417
1905 ...	58,820	32,041	14,187	9,094	35,925	4,809	154,876
1906 ...	89,975	39,184	24,896	13,340	39,390	3,456	210,241
1907 ...	103,348	68,416	30,340	15,839	38,928	7,216	264,587
1908 ...	146,715	106,983	44,333	22,726	34,299	8,659	363,715
1909 ...	149,767	162,932	57,349	31,512	31,099	8,442	441,101
1910 ...	191,188	118,556	50,668	44,025	47,637	16,957	469,031

The total net cost and the net cost per scholar in average attendance during the year 1910 were as follows:—

### NET TOTAL COST PRIMARY EDUCATION, 1910,

(COMMONWEALTH.)

Item.	N.S.W.	Vic.	Q'land.	S. Aust.	W. A.	Tas.	C'wealth.
	£	£	£	£	£	£	£
Net cost of primary education, including buildings ...	1,170,963	906,802	374,040	221,852	230,107	91,864	2,985,628
Per scholar in average attendance ...	£7 8/8	£6 12/3	£5 7/9	£5 18/2	£8 0/5	£5 2/3	£6 11/0

The average for the Commonwealth in 1901 was £4 9s. 3d. per scholar in average attendance.

### § 3. Private Schools.\*

1. **School Teachers, etc., in 1910.**—The following table shews the number of Private Schools, together with the teachers engaged therein, and the enrolment and average attendance in 1910:—

#### PRIVATE SCHOOLS, 1910.

(COMMONWEALTH.)

State.	Schools.	Teachers.	Enrolment.	Average Attendance.
New South Wales ... ..	774	3,602	59,247	49,351
Victoria ... ..	641	2,067	54,740	44,000
Queensland ... ..	159	761	16,320	13,950
South Australia ... ..	185	683	11,334	9,408
Western Australia ... ..	119	407	9,400	7,563
Tasmania ... ..	140	420	7,653	5,600
Commonwealth ... ..	2,018	7,940	158,694	129,872

The figures for Queensland include the returns from Grammar Schools, of which there are ten—six for boys and four for girls. These schools are governed by boards of trustees, partly nominated by Government, and partly by the subscribers to the funds. The trustees make regulations regarding the fees of scholars, the salaries of teachers, and generally for the management of the schools. Each school is endowed by the Government at the rate of £750 per annum together with an additional £250 to provide district scholarships, of which five were allotted to each school from 1st January, 1909.

2. **Growth of Private Schools.**—The enrolment and average attendance at Private Schools during 1891 and in each year of the period 1900 to 1910 are shewn below:—

#### ENROLMENT AND ATTENDANCE AT PRIVATE SCHOOLS, 1891 to 1910.

(COMMONWEALTH.)

Year.	Enrolment.	Average Attendance.	Year.	Enrolment.	Average Attendance.
1891 ...	124,485	99,588	1905 ...	145,143	118,627
1900 ...	153,433	124,313	1906 ...	152,058	124,510
1901 ...	148,659	120,742	1907 ...	152,037	122,878
1902 ...	144,437	117,293	1908 ...	152,399	125,530
1903 ...	147,135	120,193	1909 ...	164,428	127,069
1904 ...	146,339	119,915	1910 ...	158,694	129,872

In view of the growth in population during the period covered by the table the increase in enrolment and attendance does not afford room for much satisfaction. The returns will no doubt in future be to some extent adversely affected by the development of the Higher State Schools alluded to in a preceding paragraph.

\* Private Schools include all schools not wholly under State control. The term "private" though popularly applied is, of course, a misnomer.

**3. Defects in Returns of Private Schools.**—Throughout Australia, until quite recently, no administrative machinery existed by means of which supervision could be exercised over the course of education carried out under other ægis than that of the Departments of Education themselves. These departments were without authority over the qualifications of the teaching staff, the equipments, the curricula, or general circumstances of private or denominational schools. With the exception of Western Australia, Victoria, and Tasmania, this state of things continues to the present time.

Without a thorough system of registration of all schools (public or private) the certainty of the operation of the compulsory clause of Public Instruction Acts must necessarily be insecure. Proper statistical information, moreover, cannot be obtained without imposing upon all schools the duty of rendering complete and prompt returns in regard to enrolment, attendance, teaching staff, equipment, etc.

Recent educational criticism has led, not only to a better training of teachers in State Schools, and, to some extent, in Private Schools, but also to a better recognition of the importance of accurate information as to the progress of educational events. It is understood that in New South Wales steps will be taken shortly to secure more adequate information as to the condition of schools generally.

In Victoria up to the year 1905 no attempt had been made to bring Private Schools under general administrative control, but the Registration of Teachers and Schools Act of 1906, and the Education Act of 1910, established a registration scheme under a special committee. At present, the committee consists of nine members of the Council of Education. Section 60 of the Act of 1910, also empowers the Minister of Education to authorise the inspection of any school (other than a State School) in order to ascertain whether the instruction given is satisfactory. In his first report, the inspector of registered schools pointed out that there is a fair number of institutions which are very unsatisfactory both as regards buildings and quality of instruction given therein.

In Queensland, with the exception of the Grammar Schools, which are now examined annually, there is practically no control over the Private Schools, beyond the fact that they may submit themselves to inspection if so desired, and there is apparently no provision in South Australia for any Government supervision over Private School affairs.

In Western Australia, non-Government schools must be declared efficient by the Education Department if attendance at them is to be recognised as fulfilling the requirements of the law, and the school registers must be open to the inspection of the compulsory officers of the Department.

In Tasmania the Education Act requires the teachers of other than State Schools "to furnish during January of each year returns showing attendances at such schools." Despite the fact that penalties are prescribed for non-compliance with the law, nevertheless many teachers neglect to return the forms sent out. Provision has been made for registration of private teachers and schools very much on the lines adopted in Victoria. The Act declares that all persons who were employed in a *bona fide* manner for at least three months before 25th October, 1906, are entitled to be registered as teachers without submitting proof of professional qualifications. No person can be registered as a private teacher since July, 1907, unless the Board is satisfied as to his fitness for the work.

#### § 4. Free Kindergartens.

The following information regarding Free Kindergartens in the Commonwealth has been compiled from particulars supplied by the principals of the chief institutions in each State, except in the case of Victoria, the details for this State being furnished by the honorary secretary of the Free Kindergartens Union.

## FREE KINDERGARTENS IN THE COMMONWEALTH, 1910.

State.	No. of Schools.	Teachers.	Average Attendance of Children.	Number of Teachers in Training.
New South Wales (Sydney) ...	8	38	380	41
(Newcastle) ...	3	4	110	10
Victoria (Melbourne) ...	13	23	900	37
Queensland (Brisbane) ...	1	2	73	5
(Clermont) ...	1	1	27	3
South Australia (Adelaide) ...	4	27	250	21
Tasmania (Hobart) ...	1	4	44	3
(Launceston) ...	1	5	35	4
Total ...	32	104	1,819	124

At Brisbane the training of teachers is undertaken by the Queensland Crèche and Kindergarten Association. In Tasmania, schools were established in Hobart and Launceston at the end of 1910, and information regarding them consequently appears for the first time in this issue.

There are no free Kindergartens in Western Australia, but it is proposed to establish one or more institutions in Perth.

It must, of course, be distinctly understood that the information given above refers to Kindergartens under private management, and is exclusive of institutions controlled by the Education Departments of the various States.

## § 5. Universities.

1. **Origin and Development.**—The history of the foundation and progress of the four then existing Australian Universities was traced at some length in Year Books I. and II. In the present volume space will permit of only a very brief reference to the subject.

(i.) *University of Sydney.* The Act of Incorporation of the University of Sydney received Royal assent on the 1st October, 1850, and the first Senate was appointed on the 24th December of that year. The first matriculation examination was held in October, 1852, when twenty-four candidates passed the required test, and the formal inauguration ceremony took place on the 11th October of the same year. A Royal Charter was granted to the University on the 27th February, 1858. Women students were admitted in 1881. At the inception of the University there were only three professorships. The present staff consists of eighteen professors, five assistant professors, and eighty-three lecturers and demonstrators. There are, in addition, two honorary lecturers, four honorary demonstrators, as well as fifty miscellaneous assistants in laboratories and three curators of museums.

(ii.) *University of Melbourne.* This institution was established by Act of Parliament assented to on the 22nd January, 1853, and its first Council was appointed on the 11th April of that year. The foundation stone of the main building was laid on the 3rd July, 1854, and the University was formally inaugurated on the 13th April, 1855. By Royal Letters Patent issued in 1859 its degrees are, like those of the Sydney institution, declared of equal status with those of any other University in the British Empire. Women students attended lectures for the first time in 1881. The University, which

began in 1855 with Schools of Arts and Laws, has now a staff of eighteen professors and sixty-one lecturers and demonstrators. The Conservatorium of Music has a staff numbering twenty-five.

(iii.) *University of Adelaide.* This University was established by Act of Parliament in 1874. Its origin and progress was largely due to the munificence of the late Sir Walter Watson Hughes and Sir Thomas Elder, G.C.M.G., the total gifts of the latter amounting to over £100,000. The academical work of the institution was commenced in March, 1876, when eight matriculated and fifty-two non-graduating students attended lectures. The foundation stone of the University buildings was laid on the 30th July, 1879, and the buildings were opened in April, 1882. In 1881, by Royal Letters Patent, the degrees granted by the institution were recognised as of equal distinction with those of any University in the British Empire. The Elder Conservatorium of Music was opened in 1898. Power was given by Act of Parliament in 1880 to grant degrees to women. At first there were only four professorships in the University, whereas the present staff consists of ten professors and twenty-eight lecturers and demonstrators, exclusive of the staff at the Conservatorium, which numbers ten.

(iv.) *University of Tasmania.* The Act to establish the University of Tasmania (Hobart) was assented to on the 5th of December, 1889. At the present time, the institution, which is small but efficient, possesses a staff of four professors and four lecturers. Under Statute dated 13th April, 1905, the Zeehan School of Mines and Metallurgy was affiliated to the University.

(v.) *University of Queensland.* The Act to establish the University of Queensland was passed in 1909, and the first Senate was appointed on the 14th April, 1910. The University was opened on the 18th and lectures were given on the 20th March, 1911, by professors of classics, chemistry, physics and mathematics, and engineering.

(vi.) *University of Western Australia.* The University Commission in this State has recommended the establishment of a University somewhat on the lines of those in the eastern States, but with such amendments as would bring it as far as possible into accord with the most modern requirements. The Act establishing a University was passed on the 18th February, 1911. In addition to lectureships, it is proposed to open the institution with four professorships—modern literature and history, mathematics and physics, chemistry, and engineering and mining—while a chair in agriculture will be endowed by the generosity of Dr. Hackett.

**2. Teachers and Students of Universities.**—The following table shews the number of professors and lecturers and the students in attendance at each of the Commonwealth Universities during the year 1910:—

UNIVERSITIES.—TEACHERS AND STUDENTS, 1910.

University.	Professors.	Lecturers.	Students attending Lectures.		
			Matriculated.	Non-matriculated.	Total.
Sydney ... ..	23	83	1,005	337	1,342
Melbourne ... ..	18	61	...	...	1,118*
Adelaide ... ..	10	28	393	272	665†
Tasmania (Hobart) ...	3	7	72	75	147
Queensland (Brisbane)‡	...	...	...	...	...

\* Exclusive of 119 music students. † Exclusive of 285 music students. ‡ Opened in 1911.

**3. University Revenues.**—The income of the Universities from all sources during the year 1910 was as follows:—

## UNIVERSITIES.—REVENUE, 1910.

University.	Government Grants.	Fees.	Other.	Total
	£	£	£	£
Sydney ... ..	18,800	19,453	26,052	64,305
Melbourne ... ..	21,000	23,119	1,074	45,193
Adelaide ... ..	7,210	9,633	5,655	22,498
Tasmania (Hobart) ... ..	4,750	1,217	128	6,095

The column "Other" includes the receipts from private foundations. The extent to which the Universities have benefited by private munificence will be apparent from the following table :—

## PRINCIPAL PRIVATE BENEFACTIONS TO AUSTRALIAN UNIVERSITIES.

University of Sydney.		University of Melbourne.		University of Adelaide.	
Donor.	Amount.	Donor.	Amount.	Donor.	Amount.
	£		£		£
J. H. Challis ... ..	277,000	Sir Samuel Wilson ... ..	30,000	Sir Thos. Elder ... ..	100,130
Sir P. N. Russell ... ..	100,000	James Stewart ... ..	25,624	Sir W. Hughes ... ..	20,000
Thos. Fisher ... ..	30,000	Sir Francis Ormond ... ..	20,000	Hon. J. H. Angas ... ..	10,000
Edwin Dalton ... ..	8,000	John Hastie ... ..	19,140	R. Barr Smith ... ..	9,150
Hugh Dixon ... ..	7,050	Robert Dixon ... ..	10,837	Other donations ... ..	11,817
Hon. Sir W. Macleay ... ..	6,000	David Kay ... ..	5,764		
Mrs. Hovell ... ..	6,000	Henry Dwight ... ..	5,000		
Thos. Walker ... ..	5,700	Wm. Thos. Mollison ... ..	5,000		
Other donations ... ..	52,740	Other donations ... ..	43,534		
Total	£ 492,490	Total	£ 164,899	Total	£ 151,097

The credit balances of some of the above endowments now amount to very considerable sums. For example, on the 31st December, 1910, the Challis Fund amounted to nearly £316,000, and the Fisher bequest to £40,000. Altogether the totals for the University of Sydney might be increased by £70,000. In the case of Melbourne University the Hastie fund on the 31st December, 1910, stood at £19,000, the Dixon fund at £11,900, etc.

In addition to the above there were various other bequests to Sydney University—*e.g.*, collection of Egyptian antiquities, etc., by Sir Charles Nicholson, and Natural History collection by Mr. Geo. Masters, while the building for the Natural History Museum was given by Sir W. Macleay. Numerous prizes and scholarships have also been given to the various colleges. In Melbourne, Sir Francis Ormond's benefactions to Ormond College amounted to about £108,000. Private benefactions to the University of Tasmania and the newly-established University of Queensland amount to £1445 and £2192 respectively.

4. **University Extension.**—These lectures were instituted at Sydney University in 1886, but under a statute of the Senate, approved of in 1892, a Board was appointed, which was empowered from time to time to recommend to the Senate the names of suitable persons for giving courses of lectures, and to hold examinations in the subjects of the lectures. The Board receives and considers applications from country centres, and makes provision for engaging lecturers and managing the entire business connected with the various courses. The project has only met with fair success, no lectures having been given in some years, but lately there appears to be an awakening of interest in the matter. The Board also arranged for courses of lectures in Queensland, Victoria, and Western Australia. In 1910 the average attendance at extension lectures in New South Wales was 145.

University extension lectures in Victoria date from the year 1891, when a Board was appointed by the Melbourne University for the purpose of appointing lecturers and holding classes and examinations at such places and in such subjects as it might think fit. Interest in University extension has varied in Victoria, but lectures were delivered in thirteen centres in 1910.

The Adelaide University has also instituted short courses of extension lectures in Arts and Science, to which students are admitted on payment of a nominal fee. Public intimation of these lectures is made from time to time during the session. For 1911 a course of twelve lectures was provided. The University of Tasmania provides for courses of lectures at Launceston, which are delivered weekly by members of the University teaching staff.

## § 6. Technical Education.

1. **General.**—Although provision has been made in some of the States in respect to many necessary branches of technical education, the total provision made would imply that this branch of education has not been regarded as of great importance. As will be seen later on, the expenditure on technical education for the whole of Australasia is comparatively insignificant.

2. **New South Wales.**—The present organisation of technical education in this State dates from the year 1883, when a Technical Education Board was appointed as a result of suggestions made at the Technological Conference held in 1879. This Board continued its function till November, 1889, when it was dissolved, and the work has thenceforward been carried on as a branch of the Public Instruction Department. The chief centre of activity is, of course, in Sydney, where the Technical College and Technological Museum are situated, the college having been opened for the reception of students early in 1892. Colleges have also been erected in some of the chief country towns—at Maitland in 1890; Newcastle 1896; Bathurst 1898; Broken Hill 1898; Albury 1899; and Goulburn 1902. In other centres classes have been established in various subjects whenever the prospects are sufficiently encouraging. The table below gives some idea of the development of technical education in New South Wales:—

TECHNICAL EDUCATION, NEW SOUTH WALES, 1901-10.

Year.	Number of Classes.	Number of Enrolments.	Average Weekly Attendance.	Number of Lecturers and Teachers.	Fees Received.
					£
1901 ... ..	331	12,267	7,721	133	8,068
1906 ... ..	654	15,594	9,771	249	11,007
1907 ... ..	718	17,662	11,260	273	13,046
1908 ... ..	790	18,490	10,498	280	14,176
1909 ... ..	864	21,242	12,265	292	15,475
1910 ... ..	886	22,822	13,255	334	15,873

The enrolments in 1910 were distributed as follows:—

Sydney College Classes	...	...	...	10,171
Suburban Classes	...	...	...	2,837
Country Classes	...	...	...	6,687
				19,695
Classes at Public Schools	...	...	...	3,127
Total	...	...	...	22,822

Technical Day Schools have been established at the Central College in Sydney, and at Newcastle and Goulburn. The course of instruction covers two years and is designed

to prepare young students for admission to the Engineering, Mining, or Architecture classes at the College. As mentioned elsewhere, higher technical training is afforded at the Schools of Mines and Engineering in connection with the University. References to the Agricultural Colleges will be found in the section dealing with Agriculture.

3. **Victoria.**—Technical instruction in mining has for many years received considerable attention in Victoria, the Ballarat School of Mines, which was established as far back as 1870, having achieved an Australasian reputation. The general scheme of instruction, however, lacked cohesion, and it was not until after the publication of the Report of the Royal Commission on Technical Education, which was appointed in 1899, that many defects were remedied. The largest technical institution in Melbourne is the Working Men's College, founded in 1887. The College, in addition to giving instruction in a large number of technical subjects, is also a School of Mines. Science and Art classes have been established at some of the larger State Schools. At the 30th June, 1910, there were nineteen technical schools receiving aid from the State. These were as follows:—

#### TECHNICAL EDUCATION, VICTORIA, 1910.

Institution.				Receipts.	Enrolment.
				£	
Melbourne Working Men's College	...	...	...	10,000	4,371
Ballarat School of Mines	...	...	...	4,000	1,173
Bendigo School of Mines	...	...	...	2,500	593
Geelong Gordon Technical College	...	...	...	1,000	475
Bairnsdale School of Mines	...	...	...	750	207
Maryborough Technical College	...	...	...	750	235
Stawell School of Mines	...	...	...	750	187
Castlemaine Technical School	...	...	...	550	201
Daylesford Technical School	...	...	...	350	161
Melbourne College of Domestic Economy	...	...	...	263	80
Sale Technical School	...	...	...	400	105
Horsham Working Men's College	...	...	...	350	90
Eastern Suburbs Technical College	...	...	...	1,000	342
Echuca School of Art	...	...	...	300	103
Kyneton Technical School	...	...	...	250	73
Nhill School of Art	...	...	...	200	86
Warrnambool School of Arts	...	...	...	150	30
Prahran Technical School	...	...	...	...	67

Of the above schools, seven afford instruction in Science, Art, and Trade subjects; four in Art and Science; four in Art and Trade; and four in Art.

4. **Queensland.**—Previous to 1902 Technical Colleges were carried on in connection with Schools of Art in many of the towns, under the control of local committees, by whom regulations were framed and the colleges administered. The aid granted by the State was £1 for every £1 raised locally, but no grant was to exceed the amount voted annually by Parliament. In 1902 a Board of Technical Education was formed, and held office from September of that year till the 27th May, 1905, and during this time devoted much energy towards the improvement of technical education in Queensland. The control, however, was removed from the Board in July, 1905, and vested in the Minister of Education, who appointed an officer of his Department to the position of Inspector of Technical Colleges. This officer reports on technical education generally, inspects the colleges, sees that the grants to the various colleges are spent to the best advantage, and so on. Under "The Technical Instruction Act of 1908" the State may contribute four-fifths of the cost of construction and equipment of Technical Colleges, and the provision has already been availed of in several instances. Efforts are being made to bring the country Technical Colleges into closer relationship with the State Schools, by providing for the instruction of selected pupils in various technical subjects. Moreover, representatives of the Educational Department have been appointed to the committees of

country colleges, and greater uniformity in management has been secured. The success of the Central Technical College under the control of the Department has led several of the country colleges to ask the Department to take over control of the institutions, and a commencement has already been made in this direction. The sixteen colleges open in 1910 were situated at Bowen, Central (with branches at South Brisbane and West End), Bundaberg, Cairns, Charters Towers, Gympie, Herberton, Ipswich, Mackay, Maryborough, Mount Morgan, Rockhampton, Sandgate, Toowoomba, Townsville, and Warwick.

A Technical Day-school has been established at Brisbane for the purpose of preparing students for the college courses in the commercial, wool, engineering, mining, and domestic departments.

It is proposed to affiliate the Central Technical College with the University. The average enrolment per term in the various departments of Queensland Technical Colleges during the year 1910 was 6447, and the average attendance 5250. The number of students entering for examination in each branch is given hereunder.

#### TECHNICAL EXAMINATIONS, QUEENSLAND, 1910.

Department.	Entries.	Department.	Entries.
Art ... ..	461	Geology, Mineralogy, Mining	107
Commerce ... ..	705	Mechanical Engineering ...	209
Trades ... ..	238	Agriculture ... ..	50
Mathematics ... ..	540	Health and Sanitary Science	150
Physics ... ..	121	Domestic Science and Art ...	906
Chemistry and Metallurgy ...	287	Revisal ... ..	254
Electricity ... ..	29		

5. **South Australia.**—A considerable amount of attention has been given to technical education in South Australia, particularly in connection with the mining industry. The School of Mines and Industries in Adelaide was founded in 1889. There are in addition Schools of Mines at Moonta, Port Pirie, Kapunda, and Gawler. A School of Design, Painting, and Technical Arts has been established in Adelaide, with branches at Port Adelaide and Gawler. The conditions connected with the country Technical Schools, viewed from the standpoint of the Department of Education, are not considered satisfactory. While the Government bears the bulk of the cost of maintenance, the Minister for Education is not consulted in regard to the organisation, curriculum, or staffing of the schools. Although good work has been accomplished, the system of control of Technical Schools by independent councils is declared by the Director of Education to be no longer suitable, and stress is laid on the necessity for co-ordinating technical effort under one central authority.

#### TECHNICAL SCHOOLS, SOUTH AUSTRALIA, 1910.

Name of School.	Teachers.		Students Enrolled.	Average Weekly Attendance.
	Ordinary.	Special.		
South Australian School of Mines and Industries ... ..	24	20	3,401	2,789
School of Mines—Port Pirie ...	1	8	285	150
Moonta ... ..	1	9	308	185
Kapunda ... ..	6	11	148	137
Mt. Gambier ... ..	5	...	297	234
Gawler ... ..	1	8	207	157

6. **Western Australia.**—A Technical School was established at Perth in 1900, and since its opening has progressed rapidly. Extensive additions to the buildings were made in 1909, and the remodelled institution was opened in 1910. The institution is

affiliated with the Adelaide University, and it is hoped that the students will shortly be allowed to take the degree of B.Sc. without leaving the school. There are branch institutions at Midland Junction, Fremantle, Claremont, Coolgardie, Kalgoorlie, Boulder, Menzies, Murchison, Northam and Albany, while it is proposed to open classes at other centres as occasion demands. The schools are all under the control of the Education Department, the officer entrusted with their supervision being styled Director of Technical Education. The Director also supervises the School of Mines at Kalgoorlie, which is controlled by the Mines Department. The number of individual students at each college during the last term of 1910 was as follows:—

#### TECHNICAL CLASSES, WESTERN AUSTRALIA, 1910.

College.				Students.	College.				Students.
Perth	...	...	...	746	Kalgoorlie	...	...	...	97
Boulder	...	...	...	160	Fremantle	...	...	...	248
Menzies	...	...	...	18	Midland Junction	...	...	...	71
Claremont	...	...	...	59	Northam	...	...	...	67
Murchison	...	...	...	9	Albany	...	...	...	50
Coolgardie	...	...	...	59					

7. **Tasmania.**—In this State provision for technical education dates from the year 1888. At the present time the most important technical institution is the School of Mines and Metallurgy at Zeehan. Courses of instruction are given in metal mining and in metallurgical chemistry and assaying, the diploma in metal mining entitling the holder to the Government certificate of competency as a mine manager. The institution is affiliated to the University of Tasmania. There are also three other schools under the control of the Education Department, each managed by a committee appointed by the Governor-in-Council. Tasmanian Technical Schools naturally devote their chief attention to mining and mineralogy.

Particulars regarding the schools are given hereunder:—

#### TECHNICAL CLASSES, TASMANIA, 1910.

								£
No. of schools	...	...	...	4	Receipts	...	...	3,713
Students enrolled	...	...	...	614	Government aid	...	...	2,658
Average attendance	...	...	...	267	Fees	...	...	681

The table hereunder shews the enrolment and attendance at Technical Schools and classes in the Commonwealth during 1910:—

#### ENROLMENT AND ATTENDANCE AT TECHNICAL SCHOOLS, 1910.

(COMMONWEALTH.)

State.				Enrolment	Average Attendance	Technical Classes at State Schools.	
						Enrolment	Av. Attend.
New South Wales	...	...	...	19,695	12,172	3,127	1,083
Victoria	...	...	...	7,107	† 3,500	289	...
Queensland	...	...	...	5,744	5,250	...	...
South Australia	...	...	...	4,332	3,938	314	...
Western Australia	...	...	...	2,007	*	...	...
Tasmania	...	...	...	614	267	...	...

\* Not available.

† Estimate.

8. **Expenditure on Technical Education.**—The expenditure on technical education in each State during the period 1906 to 1910 is shewn below :—

**EXPENDITURE ON TECHNICAL EDUCATION, 1906 to 1910.**  
(COMMONWEALTH.)

Year.	N.S.W.	Victoria.	Queensland.	South Aust.	West. Aust.	Tasmania.	C'wealth.
	£	£	£	£	£	£	£
1906 ...	26,764	21,444	6,803	7,663	7,931	2,650	73,255
1907 ...	33,568	22,322	9,610	8,006	7,940	2,418	83,864
1908 ...	51,814	26,839	10,720	7,856	9,264	2,215	108,708
1909 ...	61,452	27,039	13,589	12,742	9,422	3,209	127,453
1910 ...	71,002	32,314	20,612	13,476	*9,987	3,055	150,446

\* In addition a sum of £11,927 was spent in buildings.

The figures in the preceding table represent an expenditure of about 8d. per head of the population of the Commonwealth, as compared with 11s. 6d. per head spent on maintenance for primary education, and clearly shew that technical education has not attained its proper place in the educational organisation of Australia.

### § 7. Diffusion of Education.

1. **General Education.**—A rough indication of the state of education of the people is obtained at each Census under the three headings, "read and write," "read only," and "cannot read." The grouping of the whole population, exclusive of aborigines, in these three divisions is given for each Census since 1861 :—

**EDUCATION AT CENSUS PERIODS, 1861 to 1901.**  
(COMMONWEALTH.)

State.		1861.	1871.	1881.	1891.	1901.
N.S. Wales ...	(Read & write	188,543	296,741	507,067	835,562	1,071,935

	Cannot read	5,853	7,902	7,594	13,467	30,918
Tasmania ...	(Read & write	48,282	55,941	74,966	103,138	133,579
	Read only...	13,136	13,946	9,606	6,287	3,907
	Cannot read	28,559	29,441	31,133	37,242	34,989
Commonwealth	(Read & write	662,212	1,037,601	1,591,556	2,394,339	3,020,665
	Read only...	140,027	177,596	138,282	108,870	78,614
	Cannot read	348,952	447,842	520,356	671,183	674,522

The proportion in the Commonwealth of the various classes per 10,000 of the population is shewn below for each Census period:—

**PROPORTION OF EDUCATED AND ILLITERATE PER 1000 PERSONS, 1861 to 1901.**  
(COMMONWEALTH.)

Division.	1861.	1871.	1881.	1891.	1901.
Read and write ... ..	5,752	6,239	7,073	7,543	8,004
Read only ... ..	1,217	1,068	615	343	208
Cannot read ... ..	3,031	2,693	2,312	2,114	1,788

2. **Education of Children.**—The figures in the preceding tables refer to the entire population of the Commonwealth, and as the age constitution of those dwelling in the various portions of Australia underwent considerable modifications during the period dealt with, a far more reliable test of the diffusion of education will be obtained by a comparison of the Census returns in regard to children of school age. For comparative purposes this has been taken to include all children in the group over five and under fifteen years of age, and the degree of education of these at each Census will be found below:—

**EDUCATION OF CHILDREN AT CENSUS PERIODS, 1861 to 1901.**  
(COMMONWEALTH.)

State.	1861.	1871.	1881.	1891.	1901.

In the case of Tasmania full details for the years 1861 and 1871 are not available, and the figures for those years are approximate. The variation in degree of education will be more readily seen by reducing the foregoing figures to the basis of proportion per 10,000, and the results so obtained are embodied in the following table, a glance at which is sufficient to demonstrate the remarkable strides that at least the lower branches of education have made since 1861. In that year, only 47 per cent. of the children of school

age could read and write, while 26 per cent. were illiterate. The returns for 1901 shew that the proportion of those who could read and write had increased to nearly 80 per cent., while the totally ignorant had declined by nearly one-half.

**EDUCATION OF CHILDREN (AGES 5 to 15) PER 10,000 AT CENSUS PERIODS,  
1861 to 1901.**

(COMMONWEALTH.)

State.		1861.	1871.	1881.	1891.	1901.

**3. Education as shewn by Marriage Registers.**—Another common method of testing the spread of education is to compare the number of mark signatures with the total number of persons married during each year of a series. The percentage of males and females signing with a mark to the total persons married in the Census years 1861 to 1901, and during each of the last seven years, was as follows. The figures refer to marriages in the Commonwealth in respect of which information was obtainable.

**ILLITERACY AS SHOWN BY MARRIAGE SIGNATURES, 1861 to 1910.**

(COMMONWEALTH.)

Year.	Proportion Signing with Marks of Total Persons Married.						
	Males.	Females.	Total.	Year.	Males.	Females.	Total.
	per cent.	per cent.	per cent.		per cent.	per cent.	per cent.
1861 ...	18.50	30.69	24.60	1905 ...	0.91	0.93	0.92
1871 ...	10.58	16.40	13.49	1906 ...	0.92	0.86	0.89
1881 ...	4.34	6.78	5.56	1907 ...	0.81	0.70	0.76
1891 ...	2.27	2.40	2.34	1908 ...	0.71	0.73	0.72
1901 ...	1.35	1.29	1.32	1909 ...	0.65	0.62	0.64
1904 ...	0.95	0.91	0.93	1910 ...	0.56	0.59	0.58

The table shews that there has been a large diminution in illiteracy, and judging from the figures for the last few years the proportion bids fair to practically disappear. Up to 1891 there was a higher proportion of illiteracy amongst females, but from 1901 onwards, generally speaking, the opposite condition prevailed.

## § 8. Miscellaneous.

1. **Scientific Societies.**—(a) *Royal Societies.* Despite the trials and struggles incidental to the earlier years of the history of Australia, higher education and scientific advancement were not lost sight of. Thus the origin of the Royal Society of New South Wales dates as far back as 1821, when it was founded under the name of the Philosophical Society of Australasia, Sir Thomas Brisbane being its first president. Scientific work was fitfully carried on by means of a society whose name varied as the years rolled on. It was called the Australian Philosophical Society in 1850. In 1856 the old Australian Society merged into a resuscitated Philosophical Society of New South Wales, and its papers were published up to 1859 in the Sydney Magazine of Science and Art (2 vols. 1858-9). Its present title dates from 1866. Some of the papers of the old Philosophical Society were published in 1825 under the title of "Geographical Memoirs of New South Wales," (Barron Field) and contain much that is interesting in regard to the early history of Australia. One volume containing the Transactions of the Philosophical Society of New South Wales (1862-65) was published in 1866. The journal of the Society did not begin to bear a serial number, however (vol. 1), until the year 1867. "Transactions of the Royal Society of New South Wales" was issued in 1867, the title of the series being altered to "Journal" in 1876. Up to the end of 1910 forty-four volumes had been published. The exchange list comprises 434 kindred societies. At the present time the library contains about 21,000 volumes and pamphlets, valued at over £7500. Income and expenditure for the year ended 31st March, 1911, were £1462 and £1357 respectively. The Society had on the same date 343 members.

The Royal Society of Victoria dates from 1854, in which year the Victorian Institute for the Advancement of Science and the Philosophical Society of Victoria were founded. These were amalgamated in the following year under the title of the Philosophical Institute of Victoria, whilst the society received its present title in 1860. The first volume of its publications dates from 1855. The earlier publications dealt largely with Physics, later on Biology became prominent, while at present a large number of papers deal with Geology. Up to 1910 fifty-five volumes of publications had been issued. The Society exchanges with 304 kindred bodies. The constitution of the society states that it was founded "for the promotion of art, literature, and science," but for many years past science has monopolised its energies. The library contains over 8000 volumes. Since its inception the society has received about £18,000 in annual subscriptions, while Government aid has been given to the amount of about £10,000.

The inaugural meeting of the Royal Society of Queensland was held on the 8th January, 1884, under the presidency of the late Sir A. C. Gregory. The society was formed "for the furtherance of the natural and applied sciences, especially by means of original research." Shortly after its formation it received an addition to its ranks by the amalgamation with it of the Queensland Philosophical Society, which was started at the time when Queensland became a separate colony. At latest date the members numbered 105; publications issued, 24 volumes; library, 3780 volumes; societies on exchange list, 142. Up to 1910 the total subscriptions reached about £1800.

The present Royal Society of South Australia grew out of the Adelaide Philosophical Society, which was founded in 1853, its object being the discussion of all subjects connected with science, literature and art. Despite this programme, the tendency of the papers was distinctly scientific, or of a practical or industrial nature. With the advent of the late Professor Tate the sphere of activity of the society was considerably enlarged. Permission to assume the title of "Royal" was obtained in 1879, the society thenceforward being known as "The Royal Society of South Australia." In 1903 the society was incorporated. In 1910 the number of members was 84. Receipts to the end of 1910 were £485, the Government endowment being £226. Up to 1910 the society had issued thirty-five volumes of proceedings and three volumes of memoirs. The exchange list numbers about 148.

The Royal Society of Tasmania, for horticulture, botany, and the advancement of science, dates from 14th October, 1843, although Sir John Franklin had started a scientific society as early as 1838. The names of Captains Ross and Crozier, of H.M.S. *Erebus* and *Terror*, appear in the list of the first corresponding members. The society, which, since 1844, has published annual volumes of proceedings, possesses 139 members, exchanges with 77 kindred bodies, and has a library containing about 2000 volumes.

(b) *Other Scientific Societies.* The Australasian Association for the Advancement of Science, founded in 1888, has its headquarters in Sydney. Its receipts to date were about £11,000, including Government aid to the amount of £3000. The library contains 4000 volumes, valued at £400. Up to date eleven volumes of proceedings have been issued. The exchange list numbers 286. The Linnean Society of New South Wales, with headquarters in Sydney, was founded in 1875, and possesses a library of 10,000 volumes, valued at £6000. Up to date thirty-six volumes of proceedings have been issued. Exchanges number 188. This society maintains two investigators engaged in research work, and owes its development almost entirely to the benefactions of Sir William Macleay. The British Astronomical Association has a branch in Sydney, and in some of the States the British Medical Association has branches.

The principal scientific society in Western Australia is the Natural History and Science Society of Western Australia. This society has grown out of the Mueller Botanic Society, founded in July, 1897. The objects of the society are the study of natural history and pure science, promoted by periodical meetings and field excursions, the maintenance of a library, and the issue of reports of proceedings. It numbers at present 117 members whose subscriptions form its main source of revenue. Government aid in the past has ranged from £7 to £75 per annum, the subsidy paid in 1910 being £12 10s. Since its establishment the society has issued nineteen journals of proceedings. Its publications are exchanged with numerous institutions at home and abroad.

In addition to the societies enumerated above, there are various others in each State devoted to branches of scientific investigation, particulars respecting which are not at present available.

2. **Libraries.**—As far as can be ascertained the total number of libraries in the Commonwealth at the latest available date was about 1500, and the number of books contained therein is estimated at nearly three millions. In each of the capital cities there is a well-equipped Public Library, the Melbourne institution especially comparing very favourably with similar institutions in other parts of the world. The following statement gives the number of volumes in the Public Library of each city :—

#### METROPOLITAN PUBLIC LIBRARIES.

City.	Number of Volumes in—			Total.
	Reference Branch.	Ordinary Lending Branch.	Country Lending Branch.	
Sydney ...	219,981	...	10,908	230,889
Melbourne ...	200,562	27,721	...	228,283
Brisbane ...	36,667	...	...	36,667
Adelaide ...	71,534	25,476	...	97,010
Perth ...	82,180	7,050	...	89,230
Hobart ...	17,000	...	...	17,000

The maintenance and control of the lending branch of the Public Library at Sydney were transferred in 1909 to the Municipal Council. At the end of December, 1910, the books numbered 29,244.

The Mitchell Library in Sydney consists of 60,000 volumes and pamphlets, principally relating to Australasia, bequeathed in 1907 by Mr. D. S. Mitchell, together with an

endowment of £70,000. The testator stipulated that the regulations of the British Museum were to be adopted as far as practicable, hence the library is the resort of specialists.

The Launceston Mechanics' Institute in Tasmania possesses a library of 27,000 volumes.

The number of libraries in receipt of State or municipal aid, together with the estimated number of books contained therein, is given below for each State:—

#### SUBSIDISED LIBRARIES AND BOOKS THEREIN.

Particulars.	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.
Number of libraries ...	430	490	210	204	225	27
Estimated number of books	892,000	1,044,000	282,000	430,000	191,000	117,000

The figures in the above table can be taken only as approximations, as in many instances returns were not received from various institutions.

3. **Museums.**—The Australian Museum in Sydney, founded in 1836, is the oldest institution of its kind in Australia. In addition to possessing a fine collection of the usual objects to be met with in kindred institutions, the Museum contains a very valuable and complete set of specimens of Australian fauna. The cost of construction of the building was £59,000. The number of visitors to the institution last year was 146,000, and the average attendance on week-days 380, and on Sundays 844. The expenditure for 1910 amounted to £10,299, of which £6452 was absorbed by salaries and allowances, and £3847 by purchases and miscellaneous. A valuable library containing over 16,000 volumes is attached to the Museum. Representative collections, illustrative of the natural wealth of the country, are to be found in the Agricultural and Forestry Museum, and the Mining and Geological Museum. The latter institution prepares collections of specimens to be used as teaching aids in country schools. The "Nicholson" Museum of Antiquities, the "Macleay" Museum of Natural History, and the Museum of Normal and Morbid Anatomy, connected with the University, and the National Herbarium and Botanical Museum at the Sydney Botanic Gardens, are also accessible to the public. There is a fine Technological Museum in Sydney, with branches in five country centres, the metropolitan institution containing over 100,000 specimens. Valuable research work has been undertaken by the scientific staff in connection with oil and other products of the eucalyptus. The number of visitors at the Technological Museums during 1910 was nearly 240,000.

The National Museum at Melbourne, devoted to Natural History, Geology, and Ethnology, is located in the Public Library building. The expenditure for specimens, furniture, etc., in 1910 was £750, and salaries and wages £2440. The Industrial and Technological Museum, opened in 1870, contains upwards of 55,000 specimens. There is a fine Museum of Botany and Plant Products in the Melbourne Botanic Gardens. Well equipped museums of mining and geological specimens are established in connection with the Schools of Mines in the chief mining districts.

The Queensland Museum dates from the year 1871, but the present building was opened in January, 1901. Since its inauguration the Government has expended on the institution a sum of £70,597, of which buildings absorbed £16,615, purchases £22,171, and salaries £31,811. The number of visitors during the year was 59,516, of whom 22,709 visited the institution on Sundays. The Queensland Geological Survey Museum has branches in Townsville, opened in 1886, and Brisbane, opened in 1892. The total expenditure on the institution up to the end of 1909 was £6054, of which £2847 was spent on buildings.

Under the Public Library Act of 1884 the South Australian Institute ceased to exist, and the books contained therein were divided amongst the Museum, Public Library, and

Art Gallery of South Australia, and the Adelaide Circulating Library. The Museum was attended by 75,321 visitors in 1910.

The latest available returns shew that the Western Australian Museum contains altogether 49,000 specimens of an estimated value of £60,000. The Museum is housed in the same building as the Art Gallery, and the visitors to the combined institutions during the year numbered 81,000. The expenditure totalled £3736, of which salaries absorbed £2111.

There are two museums in Tasmania—The Tasmanian Museum at Hobart, and the Victoria Museum and Art Gallery at Launceston, both of which contain valuable collections of botanical and mineral products. The Tasmanian Museum received aid from the Government during last year to the extent of £500.

**4. Art Galleries.**—Information regarding the State collections of objects of art in the various capitals is in some cases very meagre, while the method of presentation does not admit of any detailed comparisons being made. The Art Gallery of New South Wales originated in the Academy of Art founded in 1871. Up to the end of 1910, the total expenditure was £259,000, of which works of art absorbed £104,000. The contents, which are valued at £136,000, comprise 366 oil paintings, 374 water colours, 515 black and white, 153 statuary and bronzes, and 353 ceramics, works in metal and miscellaneous. During 1910 the average attendance on week days was 548, and on Sundays 1897. The expenditure in 1910 amounted to £4550.

The National Gallery at Melbourne at the end of 1910 contained 531 oil paintings, 3581 objects of statuary, bronzes and ceramics, and 13,915 water-colour drawings, engravings, and photographs. The Gallery is situated in the same building as the Museum and Public Library, the total cost of construction being £229,000. At the end of 1910 the Ballarat Art Gallery contained 217 oil paintings, and 164 water colours, etc., while there are some valuable works of art in the smaller galleries at Bendigo, Geelong, and Warrnambool.

The Art Gallery at Adelaide dates from 1880, when the Government expended £2000 in the purchase of pictures, which were exhibited in the Public Library building in 1882. The liberality of private citizens caused the Gallery to rapidly outgrow the accommodation provided for it in 1889, at the Exhibition Building, and on the receipt of a bequest of £25,000 from the late Sir T. Elder, the Government erected the present building, which was opened in April, 1900. The Gallery also received a bequest of £16,500 in 1903 from the estate of Dr. Morgan Thomas, and of £3000 in 1907 from Mr. David Murray. At the latest available date there were in the Gallery 215 oil paintings, 124 water colours, 163 black and white, 112 engravings and etchings, 24 statuary, and 593 miscellaneous works in metal, etc., the whole being valued at upwards of £47,000. Building and site are valued at upwards of £31,000. Visitors during the year 1910 numbered 92,449.

The foundation stone of the present Art Gallery at Perth in Western Australia was laid in 1901, the building and site being valued at £60,000. The collection comprises 97 oil paintings, 41 water colours, 217 engravings and black and white, 262 statuary, and miscellaneous metal works, etc., of a total value of £15,000.

In Tasmania the Art Gallery at Hobart was opened in 1887. Its present contents consist of 96 paintings and 81 etchings and black and white drawings. Buildings and site are valued at £30,000. The number of visitors during the year on week days averages 62,000, and on Sundays 30,000.

The Art Gallery at Launceston was erected in 1888 at a cost of £5000, and opened on the 2nd April, 1891. Only a small proportion of the contents belong to the Gallery, the bulk of the pictures being obtained on loan. At latest date there were on view 80 oil

paintings and 44 water colours valued at £5000. The total value of buildings and site is estimated at £12,100. The average annual attendance is 36,000, and for Sundays 10,000.

5. **State Expenditure on all Forms of Educational Effort.**—The expenditure from the Consolidated Revenue in each State on all forms of educational and scientific activity during each of the last five financial years was as follows:—

**EXPENDITURE ON EDUCATION, SCIENCE, AND ART, 1906-7 to 1910-11.**

State.		1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
		£	£	£	£	£
New South Wales	{ Total	£ 941,654	1,055,197	1,104,077	1,149,422	1,221,175
	{ Per head	12/2	13/4	13/9	13/11	14/11
Victoria ...	{ Total	£ 842,071	872,655	925,368	953,499	1,003,251
	{ Per head	13/7	13/10	14/5	14/7	15/8

	{ Per head	7/8	8/1	8/10	9/7	9/8
Commonwealth						
	{ Total	£ 2,629,519	2,830,273	2,993,460	3,155,357	3,346,225
	{ Per head	12/8	13/4	13/10	14/3	15/4

The comparatively heavy expenditure in Queensland for 1909-10 is due to the inclusion of an expenditure of £70,000 in connection with the establishment of the University.

## SECTION XXIII.

## PUBLIC JUSTICE.

## § 1. Police.

1. **Introductory.**—In previous issues of the Year Book a résumé was given of the evolution of the police force in Australia up to the passing of the Police Act of 1862 (25 Vic. No. 16) in New South Wales, but considerations of space preclude its inclusion in the present volume.

In general terms the police forces of Australia may be said to be satisfactory both in regard to physique and intelligence, while as regards methods of prevention and detection of crime it is believed that the system in vogue here compares very favourably with those of the older-settled countries of the world.

2. **Strength of Police Force.**—The strength of the police force in each State during the five years ended 1910 was as follows. It may be mentioned that the police forces are entirely under State control, but, by arrangement, the Commonwealth Government utilises their services in various directions, such as the collection of Commonwealth electoral rolls, etc.

## POLICE FORCES IN THE COMMONWEALTH, 1906 to 1910.

State.	Area of State in Sq. Miles.	1906.	1907.	1908.	1909.	1910.
New South Wales	310,372	2,342	2,381	2,417	2,435	2,447
Victoria...	87,884	1,518	1,546	1,552	1,598	1,605
Queensland ...	670,500	883	923	960	966	957
South Australia ...	380,070	422	444	429	442	465*
Northern Territory	523,620	507	488	492	475	474
Western Australia	975,920	229	226	232	234	234
Tasmania ...	26,215					
Commonwealth	2,974,581	5,901	6,008	6,082	6,150	6,182

\* Including 23 police in Northern Territory.

The figures for New South Wales for 1910 are exclusive of sixty-two "black trackers," i.e., natives employed in detection of offenders in outlying districts, and five female

searchers. In Queensland there were ninety-three native police. The South Australian returns for 1910 are exclusive of eighteen "black trackers," and twenty-four native police in the Northern Territory. There are also fifty-one "black trackers" in Western Australia and three female searchers not included in the table.

(i.) *Average Number of Inhabitants to each Police Officer.* The average number of inhabitants to each officer in each State during the same period is shewn below. In considering these figures allowance must, of course, be made for the unequal area and unequal distribution of the population of the various States.

### INHABITANTS TO EACH POLICE OFFICER, 1906 to 1910.

(COMMONWEALTH.)

State.	No. of Persons per Sq. Mile, 1911 Census.	Inhabitants to each Police Officer.				
		1906.	1907.	1908.	1909.	1910.
New South Wales ...	5.31	633	659	659	659	667
Victoria ...	14.97	812	807	819	804	799
Queensland ...	0.90	606	587	575	585	622
South Australia ...	0.46	910	884	949	900	863
Western Australia ...	0.29	516	536	543	571	572
Tasmania ...	7.29	787	814	801	787	816
Commonwealth ...	1.50	698	698	703	703	707

The above figures naturally shew a great disparity in the relative numbers of the population protected by each police officer in the various States, and also in the relative area of territory to each officer. Western Australia and South Australia exhibit the largest figures in the latter respect, this, of course, being due to the fact that extensive areas in each State are as yet unpeopled by white settlers.

**3. Duties of the Police.**—In addition to the ordinary employment attaching to their office, the police are called upon to perform many duties which in other countries are carried out by various functionaries. As far as the statistician is concerned, it is found that the expert local knowledge possessed by the police renders their services in the collection of such returns as those relating to the agricultural, pastoral, and manufacturing industries, private schools, etc., more than ordinarily valuable. Then, again, the fact that their services are enlisted by such widely different departments as those dealing with mines, stock, agriculture, elections, registrations of births, deaths, and marriages, forestry, fisheries, explosives, old-age pensions, lunacy, public works, labour, etc., greatly enhances their general alertness by widening the range of their experience. Occasionally the objection is heard in some quarters that these special tasks involve some degree of sacrifice of ordinary routine duties, but that the general intelligence of the Australian police is adequate to the obligation to perform these tasks, besides being most creditable, results in a great saving of the public money.

**4. Cost of Police Forces.**—The expenditure from Consolidated Revenue on the police forces in each State during the five years 1906 to 1910 is shewn in the following table. Cost of buildings has been excluded from the return.

## COST OF POLICE FORCES IN THE COMMONWEALTH, 1906 to 1910.

State.	1906.	1907.	1908.	1909.	1910.
	£	£	£	£	£
New South Wales ...	434,934	462,804	466,994	472,718	504,146
Victoria ...	312,941	306,130	306,263	320,881	337,670
Queensland ...	176,086	202,184	207,043	220,344	244,945
South Australia ...	85,016	87,374	96,979	98,214	96,769
Western Australia ...	126,276	125,440	124,518	119,111	120,420
Tasmania ...	35,086	37,152	39,105	39,740	40,408
Commonwealth ...	1,170,339	1,221,084	1,240,902	1,270,958	1,344,358

The total for New South Wales includes £23,000 payment to Police Superannuation Fund; similar payments are included also in Victoria and Queensland. The cost per head of the population in each State for the period 1906 to 1910 was as follows:—

## COST OF POLICE PER INHABITANT, 1906 to 1910.

(COMMONWEALTH.)

State.	1906.	1907.	1908.	1909.	1910.
	s. d.	s. d.	s. d.	s. d.	s. d.
New South Wales ...	5 9	5 11	5 11	5 11	6 2
Victoria ...	5 1	4 11	4 10	5 0	5 3
Queensland ...	6 7	7 5	7 6	7 8	8 3
South Australia ...	4 6	4 6	4 11	5 0	4 10
Western Australia ...	9 9	9 7	9 5	8 10	8 11
Tasmania ...	3 11	4 2	4 4	4 4	4 3
Commonwealth ...	5 9	5 11	5 11	5 11	6 2

The relatively high cost per head in Queensland and Western Australia is due to the fact that there are in those States extensive areas of sparsely settled country, in which mounted patrols have to be maintained.

## § 2. Lower (Magistrates') Courts.

1. **Introductory.**—In considering the criminal returns of the various States due allowance must be made on account of several factors, such as the relative powers of the courts, both lower and higher, etc. In the case of lower courts, the actual number of laws in each State, the breach of which renders a person liable to fine or imprisonment, must be taken into account. Again, the attitude of the magistracy and police towards certain classes of offences is a factor, for in the case of liquor laws, or laws connected with vagrancy or gaming, the views of magistrates, and instructions issued to the police, may be responsible for considerable variations in the returns. The strength and distribution of the police forces, and the age constitution and distribution of the State's population, also influence the results. In any consideration of criminal returns, due weight should also be given to the prevalence of undetected crime, but information on this point can only be obtained for the State of Victoria. It may be mentioned that each State has its own separate judicial system, the Commonwealth jurisdiction being confined to the High Court of Australia, which is largely a Court of Appeal intermediate to the Privy Council, although it has also original jurisdiction, and the Commonwealth

Court of Arbitration and Conciliation. Full particulars regarding the judicial power of the Commonwealth will be found in Chapter III. of the Commonwealth Constitution (see page 26).

**2. Powers of the Magistrates.**—In New South Wales there is no general limit to the powers of the magistrates in regard to offences punished summarily, their authority depending in each case on the statute which creates the offence and gives them jurisdiction. Except in the case of a very few statutes, and excluding cumulative sentences, the power of sentence is limited to six months. Imprisonment in default of payment of fine is regulated by a scale limiting the maximum period according to the sum ordered to be paid, but in no case exceeding twelve months. Actions for debt and damage within certain limits also come within magisterial jurisdiction. In cases of debts, liquidated or unliquidated, the amount recoverable is not exceeding £50 before a court constituted of a stipendiary or police magistrate at certain authorised places, and not exceeding £30 at any other place before a court constituted of a stipendiary or police magistrate or two or more justices of the peace. The amount in actions of damage is limited to £10, but may extend to £30 by consent of parties.

In Victoria the civil jurisdiction of magistrates is restricted to what may be designated ordinary debts, damages for assault, restitution of goods, etc., where the amount in dispute does not exceed £50. No definite limit is fixed to the powers of the magistrates on the criminal side, and for some offences sentences up to two years may be imposed. The proportion of long sentences is, however, comparatively small.

In Queensland, generally speaking, the maximum term of imprisonment which justices can inflict is six months, but in certain exceptional cases, such as offences against sections 233 and 445 of the criminal code (betting-houses and illegally using animals), sentences of twelve months may be imposed. No limit exists as to the extent to which cumulative sentences may be applied, but in practice the term is never very lengthy.

In South Australia, under the Minor Offences Act, magistrates can impose sentences up to six months, and under the Summary Convictions Act, up to three months. The Police Act of 1869 gives power to sentence up to one year, with hard labour, in the case of incorrigible rogues, while under the Quarantine Act of 1877, and the Lottery and Gaming Act of 1875, sentences of two years may be imposed.

Under the Petty Sessions Act of 1867, in Tasmania, any person charged with having committed, or with having aided or abetted in the commission of an offence in regard to property of a value not exceeding £10, may, on conviction, for a first offence, before two or more justices in Petty Sessions, be imprisoned for any term not exceeding one year, and for a term not exceeding two years for a second or subsequent offence.

**3. Persons Charged at Magistrates' Courts.**—The total number of persons who were charged before magistrates in each State is given below for the five years 1906 to 1910:—

**PERSONS CHARGED BEFORE MAGISTRATES IN THE COMMONWEALTH,  
1906 to 1910.**

State.	1906.	1907.	1908.	1909.	1910.
New South Wales ...	65,197	67,183	66,233	64,502	73,960
Victoria ...	48,244	60,687	58,778	52,658	52,060
Queensland ...	18,849	18,621	19,687	19,824	22,104
South Australia ...	6,324	6,347	6,589	7,332	8,328
Western Australia ...	14,478	13,968	12,685	12,961	13,260
Tasmania ...	6,391	6,258	7,048	6,831	7,079
Commonwealth...	159,483	173,064	171,020	164,108	176,791

In explanation of the large increase shewn by Victoria for the year 1907 it is stated that the returns of summons were inflated by prosecutions under the new Licensing and Pure Food Acts and the Amending Education Act.

The figures given in the tabulation above include, of course, a number of people who were wrongly charged, and statistically are not of great importance. The actual number of convictions in connection with the persons who appeared before the lower courts in each year of the period 1906 to 1910 is, therefore, given hereunder. A separate line is added shewing the committals to higher courts.

### CONVICTIONS AND COMMITTALS AT MAGISTRATES' COURTS, 1906 to 1910.

(COMMONWEALTH.)

State.			1906.	1907.	1908.	1909.	1910.
New South Wales	...	{ Convictions	54,809	58,103	57,630	55,767	63,671
		{ Committals	1,286	1,130	1,015	1,081	1,176
Victoria	...	{ Convictions	37,740	46,731	43,705	38,801	38,555
		{ Committals	584	561	577	580	551
Queensland	...	{ Convictions	15,987	16,056	17,710	17,584	19,805
		{ Committals	440	464	417	442	455
South Australia...	...	{ Convictions	5,249	5,352	5,664	6,324	7,229
		{ Committals	168	105	89	111	117
Western Australia	...	{ Convictions	12,181	11,803	10,695	10,910	11,433
		{ Committals	182	193	187	177	192
Tasmania	...	{ Convictions	5,449	5,334	5,903	5,930	6,250
		{ Committals	55	46	63	44	48
All States	...	{ Convictions	131,415	143,379	141,307	135,316	146,943
		{ Committals	2,715	2,499	2,348	2,435	2,539

In connection with the variations in convictions at magistrates' courts, it may be noted that deductions in regard to the prevalence of lawlessness based on the totals alone must be largely qualified by several considerations. For example, as previously stated, the passing of new legislation may result in a sudden addition to the crop of convictions, which would not necessarily imply a corresponding growth in lawlessness. Further, the activity of the police in regard to the strict compliance with certain legislation, such as that dealing with Sunday observance, food standards, liquor trade, etc., may cause considerable variations in the returns. Hence references to the spread or otherwise of crime should more correctly depend on a consideration of the convictions for serious crime at the lower courts, and committals to, and convictions at, superior courts.

**4. Convictions for Serious Crime.**—While the figures given in the preceding table refer to the entire body of convictions, the fact must not be lost sight of that they include a large proportion of offences of a technical nature, many of them unwittingly committed, against various Acts of Parliaments. Cases of drunkenness and minor breaches of good order which, if they can be said to come within the category of crime at all, at least do so in a very different sense to some other offences, also help to swell the list. The following table has, therefore, been prepared for the purpose of shewing the convictions at magistrates' courts for what may be regarded as the more serious offences, i.e., against the person and property, either separately or conjointly, and forgery and offences against the currency:—

**CONVICTIONS FOR SERIOUS CRIMES AT MAGISTRATES' COURTS, 1906 to 1910.**  
(COMMONWEALTH.)

State.	1906.	1907.	1908.	1909.	1910.
New South Wales ...	4,971	4,799	4,779	4,764	5,224
Victoria ...	2,879	2,672	2,794	2,626	2,673
Queensland ...	2,035	1,334	1,433	1,526	1,479
South Australia ...	437	499	540	513	487
Western Australia ...	1,215	1,301	1,143	1,074	996
Tasmania ...	522	438	575	548	609
Commonwealth ...	12,059	11,043	11,264	11,051	11,468

Owing to a reclassification adopted by Queensland in 1907, a large number of offences have been transferred from the class "Offences against the Person" to "Offences against Good Order," hence the falling-off shewn by that State in the last four years.

Compared with the population the above figures give the following results per 10,000 inhabitants:—

**CONVICTIONS FOR SERIOUS CRIME PER 10,000 INHABITANTS, 1906 to 1910.**  
(COMMONWEALTH.)

State.	1906.	1907.	1908.	1909.	1910.
New South Wales ...	32.9	31.0	30.2	29.7	32.0
Victoria ...	23.5	21.6	22.2	20.4	20.8
Queensland ...	38.2	24.8	26.1	27.0	25.0
South Australia ...	11.5	12.9	13.6	12.5	12.1
Western Australia ...	46.7	49.6	43.1	39.6	36.7
Tasmania ...	29.2	24.4	31.6	29.8	31.9
Commonwealth ...	29.5	26.6	26.6	25.6	26.2

**5. Decrease in Crime.**—The figures quoted in the preceding table show that there has been a considerable decrease in crime during the last five years, while if the comparison be carried back to 1881 the position is seen to be still more satisfactory. The rate of convictions at magistrates' courts per 10,000 of the population is given below for each of the years 1881, 1891, 1901, and 1910. Only the more serious offences, particularised in the preceding paragraph, have been taken into consideration.

**RATE OF CONVICTIONS FOR SERIOUS CRIME IN THE COMMONWEALTH.**

Year.	Convictions per 10,000 Persons.					
1881 ...	...	...	...	...	...	69.3
1891 ...	...	...	...	...	...	44.8
1901 ...	...	...	...	...	...	29.1
1910 ...	...	...	...	...	...	26.2

**6. Need of Statistic of Distinct Persons.**—The figures already quoted refer to total convictions, and in respect of individuals necessarily involve a considerable amount of duplication, especially in minor offences, such as drunkenness, petty larcenies, etc., in which the same offender appears before the court many times in the course of the year. In a few of the States it is possible to obtain the number of distinct persons arrested, but there are no means of arriving at the total distinct persons convicted before the magistrates in any State. The forms submitted to and adopted by the Conference of Statisticians in

1906 provided for information as to separate persons convicted, irrespective of whether they were arrested or summoned, but the information is not yet sufficiently complete to be of value for statistical comparisons.

**7. Causes of Decrease in Crime.**—The statistics given shew that there has been a considerable decrease in crime throughout Australia. The results so far quoted are restricted entirely to the lower or magistrates' courts. There has also been a gratifying decrease in regard to offences tried at the higher courts, as will be seen later.

Attempts have been made to account for this decline: *e.g.*, advance in education, enlightened penological methods, etc. Much depends upon what is meant by education. Many classed in census statistics as "educated" can barely read and write. In this connection, moreover, it ought not to be forgotten that collaterally with the introduction of ordinary intellectual education certain people have departed from their pristine virtues. The deterrent effect of punishment, in respect of many offences, notably drunkenness, vagrancy, petty larcenies, etc., appears to be almost negligible. In general, punishment has declined in brutality and severity, and has improved in respect of being based to a greater extent upon a scientific penological system, though in this latter respect there is yet much to be desired. Recent advances in penological methods will be referred to in a subsequent section. Here it will be sufficient to remark that under the old régime, a prisoner on completion of a sentence in gaol was simply turned adrift on society, and in many cases sought his criminal friends, and speedily qualified for readmission to the penitentiary. Frequently he was goaded to this by mistaken zeal on the part of the police, who took pains to inform employers of the fact of a man having served a sentence in gaol. For a long time any assistance to discharged prisoners was in the hands of private organisations, such as the Salvation Army Prison Gate Brigade, but in some of the States, and notably in New South Wales, the authorities themselves look after the welfare of discharged prisoners in the way of finding work, providing tools, etc.

Improvements in the means of communication and identification have been responsible for some of the falling-off noticeable in the criminal returns, the introduction of the Bertillon system having contributed to certainty of identification. In his report for the year 1910 the Inspector-General of Police in New South Wales states that "criminals have a wholesome dread of the finger print system, and I have not the slightest doubt that it is one of the principal causes of the diminution of serious crimes." Part of the improvement may no doubt be referred also to the general amelioration in social conditions that has taken place during the last fifty years.

**8. Drunkenness.**—The number of cases of drunkenness and the convictions recorded in connection therewith during the period 1906 to 1910 will be found in the following table:—

**CASES AND CONVICTIONS—DRUNKENNESS, 1906 to 1910.**

(COMMONWEALTH.)

State	1906.		1907.		1908.		1909.		1910.	
	Cases.	Convictions.	Cases.	Convictions.	Cases.	Convictions.	Cases.	Convictions.	Cases.	Convictions.
New South Wales	25,399	25,253	28,255	28,109	27,976	27,817	27,495	27,363	27,542	27,380
Victoria	14,029	9,529	14,783	9,151	13,102	6,596	12,436	7,025	12,719	7,272
Queensland	7,493	7,473	9,066	9,002	9,203	9,185	9,109	9,102	10,870	10,849
South Australia	2,483	2,460	2,838	2,735	3,063	3,024	3,481	3,455	4,383	4,323
Western Australia	3,588	3,505	3,591	3,535	3,506	3,441	4,007	3,955	4,550	4,506
Tasmania	459	454	535	531	543	527	709	690	761	741
Commonwealth	53,451	48,674	59,068	53,063	57,393	50,590	57,237	51,590	60,825	55,071

The number of convictions is, as might naturally be expected, almost identical with the number of cases. Victoria, however, is an exception, but in this State it is explained that offenders are generally discharged on a first appearance, and no conviction is recorded, a similar procedure being also adopted in the case of those arrested on Saturday and detained in custody till Monday. The logic of excluding these cases from the list of convictions is certainly open to doubt.

The convictions for drunkenness per 10,000 of the population during each of the years from 1906 to 1910 are given hereunder :—

### CONVICTIONS FOR DRUNKENNESS PER 10,000, 1906 to 1910,

(COMMONWEALTH.)

State.	1906.	1907.	1908.	1909.	1910.
New South Wales ...	167.3	181.3	175.9	170.4	167.7
Victoria ...	77.9	73.9	52.4	54.7	56.7
Queensland ...	140.3	167.0	167.1	161.1	183.4
South Australia ...	64.7	70.9	76.0	84.1	107.7
Western Australia ...	134.8	134.8	129.8	146.0	166.2
Tasmania ...	25.4	29.6	29.0	37.5	38.8
Commonwealth ...	119.1	127.7	119.5	119.4	126.0

The convictions for drunkenness taken by themselves are not an altogether satisfactory test of the relative sobriety of the inhabitants of each State, inasmuch as several important factors must be taken into consideration. The age constitution of the people, for example, is by no means identical in each State, Western Australia having by far the largest proportion of adult males. The avocations of the people affect the result, since persons engaged in strenuous callings are, on the whole, more likely to indulge in alcoholic stimulants than those employed in less arduous ones. The distribution of the population is also a factor, the likelihood of arrest or summons for drunkenness obviously being greater in the more densely populated regions, and lastly, allowance must be made for the attitude of the magistracy, the police, and the public generally in regard to the offence.

It is not unusual to supplement statistics of drunkenness by furnishing also the relative consumption of alcoholic beverages. Deductions drawn therefrom will be very misleading if they fail to take into account also the consumption of non-intoxicating beverages such as tea and coffee, and the general habit of the people. Throughout the greater part of Europe, tea and coffee are consumed but sparingly, while Australia, as is well known, is one of the greatest tea-drinking countries of the world.

The following table shewing the consumption of spirits, wine, and beer per head of the population has, with the exception of the figures relating to the Commonwealth, been compiled from returns prepared by the British Board of Trade. The figures quoted for the Commonwealth refer to the year 1910, and for the other countries mentioned cover the quinquennium 1905-9. Owing to the abolition by the Customs Department of records of interstate trade it is no longer possible to give accurate returns for the separate States.

CONSUMPTION OF ALCOHOLIC BEVERAGES IN VARIOUS COUNTRIES.

9. **Treatment of Drunkenness as Crime.**—Though the problem of the correct method of dealing with dipsomania is by no means an easy one, it seems fairly clear that the present plan of bringing offenders before magistrates, and subjecting them to the penalty of imprisonment or fine, has little deterrent effect, as the same offenders are constantly reappearing before the courts. Further, the casting of an inebriate into prison, and placing him in his weakened mental state in the company of professional malefactors, doubtless tends to swell the ranks of criminals and certainly tends to lower his self-respect, while examination of the prison records in New South Wales some years ago disclosed the fact that over 40 per cent. of the gaol population had commenced their criminal career with a charge of drunkenness. During the last few years the dangers of moral contamination in this way have been more accurately appreciated, and a system of classification of prisoners has been adopted whereby the petty offender is as far as possible kept from association with the more evilly-disposed. With regard to drunkards, however, the Comptroller of Prisons in New South Wales advocates the entire abandonment of the system of repeated fine or imprisonment in favour of a course of hospital treatment, and this has to some extent been accomplished by the Inebriates Act of 1900 and 1909 under which habitual drunkards may be detained for long periods. The Comptroller-General of Prisons in Queensland states in his report for the year 1907 that "the drunken habit in many cases is merely one of many symptoms which jointly indicate the existence of a graver condition than simple habitual drunkenness."

10. **Remedial Treatment of Inebriates.**—Legislation has been passed in each State providing for the commitment of inebriates to special Government institutions, but so far New South Wales and Victoria are the only States in which such institutions have been established. The laws in the various States are as follows:—New South Wales, Inebriates Act 1900; Victoria, Inebriates Act 1904; Queensland, Inebriate Institutions Act of 1896; South Australia, Inebriates Act of 1881; Western Australia, Lunacy Act 1903, Pt. iv., Habitual Drunkards; Tasmania, Inebriates Act 1885, Inebriate Hospitals Act 1892. Curative work was first undertaken by the Government of New South Wales in 1907. The institutes are connected with the gaols, and, naturally, custodial measures are still a strong feature in their management; nevertheless the results so far have been encouraging. In Victoria an institute purporting to be wholly remedial was founded in 1907, and up to the end of December, 1910, 341 patients had been admitted. It may be mentioned that there are private retreats in each State, but these are not officially subsidised or inspected.

**11. Treatment of Habitual Offenders.**—In New South Wales the Habitual Criminal Act of 1905 gives judges the power of declaring a prisoner, after a certain number of sentences, to be an habitual criminal, and as such to be detained until, in the opinion of the authorities, he is fit to be at large. At the end of 1910 there were thirty-six persons in prison under this Act. The Indeterminate Sentences Act came into force in Victoria in July, 1908, and on the 30th June, 1911, twenty-nine males and seven females were under detention in Pentridge and in the Female Penitentiary, as well as thirteen youths in Castle-maine reformatory prison. Somewhat similar Acts are in force in South Australia and Tasmania. The provisions of the Habitual Criminals Amendment Act of 1907 were put into force in South Australia in 1909, and ten criminals declared to be habitual offenders were in confinement in the Labour Prison at the end of 1910. Legislation of this character has not yet been adopted in Queensland, where the Comptroller-General states that the class of offenders suitable for its operation is very limited. Naturally it will be some time before the effect of these measures on the prevalence of crime can be estimated. The Comptroller-General of Prisons in New South Wales states, however, that the system has exercised a wholesome deterrent effect on the criminal who is not a prisoner.

In illustration of the need for an Habitual Offenders Act to deal with professional criminals, the following statement culled from the report for 1909 of the Inspector-General of Police in New South Wales will be found of interest. In cases of breaking and entering, thirty-three persons committed 165 offences, or an average of five each. Of the total number, one man committed thirty-two offences, another thirteen, and another twelve. In simple larcenies, 139 persons committed 528 offences, one man being responsible for fifty-two charges, another fifty-six, and another seventeen. Under "burglaries" one man committed five offences; under "false pretences" one man committed nineteen, and another fifteen offences.

**12. Treatment of First Offenders.**—In all the States and in New Zealand statutes dealing with first offenders have been in force for some years, the dates of passing the Acts being as follows: New South Wales, 1894; Victoria, 1890; Queensland and South Australia, 1887; Western Australia, 1892; Tasmania and New Zealand, 1886. The method of procedure is practically the same in all cases, *i.e.*, with regard to most first offenders the magistrate or judge is empowered to allow the offender to go free on recognisances being entered into for his good behaviour for a certain period. In practice, this humane law has been found to work excellently, very few of those to whom its provisions have been extended having been found to relapse into crime.

**13. Children's Courts.**—Special courts for the trial of juvenile offenders have been established in New South Wales, Victoria, Western Australia, and New Zealand within the last few years, while Children's Courts, although not under that name, are practically provided for by the State Children's Act of 1895 and 1900 in South Australia. The object of these Courts is to avoid, as far as possible, the unpleasant surroundings of the ordinary police court. This subject is dealt with in detail in the section dealing with Public Hygiene. (See Section xxx.)

**14. Committals to Superior Courts.**—In a previous section it has been pointed out that comparisons of criminality based on a consideration of the total returns from magistrates' courts are somewhat inadequate, seeing that the figures include numbers of cases which are merely technical breaches of laws having in some instances a purely local significance. The committals to higher courts give a better basis of comparison, although even in this connection allowance must be made for the want of uniformity in jurisdiction. The table below gives the number of committals in each year from 1906 to 1910, with the proportion of such committals per 10,000 of the population. The rates are shewn on a separate line.

**COMMITTALS TO SUPERIOR COURTS (COMMONWEALTH), 1906 to 1910.**

State.				1906.	1907.	1908.	1909.	1910.
New South Wales	...	...	No.	1,334	1,172	1,060	1,135	1,233
			Rate	8.8	7.2	6.7	7.1	7.6
Victoria	...	...	No.	584	561	577	580	551
			Rate	4.8	4.5	4.6	4.5	4.3
Queensland	...	...	No.	440	464	417	442	455
			Rate	8.3	8.6	7.6	7.8	7.7
South Australia	...	...	No.	168	105	89	111	117
			Rate	4.4	2.7	2.2	2.7	2.9
Western Australia	...	...	No.	182	193	187	177	192
			Rate	7.0	7.4	7.0	6.5	7.1
Tasmania	...	...	No.	55	51	63	44	48
			Rate	3.1	2.8	3.5	2.4	2.5
Commonwealth	...	...	No.	2,763	2,546	2,393	2,489	2,596
			Rate	6.8	6.0	5.7	5.8	5.9

The above figures shew that there has been a decrease in serious crime, and, if the comparison be carried farther back, it will be found that the improvement has been considerable. This will be evident from an examination of the following figures, which shew the rate of committals per 10,000 persons in Australia at various periods since 1861:—

**RATE OF COMMITTALS IN AUSTRALIA, 1861 to 1910.**

Year ...	...	...	...	...	1861.	1871.	1881.	1891.	1901.	1910.
Committals per 10,000 inhabitants	...	...	...	...	22	14	12	11	8	6

The decline in proportion to population since 1861 has therefore been about 73 per cent.

**§ 3. Superior Courts.**

1. **Convictions at Superior Courts.**—The total number of convictions at superior courts, together with the rate per 10,000 of the population, is shewn below for each of the years 1906 to 1910:—

**CONVICTIONS AT SUPERIOR COURTS (COMMONWEALTH), 1906 to 1910.**

State.				1906.	1907.	1908.	1909.	1910.
New South Wales	...	...	No.	707	629	614	619	546
			Rate	4.7	4.0	3.9	3.9	3.3
Victoria	...	...	No.	339	368	365	352	354
			Rate	2.8	3.0	2.9	2.7	2.7
Queensland	...	...	No.	249	268	292	345	376
			Rate	4.7	4.6	4.8	6.1	6.4
South Australia	...	...	No.	92	74	68	86	101
			Rate	2.4	1.9	1.7	2.1	2.5
Western Australia	...	...	No.	150	176	106	87	95
			Rate	5.8	6.7	4.0	3.2	3.5
Tasmania	...	...	No.	32	39	29	24	27
			Rate	1.8	2.2	1.6	1.3	1.4
Commonwealth	...	...	No.	1,569	1,554	1,474	1,513	1,499
			Rate	3.8	3.7	3.5	3.5	3.4

In considering the above figures allowance must be made for the various factors enumerated in a preceding paragraph. Only when this is done will the comparatively unenviable pre-eminence of Western Australia in regard to serious crime be explained. Tasmania, it will be noted, shews by far the smallest proportion of serious crime, while the figures available shew that the island State is relatively the smallest consumer of alcoholic beverages. That a definite causal relation exists between the figures shewn by the respective tables is not, however, obvious.

**2. Offences for which Convictions were Recorded at Superior Courts.**—In the following table will be found a classification of the principal offences for which persons were convicted at the higher courts during each year of the period 1906 to 1910. Owing to lack of uniformity in the presentation of the returns for the several States the information is confined to the chief offences against the person only. The figures quoted refer to convictions in the Commonwealth during the period dealt with.

### CONVICTIONS FOR SERIOUS CRIME, SUPERIOR COURTS, 1906 to 1910.

(COMMONWEALTH.)

Offences.	1906.	1907.	1908.	1909.	1910.
Murder and attempts at ...	35	26	26	24	31
Manslaughter ...	21	19	20	21	15
Rape and crimes of lust ...	70	90	60	59	77
Other offences against the person ...	239	255	278	260	250

While the convictions for manslaughter and crimes of lust are identical in the opening and closing years of the period dealt with, those for murder declined by about 11 per cent. The general total of convictions for all offences against the person shews a decline since 1901 of about 10 per cent.

**3. Capital Punishment.**—The table below gives the number of executions in each State during the period 1906 to 1910:—

### EXECUTIONS (COMMONWEALTH), 1906 to 1910.

State.	1906.	1907.	1908.	1909.	1910.
New South Wales ...	1	3	...	...	...
Victoria ...	...	...	1	...	...
Queensland ...	3	1	...	2	1
South Australia ...	1	...	1	...	3
Western Australia ...	1	1	2	1	1
Tasmania ...	...	...	...	...	...
Commonwealth ...	6	5	4	3	5

In the early days of the history of Australia the penalty of death was attached to a large number of offences, many of which at the present time would be dealt with in the lower or magistrates' courts. With the growth of settlement, and the general amelioration in social and moral conditions, the list was, however, considerably curtailed, and the existing tendency is practically to restrict death sentences to cases of murder. It may be remarked that in cases of rape, which is a capital offence in some of the Australian States, the penalty has been but sparingly inflicted during the last few years. Juries are

reputed to be loth to convict on this charge, owing to the uncertainty whether sentence of death will be pronounced.

During the period 1861 to 1880 the average number of executions in the Commonwealth was nine, from 1881 to 1900 the average was six, while for the period 1901 to 1910 the figure stood at five.

#### § 4. Prisons.

1. **Prison Accommodation and Prisoners in Gaol.**—The table below shews the number of prisons in each State and the accommodation therein at the end of 1910:—

**PRISONS AND PRISON ACCOMMODATION (COMMONWEALTH), 1910.**

State.	Number of Prisons.	Accommodation in—		Prisoners at End of Year.
		Separate Cells.	Wards.	
New South Wales ... ..	30	2,193	759	1,235
Victoria ... ..	18	1,489	727	859
Queensland ... ..	12	561	416	527
South Australia ... ..	15	812	292	*269
Western Australia ... ..	27	719	110	†311
Tasmania ... ..	2	270	94	72
Commonwealth ... ..	104	6,044	2,398	3,273

\* Including three gaols with 23 prisoners in the Northern Territory. † Exclusive of 404 aborigines.

The number of prisoners in gaol, exclusive of debtors, at the 31st December in each of the years 1906 to 1910, is given below. A separate line is added in each instance shewing the proportion per 10,000 of the population.

**PRISONERS IN GAOL (COMMONWEALTH), 1906 to 1910.**

State.	1906.	1907.	1908.	1909.	1910.
New South Wales ... { Number	1,519	1,437	1,417	1,333	1,235
... { Proportion	10.1	9.3	9.0	8.3	7.6
Victoria ... { Number	927	916	875	844	859
... { Proportion	7.6	7.4	7.0	6.5	6.7
Queensland ... { Number	507	501	493	516	527
... { Proportion	9.5	9.3	9.0	9.1	8.9
South Australia ... { Number	237	255	247	276	269
... { Proportion	6.2	6.6	6.2	6.7	6.7
Western Australia ... { Number	402	502	351	365	311
... { Proportion	15.5	19.1	13.2	13.5	11.5
Tasmania ... { Number	89	89	96	81	72
... { Proportion	5.0	5.0	5.3	4.4	3.8
Commonwealth ... { Number	3,681	3,700	3,479	3,415	3,273
... { Proportion	9.0	8.9	8.2	7.9	7.5

From the preceding table it will be seen that the proportion to population of prisoners in gaol has fallen considerably during the last five years, while, if the comparison be carried farther back, the position is seen to be still more favourable, the prisoners in gaol in the Commonwealth numbering as much as 16 per 10,000 of the population in 1891.

**2. Improvement of Penological Methods.**—During recent years Australia, in common with most other civilised countries, has introduced considerable modifications and improvements in methods of prison management. Under the old régime punishment partook more or less of the character of reprisal for wrongdoing, and the idea of constituting the prison as a reformatory agency was in the background. But of recent years there has been an earnest attempt at effecting a moral reformation in the unfortunates who lapse into crime. This aspect of prison management has been specially prominent in New South Wales. As pointed out by the Comptroller-General of Prisons of that State, there are, however, certain directions in which improvements can be made. The danger and absurdity of sending drunkards to gaol has already been alluded to in a previous section, while present methods of dealing with vagrancy, and particularly with prostitution, have proved quite inadequate. A step in the right direction has however been taken in New South Wales, where, under the Prisoners' Detention Act, prisoners afflicted with certain diseases may be detained until the medical authorities pronounce them to be free from contagion. Unfortunately the Act does not apply to persons imprisoned in default of paying fines.

The general reorganisation of the New South Wales prison system may be said to date from the year 1896. Briefly stated, the chief reforms which have been introduced are as follows:—(a) Prevention of contamination consequent on evil association by the adoption of the "restricted association" scheme, under which prisoners are allowed to have as little intercourse with each other as possible, each prisoner having a separate cell, and mingling with other prisoners only at exercise or at work, and then under close supervision. (b) Careful classification of prisoners to avoid contact of minor or first offenders with the more hardened. (c) Better prison fare. (d) Abolition of solitary confinement in dark cells. (e) Lighting cells up to a reasonable hour at night and allowing well-conducted prisoners the privilege of reading interesting books. (f) Abolition of the practice of sending young children to gaol. (g) Attempt at scientific treatment of the habitual offender. (h) Special penitentiary for women prisoners under system of restricted association. (i) Provisions for helping prisoners on leaving gaol to find work through the agency of the Discharged Prisoners' Aid Society. Assistance in this direction is also given by numerous clerical and lay helpers.

In 1902 the system of finger-print identification of criminals was introduced, and by the year 1903 bureaux had been established in the various States for the exchange of records. Very successful results have attended the introduction of the system.

Space will not permit of more than a passing reference to the improvements brought about in prison management in the other States. In Victoria there is an excellent system of classification and allocation of prisoners to different gaols, while at the important penal establishment at Pentridge a careful segregation into no less than five distinct classes is carried out. In common with the other States the latest humane methods of accommodation and prison treatment have for some time been employed.

Queensland prisons have been considerably modernised during the last few years. The prison for females at Brisbane has been built on the radiating plan, and embodies the latest ideas in penological methods. Classification of prisoners has been fully carried out in the male and female divisions of Brisbane prison, and at the Stewart's Creek penal establishment. The construction of the buildings does not, however, permit of the plan being adopted in its entirety in all Queensland prisons. It is stated by the Comptroller-General of Prisons that the classification adopted has already resulted in a decrease in the total number of female prisoners received.

Unusual circumstances have combined to keep crime at a low point in South Australia. In the first place there was never any transportation of criminals to the State,

while in the earlier years of its history South Australian lawbreakers were transported elsewhere. The present system was drafted mainly on English and European lines by the late W. R. Boothby, C.M.G., and under his directions and that of his successor has been found to work admirably. Excellent work for the benefit and assistance of discharged prisoners is performed by the Prisoners' Aid Association.

There is no special information available with regard to the prison systems of Western Australia and Tasmania.

### § 5. Civil Courts.

1. **Lower Courts.**—The transactions of the lower courts on the civil side during each of the last five years are given in the table hereunder. As pointed out previously, the jurisdiction of the courts is by no means uniform in the various States. The figures, however, possess a certain value as indicating that, in comparison with other years, resort to litigation is on the decline in Australia.

#### LOWER COURTS.—CIVIL CASES, COMMONWEALTH, 1906 to 1910.

State.			1906.	1907.	1908.	1909.	1910.
New South Wales	...	{ Cases No.	20,573	26,548	30,472	32,637	30,059
		{ Amount £	*	63,350	83,372	87,432	77,700
Victoria	...	{ Cases No.	25,320	26,255	32,005	36,894	29,902
		{ Amount £	123,625	123,732	157,334	162,393	146,284
Queensland	...	{ Cases No.	10,311	10,304	12,016	12,244	11,951
		{ Amount £	36,408	35,576	42,863	43,363	45,432
South Australia	...	{ Cases No.	11,844	11,737	13,068	13,627	13,845
		{ Amount £	29,123	31,804	39,627	41,811	45,380
Western Australia	...	{ Cases No.	10,109	9,930	10,570	10,681	9,598
		{ Amount £	62,556	57,000	59,863	50,261	42,636
Tasmania	...	{ Cases No.	3,673	3,568	4,120	4,868	3,620
		{ Amount £	22,095	19,574	25,717	30,855	29,199
Commonwealth	...	{ Cases No.	81,830	88,342	102,251	110,951	98,975
		{ Amount £	†273,807	331,036	408,776	416,115	386,631

\* Not available. † Exclusive of New South Wales.

The figures just given represent the returns from Petty Sessions Courts in New South Wales and Victoria, the Petty Debts Cases in Queensland, the Local Courts of South Australia and Western Australia, and the Court of Requests in Tasmania.

2. **Superior Courts.**—In the next table will be found the transactions on the civil side in the Superior Courts during each of the years 1906 to 1910.

The New South Wales returns are to some extent defective, as the figures quoted for amount of judgments include in the case of the Common Law jurisdiction of the Supreme Court the total judgment signed, while in the case of the other States the figures refer to sums actually adjudged after trial. For New South Wales, also, the transactions of

district courts refer to the total amounts sued for, and not the sums actually awarded after trial. Statistically the chief importance of the table consists in the fact that it shews a marked decline in litigiousness in Australia.

### SUPERIOR COURTS.—CIVIL CASES, 1906 to 1910.

(COMMONWEALTH.)

State.			1906.	1907.	1908.	1909.	1910.

The average annual number of divorces and judicial separations in the Commonwealth at decennial periods from 1871 to 1901 is given hereunder :—

### DIVORCES AND JUDICIAL SEPARATIONS, 1871 to 1910.

		1871-1880.	1881-90.	1891-1900.	1901-10
Commonwealth	...	29	70	358	401

The bulk of the divorces and judicial separations refer, as the table shews, to New South Wales and Victoria, the Acts of 1892 and 1889 in the respective States making the separation of the marriage tie comparatively easy. In some statistical works it is customary to compare the divorces in any year with the marriages in the same year. The comparison is, however, quite valueless, as there is no necessary connection between the figures. Some value would attach to a comparison of the number of divorces with the number of married people living, but the latter information cannot be obtained with accuracy except at Census periods.

4. **Probates.**—The number of probates and letters of administration granted, together with the value of the estates concerned, is shewn below for each State for the period 1906 to 1910:—

### PROBATES AND LETTERS OF ADMINISTRATION, COMMONWEALTH, 1906 to 1910.

State		1906	1907.	1908.	1909.	1910.
New South Wales	{ Number	2,852	3,084	3,094	3,185	3,336

	{ Value £	19,196,664	20,013,133	20,427,887	22,732,165	22,007,170

As may naturally be expected, the figures in the above table giving the value of property left each year, shew considerable variations.

5. **Bankruptcies.**—The returns in bankruptcy during each of the last five years are given hereunder.

For several reasons comparisons drawn from the figures in the following table are of little value. In the first place, the statements of assets and liabilities are notably unsatisfactory, particularly in regard to the former. Then, again, there is wide dissimilarity in regard to the laws in force in the various States and the method of procedure thereunder in connection with bankruptcy. Further, there are no means of knowing how many persons in each State who were in a bankrupt condition made private arrangements with their creditors either personally or by intervention of a solicitor. The figures quoted in the table exclude the private arrangements in Victoria and South Australia, and the liquidations in Queensland and Tasmania.

## BANKRUPTCIES, COMMONWEALTH, 1906 to 1910.

6. **High Court of Australia.**—Under the provisions of section 71 of the Commonwealth Constitution Act, the judicial power of the Commonwealth is vested in a Federal Supreme Court, called the High Court of Australia, and in such other courts as the Parliament creates or invests with federal jurisdiction. The Federal High Court possesses both original and appellate jurisdiction, but so far its activities have been confined principally to the latter form. The powers of the court are defined in Chapter III. of the Constitution Act and in the Judiciary Acts of 1903, 1906, 1907, and 1910. At present the court consists of a Chief Justice and four other judges. Sittings of the court are held in the capitals of the various States as occasion may require. The following statement shews the transactions of the High Court for the quinquennium 1906-10:—

## COMMONWEALTH HIGH COURT TRANSACTIONS, 1906 to 1910.

III. AMOUNT OF FEES COLLECTED.					
Amount in each year...	£566	£523	£558	£505	£437

### § 6. Cost of Administration of Justice.

The table below shews the expenditure from Consolidated Revenue during each of the last five years in connection with the administration of justice in each of the States. Expenditure on police and prisons has been separately shewn. With regard to the figures quoted for "other" expenditure, a slight allowance has to be made for the fact that some extraneous expenditure has been included which it was found impossible to disentangle from the total, but the amount is in no instance large. Cost of buildings has been excluded from the return.

#### EXPENDITURE ON JUSTICE, COMMONWEALTH, 1906 to 1910.

State.				1906.	1907.	1908.	1909.	1910.

			Other	5 0	4 8	5 3	4 10	5 2
Tasmania	...	...	Police	3 11	4 2	4 4	4 4	4 3
			Gaols	0 8	0 7	0 8	0 7	0 7
			Other	2 4	2 1	1 10	1 7	1 2
Commonwealth	...	...	Police	5 9	5 9	5 10	5 11	6 2
			Gaols	1 0	1 0	1 0	0 11	0 11
			Other	2 7	2 8	2 9	2 10	2 10

The total expenditure in the Commonwealth in connection with the administration of justice has fallen from ten shillings per inhabitant in 1901 to nine shillings and elevenpence in 1910. Police expenditure has increased by about fivepence per head, the average for gaols is about threepence per head less, while the expenditure on courts and the remaining machinery of justice has fallen by threepence per head, during the same period.

## SECTION XXIV.

## PUBLIC BENEVOLENCE.

## § 1. Introductory.

1. **General.**—Charity and charitable effort in Australia may be classified under three headings, viz.:—(a) State; (b) public; (c) private. To the first belong all institutions wholly provided for by the State, such as the principal lunatic asylums in the various States, the Government hospitals in Western Australia, and the Government asylums for infirm in New South Wales. The second class comprises public institutions of two kinds, viz.:—(i.) Institutions partially subsidised by the State or State endowed, but receiving also private aid, and (ii.) those wholly dependent upon private aid. To the former division belong such institutions as the Melbourne and other large metropolitan hospitals. In the latter are included institutions established and endowed by individuals for the benefit of the needy generally. All charitable movements of a private or special character are included in the third group.

A more or less accurate statistical account is possible in classes (a) and (b), but in regard to (c) complete tabulation is, for obvious reasons, impossible. Moreover, public response to special appeals, and summary relief in kind, cannot be statistically recorded. Hospitals, orphanages, homes, benevolent asylums, etc., naturally attract the largest share of charitable aid. There are, nevertheless, numerous other and minor charities which mark the course and measure the amount of a considerable volume of private beneficence. In institutions which receive Government aid, management and finance are usually relegated to executive bodies, elected ordinarily on a democratic basis.

The distribution of wealth in the Australian Commonwealth, and the generally favourable conditions, as regards scope for the exercise of natural ability, operate to prevent the development of a permanent pauper class, and at the same time lessen in a dual way the burden of charity. This latter is brought about by the increase, on the one hand, of the number of people whose prosperity enables them to relieve the indigent and unfortunate, and by the reduction, on the other, of the number who need assistance. Enactments of State Legislatures have decreed short hours and a liberal holiday allowance for large numbers of persons engaged in industrial and other pursuits, and, even in occupations not covered by Act of Parliament, the general conditions of employment often provide a considerable amount of leisure. This, coupled with an equable climate, enables the community to spend much of its time in the open air, with resultant advantages to its physique and general health. No poor-rate is levied in Australia, and Government aid without return is required only for the aged and disabled. Moreover, although Old Age Pensions are paid by the Commonwealth, the payments are looked upon rather in the light of a citizen's right than as a charity. Reference to the Old Age Pensions will be found in § 3, Miscellaneous, chap. xxxiv.

To meet temporary conditions, or rather, what ought to be temporary conditions, various relief works have been started from time to time, in which the able-bodied who may be forced to seek official relief are required to make some return for the assistance afforded. In the past, attempts to relieve the unemployed have led to large expenditures, but at the present time the entire scheme of such relief is on an altogether more satisfactory footing.

In each of the States there are Government asylums for the care of the insane, and the condition of these unfortunates has been steadily ameliorated by the general advance in psychiatry.

Young children deprived of parental training and control are cared for and educated in "orphanages" and "industrial schools," and those who have been guilty of some specific offence, or who are beyond adequate parental control, are committed to "reformatories."

In common with other civilised communities, relief funds have from time to time been organised for famine-stricken territories (*e.g.*, China, India, etc.), or for places where plague, flood, fire, or earthquake has shewn the need of urgent relief. Statistical information in regard to this form of charity is not, however, available. It may be mentioned that the daily Press frequently accepts the duties of collectorship in charity appeals.

**2. Charity Reforms.**—The evident overlapping of charitable effort has on various occasions led to discussion regarding methods of collection and distribution of aid, and has, moreover, given rise to a desire for improved administration. In this connection, an important conference of representatives of charitable associations was held in Melbourne in September, 1907, with the object of systematically digesting the experiences of the committees of management of the various hospitals and kindred institutions. These obtain their revenue from State and municipal subsidies, from proceeds of concerts, entertainments, etc., from organised public collection, from private contributions and bequests, and from patients. Some of the institutions also have paid or honorary collectors. As a result of the investigations of this Conference, it was found (*a*) that institutions of a similar character were competing with each other; (*b*) that public aid was not effectively dispensed; (*c*) that public eleemosynary impulse was prejudiced by the circumstance that institutions primarily intended for the poor and needy were being utilised by people who could afford to pay for private relief, particularly in regard to medical or surgical treatment. As an outcome of the Conference, societies to prevent overlapping have been formed, resulting in improved economical collection and distribution of charitable aid.

Other proposed reforms aim at ascertaining the causes of poverty and crime, and finding the necessary palliative. Increased provision of better houses and workrooms and improved sanitation are advocated, together with more stringent legislative measures to enforce cleanliness and healthy modes of life. Further, Factories Legislation, Health Acts, etc., have enacted provisions for safeguarding dangerous machinery, and permitting only competent persons to be employed thereon.

**3. Difficulties of General Tabulation.**—Differences in the organisation of charities prevent uniform tabulation of statistics for all the States, but certain of the larger features of the statistics of benevolence have been combined for the whole Commonwealth. Combinations for the whole of Australia for the five years ended 1910 are given for hospitals, benevolent asylums, orphanages, and hospitals for the insane. Satisfactory tabulation for other charities is not yet possible. Where the combination has been for dissimilar periods the nearest years have been taken.

## § 2. The Larger Charities of Australia.

1. **Hospitals.**—Most of the State capitals have several large and well-equipped hospitals, and there is at least one in every important town. In large centres there are hospitals for consumptives, women, children, infectious diseases, incurables, etc. The number of hospitals in Australia, with the admissions, patients treated, deaths, and expenditure, is shewn in the following table. The "special" hospitals are included in the returns for 1906, but in subsequent years only general hospitals are tabulated, since the working of "special" institutions is not properly comparable with those which treat cases of all kinds. In 1909, the figures for assisted hospitals in Western Australia were included for the first time, not having been available for previous years.

### HOSPITALS IN THE COMMONWEALTH, 1906 to 1910.

Particulars.	1906.	1907.	1908.	1909.	1910.
Number of institutions ...	313	304	312	337	338
Number of beds ...	12,108	11,463	12,057	12,630	13,342
Admissions during year ...	99,308	98,031	107,292	112,102	119,091
Indoor patients treated ...	106,488	104,483	114,668	118,928	126,234
Deaths ...	7,627	8,005	8,560	8,814	8,946
Expenditure ...	£ 612,628	639,002	758,993	805,787	802,212

In addition to those admitted to the institutions there are large numbers of out-patients. The exact number of these cannot be given, but a rough estimate of distinct cases for 1910 places the total at about 280,000.

Fuller details of hospital statistics are given for 1910 in the table below, the States of the Commonwealth being shewn separately:—

\* Exclusive of assisted hospitals. † Including rent.

**2. Hospitals for General and Special Cases.**—The tables here given refer to general hospitals. In addition there are hospitals for “specials,” (such as women's, children's, and infectious diseases hospitals), and institutions nearly allied to hospitals (such as consumptive sanatoria). In the first and second numbers of the Commonwealth Year Book, these were tabulated with general hospitals. Where the institutions carry on general hospital relief, they are still included with those establishments.

(i.) *New South Wales.* A feature of late years has been the establishment of hospitals in many country towns of growing importance. In 1898, there were 13 metropolitan and 97 country hospitals; in 1910 these had increased to 20 and 119. A Government hospital is established at Little Bay. There are four women's and one children's hospitals in the metropolis. Other leading institutions are the Thomas Walker Convalescent Hospital, Dental Hospital, Home for Incurables, Hospital for Infants and Asylum for Women and Children, Infants' Home, etc.

(ii.) *Victoria.* Special hospitals, not included in the above tabulation, comprise the Women's Hospital, with infirmary and midwifery departments, the Children's Hospital, the Hospital for Women and Children, two Consumptive Sanatoria (one a Government institution), Inebriates' Institute, Convalescent homes, etc.

(iii.) *Queensland.* There are four lying-in and two children's hospitals in Queensland, and a sanatorium; also two Lock hospitals, established under the provisions of the Contagious Diseases Act of 1868.

(iv.) *South Australia.* In connection with the leading general hospital in the metropolis, there is a consumptive home and infectious diseases block; there are also a children's hospital, two lying-in homes, sanatorium, convalescent home, home for incurables, etc.

(v.) *Western Australia.* The leading general hospitals are Government establishments. There is a lying-in establishment in connection with the metropolitan women's home. There are also homes for the dying and incurable, homes and rests for sailors, strangers, etc.

(vi.) *Tasmania.* Included in the Tasmanian general hospitals are two which pay particular regard to “special cases”; these are the hospital for contagious diseases

(a Government institution) and the convalescent home. Other important institutions of a general nature are the New Town charitable establishment, and the invalid dépôt.

**3. Benevolent and Destitute Asylums.**—A marked increase has taken place in the amount of aid bestowed upon the aged. Two elements, each of them independent of the growth of population, have influenced this increase. One is, that the general age of the community has advanced,—the large flow of immigration of fifty and sixty years ago having been mostly of persons in the prime of life; the other is the increased regard paid in all British communities to the well-being of the helpless. The result in Australia has been that numerous establishments have been founded for the housing and protection of such as are no longer able to care for themselves. The institutions are supported by Government and municipal aid, public subscriptions, charity performances, bequests, etc., and in many cases relatives of indigent and afflicted persons contribute to their maintenance.

The impossibility of an entirely satisfactory statistical tabulation in regard to all forms of charitable aid, is especially marked in the case of benevolent institutions, since the conditions under which they have been established in the different centres in the Commonwealth have caused divergence in their development and in the classes of cases treated by them. For example, in Western Australia the Home for Destitute Women includes a maternity ward, for which the statistics are not separately kept. Since the predominating function of the Institution is aid to the destitute, it has been included among benevolent asylums. In Victoria, nine of the hospitals are also Benevolent asylums, and they are included wholly under the former. In South Australia, the Destitute Asylum includes lying-in and children's departments.

(i.) *Government Asylums for the Infirm, New South Wales.* There are six of these institutions in New South Wales, with something over 4000 beds, generally nearly all in use. Inmates at the end of 1910 numbered 3325; deaths numbered 673; and the expenditure amounted to £65,221.

(ii.) *Benevolent Asylums, Victoria.* Besides the asylums attached to hospitals, there are eight institutions in Victoria. The daily average number indoors was 2328 for 1909-10, with 1076 distinct cases of outdoor relief. Deaths numbered 438. The total expenditure was £36,862, and receipts £39,014—£20,043 from Government and £18,971 from other sources.

(iii.) *Benevolent Asylums, Queensland.* There are four institutions in Queensland, with 1262 beds. The total number in the asylums during 1910 was 1646, with a daily average of 1082. Deaths numbered 175. Expenditure amounted to £32,606, and receipts to £32,650, of which £31,380 was Government aid.

(iv.) *Destitute Asylum, Adelaide.* Outside of hospitals and lunatic asylums the destitute of South Australia are dealt with and relieved at the Destitute Asylum, Adelaide. The institution includes lying-in and children's departments. In the asylum the average number of inmates in 1909-10 was 350. There were sixty-nine deaths during the year. Expenditure totalled £6566. In addition, £9432 was dispensed through the institution for outdoor relief of the destitute in both metropolitan and rural districts.

(v.) *Homes for the Destitute, Western Australia.* There are four of these homes in Western Australia supported by public funds. Attached to the Perth Women's Home is a lying-in department. Outdoor relief to the poor and aged is given, the amount expended being included in expenditure in the above table. More than fifteen hundred cases were dealt with during 1909. There were ninety-eight deaths.

(vi.) *Charitable Establishments, Tasmania.* There are two principal Government charitable establishments in Tasmania. Beds numbered 315 in 1910. The total number of persons treated was 555, of whom 64 died. The daily average number resident was 235. Total expenditure was £4509, receipts amounting to the same sum, of which £4125 was contributed by the State.

**4. Orphanages, Industrial Schools, etc.**—The organisation of charitable effort varies greatly in regard to orphans and waifs. In many institutions shelter and some form of industrial training is offered to destitute children of all classes, whether orphans or not, while some of those styled orphanages do not confine their relief to orphans strictly so called. The figures in the next table are those for institutions where, it is believed, the principal effort is on behalf of those who are really orphans:—

#### ORPHANAGES IN COMMONWEALTH, 1906 to 1910.

Particulars.	1906.	1907.	1908.	1909.	1910.
Number of institutions ... ..	38	38	38	42	42
Admissions ... ..	1,333	1,465	1,393	1,613	1,626
Total number of inmates during year ...	4,868	5,081	4,078	5,150	5,331
Deaths ... ..	15	17	19	14	22
Expenditure ... ..	£ 61,098	62,439	65,154	61,088	72,882

(i.) *New South Wales.* The care of destitute and neglected children is entrusted to the State Children's Relief Board, whose officers are charged with a strict supervision regarding the welfare of the children and the relation to them by those to whom they are boarded out. Useful trades and profitable occupations are taught, and many of the children become useful members of society. The number of children under the board's supervision in 1910-11 was 4498. The board's expenditure in 1910-11 was £90,352, or £20 17s. per child.

There are also thirteen orphanages, with about 800 persons under care. Deaths are but one or two annually, and the yearly expenditure fluctuates between £7300 and £10,800.

New South Wales had in 1910 three reformatory institutions—the Carpenterian State Reformatory, and the "Sobraon" State Training Ship for boys, the enrolment for 1910 being 56 and 407 respectively; and the Girls' State Industrial School, where for the same year the enrolment was 133.

The training ship attained very satisfactory results. In forty years more than 5000 boys were dealt with, and the records shew that 98 per cent. of these have developed into good citizens. In 1911, the "Sobraon" was purchased by the Commonwealth, to be used in connection with naval training. The boys were placed in the Mittagong Farm Homes and the Brush Farm Reformatory. To the Carpenterian Reformatory are sent boys who have been convicted in the courts, whom it is desired to keep apart from other prisoners, and who are taught useful trades.

(ii.) *Victoria.* There are ten orphanages in Victoria, with 1580 beds. The total number under care in 1910 was over 2000. Average annual admissions are about 500. This average was, however, not reached in 1910. Deaths numbered eight in 1910. The annual expenditure is about £23,000.

At the end of 1910 there were three industrial and eleven reformatory schools in the State. Of these, one industrial and one reformatory school are wholly controlled by the Government, being used merely as receiving and distributing depôts. The children are sent thence to situations, foster homes or other institutions dealing with State wards. The other schools are under private management, receiving an allowance for State wards. Many of the reformatory children are placed with friends or licensed out. On 31st December, 1910, the wards of the State numbered 6860—comprising 6656 neglected and 204 reformatory children. There were also 39 children free from legal control, who, being incapacitated, were maintained by the State. The total expenditure for 1910 was £89,689, of which £86,160 was borne by the Government.

Under Government control, but not administered as charity, are the training ships "John Murray" and "Dart," on which general instruction is imparted and special training given in technical seamanship.

(iii.) *Queensland.* There are seven orphanages in Queensland with over 1000 beds. The number under care is about 1600, deaths averaging six per annum. The expenditure in 1910 was £27,538.

There are also six industrial and reformatory schools. The total number of children under State control at the end of 1910 was 2960. The gross cost was £34,370, of which £31,368 was borne by the Government.

(iv.) *South Australia.* The State Children's Department exercises a supervision over the probationary and industrial schools, the reformatories, and the Methodist Home. The total number of admissions into these institutions in 1909-10 was 212. The number of inmates on the 30th June, 1910, was 198, in addition to which 1281 were placed out, or had been adopted or apprenticed. There were three deaths of children in industrial schools, and seven of those placed out and in other institutions. The number of children under State control on 30th June, 1910, was 1479. The expenditure for 1909-10 was £21,365 in gross, of which the Government aid was £19,414.

(v.) *Western Australia.* In Western Australia there were, in 1909, eight orphanages (including industrial orphanage schools). The admissions during the year were 173, and the number in institutions on 31st December was 681. There was one death during the year. The State expenditure was about £10,000.

In the Government Industrial School there were, at the end of 1909, 24 inmates, 161 having been admitted during the year. Five deaths occurred. At the end of 1910 751 children were under State control. The net cost to the State was £14,194, parents' contributions amounting to £705.

(vi.) *Tasmania.* There were two admissions to the orphanage in 1910 and thirty-six inmates during the year. No deaths occurred. Expenditure amounted to £422.

There are three industrial schools under benevolent institutions in the State. Admissions in 1910-11 numbered twenty-four, and total inmates during the year 116. No deaths occurred. The expenditure was £1997.

Under the boarding-out system an annual average of 140 children are placed out at an annual average expenditure of £1610. The total number of children under State control at the end of 1910 was 301, the gross cost to the State of children's relief being £3454, of which £296 represents parents' contributions.

vii. *Neglected Children.* The following table summarises the number of neglected children under State Departments. In New South Wales a number of children are boarded out with their own mothers. The inclusion of these would make the total number of children in that State 8680.

#### STATE RELIEF OF NEGLECTED CHILDREN.—TRANSACTIONS OF STATE DEPARTMENTS IN THE COMMONWEALTH, 1910.

\* For year ended 5th April following. † For year ended 30th June preceding.

5. *Lepers.*—Lazarets for the treatment of lepers have been established in New South Wales (Little Bay); Queensland (Stradbroke Island, near Brisbane, and Dayman Island, Torres Straits); and the Northern Territory (Mud Island). Quarantine and isolation stations have also been used for the segregation of patients. A great deal of information concerning the beginning and progress of leprosy in Australia has been collected and published by Dr. J. Ashburton Thompson, Chief Government Medical Officer and President of the Board of Health, New South Wales, from whose reports the following table has been compiled:—

#### CASES OF LEPROSY RECORDED IN THE COMMONWEALTH, 1855 to 1910.

State.	1855 to 1905.	1906.	1907.	1908.	1909.	1910.	Total.

Total ... ..	*†373	22	26	28	14	14	*†477

\* In addition, some Chinese.

† In addition, many Kanakas.

6. **Hospitals for the Insane.**—The method of compiling insanity statistics has been fairly uniform throughout the States, but the various methods of observing the early stages of the development of insanity introduce an element of uncertainty which considerably reduces the value of comparison. In the summary given below, licensed houses (except as regards expenditure) are included for New South Wales throughout, and the number in Victoria is included in 1907, 1908, 1909, and 1910, but the figures are exclusive of reception houses and observation wards in gaols:—

#### HOSPITALS FOR INSANE, COMMONWEALTH, 1906 to 1910.

Particulars.	1906.	1907.*	1908.*	1909.*	1910.*
Number of institutions ... ..	27	30†	30†	31†	31†
Number of beds ... ..	13,507	13,238	14,317	14,546	14,978
Admissions ... ..	2,839	2,583	2,638	2,740	2,936
Total number under treatment ...	16,803	17,000	17,373	17,915	18,870
Discharged as recovered, relieved, &c. ...	1,258	1,216	1,159	1,245	1,309
Deaths ... ..	1,003	1,018	1,071	1,046	1,177
Expenditure ... ..	£404,354	500,168	511,468	514,531	561,677

\* Exclusive of receiving wards at two general hospitals, previously included. † Includes five licensed houses for insane in Victoria.

The proportion of insane, as well as the total number returned as under treatment is gradually rising. In the next table the number of insane under official care in Australia is given, and in the table following the proportion of insane to population.

The number of insane persons in institutions in Australia at the end of each of the last five years was as follows:—

#### INSANE PERSONS IN THE COMMONWEALTH, 1906 to 1910.

State.	1906.	1907.	1908.	1909.	1910.
New South Wales ... ..	5,422	5,509	5,673	5,902	6,148
Victoria ... ..	4,876	4,969	5,014	5,097	5,241
Queensland ... ..	2,029	2,069	2,184	2,227	2,260
South Australia ... ..	994	1,019	1,051	1,051	1,055
Western Australia ... ..	546	630	707	782	793
Tasmania ... ..	482	502	507	506	505
Commonwealth ... ..	14,349	14,698	15,136	15,565	16,002

For the period embraced in the tables Victoria shows the highest rate of insanity, roughly one in 250 persons. It is stated that this is chiefly owing to the proportionately greater number of old persons in that State. On the other hand, in Western Australia, where the population is much younger, a considerably lower insanity rate has prevailed, being about one in 500 in 1906, about one in 400 in 1907 and 1908, and about one in 350 in 1909 and 1910.

## PROPORTION OF INSANE, COMMONWEALTH, 1906 to 1910.

State.	1906.	1907.	1908.	1909.	1910.
PER 1000 OF THE POPULATION.					
New South Wales ...	3.56	3.53	3.58	3.66	3.74
Victoria ...	4.00	4.02	4.01	3.99	4.03
Queensland ...	3.76	3.79	3.92	3.85	3.77
South Australia ...	2.68	2.70	2.70	2.65	2.57
Western Australia ...	2.14	2.48	2.72	2.94	2.87
Tasmania ...	2.60	2.65	2.64	2.62	2.61
Commonwealth ...	3.51	3.53	3.58	3.60	3.62

Consequent upon the development of a more rational attitude to the treatment of mental cases, there is growing up a greater willingness to submit necessary cases to treatment at an earlier stage than formerly. Hence an increase in the number of recorded cases does not necessarily imply an actual increase in insanity. It is important to bear this in mind, because the small progressive increase in the preceding table is probably to be attributed largely, if not solely, to this circumstance. The increase in expenditure is another evidence of the greater care bestowed on the insane.

The leading features in regard to institutions for the care of the insane are given below for 1910:—

HOSPITALS FOR THE INSANE.—NUMBER, STAFFS, AND ACCOMMODATION,

\* Exclusive of inmates of the Receiving House, Royal Park, and of Receiving Wards attached to the hospitals at Bendigo and Geelong, and of five private licensed houses.

In some of the States it is the practice to allow persons well advanced towards recovery to leave the institutions and reside with their relatives or friends, but they are nevertheless under supervision of the asylum authorities and are kept on the books. These patients are not shewn in the above table as inmates. In nearly every case absconders are retaken. They are shewn above as readmitted.

The revenue of Government asylums is small in comparison with their cost, and consists chiefly of patients' fees. The proportion of expenditure borne by the State amounts to about 86 per cent.

### HOSPITALS FOR THE INSANE (GOVERNMENT ONLY), REVENUE AND EXPENDITURE, 1910.

\* Lunacy patients only. † Including £2446 expenses of Government hospital at Morisset and £1500 expenses of temporary hospital at Stockton. ‡ Buildings and repairs.

(i.) *New South Wales.* The average length of residence in the hospitals of persons who died was 4 years 8 months for males and 5 years 9 months for females; and that of persons who were discharged was 1 year 2 months for males and 1 year 7 months for females.

There are also two State reception houses, where suspected persons are confined for observation, being subsequently either discharged or transferred to lunatic asylums. In two of the gaols observation wards have been instituted, with similar functions.

(ii.) *Victoria.* The average residence in the hospitals of those who died was 8 years 1 month for males, and 7 years 2 months for females; that of those discharged, 1 year 10 months for males, and 1 year 5 months for females.

There are also lunacy wards in two of the general hospitals. On 24th September, 1907, a State receiving house was opened, where persons are placed for observation, and subsequently discharged or transferred to asylums.

(iii.) *Queensland.* The average residence in the institutions of those who died was 8 years 4 months for males and 7 years 5 months for females; and of those who were discharged, 2 years 11 months for males and 1 year 3 months for females.

There are also three reception houses for insane, which act as depôts to which patients are sent with a view to determining whether their mental illness is of a merely temporary character, readily to be relieved, or is of such a nature as to need further treatment at the State asylums.

(iv.) *South Australia.* The average residence of those who died was 8 years 4 months for males and 5 years 3 months for females; of those discharged, 1 year 1 month for males and females.

(v.) *Western Australia.* The period of residence of those who died during the year averaged 2 years 9 months for males and 3 years 6 months for females; of those who were discharged, 1 year 3 months for males and 8 months for females.

(vi.) *Tasmania.* The period of residence of those who died was 4 years 10 months for males and 11 years 3 months for females; that of those discharged, 2 years 2 months for males and 1 year 3 months for females.

(vii.) *Causes of Insanity.* The proportion of causes of insanity to the total of ascertained causes in Australia in 1907, 1908, 1909, and 1910 shows that hereditary influences have been the chief factor, one-fifth of the total ascertained causes coming under this head. Domestic troubles, adverse circumstances, etc., have also been a fruitful source. About one case in eight was due to intemperance in drink.

**PROPORTION OF ASCERTAINED CAUSES, etc., OF INSANITY, COMMONWEALTH,  
1907-10.**

**7. Treatment of Inebriates.**—The treatment of inebriates is referred to in the section dealing with Public Justice hereinbefore. (See page 917.)

**8. Protection of Aborigines.**—For the protection of the aboriginal Australian race there are institutions, under the supervision of Aborigines Boards, where the blacks are housed and encouraged to work, the children receiving elementary education. The work is usually carried on at mission stations, but many of the natives are nomadic in habit of life, and receive food and clothing when they call, whilst others but rarely come under the notice of the boards. The native race is extinct in Tasmania. The average annual expenditure on maintenance, etc., for the last five years was—New South Wales, £14,472; Victoria, £4268; Queensland, £10,380; South Australia, £14,884; Western Australia, £18,810; Commonwealth, £62,814.

**9. Other Charitable Institutions.**—Owing to variety of name and function of other charitable institutions it has been found impracticable to give detailed results. The aid given in kind—food, clothing, tools of trade, etc.—is considerable, whilst the shelter and treatment afforded ranges from a bed for a night for casual callers in establishments ministering minor charity, to indoor treatment over long periods for those that exist for the relief of the aged and infirm. The institutions not so particularised include asylums for the deaf, dumb, and blind, maternity institutions and infant homes, homes for the destitute and aged poor, industrial colonies, night shelters, crèches, homes of hope, rescue homes, free kindergarten and ragged schools, auxiliary medical charities, free dispensaries, benevolent societies and nursing systems, ambulance and health societies, boys' brigades, humane and animals' protection societies, prisoners' aid associations, shipwreck relief societies, bush fires, mining accident relief funds, etc.

**10. State Expenditure on Charities.**—The table below gives the amount expended by Government on charities in each of the last four years. In some of the States amounts have been included for minor items, which in other States are charged to other heads:—

## STATE EXPENDITURE ON CHARITIES, 1907-10.

State.	1907.	1908.	1909.	1910.
	£	£	£	£
New South Wales ... ..	440,360	481,887	519,327	528,289
Victoria ... ..	361,498	383,086	378,165	385,467
Queensland ... ..	206,881	216,144	200,141	205,577
South Australia ... ..	113,345	88,752	88,618	87,112
Western Australia ... ..	146,685	175,839	149,892	139,700
Tasmania ... ..	46,100	47,537	36,316	39,558
Commonwealth ... ..	1,314,869	1,393,245	1,372,459	1,385,703

11. **Total Charitable Expenditure.**—The expenditure in the Commonwealth in money on hospitals, charities, and all forms of relief publicly given, comprising the amounts furnished by Government and those raised by public subscription, etc., but excluding old-age pensions, exceeds £2,200,000.

## SECTION XXV.

## GENERAL GOVERNMENT.

## § 1. Scheme of Parliamentary Government.

1. **General.**—The legislative power of the Commonwealth is vested in the Federal Parliament, which consists of the Sovereign, the Senate, and the House of Representatives. The Sovereign is represented throughout the Commonwealth by the Governor-General, who, subject to the Constitution of the Commonwealth, has such powers and functions as the Sovereign is pleased to assign to him. In each State there is a State Governor, who is the representative of the Sovereign for the State, and who exercises such powers within the State as are conferred upon him by the Letters Patent which constitute his office, and by the instructions, which inform him in detail of the manner in which his duties are to be fulfilled. The Legislature in each State is also bi-cameral, and consists of (a) a Legislative Council and (b) a Legislative Assembly, or House of Assembly, the legislative powers of these chambers being delimited by the Commonwealth and the State Constitutions. The latter chamber, which is the larger, is always elective; the qualification for the franchise varies in character. The former chamber is, in the case of New South Wales and Queensland, nominated by the Governor-in-Council, but in the other States it is also elective, the constituencies being differently arranged and some property qualification for the electorate being required. In the Federal Parliament, however, the qualifications for the franchise are identical for both Houses. A brief account of the constitutional history of each of the States was given in previous issues of this book (see especially Year Book No. 4, pp. 27 to 32).

2. **Number of Members of the Legislatures.**—The following table shews the number of members in each of the legislative chambers in the Commonwealth and in each State in March, 1912:—

MEMBERS OF PARLIAMENTS OF AUSTRALIA, 1912.

Members in—	C'wealth.	N.S.W.	Victoria.	Q'land.	S. Aust.	W. Aust.	Tas.	Total.
Upper House	36	62	34	44	18	30	18	242
Lower House	75	90	65	72	40	50	30	422
Total ...	111	152	99	116	58	80	48	664

The use of the expressions "Upper House" and "Lower House" in the above statement, though not justified constitutionally, is convenient, inasmuch as the legislative chambers are known by different names in the Commonwealth and in some of the States.

In the Commonwealth Parliament the Upper House is known as the Senate, and in the State Parliaments as the Legislative Council. The Lower House is known as follows:—In the Commonwealth Parliament as the House of Representatives, in the State Parliaments of New South Wales, Victoria, Queensland, and Western Australia as the Legislative Assembly, and in the State Parliaments of South Australia and Tasmania as the House of Assembly.

3. **The Cabinet and Executive Government.**—The sections of the Commonwealth Constitution Act dealing with the Executive Government are given on pages 25 and 26 hereinafore. In both the Commonwealth and the State Legislatures the forms of Government have been founded on their prototype, the Imperial Government, and the relations established between the Ministry and the representatives of the people are in accordance with those prevailing in Great Britain. The executive powers in the Commonwealth and in the State Governments are vested in the Governor-in-Council. The Executive Council in the Commonwealth and in the majority of the States is co-extensive with a group of departmental chiefs who are usually spoken of as the Cabinet, and who change with the rise and fall of party majorities. In Victoria and Tasmania, however, the Cabinet on leaving office remain members of the Executive Council, though they no longer attend its meetings, and it is in fact an essential feature of the Cabinet system of Government that they should not do so, except to assist the Governor in transacting purely formal business, or to advise on non-political questions.

(i.) *The Executive Council.* This body is composed of the Governor and the Ministers of State holding office for the time being. The latter are sworn both as Executive Councillors and as Ministers controlling the different administrative departments. It should be observed that all persons living who have held Ministerial office under former Governments are also technically members of the Executive Council, and are thus liable to be specially summoned for attendance at meetings of that body. The meetings are official in character; they are presided over by the Governor-General (or Governor) and are attended by the clerk, who keeps a formal record of its proceedings. At these meetings the decisions of the Cabinet are put into official form and made effective, appointments are confirmed, resignations accepted, proceedings ordered, and notices and regulations published.

The official members of the Executive Council in March, 1912, are specified below. In addition all living members of past Ministries (see following pages) are technically liable to be officially summoned to attend meetings of the Executive Council:—

#### OFFICIAL MEMBERS OF THE COMMONWEALTH EXECUTIVE COUNCIL, 1912.

<i>Prime Minister and Treasurer</i>	...	The Right Hon. ANDREW FISHER, P.C.
<i>Attorney-General</i>	... ..	The Hon. W. M. HUGHES.
<i>Minister of State for External Affairs</i>	...	The Hon. J. THOMAS.
<i>Minister of State for Home Affairs</i>	...	The Hon. K. O'MALLEY.
<i>Postmaster-General</i>	... ..	The Hon. C. E. FRAZER.
<i>Minister of State for Defence</i>	...	The Hon. G. F. PEARCE.
<i>Minister of State for Trade and Customs</i>	...	The Hon. F. G. TUDOR.
<i>Vice-President of Executive Council</i>	...	The Hon. G. MCGREGOR.
<i>Honorary Minister</i>	... ..	The Hon. E. FINDLEY.
"	"	"
"	"	"
"	"	The Hon. E. A. ROBERTS.

Particulars of previous Commonwealth Ministries are given on pages 37-9 hereinbefore, and on pages 946 and 947 following.

(ii.) *The Cabinet.* The meetings of this body are private and deliberative. No one is admitted but the actual Ministry of the day, no records of the meetings transpire, and no official notice is taken of the proceedings. The members of the Cabinet, being the leaders of the party in power in Parliament, control the bent of legislation and must retain the confidence of the people and also of the Governor-General (or Governor), to whom they act as an advising body. They also in effect wield, by virtue of their seats on the Executive Council, the whole executive force of the community. In summoning, proroguing, or dissolving Parliament the Governor-General (or Governor) is usually guided by the advice tendered him by the Cabinet, though legally he is in no way bound to do so. The following statement gives the names of the Ministries of State for the Commonwealth, who have held office since the inauguration of the Commonwealth Government:—

4. **The Appointment of Ministers and of Executive Councillors.**<sup>1</sup>—Although it is technically possible for the Governor to make and unmake cabinets at his pleasure, under all ordinary circumstances his apparent liberty in choosing his Executive Council is virtually restricted by the operation of constitutional machinery. When a Ministry is defeated in Parliament or at the polls the procedure both in the Commonwealth and the State Parliaments generally, though not invariably, follows that prevailing in the

1. See Jenks' "Government of Victoria," pp. 269 *et seq.*

Imperial Parliament. The members of the Ministry tender their resignations to the Governor-General or Governor, whose duty it is to announce his intention of accepting them. The resignations are not actually accepted at once, for in that case the offices would become vacant and business would be at a standstill. The outgoing Premier usually suggests to the Governor the name of the most prominent member of the Opposition, and the Governor thereupon "sends for" the person suggested; and if the latter accepts the responsibility, he endeavours to form a Ministry; if he fails, he informs the Governor, who applies to some other person. The distribution of portfolios is first arranged by the proposed Ministers themselves and is then submitted to the Governor for approval, which is given as a matter of course unless the list contains the name of any person against whom serious objections exist. Before appointing the persons named to the various offices the Governor accepts the resignations of the outgoing Ministers, and also appoints to seats in the Executive Council such members of the new Ministry as do not already hold them. Their seats in Parliament being ordinarily vacated by acceptance of office the new Ministers must go before their constituencies, and the result of these by-elections usually decides the attitude of the Opposition. In the Commonwealth Parliament, however, seats are not vacated by the acceptance of office. It may be seen from what has been stated above that only certain persons can in practice be chosen as members of a Ministry. The Cabinet must be chosen so that the following conditions are fulfilled:—(a) The members must belong to one or other of the Legislative Chambers and also to the same political party; (b) that party must possess a majority in the House of Representatives or in the Legislative Assembly or House of Assembly as the case may be; (c) the Ministers must carry out a concerted policy; (d) they must acknowledge the leadership of one chief Minister; and (e) must be under a joint responsibility, signified by resignation *en bloc* in the event of Parliamentary censure.

**5. The Resignation of Ministers.**—A Ministry is bound to resign either when it fails to command a majority in the House of Representatives, the Legislative Assembly, or the House of Assembly, as the case may be, or when a want of confidence has been clearly shewn, either (a) by a vote of censure, (b) by a declaration of want of confidence, or (c) by a vote disapproving of some act of the Government. In such cases the Ministry must either resign or must appeal to the country.

**6. Enactments of the Parliament.**—In the Commonwealth, all laws are enacted in the name of the Sovereign, the Senate, and the House of Representatives. The subjects with respect to which the Commonwealth Parliament is empowered to make laws are enumerated in the Constitution Act (see pp. 22-3 hereinbefore). In the States, laws are enacted in the name of the Sovereign by and with the consent of the Legislative Council and Legislative Assembly or House of Assembly. The Governor-General or the State Governor acts as Viceroy as regards giving the Royal Assent to or vetoing Bills passed by the Legislatures, or reserving them for the special consideration of the Sovereign. In the States, the Councils and Assemblies are empowered generally, subject to the Commonwealth Constitution, to make laws in and for their respective States in all cases whatsoever. Subject to certain limitations, they may alter, repeal, or vary their Constitution. Where a law of a State is inconsistent with a law of the Commonwealth the latter prevails, and the former is, to the extent of the inconsistency, invalid.

**7. Powers and Functions of the Governor-General and of the Governors.**—The Governor-General and the State Governors act under the authority of the commissions by which they are appointed and of Letters Patent under the Great Seal of the United Kingdom, and according to instructions issued by the Colonial Office and passed under the Royal Sign Manual and Signet.

(i.) *The Governor-General.* The office of Governor-General and Commander-in-Chief of the Commonwealth was constituted by Letters Patent issued on the 29th October, 1900, in pursuance of the provisions of the Commonwealth Constitution Act. The powers and duties of the Governor-General were further defined by Royal instructions passed on

the same date. The principal and most important of his functions, legislative as well as executive, are expressly conferred upon him by the terms of the Constitution itself. He is the custodian of the Great Seal of the Commonwealth, and has the appointment of political officers to administer Departments of State of the Commonwealth.

- (a) His legislative functions are exercised with respect to proposed laws as finally passed by the Federal Houses of Parliament. Such Bills are presented to the Governor-General for his assent in the King's name, on receiving which they become law throughout the Commonwealth. The Governor-General may, however, withhold his assent, or may reserve any Bill for the King's pleasure. He may return to the House in which it originated any proposed law with suggested amendments. The King may disallow any law within one year from the date on which it was assented to by the Governor-General.
- (b) The Governor-General's executive functions are, under ordinary circumstances, exercised on the advice of his responsible Ministers. Various specific powers are vested in him by the Constitution; he may summon or prorogue Parliament and may dissolve the House of Representatives. He is the Commander-in-Chief of the military and naval forces of the Commonwealth, and is invested by the Crown with the prerogative of mercy in case of offences committed against the laws of the Commonwealth.
- (c) The Governor-General is also invested with authority in certain matters of Imperial interest, such as the control of the naval and military forces of the Commonwealth; the observance of the relations of foreign States to Great Britain, so far as they may be affected by the indirect relations of such States to the Commonwealth; and the treatment of neutral and belligerent ships in Commonwealth waters in time of war.

The Governor-General may not leave the Commonwealth without having first obtained leave from the Imperial Government, to whom alone he is responsible for his official acts. The present Governor-General is the Right Honourable Thomas, Baron Denman, P.C., G.C.M.G., K.C.V.O. He assumed office on the 31st July, 1911. Particulars of previous Governors-General are given on p. 37 hereinbefore.)

(ii.) *The State Governors.* The powers and functions of the State Governors are, within their respective States, very similar to those exercised by the Governor-General for the Commonwealth, and are defined by the terms of their Commissions and by the Royal instructions accompanying the same. A State Governor is the official head of the State Legislature, and assents in the name of the Crown to all Bills passed by the Parliament, reserving for the Royal Assent certain classes of Bills, which are regulated by the Constitution Acts and by the instructions issued by the Imperial Government. The Governors are, under ordinary circumstances, guided by their Executive Councils, the chief matters in which the exercise of discretion is required being the granting or withholding of a dissolution of Parliament when requested by a Premier; the appointment of a new Ministry; or the assenting to, vetoing, or receiving of Bills passed by the legislative chambers. The Governors are authorised, under certain restrictions, to administer the prerogative of mercy by the reprieve or pardon of criminal offenders within their jurisdiction, and to remit fines and penalties due to the Crown. All moneys to be expended for the public service are issued from the Treasury under the Governor's warrant.

The following is a list of the Governors of the various States of the Commonwealth in March, 1912:—

<i>New South Wales</i> ...	BARON CHELMSFORD, K.C.M.G.
<i>Victoria</i> ...	SIR JOHN MICHAEL FLEETWOOD FULLER, Bart., K.C.M.G.
<i>Queensland</i> ...	SIR WILLIAM MACGREGOR, G.C.M.G., C.B.
<i>South Australia</i> ...	ADMIRAL SIR DAY HORT BOSANQUET, K.C.B.
<i>Western Australia</i> ...	SIR GERALD STRICKLAND, K.C.M.G.
<i>Tasmania</i> ...	Major-General SIR HARRY BARRON, K.C.M.G., C.V.O.

8. **Cost of Parliamentary Government.**—The following statement shews the cost of parliamentary government in the Commonwealth and in each State, as well as in the whole of Australia, for the year ended the 30th June, 1911 :—

## § 2. Parliaments and Elections.

1. **Qualifications for Membership and for Franchise.**—The summary on pages 956-7 gives particulars as to the legislative chambers in the Commonwealth and State Parliaments, and shews concisely the qualifications necessary for membership and for the franchise in each House. Persons who are otherwise eligible, either as members or voters, are generally disqualified on the usual grounds of being of unsound mind or attainted of treason, being convicted of certain offences, and, as regards membership, on the grounds of holding a place of profit under the Crown, being pecuniarily interested in Government contracts, or being an undischarged bankrupt.

**2. The Federal Parliament.**—The Senate consists of thirty-six members, six being returned by each of the original federating States. Members of this chamber are elected for a term of six years, but by a provision in the Constitution a certain number retire at the end of every third year, although they are eligible for re-election. In accordance with the Constitution the total number of members of the House of Representatives must be as nearly as possible double that of the Senate. In the House of Representatives the States are represented on a population basis, and the numbers stand at present as follows:—New South Wales, 27; Victoria, 21; Queensland, 10; South Australia, 7; Western Australia, 5; Tasmania, 5—total, 75. The Constitution provides for a minimum of five members in each original State. Members of the House of Representatives are elected for the duration of the Parliament, which is limited to three years. In elections for Senators each State is counted as a single electorate, but an elaborate scheme of subdivision had to be undertaken in order to provide workable electorates in each State for members of the House of Representatives. Members of both Houses are paid at the rate of £600 per annum. Further information regarding the Senate and the House of Representatives is given on pages 15 to 22 hereinbefore.

(i.) *Particulars of Elections.* There have been three complete Parliaments since the inauguration of Federation. The first Parliament was opened by His Royal Highness, the Duke of Cornwall and York on 9th May, 1901, and was dissolved on 23rd November, 1903. The second session of the fourth Parliament was opened on 5th September, 1911, and was prorogued on 22nd December of the same year. Further information as to the Commonwealth Parliaments since their inception is given on page 946 hereinbefore. Since the establishment of the Commonwealth there have been four elections for the Senate and for the House of Representatives. The fourth Federal elections took place on 13th April, 1910, when, in addition to the ordinary voting, electors were called upon to decide the questions on the Financial Agreement and the taking over of the State Debts by the Commonwealth. These matters are referred to in detail on pages 790 and 791 hereinbefore. Particulars regarding the number of electors enrolled and the number of electors to whom ballot-papers were issued at the last three elections may be found in the tables given hereunder:—

**FEDERAL ELECTIONS OF 16th DECEMBER, 1903, 12th DECEMBER, 1906,  
AND 13th APRIL, 1910.**

	1910	1,128,496	1,020,473	2,148,969	768,714	580,912	1,349,626	68.12	56.93	62.80

\* For the House of Representatives the number of electors enrolled in contested divisions only is given.

In the Senate the figures for the year 1906 shew that ballot-papers were issued to 50.21 per cent. of the electors, and are a slight improvement on those for the year 1903, when only about 47 per cent. of the electors visited the polls. There was, however, a substantial increase in the number of electors who voted at the 1910 elections, 62.16 per cent. of the persons on the rolls exercising the franchise. The increase of 11.95 per cent. over the 1906 elections was in a great measure due to the extraordinary amount of party feeling that existed at the 1910 elections. Allowing for the various causes which may have prevented those qualified from recording their votes, it cannot be said that the electors of the Commonwealth have, so far, set a high value on the privilege of the franchise. In the elections for the House of Representatives the figures for the three years shew a slight improvement in percentage of voters as compared with the returns for the Senate; nevertheless they cannot be looked upon as satisfactory. In every instance the percentage of female voters is very far below that of the males.

3. **Commonwealth Referenda, 26th April, 1911.**—Two proposed laws for the alteration of the Constitution were submitted to the people for acceptance or rejection on the 26th April, 1911. They were (A) The Constitution Alteration (Legislative Powers) 1910, and (B) the Constitution Alteration (Monopolies) 1910. If, in a majority of the States, a majority of the electors voting approve the proposed laws, and if a majority of all the electors voting also approve them, they are presented to the Governor-General for the King's assent. Particulars of the alterations proposed have already been given (see page 22).

Results of the Referenda on the above proposals are given in the following table, which shews the number of electors enrolled, electors to whom ballot papers were issued, and the number of votes in favour of, and against, each of the proposed laws, and as will be seen neither of the proposed laws was approved by the people.

COMMONWEALTH REFERENDA (LEGISLATIVE POWERS AND MONOPOLIES),  
TAKEN ON 26th APRIL, 1911.

State.	Electors Enrolled.			Electors to whom Ballot Papers were Issued.			Legislative Powers.		Monopolies.

4. **The Parliament of New South Wales.**—The Legislative Council is in this State a nominee chamber, the Legislative Assembly being an elective body. Theoretically the Legislative Council may contain an unlimited number of members, but in practice the number is restricted to about sixty, the members at the latest available date being sixty-two. The tenure of the seat is for life; four-fifths of the members must be persons not holding any paid office under the Crown, but this is not held to include officers of His Majesty's sea or land forces on full or half pay, or retired officers on pensions. The Legislative Assembly consists of ninety members, who hold their seats during the existence of the Parliament to which they are elected. The duration of any single Parliament is limited to three years.

(i.) *Particulars of Elections.* Since the introduction of responsible government in New South Wales there have been twenty-one complete Parliaments, the first of which opened on the 22nd May, 1856, and was dissolved on the 19th December, 1857, while the twenty-first opened on the 2nd October, 1907, and closed on the 14th September, 1910. The average duration of the Parliaments was two years and five months. The first session of the twenty-second Parliament was opened on the 14th October, 1910. Particulars of voting at the last seven elections are given below:—

LEGISLATIVE ASSEMBLY ELECTIONS, NEW SOUTH WALES, 1894 to 1910.

Date of Opening of Parliament.	Electors upon the Roll.	Members Returned.	Members Unopposed.	Contested Electorates.			
				Electors upon the Roll.	Votes Recorded.	Percentage of Votes Recorded.	Percentage of Informal Votes.

	Females 353,055			336,680	204,650	60.78	
14th October, 1910	Males 458,626	90	3	444,242	322,129	72.47	1.78
	Females 409,069			400,139	262,154	65.24	

The franchise was extended to women in 1902, and was exercised for the first time at a State election in 1904.

## PARLIAMENTS AND ELECTORATES—

Particulars.	Commonwealth.	New South Wales.	Victoria.
<b>1. Senate and Legislative Councils.</b>			
<i>Number of Members</i> ...	36	62. May not be less than 21	34
<i>Qualification for Membership</i> ...	Adult British subjects natural-born or naturalised for 5 years, if (a) eligible to vote at the elections for the Senate, and (b) resident for at least 3 years within the Commonwealth	Male adult natural-born or naturalised British subjects	Male natural-born or naturalised British subjects of the age of 30 years or upwards, (a) if possessed of a freehold property of the annual value of at least £50 for one year previous to the election, and (b) in the case of naturalised subjects if a resident of the State for 10 years
<i>Period for which elected or nominated</i> ...	6 years	For life	6 years
<i>Allowance to Members</i> ...	£600 each per annum	None	None
<i>Qualification for Franchise</i>	Adult British subjects of either sex who have lived in Australia for 6 months continuously. Aboriginal natives of Australia, Asia, Africa, or the islands of the Pacific, except New Zealand, cannot vote at federal elections unless they have acquired a right to vote at elections for the Lower House of a State Parliament	(Nominated)	Adult British subjects of either sex, if either (a) the owner of a freehold of the annual value of £10 or of a leasehold of property rated at £15, or (b) a graduate of a British university, matriculated students of Melbourne University, qualified legal and medical practitioners, ministers of religion, certificated schoolmasters, and naval and military officers. Naturalised subjects must be of 3 years' standing, and must have resided in the State for 12 months
<b>2. House of Representatives, Legislative Assemblies, etc.</b>			
<i>Number of Members</i> ...	75	90	65
<i>Qualification for Membership</i> ...	The same as for the Senate	Male adult British subjects if qualified to vote at an election of members of the Legislative Assembly, unless disqualified under the Constitution Acts or the Federal Elections Act 1900	Male adult natural-born British subjects or aliens naturalised for the period of 5 years, if resident in the State for not less than 2 years
<i>Period for which elected</i> ...	Duration of Parliament, which is limited to 3 years	Duration of Parliament, which is limited to 3 years	Duration of Parliament, which is limited to 3 years
<i>Allowance to Members</i> ...	£600 each per annum	£300 each per annum	£300 each per annum
<i>Qualification for Franchise</i>	The same as for the Senate	Adult naturalised subjects of either sex, who have resided in the State continuously for one year after naturalisation, and adult natural-born subjects who have resided in the State for a continuous period of 1 year	Adult natural-born subjects of either sex, or naturalised for 1 year prior to the 1st January or the 1st July in any year, if (a) enrolled as ratepayer, or (b) if holding an elector's right and enrolled on the general or supplementary roll. (These provisions only remain in force until a day to be notified by proclamation of the Governor-in-Council as the day on which the provisions of the Electoral Act 1910, came into effect)

SUMMARY, MARCH, 1911.

Queensland.	South Australia.	Western Australia.	Tasmania.
44	18	30	18
Male adult natural-born or naturalised British subjects	Male natural-born or naturalised British subjects if (a) of the age of 30 years or upwards, and (b) if resident in the State for 3 years	Male natural-born or naturalised British subjects of the age of 30 years or upwards, if (a) in the case of natural-born subjects, resident in the State for 2 years, and (b) in the case of naturalised subjects, if naturalised for 5 years previous to the election and resident in the State during that period	Male British subjects, either natural-born or for at least 5 yrs. naturalised, of not less than 30 years of age, qualified to vote at the election for the Legislative Council, and who have resided in Tasmania for any continuous period of 5 years, or for a period of 2 years immediately preceding the election
For life	6 years	6 years	6 years
None	£200 each per annum	£200 each per annum	£100 each per annum
(Nominated)	Adult British subjects of either sex who are either (a) owners of a freehold of the clear value of £50, (b) owners of a leasehold of the clear annual value of £20, with at least 3 years, to run or containing a right of purchase, (c) occupiers of a dwelling-house of the clear annual value of £17, (d) registered proprietors of a Crown lease on which there are improvements to the value of at least £50. Voters must have resided in State for 6 months prior to enrolment	Adult British subjects of either sex who have resided in the State for 6 months, and who either (a) own a freehold estate to the value of £100, (b) occupy a house or own leasehold property rated at £25, (c) hold Crown leases or licenses to the value of not less than £10 per annum, or (d) are on the electoral list of a municipality or road-board district in respect of property of the annual value of £25. Aboriginal natives may only acquire the franchise in respect of a freehold qualification	Adult British subjects of either sex who have resided in the State for 12 months, if either (a) possessing freehold to the annual value of £10 or leasehold to the value of £30, or (b) graduates of a British university, qualified legal or medical practitioners, officiating ministers of religion, or retired naval or military officers
72	40	50	30
All persons qualified and registered to vote at the election of members of the Legislative Assembly are eligible as members	Any person qualified for the franchise of the House of Assembly is eligible for membership	Male adult British subjects, if resident in the State for 12 months. Naturalised subjects must have been naturalised for 5 years and have resided in the State for 2 years previous to the election	Male adult British subjects, either natural-born or for at least 5 years naturalised, qualified to vote at the election for the House of Assembly, and who have resided in Tasmania for any continuous period of 5 years, or for a period of 2 years immediately preceding the election.
Duration of Parliament, which is limited to 3 years	Duration of Parliament, which is limited to 3 years	Duration of Parliament, which is limited to 3 years	Duration of Parliament, which is limited to 3 years
£300 each per annum	£200 each per annum	£200 each per annum	£100 each per annum
Adult British subjects of either sex who either (a) have resided in Queensland for 12 months continuously and whose names are on the electoral roll, (b) own freehold estate of the value of £100, (c) have occupied a house of the annual value of £10 for at least 6 months, or (d) have a leasehold estate in possession of the annual value of £20 with not less than 18 months to run.	Adult natural-born or naturalised subjects of either sex who have resided in the State for 6 months continuously. In the Northern Territory only natural-born British subjects and naturalised Europeans or Americans may vote	Adult natural-born or naturalised subjects of either sex who have resided in the State for 6 months continuously and for a continuous period of 1 month in district	Adult natural-born or naturalised subjects of either sex who have resided in Tasmania for 6 months

**5. The Parliament of Victoria.**—Both of the Victorian legislative chambers are elective bodies, but there is a considerable difference in the number of members of each House, as well as in the qualifications necessary for members and electors. The number of members in the Upper House in February, 1912, was 34, and in the Lower House, 65. In the Legislative Council the tenure of the seat is for six years, but one member for each province retires every third year, except in the case of a dissolution, when one half of the newly elected members hold their seats for three years only. Members of the Legislative Assembly are elected for the duration of Parliament, which is limited to three years. The franchise was extended to women by the "Adult Suffrage Act, 1908." An elector for the Legislative Assembly may only vote once, plurality of voting having been abolished in 1899; an elector, however, qualified in more than one district, may select that for which he desires to record his vote. The preferential system of voting (see Section Miscellaneous hereinafter) was for the first time adopted in Victoria at the election held in November, 1911.

(i.) *Particulars of Elections.* Since the introduction of responsible government in Victoria there have been twenty-two complete Parliaments, the first of which was opened on the 21st November, 1856, and closed on the 9th August, 1859, while the twenty-second opened on the 7th January, 1909, and closed on the 24th October, 1911. The first session of the twenty-third Parliament opened on the 5th December, 1911, and terminated on the 4th January, 1912.

Statistics regarding the last six elections will be found below:—

#### PARTICULARS OF VICTORIAN ELECTIONS, 1902 to 1911.

Year.	Legislative Council.				Legislative Assembly.			
	Electors on Roll.	Electors in Contested Districts.	Voters in Contested Districts.	Per-centage.	Electors on Roll.	Electors in Contested Districts.	Voters in Contested Districts.	Per-centage.
1902 ...	134,087	*	*	*	290,241	216,063	141,471	65.47
1904 ...	172,526	104,865	66,182	63.11	264,709	223,600	149,192	66.72
1907 ...	180,738	78,512	27,152	34.58	261,088	191,131	117,098	61.26
1908 ...	185,234	*	*	*	263,876	164,919	88,461	53.64
1910 ...	240,520	136,479	40,053	35.21	487,661	*	*	*
1911 ...	249,481	*	*	*	701,451	619,644	394,189	63.61

\* Not contested.

As the table shews, the proportion of voters for the Legislative Council is considerably less than that for the Legislative Assembly. The number of persons who voted by post at the elections for the Legislative Assembly in 1911 was 12,362.

**6. The Parliament of Queensland.**—No limit is set by the Constitution Act to the number of members of the Legislative Council of Queensland, the total at the latest available date being forty-four. Members are appointed by the State Governor, and it is provided that not less than four-fifths of the members must consist of persons not holding any office under the Crown, except officers of His Majesty's sea or land forces on full or half-pay, or retired officers on pensions. The members are nominated for life. The Legislative Assembly is composed of seventy-two members, returned from sixty-one electorates, eleven electorates returning two members each, the others being single electorates, but by "The Electoral Districts Act of 1910" the State is now divided into 72 electoral districts, each returning one member, and the General Election which took place in 1912 was in conformity with this new Act.

(i.) *Particulars of Elections.* Since the establishment of responsible government in Queensland there have been seventeen complete Parliaments, the first of which opened on the 29th May, 1860, and dissolved on the 20th May, 1863, while the seventeenth

Parliament opened on the 3rd March, 1908, and closed on the 31st August, 1909. The eighteenth Parliament opened on 2nd November, 1909. Statistics regarding the elections of 1902, 1904, 1907, 1908, and 1909 are given below. Particulars as to the elections held in May, 1912, are not yet available:—

**ELECTIONS FOR QUEENSLAND LEGISLATIVE ASSEMBLY, 1902 to 1909.**

Year.	Number of Seats.	Number of Candidates Nominated.	Candidates sent to the Poll.	Electors Enrolled.			Electors who Voted.			Percentage of Electors Voting in Contested Electorates.		
				Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.
1902	72	159	154	108,548	—	108,548	80,076	—	80,076	78.88	—	78.88
1904	72	140	117	103,943	—	103,943	60,265	—	60,265	74.16	—	74.16
1907	72	185	179	125,140	95,049	220,189	—	—	152,049	73.42	68.64	71.61
1908	72	137	125	117,385	88,507	205,892	77,632	61,115	138,747	66.13	69.05	67.39
1909	72	145	133	135,841	106,913	242,754	89,609	66,809	156,418	75.34	69.36	72.67

The election of 1907 was the first State election in Queensland at which women voted, the privilege being conferred under Act 5 Edw. VII., No. 1. Some of the returns did not separate the sexes in the figures respecting the number of electors who voted, and the percentage of males and females was therefore calculated on the total returns where the subdivision was made.

**7. Parliament of South Australia.**—In this State there is a Legislative Council composed of eighteen members and a House of Assembly with forty members, both chambers being elective. Under the Constitution Amendment Act, 1908, the State of South Australia is divided into four Council Districts, of which one returns six members, and the other three return four members each, to the Legislative Council. For the purpose of electing members of the House of Assembly the State is divided into twelve electoral districts. One of the electoral districts (Torrens) returns five members; two (Adelaide and Alexandra) four members each; and the others return three members each.

(i.) *Particulars of Elections.* Since the inauguration of responsible government in South Australia there have been nineteen complete Parliaments, the first of which was opened on the 22nd April, 1857, and dissolved on the 1st September, 1859, while the nineteenth was opened on the 30th November, 1906, and terminated on the 28th February, 1910. The first session of the twentieth Parliament opened on the 2nd June, 1910. The elections for the last-named Parliament were held on the 2nd April, 1910. Particulars of voting at the elections of 1900, 1902, 1905, and 1910 are given below:—

**PARLIAMENTARY ELECTIONS IN SOUTH AUSTRALIA, 1900 to 1910.**

<b>LEGISLATIVE ASSEMBLY.</b>								
1902	77,147	72,080	149,177	53,471	36,545	90,016	62.14	49.22
1905	95,396	92,249	187,645	64,330	50,246	114,576	67.43	54.47
1906	96,724	93,438	190,162	60,109	45,997	106,106	69.31	50.73
1910	94,656	88,762	183,418	73,464	56,830	130,294	77.61	64.03

The proportions of votes recorded to total persons entitled to vote in each of the four years given above were as follows:—Legislative Council, 52.14, 73.05, 70.24, and 77.64 per cent.; and Legislative Assembly, 60.34, 61.06, 55.80, and 71.04 per cent.

It is interesting to note that South Australia was the first of the States to grant women's suffrage (under Act No. 16 of 1894), the franchise being exercised for the first time at the Legislative Assembly election on the 25th April, 1896.

**8. Parliament of Western Australia.**—In this State both chambers are elective. For the Legislative Council there are thirty members, each of the ten electorates returning three members, while the Legislative Assembly is composed of fifty members, one member being returned by each of the fifty electoral divisions. At the expiration of two years from the date of election to a seat in the Legislative Council, and every two years thereafter, the senior member for the time being for each province retires. Seniority is determined (a) by date of election, (b) if two or more members are elected on the same day, then the senior is the one who polled the least number of votes, (c) if the election be uncontested, or in case of an equality of votes, then the seniority is determined by the alphabetical precedence of surnames and, if necessary, Christian names. Members of the Legislative Assembly are elected for three years.

(i.) *Particulars of Elections.* Since the establishment of responsible government in Western Australia there have been seven complete Parliaments, the first of which was opened on the 30th December, 1890, and was dissolved on the 22nd March, 1893, while the seventh Parliament was opened on the 10th November, 1908, and closed on the 3rd February, 1911. The first session of the eighth Parliament commenced on the 1st November, 1911. Particulars relating to the last five parliamentary elections are given in the table below. The figures refer to electors for the Assembly only, no returns being published with regard to voting at Council elections.

#### ELECTIONS FOR LEGISLATIVE ASSEMBLY, WESTERN AUSTRALIA, 1901 to 1911.

Year.	Electors on the Roll.			In Contested Districts.			Votes Recorded.			Percentage of Electors Voting.		
	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.	Males.	Females.	Total.
1901	74,874	16,648	91,522	67,967	14,775	82,742	29,832	8,255	38,087	44	56	46
1904	108,861	54,965	163,826	88,524	49,791	138,315	43,285	23,500	66,785	49	47	48
1905	79,025	42,697	121,722	65,296	36,706	102,002	33,482	19,435	52,917	51	53	52
1908	83,060	52,919	135,979	69,277	44,804	114,081	46,411	29,412	75,823	67	66	66
1911	91,814	60,831	152,645	71,675	50,700	122,375	53,355	38,281	91,636	74	75	75

**9. Parliament of Tasmania.**—In Tasmania there are two legislative chambers—the Legislative Council and the House of Assembly, both bodies being elective. The Council consists of eighteen members, returned from fifteen districts, Hobart returning three, Launceston two, and the remaining thirteen districts sending one member each. For the Parliament which expired in March, 1909, there were thirty-five House of Assembly districts, each district returning one member, but, in accordance with the Constitution Amendment Act of 1906, upon the expiration of the last Assembly, either by dissolution or by effluxion of time, there are now five House of Assembly districts, viz., the Commonwealth electoral districts, each district returning six members. This latter system came into force at the 1909 elections.

(i.) *Particulars of Elections.* The first Tasmanian Parliament opened on 2nd December, 1856, and closed on 8th May, 1861. There have been fifteen complete Parliaments since the inauguration of responsible government, the last one opening on 29th May, 1906, and dissolving on 26th March, 1909. The sixteenth Parliament opened on 29th June, 1909. *Particulars of the voting at the last four elections* (excluding the elections held in April, 1912, for which particulars are not yet available) are given hereunder:—

#### ELECTIONS, HOUSE OF ASSEMBLY, TASMANIA, 1900 to 1909.

\* Manhood suffrage, Act 64 Vic., No. 5. † Universal adult suffrage, Act 3 Edward VII., No. 13.

### § 3. Administrative Government.

In each State, as well as in the Commonwealth, the Government is administered by a number of chief departments, on lines similar to those on which administrative government is carried on in the United Kingdom. Reference has already been made to the creation of the Commonwealth Departments (see pages 787 and 788). In the States the number and functions of the administrative departments vary considerably. This matter has also been referred to hereinbefore (see page 812). In many cases more than one department is under the control of a single Minister. The tabular statement given on this page and on the following pages shews the sub-departments, branches, etc., of each Ministerial Department in the Commonwealth and in each State, together with the Acts administered and other more important matters dealt with.

#### COMMONWEALTH ADMINISTRATIVE GOVERNMENT, 1912.

Departments, Sub-departments, Branches, etc.	Acts Administered.	Matters dealt with or under Control.
1. Prime Minister's— (a) Auditor-General. (b) Public Service Commissioner (as from 1st July, 1912). <b>9. Agriculture—</b> (a) Agricultural College. (b) Inspectors of Stock and Sheep & Registry of Brands. (c) Botanic Gardens. (d) State Farms and Nurseries. (e) Sugar Experiment Stations. (f) Bacteriological Institute.	Agric. Bank, Brands, Dairy, Diseases in Plants, Sheep and Stock, Game & Fish Acclimatisation, Grape-vine Diseases, Live Stock and Meat Export, Marsupial Boards, Meat and Dairy Produce Encouragement, Native Birds Protection, Slaughtering, Shearers' and Sugar-workers', Sugar Experiment Stations.	Agric. College, Botanic Gardens, brands (horses, sheep, and cattle), diseases in animals and plants, loans in aid of co-operative agric. production, marsupial destruction, meat and dairy produce encouragement, slaughter of cattle for consumption, State farms and nurseries, sugar experiment stations.
<b>10. Public Works—</b> (a) Government Architect. (b) Engineer for Bridges. (c) Director of Labour. (d) Factories etc. Inspectors. (e) Inspector of Machinery.	Brisb. Water Supply, Electric Light and Power, Factories and Shops, Wages Bds., Inspection of Machinery and Scaffolding.	Construction of public buildings, State-school buildings, bridges, hospitals, electric light and power stations.

## SOUTH AUSTRALIA.—ADMINISTRATIVE GOVERNMENT, 1912.

Departments, Sub-Departments, Branches, etc.	Acts Administered.	Matters dealt with or under Control.
<b>1. Chief Secretary—</b> (a) Statistical Dept. (b) Audit. (c) Public Actuary. (d) Sheriff. (e) Registry-General. (f) Government Printer. (g) Police. (h) Central Board of Health. (i) Hospitals. (j) Lunatic Asylum. (k) Destitute Persons. (l) State Children. (m) Government Shorthand Writer. (n) Photolithographic Department.	Civil Service, Audit, Friendly Societies, Registration of Births, Deaths, and Marriages, Prison, Police Prisons, Sheriff, Legitimation, Public Hospitals, Lunatics, Destitute Persons, Affiliation Law, State Children's, Health, Vaccination, Sale of Food and Drugs, Places and Public Entertainments, and other Acts dealing with law and order.	Chamber of Manufactures, Civil Service exams., fire brigades, Government Gazette, kerosene inspectors, public charities, Royal commissions, prisons, State printing, inspectors of public houses, administration of hospitals, asylums, etc., pub health, law and order, police prisons, photolithography, and correspondence with Governor, judges of Supreme Court, Leg. Council, House of Assembly, other Governments, and consuls.
<b>2. Treasury—</b> (a) Land and Income Tax Department. (b) Stamp Duty Department. (c) Agent General in London.	Motor Vehicles, Seed Wheat, Unclaimed Moneys, Oyster Fishery, Pawnbrokers, Appraisers, Auctioneers, Publicans' Licenses, Hawkers' Licenses, Taxation, Stamp Duty.	Banking, finance and taxation generally, Imperial and other Government pensions, Public Service Superannuation Fund.
<b>3. Attorney-General—</b> (a) Law Officers. (b) Pub. Trustees. (c) Curator of Convicts' Estates. (d) Supreme Ct. (e) Registrars of Industrial Soc., etc., in Admiralty, of Probates, of Companies, and of Building Soc. (f) Insolvency Court. (g) Police and Local Courts. (h) Licensing Benches. (i) Registrar-General of Deeds. (j) Coroners. (k) Electoral Department.	Administration and Probate, Public Trustee, Supreme Court, Legal Practitioners, Succession Duties, Companies, Insolvency, Police, Criminal Law, Local Courts, Real Property, Bills of Sale, Preferable Liens, Workmen's Liens, Deposit of Deeds, Coroners' Electoral Code, Acts in which magistrates have jurisdiction, ancient lights.	Responsible for Government Parliamentary bills and administration of Local Option and Electoral Acts. Deals with issue of summonses and warrants and with preparing informations and complaints, licenses, franchise, appeals from courts.
<b>4. Crown Lands and Immigration, and Mines—</b> (a) Crown Lands Office. (b) Roads Department. (c) Woods and Forests Department. (d) Tourist Bureau. (e) Intelligence Department. (f) Survey Department. (g) Fisheries Department.	Corporations, District Councils, Dog, Fisheries, Manufacturing Districts, Ornamental Grounds, Blocker's Loan, Fences, Bird Protection, Gams, National Park, Noxious Weeds, Wild Dog and Foxes, Reclaimed Swamps and Irrigation, Roads, Main Roads, Woods and Forests, Pastoral, Vermin, Licensed Surveyors, Weights and Measures, Botanic Garden, Advances to Settlers.	Matters affecting municipal corporations respecting the Acts under which they are constituted. Payment of main road grants, subsidies, and license fees. All matters affecting Crown lands roads and bridges, immigration, forest reserves, surveys, botanic gardens, fisheries, issue of monthly bulletins.
<b>5. Public Works—</b> (a) Railways Department. (b) Engineer-in-Chief's Department. (c) Hydraulic Engineer's Department. (d) Works and Buildings and Labour Bureau Department. (e) Marine Board Department. (f) Control of Government Wharves Department. (g) Supply and Tender Board Department. (h) Aborigines Department.	Railway Commissioners, Railways Service Appeal Board, Refreshment Rooms, South-eastern Drainage, Water Conservation, Waterworks, Sewers, Murray River Works, Adelaide Cemetery and Cremation, Marine Board and Navigation, Renmark Irrigation Trust, Municipal Tramways Trust.	Construction and maintenance of railways, south-eastern drainage works, water conservation works and artesian boring, construction of roads outside district councils, town and country waterworks, Adelaide, Glenelg, and Port Adelaide sewers, weirs, locks, and other improvements River Murray, State Government buildings and Adelaide cemetery, harbours, jetties, lighthouses, and dredging, ministerial control of Renmark Irrigation Colony and Adelaide Municipal Trust, care of the aborigines.
<b>6. Mines—</b> (a) Department of Mines. (b) Government Geologist.	Mining, Gold Dredging.	All matters arising under Mining Acts, warden's courts, record of assays, geological surveys and reports.
<b>7. Education—</b> (a) Education Department (b) Adelaide University. (c) Adelaide School of Mines. (d) Country Schools of Mines. (e) Public Library, Museum, and Art Gallery. (f) Observatory.	Education, Adelaide University, Degrees in Surgery, University Site, Public Library, Museum and Art Gallery, School of Mines.	Education generally, including primary, secondary, technical, and university, institutes, astronomical (but not meteorological) work.

## SOUTH AUSTRALIA (continued).

Departments, Sub-Departments, Branches, etc.	Acts Administered.	Matters dealt with or under Control.
8. Department of Industry—	Conciliation, Factories, Early Closing, Sale of Furniture, Scaffolding, Lifts, Shearers' Accommodation, Steam Boilers and Engine Drivers, Workmen's Compensation Act.	Factories, shops, early closing, industrial disputes, etc.
9. Agriculture and Irrigation— (a) Department of Agriculture. (b) Advisory Board of Agriculture. (c) Agricultural College. (d) Dairy Department. (e) Poultry Department. (f) Horticultural Department. (g) Stock and Brands. (h) Veterinary Department. (i) Produce Department. (j) Irrigation. (k) Experimental Farms.	Wine and Brandy, Fertilisers, Vine, Fruit and Vegetable Protection, Commerce, Hay and Chaff, Insecticides, Phylloxera, Irrigation, Stock Diseases, Brands,	Scientific farming, agricultural colleges and experimental farms, agricultural instruction and general development of agriculture; handling, shipping and cold storage of produce, inspection of stock, registration of stock brands, reclamation and irrigation of land.

## WESTERN AUSTRALIA.—ADMINISTRATIVE GOVERNMENT, 1912.

1. Colonial Secretary— (a) Accountant. (b) Aborigines. (c) Fisheries. (d) Friendly Societies. (e) Gaols. (f) Government Gardens. (g) Harbour and Light. (h) Immigration, Tourist and General Information. (i) Lunacy. (j) Medical, Public Health and Factories. (k) Observatory. (l) Police. (m) Public Charities, State Children, and Government Labour Bureau. (n) Registry and Statistical. (o) Rottnest Island.	Aborigines, Bread, Bank Holidays, Building Societies, Bunbury Harbour Board, Bills of Lading, Boulder Turf Club, Boat Licensing, Conspiracy and Protection of Property, Co-operative and Friendly Societies, Coasting Vessels, Dentists, District Fire Brigades, Dog, Early Closing, Employment Brokers, Fremantle Harbour Trust, Friendly Societies, Fisheries, Factories, Game, Harbours and Rivers, Hospitals, Health, Industrial Conciliation, Jetties, Bridges, etc., Kalgoorlie Turf Club, Lunacy, Licensing of Boats, Merchant Shipping, Marriage, Marine Stores, Medical, Newspaper Libel, Navigation, Oyster Fisheries, Public Institutions, etc., Lands Improvement, Poor House Discipline, Prisons, Pearl Shell Fisheries, Pearl Dealers' Licensing, Police, Police Benefit Fund, Pharmacy and Poisons, Perth High School, Quarantine, Registration of Births, Deaths and Marriages, Royal Commissioners' Powers, Statistical, State Children, Shark Bay Pearl Shell Fishery, Seamen, Shipping, Trespass, Trades Unions, Truck, Toll from Wharves, etc., University Endowment, Vaccination, Workers' Compensation, Workmen's Wages, W.A. Turf Club.	Consuls, passports, inspection of fisheries, protection of aborigines, actuarial, industrial arbitration, friendly societies, trades unions, prisons, Government gardens, light-houses and signal stations, harbours and rivers, coastal surveys, immigration, tourist and general information, immigration bureau (Fremantle), immigrants' home (Perth), hospitals, hospitals for insane, early closing, sanitation, factories, astronomical, police, poor relief, labour bureau, births, marriages and deaths, statistics, children's courts, old men's home, old women's home, penal settlement, Government cottages, Rottnest Island.
2. Treasury— (a) London Agency. (b) Printing Dept. (c) Savings Bank. (d) Lithography. (e) Stores. (f) Audit. (g) Taxation. (h) Inspection of Liquor.	Loan, Inscribed Stock, Treasury Bills, Auctioneers, Stamp, Wines, Beer and Spirits Sale, Employment Brokers, Gun Licensing, Gov. Savings Bank, Land and Income Tax, Dividend and Totalisator Duties, Workers' Homes.	Finance generally, general stores, taxation generally, audits as provided by special Acts, also under Ministerial authority.

## WESTERN AUSTRALIA (continued).

Departments, Sub-Departments, Branches, etc.	Acts Administered.	Matters dealt with or under Control.
<b>3. Attorney-General—</b> (a) Crown Law Offices. (b) Supreme Court. (c) Stipendiary Magistrates. (d) Land Titles Office. (e) Electoral Office. (f) Official Receiver. (g) Curator of Intestates' Estates. (h) Sheriff.	Administration of Justice, Association Incorporation, Bankruptcy, Criminal Code, Compensation for Accidents, Crown Suits, Electoral, Firms' Registration, Foreign Companies, Fugitive Offenders, Justice, Libel, Licensing Laws, Magisterial Districts, Workmen's Wages, Penalties Remission, Quarter Sessions, Supreme Court Acts, Truck Act, Transfer of Land, Workers' Compensation, Intestate Estates.	Criminal and civil law, conveyancing, parliamentary drafting, sheriffs, bankruptcy, intestacy, licensing, petty debts, petty sessions and police courts, land titles and registration of deeds and leases, elections.
<b>4. Public Works—</b> (a) Engineering Division. (b) Architectural Division.	Roads Board, Water Boards, Public Works, Tramways, Electric Light, Drainage, Municipal Corporations.	Public buildings and works generally, metropolitan water-works, Fremantle and Claremont water supply, railway and tramway construction, municipalities.
<b>5. Agricultural—</b> (a) Stock and Brands. (b) Rabbit Branch. (c) Orchard and Insect Pests. (d) Markets & Refrigerating Works. (e) Entomological. (f) Public Abattoirs. (g) Irrigation in Agricultural Areas. (h) Vegetable Pathology and Botany. (i) Dairying. (j) Tropical Agriculture. (k) Experimental Farms. (l) Clearing by Traction Engine. (m) Horticultural. (n) Poultry.	Rabbit, Stock Diseases, Scab, Brands, Insect Pests, Noxious Weeds, Fertilisers and Feeding Stuffs, Contagious Diseases in Bees, Drovers, Abattoirs, Vermin, Veterinary Surgeons.	Agricultural, horticultural, and pastoral pursuits generally, irrigation, abattoirs and refrigerating works.
<b>6. Education—</b> (a) Primary Education. (b) Secondary Education. (c) Training College for Teachers. (d) Technical Education.	Education.	Education generally, including primary, secondary, continuation and technical schools. Inspection of Schools. Training of Teachers.
<b>7. Railway—</b>	Government Railways.	Management, maintenance and control of Govt. Railways.
<b>8. Mines—</b> (a) Explosives and Analytical. (b) Inspection of Machinery. (c) Mining Engineers. (d) Mines Water Supply. (e) Geological Survey. (f) State Batteries.	Mining, Sluicing and Dredging for Gold, Explosives, Inspection of Machinery, Mines Regulation, Coal Mines, Mining Development.	Mining generally, water supply and stock routes on the gold-fields, State batteries and reduction plants.
<b>9. Lands—</b> (a) Lands and Surveys. (b) Woods and Forests.	Land, Roads, Cemeteries, Licensed Surveyors, Bush Fires, Timber Regulations.	All business in connection with holdings under the Lands Acts, reserves, roads, land selection, district survey offices, land agencies.

## TASMANIA.—ADMINISTRATIVE GOVERNMENT, 1912.

<b>1. Premier—</b> (a) Governor's Establishment. (b) Premier's Dept. (c) Executive Council. (d) Agent-General.	...	Correspondence with State, Federal, Colonial, British, and and Foreign Govts., with Agent-General & Governor, despatches from Secretary of State referred by the Governor, matters submitted by other Ministers.

Charitable institutions, cemeteries, public health, electoral, franchise, fisheries, machinery, statistics, training & industrial schools, public service, explosives, wages boards.
<b>3. Treasury—</b> (a) Taxes. (b) Printing. (c) State Savings Bank. (d) Agricultural Bank. (e) Merchant Ship's Officers Exam. Board.	Suppression of Public Betting, Licensing, Billiard Tables Licensing, Stamp Duties, Auction, Pawnbrokers, Public Debts, Loans to Local Bodies, Land Tax, Taxation, Income Tax, Assessment, Savings Bank, State Advances, Merchant Ships' Officers' Examination.	Finance generally, collection of internal revenue and of stamp duties, Government printing.
<b>4. Mines—</b>	Mining, Mining Companies, Mining Companies (Foreign).	All matters arising under Acts dealing with mining, registration of mining companies.
<b>5. Lands—</b> (a) Lands Branch Office, Launceston. (b) Agricultural and Stock Department.	Crown Lands, Closer Settlement, Game Protection, Stock, Diseased Animals, Contagious Diseases (cattle), Rabbits Destruction, Californian Thistle, Vegetation Diseases, Codlin Moth.	Crown lands and surveys, agriculture and stock.
<b>6. Public Works—</b>	Railway Management, Public Works, Local Government.	Construction and control of public works, including railways.
<b>7. Attorney-General—</b> (a) Supreme Court. (b) Lands Titles. (c) Sheriff. (d) Magistracy. (e) Police.	Probate, Stamp Duties, Foreign Companies, Legal Practitioners, Real Property, Prisons, Bankruptcy, Local Courts, Infant Life Protection, Motor Traffic, Police, Police Regulation.	Courts of law, gaols, justices of the peace and coroners, lands titles, police, registration of deeds, Supreme Court & Judges.
<b>8. Education—</b>	Education.	Primary & technical education, University of Tasmania.

## SECTION XXVI.

## LOCAL GOVERNMENT.

## § 1. Introduction.

1. **Systems of Local Government.**—In all civilised nations, whatever the previous course of their constitutional history, the persistent and rapid growth of the functions of the central Government, with repeated assumptions of new and onerous duties and responsibilities, has rendered some attempts at decentralisation and some form of local government essential. Without such a relief national administration could be carried on with success only with great difficulty, if at all. Experience, ancient and modern alike, has demonstrated that a completely centralised bureaucracy—that is, a body of officials working from a single centre and responsible only to itself—cannot carry on indefinitely the administration of a large country; such a body tends to ignore the varieties of local conditions, to become stereotyped in its ideas and methods, and sooner or later breakdown is inevitable. There are two possible policies which a Legislature may adopt towards local authorities apart from the imposition of compulsory duties upon them. There is first (a) the grant of general power to all local bodies of a particular class—that is, the Legislature may establish a set of authorities and empower them to do anything which in their judgment will tend to promote the satisfactory administration and general well-being of the areas under their control, so long as any particular powers which they propose to use are not expressly prohibited or reserved to other authorities. But as this liberty might easily in some cases be abused, there is necessarily the restriction, of greater or less extent according to the country and the nature of the authorities in question, that the actual exercise of these general powers shall be subject to the approval of an administrative department of the central Government. Or, on the other hand, the Legislature may (b) grant only specific powers to local bodies—that is, may give them permission to do all or any of a number of enumerated things, with or without the approval of the central departments, and in this case nothing further can be done by the local body unless permitted by fresh legislative enactments. In a general way it may be said that legislation on the continent of Europe has ordinarily followed the first of these two methods, and has given to the local self-governing communities power to do anything for which they can get administrative approval; while in the Commonwealth, as well as in Great Britain and in the United States, the practice has been the opposite one—local authorities are empowered to do only specified things; but in order, in spite of this, to allow free play to local initiative and enterprise, parliamentary procedure permits of local authorities being able to obtain additional powers for particular works or undertakings by means of special Acts. This difference between the Australian or British and continental systems has two important results.

(i.) *Difference between Australian and Continental Systems.* (a) The first important result of this difference is that in Australia, England and the United States the enterprise and activity of local authorities depend upon the temper and ideas of Parliament—that is to say, upon the elected representatives of the nation; whilst throughout a large part of the continent of Europe the controlling influence is ordinarily exercised by a bureaucracy whose opinions upon the matters in question may or may not be coincident with that of the majority of the electorate. The result is that in Australia it is the

business of the State Parliaments to determine what powers are to be conferred upon local authorities, while, ordinarily, under the continental system, the administrative bodies have to regulate what the local authorities may or may not do. The efficiency of such continental systems depends almost entirely upon the character of the controlling bureaucracy, although it is true that the legal powers of a municipality under that system might be very much wider than those of a municipal council in Australia. If the bureaucracy is enterprising and ready to encourage and aid in every way the growth of local action and experiment—as it is in Prussia—then there is the largest scope for municipal development; but if, as in France, the bureaucracy is conservative in its ideas and slow to move, the action of local authorities remains cramped and limited.

(b) The second important result of the difference between the Australian and continental systems is that in all matters entrusted to them local authorities in Australia consider that their duty is to carry out the law according to the will of, and in the manner desired by, the ratepayers of their local areas, subject generally to the supervision of the central Government, whereas, on the continent of Europe local authorities regard themselves normally as bodies appointed to carry out, within their respective localities, the will of the central Government, even in such matters as are of purely local importance. Local authorities under the continental systems are responsible to the central Government and are subject to administrative control, whilst in Australia municipal councils, so long as they do not infringe the Acts under which they are constituted, or which they have to administer, are responsible only to the ratepayers of their respective localities.

(ii.) *Various Systems in the Several States of the Commonwealth.* In all the States of the Commonwealth, Acts have now been passed providing for comprehensive schemes for the decentralisation of power by the constitution of various forms of local authorities to deal with a large variety of subjects and matters. The general policy of the Legislatures towards local authorities in Australia has already been pointed out. Generally speaking, these authorities exercise their powers under enactments of two kinds.

(a) There are, first, what may be called constituent Acts, which create the various classes of local bodies and arm them with the powers necessary for the fulfilment of the duties intended to be discharged by them, and there are, secondly (b) general Acts dealing with one subject or group of subjects, of administration—such as the Public Health Acts—giving power to the local authorities for that particular service. Although the Acts controlling local government in the several States vary considerably in detail, especially as regards the election of councillors and presiding officers, method of valuation, and rating powers, there is a great similarity between the general powers and duties conferred and imposed upon local authorities in the various States; these powers and consequent duties being many and varied. As a rule the municipal council is the highway authority, being responsible for all the roads within its area and the upkeep of all bridges; it is a public health authority; it supervises the sanitary work, the water supply and the lighting of its area, and for these and for other purposes may appoint officers; it administers the Acts relating to the sale of foods and drugs, the slaughter and diseases of animals, weights and measures, and river pollution; it may establish hospitals, public recreation grounds, libraries, and museums, and also provide asylums and support charitable institutions; it may make provision for preventing fires and floods; it administers the municipal property, makes by-laws with regard to a large variety of things and matters, and may acquire other powers by petition to the Governor. The councils are elected by the ratepayers and seek only to carry out the wishes of the electorate, subject to the general supervision of the central Government.

(iii.) *Systems on the Continent of Europe.* On the continent of Europe a careful distinction is generally drawn between those internal affairs in which the central Government is thought to be directly concerned and those which are held to be primarily of only local interest. In Prussia, for instance, the former includes, besides the army,

State taxes and domains, ecclesiastical affairs, police, and the general supervision of local authorities, while to the localities are left roads, poor relief, and a number of miscellaneous matters. The work of the central Government is deconcentrated, that is to say, the country is divided into districts, in each of which there is a delegation of the central authority, doing its work and thereby decreasing the pressure upon the head offices. The executive agents in each locality are elected by the inhabitants, but they are also the representatives of the central Government, and as such they are members of the bureaucracy and are under its control, with the consequence that they look to the central Government for guidance and direction in regard to local affairs. Local government is in fact weak; it is not so much the exercise of the will of a locality by the central power, as the exercise of the will of the latter by the locality. The system of deconcentrated centralised control as carried out in Prussia has, however, some distinct advantages.

- (a) In the first place the duties of supervising the actions of a large number of local authorities do not rest only upon a comparatively small number of officials at the seat of Government, but are carried out by delegations in all parts of the country, which are able to acquire a more intimate knowledge of local requirements and conditions.
- (b) Secondly, the supervision is not only by Government officials, but by responsible and experienced persons elected by the inhabitants and who command local confidence. The general results are that, firstly, the staff at the central offices is relieved of much detailed work, and, secondly, that the control of the localities is rendered much less bureaucratic.

**2. Early History of Local Government in Australia.**—Before the more comprehensive systems of self-government were first provided for in the several States, various enactments had from time to time been passed and amended in order to satisfy the growing demand for local government which asserted itself as one of the primary results of the spread of education and increase of population. In the latter part of the year 1839 the first municipal law was passed in South Australia, which was thus the birth-place of local government in the Commonwealth. On 31st October, 1840, the principles of self-government were practically adopted in Adelaide by the election of a mayor and council. In 1842 the Sydney City Incorporation Act was passed by the New South Wales Government; under this Act the city was divided into six wards, and resident occupiers or owners of houses, warehouses, or shops within a radius of seven miles were duly enrolled as citizens and entitled to vote at the election of councillors, the number of which was fixed at twenty-four. A city fund was established and rates levied. The duties of the council were to construct and maintain streets, sewers, and waterworks, to light the streets, and to make by-laws for the general good rule and government of the city. In the same year, 1842, Melbourne was incorporated as a town by special Act, and as a city in 1847, while Geelong was incorporated in 1849. The Acts by which Sydney and Melbourne were incorporated contained no provision for the extension of the municipal principle to other localities, but in 1842 an Imperial Act was passed under which the Governor of New South Wales was empowered to incorporate by Letters Patent every county or any part of a county to form districts for the purpose of local government. In the following year the districts of Appin, Campbelltown, Camden, Narellan, and Picton, in New South Wales, were incorporated under one county district council, while later in the same year Appin and Campbelltown were constituted as a separate district under the control of six councillors. In 1844 the Sydney City Incorporation Act was amended; by this time the number of county district councils had increased to eight, and these, in conjunction with the municipal council of Sydney and the Road Trusts, which were generally created by special Acts, constituted the whole of the local government system in New South Wales prior to 1858. The Imperial Act of 1850, under which the State of Victoria was granted responsible government, provided for the division of the State into districts under the government of local councils. In all the States of the Commonwealth, systems of local government have been provided for ;

in some of the States, such as Victoria, practically the whole area of the State has for some years been divided into districts for the purposes of self-government, while in others, more especially in New South Wales, a general system of extending the advantages of local government throughout the more settled parts of the country has only recently been provided. In other States systems of local government which have been in force for some years have, as is only to be expected, made comparatively slow progress owing to the small population scattered over such large areas. Taking, however, into consideration the benefits which must accrue, especially in a country of great distances, from the establishment of suitable systems of local government, and judging by the success of similar institutions in other countries, there is every reason to expect that, as population increases and settlement progresses, the people of Australia will take fuller advantage of the systems provided.

## § 2. New South Wales.

1. **Development of Local Government Systems.**—In the year 1858 the Municipalities Act, the first important measure with regard to general local government in New South Wales, was passed. Under this Act provision was made for the incorporation of any town or rural district as a municipality upon presentation to the Governor of a petition signed by at least fifty of the respective ratepayers, and containing a larger number of signatures than those attached to any counter petition. The members of the council were elected by the ratepayers, and the chairman was chosen by the councillors from their own number. The duties of the council were to abate and remove nuisances; to make by-laws for the regulation of their own proceedings and for the general good government of the town; to control all roads, bridges, ferries, and wharves; to establish hospitals, asylums, libraries, and gardens; and to establish tolls and rents for the use of markets, bridges, wharves, and jetties within and belonging to the municipality. The general rate was not to exceed one shilling in the pound, but a special rate for water supply, sewerage, and street lighting could be levied. Government endowment was provided for, by way of subsidies on the amount collected from rates, over a period of fifteen years. In all thirty-five districts were incorporated under this Act, and these districts, with the exception of Cook, which was united to Camperdown (now part of the City of Sydney) in 1870, and East St. Leonards, subsequently joined to St. Leonards, still exist, though the boundaries of most of them have since been changed.

(i.) *The Municipalities Act 1867.* The Act of 1858 was repealed in 1867 by the Municipalities Act of that year. Under the provisions of the latter Act the thirty-five existing municipalities were to continue their existence under the designation of boroughs, and all municipalities created in the future were to be classified either as (a) boroughs, or (b) municipal districts.

(a) *Boroughs* could consist of any city, town, or suburb of the metropolis, or of any populous country district, but every borough had to have a population of not less than 1000, and was limited to an area of nine square miles, of which no part was more than six miles distant from any other part.

(b) *Municipal Districts* could comprise any part of the colony not containing a borough, but had to include an area of not more than fifty square miles, with a population of not less than 500 souls.

The duties and powers of the councils were extended and defined, while the maximum rate remained as before. This Act still left it optional for any district to become constituted as a municipality, with the consequence that only a small proportion of the State was incorporated under its provisions.

(ii.) *Division of the State into Shires, 1905.* The Act of 1867 was amended from time to time during the succeeding thirty years until the whole of the Acts—sixteen in number—were repealed by the consolidating Act of 1897. This Act did not alter the

chief features of previous Acts, and still retained the voluntary principle of incorporation, which was not conducive to the adoption of a general system of local government, because so long as the central Government continued to construct and pay for local works, it was natural that the inhabitants benefited would be willing to deny themselves the advantages of self-government. The law on the subject remained in an admittedly unsatisfactory condition for several years, and, though various measures were introduced into Parliament for its amendment, it was not until the year 1905, when the Shires Act was passed, that a comprehensive scheme of local government was extended to the greater part of the State.

- (a) *The Shires Act 1905* divided the whole State, with the exception of existing municipalities, the Western Division, Lord Howe Island, the islands in Port Jackson, and the Quarantine Station of Port Jackson, into shires, which were themselves subdivided into ridings, each riding having equal representation in the council. An important feature of the Act was that the rates were to be charged on the unimproved value of the land instead of on the annual rental; the rate to be levied was not to be less than one penny, nor more than twopence in the pound, and the minimum rate in respect of any portion of land was fixed at two shillings and sixpence. Another important provision of the Act was that as soon as a rate was imposed by a council, the operation of the Land Tax Act was suspended. The councils were vested with wide general powers and could acquire additional powers by resolution of a majority of the council followed by an application by the President on behalf of the council to the Governor.
- (b) *The Local Government Extension Act 1906* amended and consolidated the law relating to municipalities and extended the principles of the Shires Act to municipalities. Provision was also made whereby the Governor was authorised to proclaim as a city any municipality which had, during the five years preceding such proclamation an average population of at least 20,000 persons and an average revenue of at least £20,000, and which formed an independent centre of population.
- (c) *The Local Government Act 1906*. Towards the close of the year 1906 the Local Government Act, which deals comprehensively with both shires and municipalities, was passed; by this Act (which was amended in 1908), both the Shires Act 1905 and the Local Government Extension Act 1906 were repealed, and their provisions amended and consolidated.
- (d) *The Local Government (Loans) Act 1907*. In 1907 the Local Government (Loans) Act was passed in order to overcome certain difficulties at the inception of the new system, authorising the Governor to approve of municipal loans in special cases, without going through the procedure required by the Local Government Act.
- (e) *The Local Government (Amending) Act 1908*. This Act was passed in December, 1908, and contains important amendments, more especially in regard to the constitution of areas, functions of councils, values and valuations, and rates.

**2. Local Government Systems now in Operation.**—The law relating to local government in New South Wales is now contained in the Acts of 1906, 1907, and 1908 referred to above. Practically the whole of the State, with the exception of the Western Division, has now been brought under the operation of these Acts.

(i.) *Areas Incorporated*. Prior to the year 1907 the total area incorporated formed a very small part of the whole area of the State, as may be seen in the following statement:—

## AREAS INCORPORATED IN NEW SOUTH WALES, 1860 to 1906.

Year	...	...	1860.	1870.	1880.	1890.	1900.	1906.
Area incorporated—sq. miles	...	...	409	649	1,482	2,387	2,763	2,830

*Total area of State (exclusive of Lord Howe Island), 310,367 square miles.*

The areas incorporated in 1906 in each of the three territorial divisions of the State were as follows:—

## DISTRIBUTION OF INCORPORATED AREAS, 1906.

Division.			Incorporated Area.	Unincorporated Area.	Total Area.
Eastern	...	Sq. miles	1,977	93,742	95,719
Central	...	"	571	88,579	89,150
Western	...	"	282	125,216	125,498
Total	...	...	2,830	307,537	*310,367

\* Total area of State, exclusive of Lord Howe Island, the area of which is 5 square miles.

The total area incorporated under the Local Government Act 1906, to the end of the year 1910, was 185,108 square miles, of which 182,111 square miles were comprised within shires and 2997 within municipalities. The areas incorporated comprise the whole of the eastern and central divisions of the State, with the exception of Lord Howe Island, the islands in Port Jackson, and the quarantine station at Port Jackson.

(ii.) *General.* The above Act came into operation on the 1st January, 1907; it provided for the continuation of existing shires and municipalities, for the creation of new ones, and for their reconstitution by uniting, dividing, altering, or converting areas. Each shire is divided into three ridings, and each municipality may be divided into wards by petition of the council or a majority of the ratepayers to the Governor. The councils consist, in the case of shires, of either six or nine councillors, and in the case of municipalities, of from six to twelve aldermen, except in the case of the union of two or more municipalities, when the Governor may determine that the council of the united areas shall consist of any number from twelve to eighteen aldermen. All occupiers of rateable property of a yearly value of a least £5 who have been in occupation for at least three months, of either sex, who are either natural-born or naturalised British subjects, of the age of twenty-one years and upwards, are entitled to be registered on the electors' roll, and any male person so enrolled is qualified to be elected as a councillor or alderman, unless he is otherwise ineligible.

(iii.) *Functions of Councils.* The general scheme of the Act was that councils, on their constitution, should start with a limited number of powers of a primary nature, and that, as their needs develop, they should from time to time acquire additional powers on following the prescribed procedure. On the constitution of a shire or municipality the councils may exercise any of the following powers:—The construction and maintenance of all public places, except those vested in the Railway Commissioners or other public bodies or trustees, and national works; lighting of, and controlling the traffic in streets and roads; prevention of fires and floods; the administration of the Public Watering Places Act 1900 and the Impounding Act 1898, and certain parts of the Police Offences Act 1901, the Public Health Act 1902, and the Cattle Slaughtering and Diseased Animals and Meat Act 1902. Other powers and duties, such as the construction of drainage and water supply systems without reticulation, the care and management of parks and commons, and the licensing of hawkers and public vehicles, are conferred and imposed upon municipal councils, while these same powers and duties may be acquired by shire councils by resolution of the council followed by application to the Governor.

(a) *Acquisition of Further Powers.* Further powers may also be acquired either by shires or by municipalities if the council decide that they are necessary for the good government of the locality; these are the administration of the Public Gates Act 1901, and the Native Dog Destruction Act 1901; water supply by reticulation; the maintenance of passenger ferries, of fire brigades, of municipal buildings, of cattle-yards and abattoirs, of markets, parks, and recreation grounds, of refuse destructors, of cemeteries and public baths; the manufacture and supply of gas, electricity, and hydraulic or other power; the regulation and control of theatres, public halls, and lodging houses; the establishment and management of public libraries, art galleries, museums, and public bands; the regulation and supervision of buildings and balconies; of the sale of fish and meat, and the suppression of nuisances caused by the emission of smoke or vapour. These powers may be acquired by a resolution passed by an absolute majority of the council followed by an application in the prescribed form to the Governor. On receipt of a petition signed by not less than fifty, or if there be less than 300 ratepayers on the roll, by one-sixth of the ratepayers, the Governor may direct that a poll be taken as to whether all or any of the powers applied for shall be conferred on the council.

(b) *Appointment of Executive Officers.* Provision is made in the Act for the appointment of officers and servants, such as shire engineers, municipal clerks, and sanitary inspectors, and also for the acquisition by councils of land or buildings either by agreement or compulsorily, for which purpose the provisions of the Public Works Act 1900 are incorporated.

(iv.) *Rates and Ratable Property.* All land is ratable except the following:—Commons, public parks, and public reserves not held under lease or license; cemeteries, public hospitals, benevolent institutions, and buildings used exclusively for public charitable purposes; churches and free public libraries; unoccupied Crown lands, lands vested in the University of Sydney occupied and used solely for the purposes of education; and vested in the Chief Commissioner for Railways and Tramways and actually used for the purposes of the Government railway or tramways. Rates levied by a council may be of four kinds, namely, general, special, local, or loan rates.

(a) *General Rates* are levied on the unimproved value at a rate of not less than one penny nor more than twopence per pound, but if the minimum rate be more than sufficient to meet the requirements of the council, it may be further reduced at the discretion of the Governor. A council of a municipality which has levied a general rate of not less than one penny on the unimproved value may impose such additional rate as may be required either on the improved or the unimproved value; the total amount to be derived from the general rate and the additional rates taken together must not, however, exceed the amount yielded by a rate of twopence in the pound on the unimproved value and two shillings in the pound on the assessed annual value of all ratable land.

(b) *Special, Local, and Loan Rates* may also be imposed either on the improved or the unimproved value at the option of the council, but in the case of special and local rates a poll may be demanded by the ratepayers as to whether the rate shall be imposed or not. Rates on the unimproved value of land may also be levied for the purposes of the Country Towns Water Supply and Sewerage Acts 1880-1905, which provided for the construction by the Government of waterworks and sewerage systems in municipalities which are outside the areas served by the Metropolitan and Hunter River Boards. The cost becomes a charge against the municipality, carrying interest at the rate of 4 per cent., and payable by annual instalments over a period of not more than 100 years.

Particulars of rates levied are given in paragraphs 3 and 4 hereinafter.

(v.) *Endowment.* Government endowments to shires are fixed every third year and the amount is determined according to the extent of the shire, the probable revenue from a rate of 1d. in the £, the necessary expenditure, the extent of roads and other public works to be constructed and maintained, and other matters. The endowment in any year is paid on the basis of the amount of general rates collected in the preceding year. At the end of 1909 the endowments to be paid during the triennium 1910-12 were fixed. The classification for the period mentioned is as follows :—

#### NEW SOUTH WALES.—ENDOWMENT OF SHIRES, CLASSIFICATION, 1910-12.

Class.	1st.	1st.	2nd.	3rd.	4th.	5th.	6th.
No. of Shires ... ..	27	41	10	9	7	14	26
Endowment received in the £ on general rate ... .. Up to	*	10s.	15s.	20s.	25s.	30s.	†

\* No endowment. † Not less than 40s. in the £ on the general rate.

It is also provided that all municipalities not receiving statutory endowment under any Act repealed by the Act of 1906 shall, upon the result of investigations made into their administration and financial necessities, be entitled to a sum not exceeding three shillings and fourpence in the pound on the general rate collected; but if the revenues are sufficient to meet the reasonable requirements of the corporation under proper management no endowment will be paid.

(vi.) *Borrowing Powers and other Provisions.* A council of a municipality is authorised to borrow up to 10 per cent. of the unimproved capital value, and all money so borrowed is a charge upon the revenue of the council. If a council desire that any proposed loan should be guaranteed by the Government application must be made to the Treasurer, who may either refuse or recommend the guarantee. Both shires and municipalities may temporarily borrow in any year an amount not exceeding one-third of the estimated revenue to be received from rates if the consent of the Minister shall have been first obtained. Auditors are appointed by the councils, and Government examiners are appointed to inspect the accounts of the councils. A defaulting area is defined to be an area in which a sufficient number of councillors have not been elected to form a quorum, or in which the requirements of the Act as to the levying of a general rate have not been carried out, or in which the council has ceased for six months to exercise its functions. The Governor is authorised to appoint an administrator for a defaulting area.

3. *Shires, 1910.*—The total area of the 134 shires constituted under the new system is 182,111 square miles, and the population at the census of 1911 was 595,517.

The shires vary in area from 36 square miles in the case of Ku-ring-gai, immediately north of the metropolis, to 5745 square miles in the case of Lachlan in the Condobolin district.

(i.) *Valuation and Rates Levied.* The unimproved capital value of the shires in 1910 was £89,935,912, as against £83,464,446 in the preceding year. It is not possible to give the improved capital value or the assessed annual value, as the shires are not compelled to make these valuations, and in many cases do not make them. The total amount of all rates levied was £423,477.

(ii.) *Revenue.* The principal heads of revenue for the four years since the new Act came into force are shewn in the following table :—

## NEW SOUTH WALES.—INCOME OF SHIRES, 1907 to 1910.

Particulars.	1907.	1908.	1909.	1910.

4. **Municipalities.**—Including the City of Sydney there are 190 municipalities in New South Wales; of these forty are in the suburbs of Sydney and twelve in the district of Newcastle and suburbs. Since the 1st January, 1908, under the Local Government Act 1906, municipalities must levy a general rate on the unimproved capital value of all ratable land, and may levy additional general, special, local, or loan rates on either the unimproved or improved capital value. Municipal rates are therefore no longer charged on the annual value; the only rates based on that value are those charged by the Metropolitan and Hunter River Water Supply and Sewerage Boards.

(i.) *Capital Value, Area, Population, and Rates Levied, 1902 to 1910.* The following table shows the improved capital value, the area, population, number of buildings, and amount of rates levied in municipalities for each year from 1902 to 1910 inclusive:—

**NEW SOUTH WALES.—MUNICIPALITIES, IMPROVED CAPITAL VALUE AREA, POPULATION, NUMBER OF BUILDINGS, AND TOTAL RATES LEVIED, 1902 to 1910.**

Year ended February.*	Sydney and Suburbs.					Country.

1909 ...	50,948,240	57,172,187	108,120,427	44,716,888	152,837,315
1910 ...	52,142,200	59,175,874	111,318,074	45,824,999	157,143,073

(ii.) *Revenue.* The Local Government Act 1906 prescribed that there should be a general fund in each local government area (municipality and shire), and also special funds for specified purposes. The regulations under the Act prescribed the system of accounts to be kept. This system differs materially from the old "cash" system of receipts (cash actually received) and disbursements (cash actually expended).

Prior to 1908 the municipal year ended on the first Monday in February; now it ends on the 31st December. In all statements of municipal accounts for the year 1908, therefore, the period referred to is from the 4th February to the 31st December, except in the City of Sydney, which does not come under the provisions of the Act of 1906 and where the accounts are kept for the calendar year. The first complete year for which financial particulars are available for the municipalities is the year 1909, and details for that year will be found in our previous issue. Particulars of revenue for the year 1910 are given in the following table:—

#### NEW SOUTH WALES.—MUNICIPALITIES, REVENUE, 1910.

Particulars.	Sydney.	Suburbs.	Country.	Total.
	£	£	£	£
General fund ... ..	578,116†	419,063	320,003	739,066†

† See note † to first table on preceding page. ‡ See note ‡ to first table on preceding page.

**5. Sydney Metropolitan Board of Water Supply and Sewerage.**—Prior to the year 1888 the main water supply and sewerage systems of Sydney and suburbs were under the control of the City Corporation, while several of the suburban councils had constructed local systems. For some years, however, it had been recognised that owing to the great increase in the population and size of the metropolitan area the water supply was inadequate and the sewerage system antiquated and inefficient. In 1867 a Royal Commission was appointed to enquire into and report upon various schemes for supplying water to the city and suburbs, and in 1869 a report was sent in recommending the adoption of what is known as the "Upper Nepean Scheme." Another commission was appointed in 1875 to investigate different proposed sewerage systems, and two years later a report was presented containing certain recommendations which form the basis of the present system. After considerable discussion and further investigation an Act was passed in 1880 authorising the schemes recommended by the two commissions being carried out. In the year 1888 the works had so far progressed that the Government, with the object of placing the administration of both water supply and sewerage systems throughout the county of Cumberland under the control of an independent body, passed an Act authorising the establishment of the Metropolitan Board of Water Supply and Sewerage. This Board consists of seven members, three of whom are appointed by the Government, two by the City Council, and two by the suburban and country municipalities in the county of Cumberland. The Board is under the general supervision of the Minister for Works—a provision considered necessary since the loan expenditure of the Board forms part of the public debt of the State.

**6. Metropolitan Water Supply.**—In the year 1850 authority was given by the Legislative Council to the City Corporation to construct water and sewerage works. Under this authority a water supply scheme was adopted and carried out, at a cost of nearly £1,750,000, by which the waters of the streams draining into Botany Bay were intercepted and pumped into three reservoirs. This system has now been superseded by the "Upper

Nepean Scheme" referred to above, the management of which was transferred to the Metropolitan Board of Water Supply and Sewerage in May, 1888.

(i.) *The Cataract and Prospect Dams.* A work of great importance and magnitude in connection with the Sydney water supply—the Cataract Dam—was completed in 1908. Prior to the construction of this dam, the system had been weak in the matter of storage, the only reservoir of any importance being that at Prospect, which was formed by the construction of an earthen dam completed in 1890, and which contains a supply available by gravitation of 5,527,000,000 gallons of water. The Prospect reservoir was supplied from the unstored waters of the Nepean, Cataract, and Cordeaux rivers by means of tunnels and conduits capable of carrying 150,000,000 gallons a day; the combined catchment area of the three rivers extends to an area of 354 square miles, and is favourably situated with regard to the coastal rainfall. The whole of this area has been acquired by the Crown, and every precaution is exercised to guard against pollution of the supply. It was found, however, in 1902—almost the driest year on record—that the Prospect reservoir was insufficient for the needs of the increasing population of Sydney and suburbs during a dry period. The Government, therefore, decided to construct additional reservoirs on the rivers forming the sources of supply, in which would be stored as much of the flood water from the available catchment area of 354 square miles as would be necessary to meet the constantly increasing requirements of the metropolis.

The first of this series of reservoirs is the Cataract dam, of which the catchment area above the impounding dam is about fifty square miles. The water released from this reservoir flows down the bed of the Cataract River to a diversion weir at Broughton's Pass, where it enters the previously existing tunnel, and is conveyed thence by a system of open canals to the Prospect reservoir. In traversing the steep and rocky bed of Cataract River the water is thoroughly aerated. The total distance travelled by the water from Cataract to Sydney *via* Prospect is 66½ miles, of which 21½ miles represent the distance from Prospect to Sydney.

The principal dimensions of the Cataract and Prospect dams are given below:—

#### SYDNEY WATER SUPPLY.—CATARACT AND PROSPECT DAMS.

Dam.	Height above Foundation.	Width at Top.	Thickness at Bottom.	Length.	Area of Reservoir.	Capacity of Reservoir.
	Feet.	Feet.	Feet.	Feet.	Acres.	Gallons.
Cataract ...	192	16½	150	811	2,104	20,743,200,000
Prospect ...	85½	30	523	7,300	1,266½	11,029,200,000*

\* Of which 5,527,000,000 gallons are available by gravitation.

The present population of Sydney and suburbs supplied with water from these works is estimated at 696,185. The winter consumption of water ranges from twenty-five to twenty-seven million gallons a day, while the summer consumption and evaporation together approximate to thirty-six million gallons a day. As the combined available capacity of the Cataract and Prospect reservoirs without pumping amounts to about 26,000,000,000 gallons, the storage available represents a supply for about 840 days without rainfall.

(ii.) *Aqueducts and Mains.* The water is drawn off from the Prospect reservoir through a valve tower by cast-iron pipes and thence proceeds by canal, five miles in length, to the Pipe Head Basin, situated 16½ miles from Sydney. It is then conveyed for a further distance of five miles by two wrought-iron pipes, each six feet in diameter to Potts' Hill reservoir, which has a capacity of 100,000,000 gallons, covers twenty-four and a half acres, and is designed to tide the city over any interruption of supply from Prospect, and to prevent fluctuation of pressure. A by-pass is laid along the floor of the reservoir to enable both six-foot mains to deliver water to Sydney direct. At Potts' Hill the water passes through a screening tank constructed of copper-gauze screens, and thence proceeds towards the city in two 48-inch cast-iron mains. The first laid main is

48-inch as far as Pet rsham, whence it bifurcates, one branch (48-inch) leading to Peter-sham reservoir, the other (42-inch) to Crown Street reservoir, where the main pumping station is situated. The duplicate 48-inch main, completed in 1893, continues of the same diameter direct to Crown Street. The main pumping plant situated at Crown Street reservoir consists of three pairs of compound high-duty pumping engines and one electrically-driven centrifugal pumping unit. The first set is capable of raising 500,000 gallons per hour to the Centennial Park reservoir, a height of 104 feet above the pumps, at which place a new covered reservoir, of a capacity of 18,500,000 gallons, has been constructed for the purpose of ensuring a larger bulk of water within the city limits; the second set is capable of raising 210,000 gallons per hour to the Woollahra reservoir, a height of 140 feet, and also of raising 200,000 gallons per hour to Waverley, a height of 220 feet above the pumps; while the third set is capable of raising 100,000 gallons per hour to the Waverley tanks. The centrifugal plant raises 2400 and 4650 gallons per minute to Waverley and Woollahra respectively.

(iii.) *Northern Sydney.* A pumping station at Ryde has been erected for the supply of the suburbs on the north side of the harbour. The station receives its supply through a 32-inch steel main from the Pipe Head Basin, discharging into a reservoir, from which the water is pumped to a 1,000,000-gallon tank at Ryde, 234 feet above high-water mark, and by a continuation of the same main into two other tanks at Chatswood, at an elevation of 370 feet above high-water mark, and having a joint capacity of 3,000,000 gallons. Water is also pumped at this station direct to Pymble at 567 feet elevation and to Wahroonga at 717 feet, and to Hermitage reservoirs Nos. 1 and 2 at 302 feet elevation, having a capacity of 3,000,000 gallons. The Beecroft-Pennant Hills district is supplied from Wahroonga reservoir. A 9-inch main extends over the Gladesville and Iron Cove bridges to supply the heights of Balmain, but it is now being superseded by an 18-inch main from the Hermitage reservoir.

(iv.) *Storage Reservoirs.* In connection with the water supply there are in all thirty-two service reservoirs, with a total maximum capacity of 51,716,000 gallons.

(v.) *Revenue, Expenditure, and Capital Cost of Sydney Waterworks.* The following table gives particulars as to the revenue, expenditure, and capital cost of the metropolitan waterworks for each financial year from 1902 to 1911.

**SYDNEY WATERWORKS—REVENUE, EXPENDITURE, AND CAPITAL COST,  
1902 to 1911.**

Year Ended 30th June.	Revenue.	Working Expenses.	Capital Cost exclusive of Items on which Interest is not charged.	Per- centage of Working Expenses to Revenue.	Per- centage of Revenue to Capital Cost.	Interest Payable on Capital Cost.	Net Profit after pay- ing Work- ing Expens- es and Interest.

1910	133,788	668,940	26,903	9,819,657	201	40.21	100
1911	139,237	696,185	29,006	10,587,433	208	41.55	102

(vii.) *Other Water Supply Systems under the Metropolitan Board.* In addition to the main metropolitan water supply system there are certain other systems within the County of Cumberland managed by the Metropolitan Board. (a) The Richmond waterworks are entirely unconnected with the Sydney supply. The system consists of a small pumping station on the left bank of the Hawkesbury River, just below the confluence of the Grose and Nepean, a 6-inch supply main, four miles in length, and five and one-eighth miles of 8-inch and 4-inch reticulation mains. (b) The Wollongong waterworks are also unconnected with the Sydney supply. The source of supply is the Cordeaux River and the catchment area is 2400 acres in extent. The total capacity of the reservoir is 173,000,000 gallons and the total length of the main about nineteen miles, exclusive of the extension to Port Kembla and Unanderra. The town, of which the estimated population on 31st December, 1909, was 4400, is reticulated with 4-inch and 3-inch pipes. (c) The Manly waterworks are supplied by a special catchment area of about 1300 acres, and are also connected with the metropolitan system by a 10-inch main from Mosman, crossing Middle Harbour, with ball and socket pipes. There are two horizontal compound duplex pumps, each having a capacity of 1,000,000 gallons in seventeen hours. (d) The water-supply for the districts of Campbelltown, Camden and Narellan, and Liverpool is not drawn from the main Sydney supply through Potts' Hill, but is received by gravitation from the upper canal at Prospect.

**7. Metropolitan Sewerage System.**—The system which is now under the control of the Metropolitan Board of Water Supply and Sewerage comprises the old and new systems. The old system was initiated by the City Commissioners in 1853, and continued by their successors, the present City Council, since their incorporation in 1857. The old system was designed on the principles of what is known as the "combined system," and comprises four main outfalls, with subsidiary sewers along the principal streets; these, in turn, receive the reticulation sewers of the minor thoroughfares. The four main outfalls discharged directly into the harbour, and the consequent pollution of the water and menace to public health led to the appointment of a commission to enquire into the best means of diverting the sewage from the harbour, and of disposing of it when thus diverted. The new intercepting system is the outcome of the labours of that commission. At the time of the transfer, in 1889, of the original sewerage works to the Metropolitan Board, there were 70½ miles of old city sewers in existence. The new system adopted is on the lines of the partially "separate system," and intercepts all sewage from the gravitation zone—i.e., from above a contour line about forty feet above high-water mark, while the sewage from the low level areas—i.e., from below that contour line is eventually pumped into the gravitation sewers. The system consists of three main outfalls, viz.:—(a) The northern outfall, discharging into the Pacific Ocean at Ben Buckler Point, near Bondi, and taking all sewage previously discharged into the harbour.

(b) The southern outfall, discharging into the sewage farm at Webb's Grant, and providing for the remainder of the city and southern suburbs. (c) The western outfall, discharging into the Rockdale end of the sewage farm and providing for the western suburbs. Another branch outfall has been constructed at Coogee, which discharges into the ocean and serves the districts of Randwick, Kensington and Coogee. On the northern side of the city extensive works have been completed. Septic tanks, into which main sewers discharge, have been constructed at Long Bay (Middle Harbour), Chatswood, and near Balmoral beach. At Manly an ocean outfall has been provided for the main sewer, and in the borough of North Sydney septic tanks were built in 1899 to deal with the sewage, while at Middle Harbour, Mosman, and Manly ample provision has been made for the sanitation of the districts.

(i.) *Revenue, Expenditure, and Capital Cost of Sydney Sewerage Systems.* The following table gives particulars as to the revenue, expenditure, and capital cost of the metropolitan sewerage systems during each year from 1902 to 1911:—

**SYDNEY SEWERAGE SYSTEMS.—REVENUE, EXPENDITURE, AND CAPITAL COST, 1902 to 1911.**

1911 ...	108,012	540,060	825.20	48.85	376,900	795.0

**8. The Hunter District Water Supply and Sewerage Board.**—The waterworks of the Lower Hunter were constructed by the Government under the provisions of the Country Towns Water Supply and Sewerage Act of 1880. In 1892 a special Act was passed establishing an independent Board to control the water-supply works. This Board consists of seven members, of whom three are nominated by the Governor, one elected by the Newcastle Municipal Council, two by the adjacent municipalities, and one by the municipalities of East and West Maitland and Morpeth. The following municipalities and incorporated areas are within the area of the Board's jurisdiction:—

*Newcastle Division.*—Adamstown, Argenton, Ash Island, Boolaroo, Carrington, Hamilton, Hexham, Holmesville, Lambton, Merewether, Minmi, Newcastle, Plattsburg, Wallsend, Waratah, and Wickham.

*Maitland Division.*—Abermain, Aberdare, Bolwarra, Cessnock, East Greta, Heddon Greta, Hinton, Homeville, Kurri Kurri, Lorn, East and West Maitland, Morpeth, Oakhampton, Pelaw Main, Rutherford, Stanford Merthyr, Telarah, and Weston.

(i.) *Description of Waterworks.* The water supply is pumped up from the Hunter River about a mile and a half up stream from West Maitland, the engines being situated above flood level on a hill about forty-four chains from the river. At the pumping station there is a settling tank of 1,390,500 gallons capacity, six filter beds, a clear water tank holding 589,500 gallons, and a storage reservoir of 172,408,100 gallons capacity. The filtered water is pumped from the clear water tank into two summit reservoirs, one of which is connected by a 10-inch cast-iron main  $4\frac{1}{2}$  miles in length, and supplies East and West Maitland, Morpeth, and Maitland, while the other is fed by two rising mains, one riveted steel pipe  $20\frac{3}{4}$  in. diameter, and a 15-inch cast-iron main,  $5\frac{1}{2}$  miles long, and supplies the other districts under the control of the Board. In seven of these districts reservoirs having a total capacity of nearly 4,000,000 gallons are supplied by gravitation. On the hill at Newcastle there is also a high-level iron tank with a capacity of 20,000 gallons, which is supplied by a small pumping engine on the roof of the Newcastle reservoir. The total length of water mains is  $384\frac{1}{4}$  miles.

(ii.) *Water Supply, Capital Cost, Revenue, and Expenditure.* By the Act of 1892 referred to above and an Amending Act of 1894 the capital debt of the Board was to be liquidated by annual instalments distributed over 100 years with interest at  $3\frac{1}{2}$  per cent. By a further amending Act of 1897 the repayment of expenditure on permanent works was abrogated, and the annual instalments were to be paid in liquidation of the cost of renewable works to be fixed by the Government from year to year. The capital debt of the Board to the Government at 30th June, 1911, was in respect of water supply £477,204, and £170,151 in respect of sewerage. In the subjoined table particulars are given as to the revenue and expenditure, and also as to the number of houses and population supplied for each financial year from 1902 to 1911 inclusive:—

**PARTICULARS OF THE HUNTER DISTRICT WATER SUPPLY, 1902 to 1911.**

Year ended 30th June.	Revenue.	Working Expenses (including Interest).	Houses Supplied.	Estimated Population Served.	Supply.	
					Daily Average.	Total.
	£	£	No.	No.	1000 Gallons.	1000 Gallons.
1902 ... ..	29,558	32,109	9,875	49,400	1,119	408,508
1903 ... ..	31,102	32,217	10,522	52,600	1,113	406,172

1910 ... ..	46,767	43,126*	16,446	82,230	1,650	602,497
1911 ... ..	45,711	45,020	17,164	85,820	1,850	675,214

\* Inclusive of an instalment of £10,675 to the sinking fund for reconstruction of renewable works.

The average daily consumption of water for all purposes per inhabitant was 21.55 gallons during the year 1911, as against 20.07 gallons during the previous year.

(iii.) *Sewerage Works.* Considerable progress has been made by the Department of Public Works with the construction of the sewerage works for Newcastle and suburbs. The scheme is designed on the separate system, and will deal with the sewage partly by gravitation and partly by pumping. The works within the first two completed sections were transferred to the Board in 1907, those within the third section in March, 1910, and those within the fourth section in February, 1912. Up to the 30th June, 1911, about 30 miles of sewers, connecting with 1465 separate properties, were under the control of the Board. For the financial year 1910-11 the revenue was £8974 and the expenditure £9584, the latter amount including a £1039 instalment to the Sinking Fund for the reconstruction of renewable works.

**9. Water Supply and Sewerage in Country Towns.**—With the object of assisting municipalities to construct systems of water supply and sewerage, the Country Towns Water Supply and Sewerage Act of 1880 was passed, but has since been amended by the Acts of 1887, 1894 and 1905. Under these Acts the amount for carrying out the works is advanced by the State, and the municipality has the option of undertaking the construction of the works, failing which the Government undertakes the duty. Municipalities which avail themselves of the provisions of the Act are empowered (in addition to levying ordinary municipal rates) to levy a special rate for each service, based (at the option of the councils) upon either the improved or unimproved capital value of the lands so liable for rating, such rate not to exceed a maximum of 10 per cent. upon the assessed value of the lands and tenements so taxed. The original Act, as amended in 1894 and in 1905, provides that the sum advanced, with interest at 4 per cent. per annum, must be repaid by a maximum number of 100 yearly repayments, and also provides for the issue of licenses to workmen, for the recovery of rates and for making by-laws for the assessment of lands and other purpose.

(i.) *Waterworks.* Up to the 30th June, 1910, forty-eight country municipalities had availed themselves of the privileges of the Act as regards waterworks, all of which at that date had been completed and handed over by the Government. The total amount expended on these works was £854,949, and the total of the sums payable annually for a period of 100 years was £31,755, including interest at the rate of  $3\frac{1}{2}$  per cent., the first repayments having become due at various dates ranging from the end of the year 1893 to the end of 1908. In the calculation of these repayments the interest on the expenditure has been added, and any payments by the councils, as well as sums remitted under the authority of the Act, have been deducted. A number of other municipalities have constructed works out of their own resources.

(ii.) *Sewerage Works.* Only eleven municipal councils have taken advantage of the Act providing for the construction of sewerage works in country towns. On the 30th June, 1910, the capital debt of these systems was £124,115, the amount payable annually to the Government being £4669. Other sewerage systems are in existence in several places, but with few exceptions the operations have been on a small scale.

**10. Board of Fire Commissioners of New South Wales.**—Reference has been made in the section of this book dealing with the subject of *Private Finance* (see page 875) to the constitution of the Board of Fire Commissioners of New South Wales, which has now superseded the Metropolitan and all other Fire Brigade Boards in that State.

(i.) *Receipts and Disbursements of Board of Fire Commissioners of New South Wales for 1910 and 1911.* The subjoined table shews the actual receipts and disbursements of the Board, for the years 1910 and 1911 inclusive:—

**NEW SOUTH WALES BOARD OF FIRE COMMISSIONERS.—RECEIPTS AND  
DISBURSEMENTS FOR SYDNEY FIRE DISTRICT, 1910 and 1911.**

Year.	Receipts.						Disbursements.
	From Government.	From Municipalities.	From Fire Insurance Companies.	From Firms.	From other Sources.	Total.	
	£	£	£	£	£	£	£
1910 ...	21,624	21,624	21,181	442	607	65,478	58,168
1911 ...	21,643	21,643	21,198	444	1,145	66,073	60,667

With reference to the preceding table, under the "Fire Brigades Act 1909," by which the New South Wales Board of Fire Commissioners was constituted and which came into operation on 1st January, 1910, insurance companies do not now, as formerly, return the amount of their risks, but give in lieu thereof the amount of premiums received, which forms the basis of their contribution towards the revenue of the Board. The Board, with consent of the Minister, is empowered to divide the State into fire districts and to make annually an estimate of the amount it proposes to expend therein during the following year, but such estimate must be made so that the amount of contribution levied against such fire districts shall not exceed  $\frac{1}{4}$ d. in the £ on the unimproved capital value of all ratable land within each district. Every insurance company pays annually to the funds of the Board a percentage contribution, to be fixed by the Board on the total amount of premiums (excluding the reinsurance proportion thereof) which each company receives out of each fire district, within each of which uniform percentages prevail. By this Act also firms which effect insurances with companies not registered in New South Wales are likewise required to make contributions on account of the premiums paid to such companies, which is the first instance of this class of insurer being compelled to share the expense of local advantages, which had hitherto been available free of cost. The Sydney fire district includes the City of Sydney and suburbs, comprising a total area of 152½ square miles.

**11. Sydney Harbour Trust.**—The establishment of this Trust was the direct outcome of the outbreak of bubonic plague in the port of Sydney in the early part of the year 1900. It was proved that this disease was due to the introduction of plague-stricken rats in vessels arriving from ports in which the disease had made its appearance. As a consequence the whole of the foreshores of the harbour, together with certain adjoining wharves, stores, dwelling houses, and other properties, were vested in a body of trustees. The Trust was established by an Act which came into force on the 11th February, 1901. Under this Act an independent body of three Commissioners was created for the purpose of administering the affairs of the harbour and of fostering its interests, each commissioner being entitled to hold office for seven years, subject to certain conditions. This Board of Commissioners is invested with the exclusive control of the port and shipping, lighthouses, beacons, buoys, wharves, and docks (with the exception of wharves and docks constructed on land which has been alienated from the Crown), in Sydney Harbour, and is empowered to levy certain tolls, dues, rates, rents, and charges, and to resume or purchase lands and buildings. Prior to the establishment of the Trust, the extensive foreshores of the port offered opportunities to private individuals of acquiring water frontages, which enabled them to participate in the revenue to be derived from the wharfage and tonnage rates as prescribed by the various Acts. This alienation of the water frontages was in return for comparatively small payments. In effect, this deprived the Crown of an annual revenue which, under other circumstances, might have been applied to the maintenance of the port. One of the greatest changes made by the Sydney Harbour Trust Act was the alteration of the basis upon which wharfage is charged, so that goods which do not use the wharf, but are lightered overside, are subject to wharfage. The Act embodied the wharfage schedule appended to the Wharfage and

Tonnage Rates Act of 1880, by which the inward rates were fixed at one shilling and eightpence per ton, and the outward at tenpence; but it did not provide for any reduced rate for transhipment goods arriving from overseas as had previously been allowed, although it gave the Commissioners power to make or to recommend certain exemptions and to increase the inward wharfage to three shillings per ton measurement, or to four shillings per ton dead-weight. During the year 1901 the Commissioners recommended the Government to increase the inward rates to two shillings and sixpence per ton and to abolish outward wharfage, and these recommendations were duly endorsed by the Executive Council. Liberal concessions were also made with regard to transhipment goods arriving from overseas. All goods produced or manufactured within the State of New South Wales were exempt from wharfage rates until the Sydney Harbour Rates Act 1904 was passed. Under this Act a schedule of wharfage charges was provided for, a small charge of fivepence per ton being imposed on all goods transhipped; important amendments were also made in the old tonnage rates charges (which had been in existence since 1880), with the result that many vessels which previously escaped payment have now to pay a fair charge for the use made of the wharfage accommodation provided by the Trust. Considerable improvements have been made by the Commissioners in the wharfage accommodation of the port and in the sanitary condition of the area vested in the Trust by the construction of new jetties, sheds, offices, and waiting rooms; by dredging and by preventing the pollution of the waters of the port; by opening up new roads; and by taking means to prevent rats and other vermin from finding a harbourage in the produce stores and in the vicinity of the wharves.

(i.) *Revenue, Expenditure, and Capital Cost.* The subjoined table gives particulars of the revenue and expenditure of the Trust, and also shews the total capital debt for properties, etc., vested in the Commissioners, the amount of interest payable on the debt, and the balance of revenue after deducting expenditure, interest, and the amount of the Commissioners' salaries:—

**SYDNEY HARBOUR TRUST.—REVENUE, EXPENDITURE, CAPITAL DEBT, INTEREST AND BALANCE, 1901 to 1911.**

\* For the period from 11th February to the 30th June, 1901. † The rate of interest charged each year is the average rate on the total capital debt of the State, which varies. — Represents a loss. ‡ Including expenditure for the renewal, replacement or reconstruction of wharves or buildings, viz., £34,970 in 1910, and £23,650 in 1911.

The revenue for the year 1910-11 shows an increase of £36,708 on that for the previous year, and is the highest attained since the formation of the Trust. The corresponding increase in expenditure was £11,738, exclusive of expenditure on renewals, etc., which was incurred chiefly on account of extra requirements for dredging, and sundry other items.

(ii.) *Dredging and Towing.* The subjoined statement gives particulars of the dredging and towing done by the dredges and tug boats owned by the Trust:—

### § 3. Victoria.

1. **Development of Types of Local Authorities.**—In Victoria there are now two types of municipal institutions, (a) boroughs, including cities and towns, and (b) shires, and although they are now dealt with by the same Act, their origin was distinct, and in the early days of their development they were provided for by independent enactments. Melbourne and Geelong, the latter of which was for many years the second largest town in the State, having been incorporated under special statutes prior to the establishment of a general system of local government, are not subject to the provisions of the Local Government Acts except in a few comparatively unimportant details. Melbourne was incorporated as a town in 1842, and as a city in 1947; Geelong was incorporated as a town in 1849, and proclaimed a city on 14th December, 1910.

(i.) *Institution of Road Districts.* The Imperial Act of 1842, under which the Governor of New South Wales was authorised to form districts for the purpose of self-government, has already been referred to. This Act was succeeded by the Act of 1850, which separated the district of Port Phillip from New South Wales, and provided that the proclamation of districts (under the Act of 1842) which had not been followed by an election of councillors should be void, and where councillors had been elected the Letters Patent forming such districts could be revoked by petition. For the future such districts were only to be incorporated upon petition of the inhabitants to the Governor, who was authorised to establish elective district councils, with power to frame by-laws for making and maintaining roads and bridges, establishing schools, and levying local tolls and rates. The necessity for a more comprehensive scheme of local government soon became apparent, owing to the increase of settlement on the land which followed the excitement of the gold rush, and in 1852 two committees of the Legislative Council were appointed, one to enquire into the operations of district councils which had been established, the other to report generally upon the condition of the roads and bridges in the State, and as to how the funds for their construction and maintenance could be best expended. The report of the latter committee was of considerable value, because it formed the basis of the first Victorian Act which provided a scheme for the local government of country districts, namely, the Roads Act of 1853. Under this Act a distinction was made between main roads and parish or cross roads. The Governor was authorised to declare any part of the colony to be a road district; main roads were placed under the care of a central Road Board with an Inspector-General and staff, while parish roads were to be made and maintained by the district councils, which were empowered to levy rates for the purpose.

(ii.) *Establishment of Shires and Extinction of Road Districts.* The Act of 1853 continued in force for ten years, when it was repealed, its provisions as amended

being re-enacted by the Road Districts and Shires Act 1863. By this Act the central Road Board was abolished, and the establishment of shires and shire councils was authorised. Any district having an area of not less than 100 square miles and a revenue from general rates of not less than £1000 might be incorporated as a shire, the duties and powers of which were the same as those of the districts, but additional privileges, such as power to raise loans and to grant licenses, were conferred upon the shires. Provision was also made for the regulation of the proceedings of shire councils, the preparation of voters' lists, elections, accounts, revenue, rates, auditors, and other matters, and these provisions have been substantially continued in later Acts. The result of the Act of 1863 was that the road districts were gradually developed into or were absorbed by the shires, and the next important measure which was passed, the Shires Statute Act of 1869, recognised only the latter, and with respect to shires retained the principal features of the preceding Act.

(iii.) *Constitution of Urban Municipal Districts and Boroughs.* In the meantime suburban districts and country towns were growing up, and in the year 1854 an Act was passed for the establishment of municipal boroughs in Victoria. Provision was made whereby any district having an area of not more than nine square miles, no part of which was more than six miles from any other part, and having a population of not less than 300, might, on petition, be constituted a municipal district. This Act, which thus originated those municipalities now known as boroughs (including cities and towns), was amended and repealed by the Municipal Institutions Consolidating and Amendment Act 1863, which re-enacted the principal features of the previous Act. These features are practically the same as those which now prevail with regard to boroughs. The Act of 1863 was in turn amended from time to time, and the law relating to boroughs was consolidated in 1869 by the Boroughs Statute Act.

(iv.) *Legislation applying to all Types of Municipalities.* Both the Shires Statute Act and the Boroughs Statute Act of 1869 were repealed and their provisions amended and consolidated by the Local Government Act 1874, which, after further improvements and extensions, was in turn consolidated by the Local Government Act 1890, which was itself amended from time to time. In 1899 a select committee of the Legislative Assembly was appointed to enquire into and to report upon the working of the Act of 1890 and to suggest amendments required in the law relating to local government. This committee was subsequently constituted a Royal Commission, and in 1902 issued a report to which was appended the draft bill which became the Local Government Act 1903, the provisions of which now regulate the working of municipalities in the State.

**2. Local Government Systems now in Operation.**—Local government is now administered under the Act of 1903 throughout the whole of the State, with the exception of about 6000 square miles in the mountainous parts of the county of Wonnangatta, and the whole of French Island.

(i.) *Constitution of Municipalities.* Provision is made for the continuation of municipalities established under previous Acts and for the constitution of new ones.

- (a) *Shires.* Any part of the State containing ratable property yielding, upon a rate not exceeding one shilling in the pound, a sum of £1500 may be constituted a shire upon petition of at least fifty inhabitants.
- (b) *Boroughs.* Any part of the State, not exceeding in area nine square miles, and having no point distant more than six miles from any other point, and containing a population of not less than 500 and ratable property yielding, upon a rate not exceeding one shilling in the pound, a sum of £300, may be constituted a borough upon petition of at least 250 resident householders. Any borough having during the preceding financial year a revenue of £10,000 may be declared a town, or having a revenue of £20,000 may be declared a city upon petition under the common seal of such borough. Provision is

also made for severing any part of a municipality and annexing the same to an adjoining municipality: for dividing municipalities into any number of subdivisions not exceeding eight; and for uniting two or more boroughs which form one continuous area so as to form one borough.

- (c) *Townships.* Upon petition signed by not less than twenty-five ratepayers resident in any portion not exceeding three square miles in extent of any shire and distant more than ten miles from the boundaries of the city of Melbourne, the Governor may, with the consent of the municipal council, proclaim such portion a township.

(ii.) *The Municipal Council.* It is provided by the Act of 1903 that, in the case of existing municipalities, the council shall consist of the number of members assigned to it at the commencement of the Act, but, when the number of members is determined under the Act, such number shall be, in case the district is not subdivided, some multiple of three, not less than six nor more than twenty-four, and, in case such district is subdivided, the number produced by the return of three councillors for every subdivision. Every person liable to be rated in respect of property in the municipal district of the ratable value of £20 at the least is qualified to hold the office of councillor in any municipality, provided that no female, nor any undischarged bankrupt, nor a person attainted of treason or convicted of felony shall be so qualified. Other persons may also be disqualified on the ground of interest. Provision is made for the retirement of one-third of the councillors annually in rotation, and for the election and privileges of the chairman, who is styled the mayor of a borough or the president of a shire.

(iii.) *The Municipal Electorate.* Every person who on the 10th June in any year has attained the age of twenty-one years, and is liable to be rated in respect of property within a municipal district, in respect of which all rates made before the 10th March of the year have been paid, is entitled to be enrolled as a voter, but no person may be enrolled in respect of property rated under £5 a year, unless there is a house on the property, and he resides there. The occupier and the owner of any ratable property may not be both enrolled in respect thereof, the former having the right to be enrolled instead of the latter. Corporations liable to be rated may appoint not more than three persons to be enrolled in their place. Joint occupiers and owners, not exceeding three, are each entitled to be enrolled, and in case more than three persons are rated in respect of any property, those whose names stand first in order upon the rate last made or upon the last valuation and return are so entitled. Plurality of votes is allowed on the scale shewn in the following statement:—

#### VICTORIA.—PROPERTY QUALIFICATIONS FOR ENROLMENT AS MUNICIPAL VOTER.

Number of Votes.	Annual Ratable Value of Property.	
	Boroughs (including Cities and Towns).	Shires.
1	Under £50.	Under £25.
2	From £50 to £100.	From £25 to £75.
3	£100 and upwards.	£75 and upwards.

Voters' lists are prepared annually by collectors appointed for the purpose; provision made for the revision of the lists, for the time and place of holding elections, for the

nomination of candidates, for the application of the Voting by Post Act 1900; for the appointment of officers, and for the meetings and proceedings of councils.

(iv.) *Powers and Functions of Councils.* Municipal councils are empowered to make by-laws for a great number and variety of purposes, of which the most important are as follows:—The control and regulation of roads and streets, buildings, wharves, and public places, of nuisances, passenger vehicles, carters, boatmen, and porters; the regulation and maintenance of water supply, sewerage, drainage, and lighting; the establishment and control of fairs and public sales, labour marts and offices; the preservation and management of commons and public reserves; the regulation of traffic and hoardings; the public health and the prevention of contagious or infectious diseases, and generally for maintaining the good rule and government of the municipality. Councils are authorised to undertake the supply of light, heat, or motive power for public or private purposes; they may construct and maintain tanks, dams, and reservoirs, and may provide public baths, markets, weighbridges, pounds, abattoirs, places of public recreation, and charitable institutions. One of the principal functions of the councils is to construct and maintain public highways, streets, bridges, ferries, and jetties within their respective localities. At the request of the council the provisions of the Act as to the maximum weight which it is permissible to carry on vehicles on any public road within the municipality, may be made to apply by proclamation.

(v.) *Ratable Property.* All land, including buildings and improvements thereon, within a municipality is ratable property, except the following:—Crown lands unoccupied or used for public purposes; land used exclusively for commons, mines, public worship, mechanics' institutes, public libraries, cemeteries, free primary schools, and charitable purposes; land vested in, in the occupation of, held in trust for, or under the control of any municipality, local governing body, or commissioners under the Rates Act; land vested in the Railway Commissioners, in the Minister of Public Instruction, in the Board of Land and Works, in the Commissioners of the Melbourne Harbour Trust, and in the Melbourne and Metropolitan Board of Works. The valuation of all property is computed at its net annual value, that is to say, at the rent at which the same might reasonably be expected to let from year to year, free of all usual tenants' rates, taxes, and cost of insurance, but no ratable property may be computed as of an annual value of less than 5 per cent. upon the fair capital value of the fee-simple thereof.

(vi.) *Rates.* The municipal councils are empowered to levy rates, which, together with grants and subsidies received from the Government, license fees, market dues, rents, tolls, and sanitary charges, form their chief sources of income. The rates which may be levied are of three kinds, namely—general, extra, and separate rates.

(a) *General Rates* are levied at least once in every year, and must not exceed two shillings and sixpence in the pound of the net annual value, nor be less than sixpence in the pound of such value. Every general rate must be made for one year or half a year, or such other period less than a year, but not less than three months, as the council thinks fit, and must be levied on the occupier of the property rated, or if there be no occupier, or if the occupier be the Crown or the Minister of Public Instruction, or a public or local body, then upon the owner of the property.

(b) *Extra Rates* may be levied in any municipal district which is subdivided equally in respect of all the ratable property within any one or more of the subdivisions, but cannot be levied except in accordance with the requisition of not less than two-thirds of the councillors returned by such sub-division. The amount of general and extra rates levied in any year must not exceed two shillings and sixpence in the pound of the net annual value.

- (c) *Separate Rates* may be levied where it appears to the council that any works or undertakings authorised by the Act are for the special benefit of any particular portion of the municipal district, but may be made only upon petition signed by a majority of the occupiers and by at least one-third of the owners of the properties affected, and must be confirmed by order of the Governor-in-Council. Separate rates may be levied equally on all properties affected, or may be differential according to the benefits to be received by different properties, and the amount of the rate must be such as will, in the opinion of the council, suffice to provide for the payment of interest and periodical repayments of, or sinking fund for, the money borrowed on the security of such rate.

(vii.) *Borrowing Powers.* The council of every municipality may borrow money upon the credit of such municipality by the sale of debentures, either for the purpose of liquidating previous loans or for the purpose of constructing certain specified permanent works or undertakings, such as the construction, alteration, or enlargement of streets, roads, bridges, ferries, sewers, and drains; the construction and purchase of waterworks, electric light or gas works, abattoirs, markets, baths, pleasure grounds, libraries, museums, and places of public resort and recreation; the establishment of hospitals, asylums, and other buildings for charitable purposes; the destruction and disposal of refuse, and the purchase of land or any easement, term, right, or privilege in, over, or affecting land. The amount of money so borrowed at any time for permanent works must not exceed ten times the average income of the municipality for the three preceding years, and the amount borrowed in the case of any municipality already indebted must not exceed the difference obtained by subtracting from ten times such average income the balance remaining unpaid of any previous loans. The question as to whether any loan for the purpose of permanent works shall be incurred must be submitted to a poll of the ratepayers upon demand signed by any twenty persons whose names are inscribed on the municipal roll. The council of any municipality may, in addition to the borrowing powers mentioned above, borrow money for permanent works or undertakings on the security of its income, but not upon the credit of the municipality, by the issue of debentures or by a mortgage over such income. The amount of money so borrowed must not at any time exceed five times the average income of the municipality for the three preceding years. The income referred to does not include moneys derived from general, separate, or extra rates, special improvement charges, publicans' licenses, or endowment from the consolidated revenue fund. Temporary advances by way of overdraft of the current account may also be obtained, but must not at any time exceed one-half the prior year's revenue.

(viii.) *Endowment.* Under the Local Government Act 1874 an annual endowment of £310,000 was provided for the municipalities. This amount ceased to be payable in 1879, but a subsidy, amounting to £310,000, was voted by Parliament annually, and was increased year by year, until £450,000 was granted in 1889-90 and 1890-91. The Local Government Act 1891 authorised the payment of an annual endowment of £450,000, but this amount was reduced year by year to £50,000 in 1902, but was increased to £75,000 for the year 1906-7, and to £100,000 from the 1st July, 1907. For the purpose of distributing the endowment, the shires are classified. Under the Municipal Endowment and Reclassification of Shires Act 1907, a new classification was adopted under which the amount of the endowment is to be allocated. In addition to the endowment of £75,000 (increased to £100,000 from the 1st July, 1907) the municipalities received from the Government during the financial year 1910-11 a sum of £82,909 out of the Licensing Act Fund as the equivalent for (a) fees for licenses, (b) fees for the registration of brewers and spirit merchants, and (c) fines, penalties, and forfeitures incurred under the Licensing Act 1876. Under the Act of 1907 the endowment of £100,000 is payable in equal moieties in March and September of each year. No city or town is entitled to receive any part of the endowment. The distribution

amongst the boroughs and shires is based on the amount of general and extra rates received in the twelve months ending on the preceding 30th September according to the following scale:—

**VICTORIA.—ENDOWMENT OF BOROUGHS AND SHIRES, 1910-11.**

To every Borough or 1st Class Shire, 3s. in the £	To every 4th Class Shire, 8s. in the £
" " 2nd Class Shire 5s. " "	" 5th " 10s. " "
" " 3rd " " 6s. " "	" 6th " 12s. " "

For the three financial years commencing the 1st July, 1907, however, the amounts were definitely fixed by Act No. 2129, and for the financial year 1910-11 by Act No. 2267.

**3. Boroughs and Shires.—Number, Population, and Value of Ratable Property, 1902 to 1911.**—The following table shews the number of cities, towns, boroughs, and shires, their estimated population, the number of ratepayers and dwellings, and the value of ratable property for the years 1902 to 1911 inclusive:—

**6. The Melbourne and Metropolitan Board of Works.**—This Board was established by an Act which came into force on 20th December, 1890, and entered upon its duties on 18th March, 1891. The Board consists of forty members, one of whom is a chairman elected every four years by the other members, the retiring chairman being eligible for re-election. Nine members are elected by the Melbourne City Council, four by the South Melbourne Council, three by the Prahran, two each by the Fitzroy, Richmond, St. Kilda, and Collingwood, and one each by the other suburban municipal councils returning a representative. Thirteen of the members retire annually in the month of February, but are eligible for re-election if they remain members of their respective councils. The district over which the Board exercises control consists of twelve cities, seven towns, and one borough, two shires, and parts of two others, or twenty-four municipalities in all, comprising a total area of 109,009 acres, and containing an estimated population on the 31st December, 1911, of 594,250 (including those supplied with water outside the Board's area). The waterworks for the supply of Melbourne and suburbs were originally carried out by the Government, which had for that purpose contracted loans amounting to £2,389,934; these works were vested in the Board in 1891. The primary object of the creation of the Board was not, however, to take over these works, but was to supply the long called for and pressing want of a sewerage system for the metropolis. The plans and estimates of the cost of the metropolitan sewerage were originally prepared by an expert civil engineer from England, and were furnished to the Board on its creation. The plan recommended by the designer and selected by the Board's engineer-in-chief was estimated to cost £5,030,000, but this plan was modified by the engineer-in-chief, with the concurrence and assistance of the Board, so as to reduce the estimated cost to £3,451,000. The original plan and estimate contemplated only the construction of the main and branch sewers by the Board, but as Parliament had added the duty of constructing sewers in streets, right-of-ways and branches therefrom the original estimate has necessarily been exceeded. To carry out its work the Board is authorised to borrow £8,750,000, exclusive of the loans contracted by the Government for the purpose of waterworks and taken over by the Board. The liability on Government loans on the 30th June, 1911, was £1,688,663, and for loans raised by the Board was £8,981,000. The Board is still empowered to borrow £470,271 before reaching the limit of its borrowing powers.

(i.) *Total Cost of Water Supply and Sewerage, 1853 to 1910-11.* The subjoined table shows the total cost of construction and maintenance of water supply and sewerage from 1853 to 1911.

**7. Melbourne Metropolitan Water Supply.**—From the year 1835 to 1857 the inhabitants of Melbourne depended for their water supply entirely upon rainwater caught in tanks, or upon water carts filled from the River Yarra above the falls. In 1848 the city

GRAPHS SHEWING CONSUMPTION OF WATER IN METROPOLITAN AREAS.—  
MELBOURNE, SYDNEY, AND PERTH, 1897 TO 1908, AND BRISBANE, 1905 TO 1907

EXPLANATION OF GRAPHS.—No. 1.—Total annual consumption of water in metropolitan area 1897 to period shown on graph. In the Adelaide water districts there are no governing meters; the quantities shown are as recorded by gaugings taken at the reservoirs and include evaporation and absorption. The base of each small rectangle represents an interval of one year, and the vertical height represents 400,000,000 gallons.

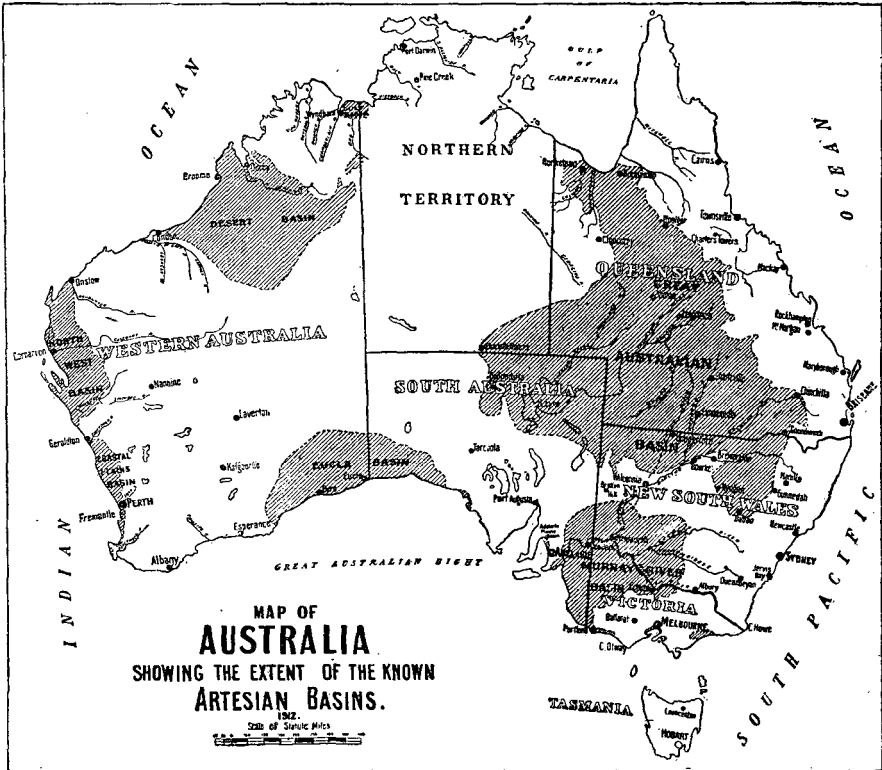

No. 2.—Average daily consumption of water in metropolitan area during each month of the year. (Mean of period 1897 to 1908.) The base of each small rectangle represents an interval of one month, and the vertical height represents 2,000,000 gallons.

No. 3.—Average daily consumption of water per head of population in metropolitan area, 1897 to 1908. The base of each small rectangle represents an interval of one year, and the vertical height represents 4 gallons.

No. 4.—Average daily consumption of water per head of population in metropolitan area during each month of the year. (Mean of period 1897 to 1908.) The base of each small rectangle represents an interval of one month, and the vertical height represents 4 gallons.

The information, while not quite up to date, covers the latest available period and gives, it is believed, a very fair approximation of the present conditions.

MAP SHEWING THE POSITION AND EXTENT OF THE "AUSTRALIAN  
ARTESIAN BASINS."

This map was prepared by the Interstate Conference on Artesian Water, held in Sydney during May, 1912. It contains the latest facts relative to the various artesian basins of the Australian continent. Of these basins the most important is the Great Australian Basin, which extends over 570,000 square miles, viz.:—About 376,000 square miles in Queensland, 90,000 square miles in South Australia, 83,000 square miles in New South Wales, and 20,000 square miles in the Northern Territory. The Murray River Basin extends over South-Western New South Wales, North-Western Victoria, and South-Eastern South Australia. The Western Australian Basins fall naturally within five groups, viz.:—The Eucla Basin, the Coastal Plains Basin, the North-West Basin, the Desert Basin, and the Gulf Basin. (See also pages 583 to 589.)

council appointed a committee to enquire into and report generally upon the water supply and sewerage of the city. This committee recommended that a comprehensive system of sewerage should be carried out, and a rate levied for that purpose; the stringent enforcement of provisions as to slaughtering stock and as to the removal of refuse; that the space between Melbourne and the beach be cleared so as to allow the free access of pure sea air; that a Building Act should be passed and that the streets should henceforth be formed of a uniform width. Most of these recommendations were carried out. A Building Act was passed in 1849, and the filthy lanes in the city were remade and drained. In 1845 the first proposal was made to supply the city with water, by means of a water-wheel to be worked by the Yarra Falls. Five years later a small steam engine was erected to pump water into a tank situated in Flinders Street, from which water was drawn by carts, and in 1851 an elaborate report was issued by the city surveyor, recommending a plan for the city water supply, which was soon afterwards adopted. The source from which it was proposed to conserve the water for the supply of Melbourne consisted of several creeks and springs which flow from Mount Disappointment, about thirty-two miles north of the metropolis, and which, when united, form the Plenty River; this scheme was adopted, and has resulted in the Yan Yean Reservoir scheme. In 1853 the duty of supplying water to the metropolis was transferred from the city council to the Commissioners of Sewers and Water Supply, and towards the end of the same year the work of construction of the Yan Yean system was commenced. On the 31st December, 1857, the first water was turned on by Major-General McArthur, acting for the Governor, Sir Henry Barkly, K.C.B.

(i.) *Development of System, 1857 to 1911.* The following statement shews the development which has taken place in the water supply system of Melbourne during the fifty-four years since its inception:—

#### MELBOURNE WATER SUPPLY SYSTEM, 1857 to 1911.

Year.	Served Population.*	Capital Cost.	Charge per 1000 Gallons.	Rate in £	Mains & Pipes, Mileage of—	Supply in Gallons, Averagedaily.
		£				
1857 ...	95,442	748,974	10/- and 6/-	1/-	104	3,250,000
1911 ...	594,250	4,014,248	1/-	7d.	1,376½	32,974,008

\* On the 31st December.

(ii.) *Description of Water Supply Systems.* The water supply of Melbourne consists of two main systems—the Yan Yean and the Maroondah.

(a) *The Yan Yean System* is the main source of supply. It commences by collecting the water from the Silvery and Wallaby Creek valleys, to the north of Mount Disappointment 2700 feet high, which forms one of the prominent heights of the main Dividing Range in Victoria. The waters of the Silvery Creek are brought by means of an aqueduct a little over eight miles long, constructed at a cost of £59,603, to a weir at the head of the Wallaby Creek aqueduct, which carries the combined waters of the two creeks for a distance of five and a quarter miles, and discharges over the crest of the Dividing Range at a height of 1694 feet above sea level, and then drops a height of 133 feet in 683 feet into Jack's Creek, one of the branches of the Plenty River. The Wallaby Creek aqueduct was constructed at a cost of £69,712. Its carrying capacity is 33,000,000 gallons a day, while the average daily flow of the combined Silvery and Wallaby Creeks is 12,000,000 gallons. From its drop into Jack's Creek the water follows the natural bed of the stream for about three miles to the Tourourrong

reservoir, which is a small reservoir of about thirty-six acres in extent, having a capacity of 60,000,000 gallons. From Tourourrong the Clear Water Channel carries the water for a distance of four and three-quarter miles to the old Plenty inlet channel of the Yan Yean reservoir. This channel is 13 feet 6 inches wide and 4 feet 6 inches deep, the section being a quadrant of a circle of 4 feet 9 inches radius, with one to one side slopes. The fall of this channel is 7 feet 6 inches to the mile, with a carrying capacity of 12,000,000 gallons per day. The cost of the Tourourrong reservoir and this channel was £77,952. In it there are waterfalls, the highest of which is 17 feet. The water from the old Plenty channel enters the Yan Yean reservoir through a spur, forming its western bank, by means of a tunnel 1000 feet long. The Yan Yean reservoir, which is twenty-two miles from the city, is formed by the construction of an earthen bank 49 chains long, 30 feet high, 20 feet wide on top, with a slope next the water of three to one, and an outside slope of two to one. The bywash is 5 feet below the top of the embankment, at a level of 602 feet above low-water mark in Hobson's Bay. The reservoir, when full, covers an area of 1560 acres, with a maximum depth of 26 feet, and an average depth of 18 feet. Its total capacity is 6,400,000,000 gallons, of which 5,400,000,000 gallons are available for consumption. From the Yan Yean reservoir to the Pipe Head dam at Morang, a distance of seven miles, an open aqueduct capable of delivering 33,000,000 gallons a day has been constructed. From the Morang reservoir, the bywash of which is 485 feet above sea level, a 30-inch cast-iron main, 27-inch cast-iron and a 30-inch wrought-iron main carry the water a distance of seven miles to the storage reservoir within the metropolitan area, at Preston. The No. 1 Preston reservoir is constructed partly in excavation and partly in bank; it is 20 feet deep, and holds 16,000,000 gallons. The bywash is 328 feet above the sea level, and the cost to 30th June, 1911, including scour main was £23,318. A second reservoir of 25,000,000 gallons capacity was built during 1908-9, the walls being of reinforced concrete with earth backing. These are the main distributing reservoirs of the central city supply.

- (b) *Maroondah System.* The water for this system is obtained from the Maroondah River, a tributary of the Yarra. The waters of the Graceburn are picked up by a small weir 686 feet above sea level, and carried for a distance of three-quarters of a mile in a concrete-lined channel to a well near the main road leading from Healesville to Marysville. From this well an 18-inch wrought-iron pipe, one and a quarter miles long, leads the water to the main Maroondah aqueduct. The creeks contributing to the flow in the Maroondah aqueduct, in addition to the Graceburn, are the Coranderrk, Donnelly's and Sawpit Creeks. In each case the water is conveyed by pipes into the main aqueduct from diversion weirs on the creeks. A temporary weir of Portland cement concrete has been constructed across the Maroondah River, from which point the water is led in an aqueduct forty-one miles long to the Preston reservoir, where it joins the water from the Yan Yean system. The channel, owing to recent improvements, is now capable of delivering 30,000,000 gallons daily, the cross section being a quadrant of three feet ten inches radius with one to one slopes and a fall of one foot to the mile. The valleys are crossed by wrought-iron syphons, and with the exception of the Plenty River, which is crossed on a wrought-iron girder bridge, all the syphons are laid under the beds of streams. Each syphon is provided with a scour pipe large enough to take the full flow of the aqueduct, enabling the water to

be directed down any of the natural watercourses when it becomes necessary to empty any length of the aqueduct for cleansing purposes. The total cost of the Maroondah system to 30th June, 1911, was £773,765.

(c) *High Level System.* Besides the Yan Yean and Maroondah systems, the high levels of the eastern suburbs of Melbourne are provided for by a direct main from the Yan Yean reservoir. This main is thirty-two inches in diameter, constructed of wrought-iron plates from  $\frac{1}{4}$  inch to  $\frac{7}{8}$  inch thick, 20 $\frac{1}{2}$  miles long, and cost to the 30th June, 1911, £199,576. The discharge is about 9,000,000 gallons per day. There is a storage reservoir of 9,000,000 gallons capacity at Surrey Hills, the by-wash of which is 480 feet above sea-level.

(d) *O'Shanassy Supply.* The O'Shanassy River is a tributary of the Yarra. It is proposed to divert the waters of this river, and to construct an open aqueduct and pipe line of an aggregate length of about 48 $\frac{1}{2}$  miles, delivering water by way of Mitcham. The watershed of the O'Shanassy River, containing 32,650 acres, has been excised from the permanent forests area and a crown grant was issued to the Board on the 28th January, 1910.

(iii.) *Catchment Areas, Reservoirs, and Aqueducts.* (a) *Drainage Areas.* The whole of the catchment areas are absolutely free from population or cultivation. The Government pursued the policy of gradually purchasing all private rights over the various watersheds, which policy the Board has carried on and completed; the original owners have been bought out, while the township of Fernshaw, in the Maroondah system, was entirely purchased and obliterated. The present drainage areas from which the water is delivered cover the following:—

	Silver and Wallaby Creeks.	Plenty River and Jack's Ck.	Yan Yean Reservoir Catchment.	Maroondah Catchment.	Total.
Area in acres	12,000	12,000	5,000	40,000	69,000

All the water is delivered by gravitation, no pumping being required in any portion of the area supplied.

(b) *Storage Reservoirs.* In connection with distribution there are eight service reservoirs having a total capacity of 73,000,000 gallons. From the Preston reservoirs, which form the main distributing point, a number of service mains lead into the reticulation system of the metropolis. The total daily quantity of water which can be sent into Melbourne is as follows:—

#### MELBOURNE WATER SUPPLY.—CATCHMENT AREA, 1911.

System	...	Yan Yean.	Maroondah.	High Level Main	Total Supply.
Gallons per day	...	33,000,000	30,000,000	9,000,000	72,000,000

(c) *Aqueducts.* Up to the 30th June, 1911, 203 miles 5 $\frac{1}{4}$  chains of 12 inch to 54 inch mains and 1092 miles 44 $\frac{1}{2}$  chains of reticulation mains, below 12 inch, had been laid, in addition to which there were 80 miles 72 $\frac{3}{4}$  chains of aqueducts and syphons, or a total length of aqueducts, mains, and reticulation pipes of 1376 miles 42 $\frac{1}{2}$  chains.

(v.) *Quantity of Water, Number of Houses, and Population Supplied.* The following table gives various particulars shewing the increase in the supply of water in Melbourne and suburbs from 1902 to 1911 inclusive:—

### MELBOURNE WATERWORKS.—NUMBER OF HOUSES, POPULATION, AND WATER SUPPLIED, 1902 to 1911.

Year Ended 30th June.	Number of Houses Supplied.	Estimated Population Supplied.	Average Daily Supply.	Total Supply for the Year ended 30th June.	Average Daily Supply.		Rate Levied.	Assessments of Tenements Served by Metropolitan Water Supply.

1. Works commenced in 1853. 2. Revenue commences in 1854. 3. Returns for expenditure commence in 1859. 4. First interest paid in 1856.

**5. Melbourne Sewerage.**—As stated above, the chief object of the creation of the Melbourne and Metropolitan Board was to carry out an efficient system of sewerage. Old Melbourne used to be a city of cesspits, and it was not until the latter sixties that these were abolished, filled up, and the movable pan system gradually adopted throughout the whole metropolitan area with night removal. The cost of removal in 1894 was about £90,000, equal to a capital expenditure of £1,750,000. This objectionable system has been displaced by the water carriage system throughout a large portion of the metropolis, and in other parts the work of reticulation is now proceeding. The sewerage system is designed to carry off all water used in water closets, lavatories, baths, and urinals,

together with all chamber slops and water used in cooking, washing clothes and floors, and from sinks in kitchens and sculleries, drainage from stables and cow houses, together with all liquid refuse, which in the opinion of the Board will not prejudicially affect the sewers, the machinery, or the sewage farm. Rainfall from the streets flows into the river and is not taken into the sewers, which are designed to provide for 30 cubic feet per head per day from the assumed future population, calculated on the basis of a population of 1,000,000 people ultimately settled on the areas now capable of being connected with the pumping station.

(i.) *Description of Sewerage Systems.* The whole of the sewage of the metropolis is being gradually collected by means of two principal main sewers and a subsidiary main leading to the pumping station at Spotswood.

The two main sewers are (a) *North Yarra System.*—The North Yarra sewer, which commences with Heidelberg (part of) and thence takes up East Kew, Preston, Coburg, Northcote, Brunswick, the Clifton Hill part of Collingwood, also Fitzroy and the North Carlton, North Melbourne, and Flemington and Kensington parts of Melbourne, together with Essendon and Footscray. (b) *South Yarra System.*—The Hobson's Bay main which starts with Moorabbin (part of), picking up Brighton, Caulfield, Malvern, St. Kilda, Camberwell, a small part of Nunawading, besides the remaining part of Kew, also Hawthorn, Prahran, South Melbourne, Port Melbourne, Richmond, the remaining part of Collingwood, also East Melbourne and other remaining parts of Melbourne. (c) The Subsidiary main, which takes in Williamstown and joins the Hobson's Bay main before it enters the pumping station.

On 30th June, 1911, the sewerage system had been practically completed in the following districts, viz.:—Port Melbourne, South Melbourne, Melbourne (except very small portions in Flemington and Kensington), Richmond, Prahran, Collingwood, Fitzroy, and very nearly the whole of St. Kilda, whilst the thickly populated portions of Brighton, Caulfield, Malvern, Camberwell, Kew, Hawthorn, Brunswick, Northcote, Essendon, Footscray, Williamstown, Coburg, Preston and Moorabbin had also been dealt with; also a small portion of Nunawading.

During the past twelve months a great deal of progress has been made in the work at Moorabbin, Coburg, Preston, Brighton, Kew, Malvern, Brunswick, Northcote, Essendon and Williamstown. Reticulation work is steadily extending outwards, while reticulation extensions of varying importance to provide for new buildings or fresh subdivisions are being carried out in various parts of the Metropolitan Area.

In all, 120 $\frac{3}{8}$  miles of main and branch sewers and 1157 $\frac{1}{4}$  miles of reticulation sewers have been completed. There were also 1757 miles of house connections drains laid (7 $\frac{3}{16}$  miles of cast iron and 1749 $\frac{3}{16}$  miles of vitrified stoneware pipes), under the supervision of the Board, or a total altogether of 3034 $\frac{1}{2}$  miles of mains, branches, reticulation sewers and house connections connected with the Spotswood Pumping Station.

The whole system was so far advanced on the 30th June, 1911, that on that date the sewage from 118,440 tenements could be collected. Of these, 112,293 tenements were connected, together with 44 public conveniences and 70 public urinals, 127,468 water closets, 91,679 baths, 69,314 sinks, 63,264 sets of wash troughs, 30,267 lavatories, 12,784 stables, 7572 urinals, 5175 polluted areas and paved yards, 1769 cellars, 932 slop hoppers, 290 latrines, and 254 dairies.

When collected at Spotswood the sewage is raised 125 feet to the head of the outfall sewer, through 2 $\frac{3}{4}$  miles of 6-foot and 4-foot wrought-iron rising mains, from whence it gravitates to the farm in a partly-open and partly-closed channel 15 $\frac{3}{4}$  miles long, eleven feet in diameter, and having a grade of two feet to the mile.

(ii.) *Metropolitan Sewage Farm.* The farm contains 8847 acres, situated on the western side of the Werribee River. The price paid for the land was £17 10s. per acre (including compensation for severance). The cost of the farm to the 30th June, 1911,

was £461,074. About 29,332,627 gallons of sewage had to be disposed of every twenty-four hours during the year in irrigating the fields. It is spread over properly-prepared and sown blocks of land by a series of mains and lateral carriers. The effluent, after filtering through the land, is discharged into Port Phillip Bay in a clear and transparent condition, all the sewage held in suspension being left in the soil. The main supply channels for carrying the sewage on to the fields are about ten chains apart, and a good system of open drains to carry off the surplus water is provided. Many of these drainage channels are ten feet to twelve feet wide at the top and seven feet deep, and through them the water drained off from the subsoil is constantly flowing to the bay. The prepared and sown blocks on the farm are laid down with grass and lucerne, on which sheep are depastured. During the financial year 1910-11, 22,313 sheep were bought, at a cost of £11,677, other expenses amounting to £3968. During the same period the total receipts from the sale of wool, skins, and 32,474 sheep amounted to £31,284. The profit on sheep for the year amounted to £9302. Number of cattle bought 943, costing £3347, other expenses being £672. Total receipts for sale of hides and 703 cattle amounted to £3732; the profit for the year was £1614.

(iii.) *House Connections.* The work of house connections with the sewerage system is carried out under a carefully prepared by-law. Under the Amending Act of 1897, after a property has been declared to be a sewered property, the owner has several options. (a) He may submit a plan of his house connections for approval, and on approval being given, may agree to carry out the work within one month. (b) He may submit a plan, for which, if approved of, he may ask for an estimate of the cost of carrying out. This the Board is bound to supply, and then the owner may either carry out the work himself or ask the Board to carry out the work, which it must do for the estimated price, whether the work costs less or more. (c) On default of the owner the Board may carry out the work, and at the request of the owner accept payment by forty quarterly instalments, bearing interest on such portion as from time to time remains unpaid at the rate of 5 per cent.

(iv.) *Number of Houses Connected, Capital Cost, Revenue and Expenditure, 1902 to 1911.* The following table gives particulars as to the number of houses connected to the sewerage system, the total capital cost, and the receipts and disbursements during each year from 1902 to 1911 inclusive:—

**MELBOURNE SEWERAGE WORKS.—TENEMENTS CONNECTED, CAPITAL COST,  
RECEIPTS AND DISBURSEMENTS, 1902 to 1911.**

Year ended the 30th June.	Number of Houses Connected.	Capital Cost.	Receipts.*			Mainten- ance and Working Expenses.
			From Rates.	From other Sources.*	Total.

\* Excluding revenue from sale of sheep and from interest.

9. **Water Supply in Country Towns and Districts.**—By the Water Act 1905, which came into operation on the 1st May, 1906, the control and management of all Irrigation Trusts, with one exception, and of a number of waterworks and water supply districts were centralised, and their works and property vested in the State Rivers and Water Supply Commission. The powers and duties of this Commission were extended by the Water Act 1909, the whole of the Water Supply Department being now merged in the Commission. Further information with regard to this Commission and to the works and districts under its control are given in the section in this book dealing with Water Conservation and Irrigation. There are, however, in different parts of Victoria a number of other waterworks which are concerned chiefly with domestic supply, and which are controlled by local authorities, *i.e.*, by Waterworks Trusts or by municipal corporations. These works are constructed out of moneys either granted or lent by the State Government. The following table gives particulars as to the waterworks under the control of Trusts and municipal corporations for each financial year from 1904 to 1911 inclusive :—

**VICTORIA.—COUNTRY WATERWORKS UNDER TRUSTS AND MUNICIPAL CORPORATIONS, 1904 to 1911.**

\* Particulars as to the receipts and expenditure in respect of waterworks under the control of municipal corporations are not available. † Returns not available.

Under the provisions of the Local Government Act 1903, municipal councils are authorised to construct and maintain tanks, dams, and reservoirs, and must maintain existing works for the gratuitous supply of water. They are also empowered to accept the management and control of new waterworks within their respective localities, and may, with the consent of the Governor, construct or purchase new works within or without their locality. Councils are also authorised to enter into contracts for the supply of water for any period not exceeding ten years with the owners of any waterworks. Every municipality may levy a special water rate for water supplied, or for the purpose of constructing waterworks or paying the interest on any loan contracted by the council for such purpose, but the amount of the rate must not exceed in any year the sum of two shillings in the pound, provided that a minimum sum of ten shillings may be fixed by the council to be paid in respect of any property at which water is supplied.

(i.) *Geelong Waterworks Trust.*—(a) *Constitution.* Constituted under The Geelong Municipal Waterworks Act 1907, with borrowing powers up to £300,000, and further increased by Act No. 2322, 1911, to £350,000. Reconstituted under Geelong Waterworks and Sewerage Act, 1910, with power to borrow an additional £250,000 for the purpose of installing a sewerage system for Geelong and suburbs.

(b) *Water Supply.* The available storage capacity of the reservoirs is 1353 million gallons, and the Trust is authorised to supply water to (a) City of Geelong; (b) the suburbs thereof, and all places within a radius of five miles of the Geelong Post Office; and (c) any place within ten miles on either side of the main pipe from Stoney Creek to Geelong.

(c) *Sewerage.* The sewerage scheme provides for a main outfall sewer 4 ft. 3 in. x 3 ft. 3 in. to the ocean at Black Rock—a distance of about nine miles. The scheme will embrace an area of 8081 acres, including the City of Geelong, Boroughs of Newtown and Chilwell, and Geelong West, and the suburban areas situated in Corio and South Barwon Shires.

10. **Fire Brigades.**—Under the Fire Brigades Act of 1890 a metropolitan fire district and nine country fire districts were established, the former being placed under the control of a Metropolitan Fire Brigades Board, and the latter under the control of a Country Fire Brigades Board.

(i.) *Metropolitan Fire Brigades Board.* The metropolitan fire district originally comprised the area included in the several municipalities within a radius of ten miles from the Melbourne General Post Office, but this area has since been extended in certain directions so as to include the greater part of the Shire of Moorabbin and also the township of Mordialloc. The Board is composed of nine members, of whom three are appointed by the Governor-in-Council, three by the municipal councils, and three by the insurance companies. On the 31st December, 1911, the Board had under its control 50 stations, 213 permanent men, 152 auxiliary firemen, 26 special service firemen, 10 steam fire engines, 5 gasolene engines, 2 chemical engines (1 motor), 2 petrol motor fire engines, 106,882 feet of hose, and 197 fire-alarm circuits having 705 street fire-alarms, of which 618 contained telephones. The total length of wire in use outside stations for fire alarms and telephones is about 400 miles.

(ii.) *The Country Fire Brigades Board.* This Board consists of nine members, of whom three are appointed by the Governor-in-Council, two are elected by the municipal councils of the districts where there are brigades registered under the Board, two by the fire insurance companies, and two by the registered fire brigades. At the end of the year 1911 there were ninety-four municipal councils and fifty-five insurance companies included in the operations of the Act. All the brigades are volunteer brigades, but in the large towns permanent station-keepers and watchmen are employed. There were 115 registered brigades and 2146 registered firemen at the end of the year 1911. At the same date the plant consisted chiefly of 5 steam engines, 63 manual engines, 11 horse brakes, 61 apparatus carriages, 3 fire escapes, about 260 hose reels, and 150,000 feet of canvas hose.

(iii.) *Financial Operations of both Boards.* The following table gives particulars as to the financial operations of both Boards during each year from 1905 to 1910 inclusive:—

11. **The Melbourne Harbour Trust.**—This Trust was constituted under an Act passed in 1876, as a result of public agitation and demands extending over a period of thirty-four years, to the effect that the cost of landing goods should be reduced, and the delays in receiving goods should be abolished. Both demands arose from the fact that vessels of a draught greater than twelve feet had to discharge in the bay into lighters.

(i.) *Constitution of the Trust.* The Harbour Trust Act was drafted on the lines of similar institutions in Great Britain, such as the Thames Conservancy, the Mersey Harbour Board and the Clyde Trust. Under the Act of 1876, as amended in 1883, the number of Commissioners is fixed at seventeen, nominated or elected as follows:—Five were nominated by the Governor-in-Council, three elected by merchants, three by ship-owners, two were elected by the City Council, and one each by the ratepayers of South Melbourne, Port Melbourne, Williamstown, and Footscray. The sum of £1700 per annum was set aside for the remuneration of the Commissioners.

(ii.) *Works Undertaken by Trust in the River and in the Port.* In 1879 a report dealing with various propositions for the improvement of the port and harbour was issued by Sir John Coode, an English engineer, who had been engaged by the Commissioners for the purpose. This report, which recommended (i.) the cutting of a new channel through the flats to the south of Fishermen's Bend, (ii.) the construction of a dock, and (iii.) the widening and deepening of the channel in the river, was adopted by the Commissioners, who were empowered in 1883 to borrow the amount of £1,000,000 for the purpose of carrying out the necessary works. In 1890 a Consolidating Act was passed, and the borrowing powers of the Trust were increased to £2,000,000. The river was widened from Queen's Bridge to the bay to about 300 feet, while the depth has been gradually increased until at the present time it is twenty-six feet at low water. Five and-a-quarter miles of wharves carrying sheds which measure a total length of 12,870 feet, and cover an area of 614,180 square feet, have been constructed along the river and at the Victoria Dock, Melbourne.

(a) *The Coode Canal.* In 1886 the canal across the flats below Fishermen's Bend was completed at a cost of £96,000. The length of the canal is 2602 yards, the distance from Queen's Bridge to the river entrance being thereby reduced from seven miles to five and three-quarter miles, and the navigation being greatly facilitated. At the present time this channel, which is called the Coode Canal, is being widened 100 feet, which will make its total width 408 feet, and its width at low water 366 feet. The work of widening the canal is still in progress.

(b) *The Victoria Dock.* This dock, four miles up the river and opened in 1892, has an area of ninety-six acres and a depth of twenty-six feet at low water. The entrance to the dock is 160 feet wide. There are 8800 feet of wharfage, and the total cost, including wharves, sheds, and approaches thereto, was £416,038. The sheds have a total length of 3460 feet, and cover an area of 283,380 square feet.

(iii.) *Works in the Bay.* Prior to 1889 all the mail steamers and vessels of heavy draught had to lie at anchor in the bay, and there discharge into lighters. One of the first works undertaken by the Commissioners was to make the railway piers at Williams-town available to these vessels. This work was completed at a cost of £256,160. In 1893 a channel over 8000 feet long and 600 feet wide was constructed, running in a southerly direction from Port Melbourne Railway Pier and having a navigable depth of thirty feet o.l.w. The cost of this work was £218,379.

(iv.) *Dredging.* The total quantity of material raised by the dredging and excavation done in the improvement of the river and bay amounts to about 42 million cubic yards.

During the ten years ending 31st December, 1911, the average cost of dredging per cubic yard was 2.73 pence and the cost of towing and depositing 3.91 pence, not allowing for depreciation of plant. The Trust has expended £225,458 in reclaiming land within its jurisdiction. The amount of material raised annually is now about 1,200,000 cubic yards.

(v.) *Financial Operations.* The revenue of the Trust is obtained from wharfages, and quayage rates, rents and license fees from lands and ferries, and other license fees. One-fifth of the revenue of the Trust is paid to the consolidated revenue of Victoria. The following table gives particulars of the revenue and expenditure of the Trust from 1906 to 1911 inclusive:—

#### MELBOURNE HARBOUR TRUST.—REVENUE AND EXPENDITURE, 1906 to 1911.

## § 4. Queensland.

1. **Development of Local Government Systems.**—The first step in the direction of local government in Queensland was the incorporation of Brisbane as a municipality by proclamation on the 6th September, 1859, about three months prior to the separation of that State from New South Wales. The provisions of the Municipalities Act, which was passed in the mother colony in 1858, and which has already been referred to, applied to settlement in the Moreton Bay district, and were amended by an Act of the Queensland Government in 1861. Three years later the provisions of these two Acts were amended and consolidated, and authority was given for the incorporation as a municipality of any city or town, or of any rural district, on petition to the Governor signed by at least 100 resident householders. The duties and powers of the councils were extended and additional privileges were conferred under this Act.

(i.) *Inauguration of General System of Local Government.* Various amendments were made in the law from time to time, without, however, altering the main features of the Act of 1864, until the year 1878, when the Local Government Act was passed, amplifying the powers of municipalities, and providing for the incorporation of rural areas as shires. The provisions of this Act, which were adopted from the then new Local Government Act of Victoria, were found to be unsuited to the requirements of a large and sparsely populated country like Queensland, and were not applied to any new area. The Act was therefore only of practical value to a few of the existing municipalities. In 1879 the Divisional Boards Act was passed. This Act was intended to provide for local government outside the boundaries of municipalities, and was applied simultaneously by the Executive to about 660,000 square miles of territory, which was divided, by proclamation, into seventy-two divisions, some of them of immense area and carrying only a very small population. The Act provided to any division a free grant equal to one shilling in the pound of the annual value, and also for endowment to the amount of £2 for every £1 of rates collected for a period of five years. In case of the failure of the people of any division to elect the first members of their Board, the appointments were made by the Governor-in-Council. On the 30th April, 1880, a Gazette was issued first announcing the personnel of the elected Boards, and then appointing the members of the nominated Boards.

In 1881 and 1887 the Divisional Boards Act was amended, and by a further amending Act, passed in 1890, the rates thenceforward were to be charged on the unimproved capital value of the land, and this system has since been retained. In 1896 a commission was appointed to enquire into the working of the Local Government Acts and to recommend amendments which might be considered desirable; a report subsequently sent in by this commission recommended that increased powers of local government should be granted in certain matters, and to the report was appended a draft bill which, with certain alterations and curtailments, became the Local Authorities Act of 1902, the provisions of which, together with the amendments in 1903 and 1905, now regulate generally the working of local government within the State.

(ii.) *The Local Authorities Act 1902 and 1910.* Considered generally, these Acts comprise the Local Government Act 1878, and amending Acts, together with the Divisional Boards Act of 1887, the Valuation and Rating Act of 1890, and the Local Authorities (Joint Action) Act of 1886. They do not, however, comprise all the statutes relating to the powers and duties of local authorities, for certain Acts, such as the Tramways Acts and the Health Acts, while conferring powers upon these bodies, deal also with other subjects, and are in the nature of general Acts upon these subjects. The Act of 1902 contains a number of provisions enlarging the powers of local bodies and rendering their duties more explicit; thus the jurisdiction of councils with respect to roads, bridges, wharves, ferries, and reserves is amplified, and provision is inserted for putting under their control, when circumstances warrant it, such public lands as cemeteries, commons, foreshores, and the like. They have enlarged powers as to traffic, the eradication of noxious weeds, the reclamation of lands, the destruction and prevention of pests, the construction of buildings, the prevention of fires, and the control of places of public resort and amusement. They are empowered to establish works for lighting, etc., and to construct tramways in districts and under circumstances to which the existing Tramways Acts are not readily applicable. The proper execution of all these matters requires additional rating, and provision is made therefor in the Act.

**2. Systems of Local Government now in Operation.**—The principal features of previous enactments as to the division of the State into local areas are retained in the Acts of 1902 and 1910, but such areas are in future to be of two classes—(a) towns and (b) shires. All municipalities formerly constituted as boroughs become towns, except Brisbane, Rockhampton, and Townsville, which are declared to be cities, and all shires and divisions become shires. The Governor-in-Council may, after giving notice in the *Gazette*, constitute, unite, divide, or abolish areas for the purpose of forming new areas, and may by proclamation constitute a town a city.

(i.) *The Municipal Council.* All local areas are governed by councils, the members of which are called aldermen in the case of towns and councillors in the case of shires. *Town councils* are composed of either seven, nine, or eleven members, as declared by Order-in-Council, but if the town has wards three members are assigned to each ward. *Shire councils* are composed of five, seven, or nine members, as declared by Order-in-Council, but if the shire is divided the number cannot be more than three for each division, and need not be the same for every division.

(ii.) *Qualification of Aldermen and Councillors.* Every male ratepayer of the age of twenty-one years, if a natural-born or naturalised subject, is qualified to be elected as a member of a council, unless he is an uncertificated insolvent, is undergoing imprisonment, is (subject to certain exceptions) financially interested in any contract with the council, or is insane. Provision is made for the election of the mayor or chairman, and for the retirement of members by rotation. The first council of a newly constituted town is elected, but that of a newly constituted shire is appointed by the Governor-in-Council, unless otherwise directed by the order constituting the shire.

(iii.) *Qualification of Voters.* Generally every person of either sex of the age of twenty-one, who is a natural-born or naturalised subject, and is rated as an occupier or owner of ratable land, is entitled to vote. The number of votes depends upon the value of the land in the following scale:—

#### QUEENSLAND MUNICIPALITIES.—PLURALITY OF VOTES.

Value of land	...	Less than £500.	From £500 to £1000.	£1000 and upwards.
Number of votes	...	1	2	3

In case of joint owners or occupiers, each is to be considered the owner or occupier of land of a value equal to that of the whole divided by the number of owners or occupiers not exceeding three. If more than three persons are joint owners or occupiers, those whose names stand first on the rate book or valuation or return are to be taken. Companies may nominate their secretaries, managers, or directors for the purpose of voting.

(iv.) *Powers and Duties of Councils.* Generally the council is charged with the construction, maintenance, and management of all roads, streets, bridges, culverts, ferries, wharves, jetties, and other necessary public works, and is invested with powers to acquire land and buildings in connection with a variety of public works and for a number of public purposes. The council also has general power to make by-laws with a view to the good government of the local area under its management. Authority is given to the councils to establish markets and weighbridges and to fix dues for the use of the same; to undertake the manufacture or supply of light or hydraulic or other power; to destroy noxious weeds; and to control the erection of new buildings and the repair of dangerous or neglected ones. The council may also make by-laws with respect to a multitude of matters mentioned with great particularity in a schedule to the Act, and may also exercise various powers conferred by a number of Acts, set forth in the second schedule, such as the Tramways Act 1882, the Water Authorities Act 1891, the Electric Light and Power Act 1896, and the Health Act 1900.

(v.) *Valuation.* All land is ratable except the following:—Crown land unoccupied or used for public purposes; land in the occupation of the Crown, but this does not include lands rented in towns by the Crown; land used for public purposes; commons; cemeteries; and land not exceeding in area fifty acres and used exclusively for public worship, educational purposes, an orphanage, or library. Generally the value is estimated at the fair average value of unimproved land of the same quality held in fee-simple in the same neighbourhood. In the case of land held under gold-mining lease, or under lease from the Crown, the value is deemed to be a sum equal to twenty times the annual rent.

(vi.) *Rates* are levied on the unimproved capital value, and are of two kinds, general and special. *The general rate* must not be greater than sixpence in the pound, nor less than a half-penny, while *special rates* must not exceed threepence in the pound, but this provision does not include separate rates, special water rates, loan rates, cleaning rates, or tramway rates. Special rates may be levied for the purpose of constructing and maintaining permanent works, while separate rates may be declared for defraying expenses incurred in the execution of a work for the special benefit of any particular part of the area. A special rate may also be levied for the administration of the Health Acts.

(vii.) *Loans.* Money may be borrowed by local authorities either from the central Government, from outside sources by means of debentures, or by way of overdraft of current account. (a) *Government Loans.* The total amount that may be advanced by the Treasury, inclusive of sums owing, may not exceed a sum equal to five times the then ordinary annual revenue of the local authority, except in the case of loans for reproductive undertakings, for which special arrangements may be made by application to the Governor-in-Council. Notice of a proposed loan must be published, and, if demand be made by any ratepayers, having in the aggregate twenty votes, a poll must be taken to decide whether the money shall be borrowed or not. (b) *Debentures.* A local authority

may apply to the Governor-in-Council for permission to borrow money by the sale of debentures, but application must only be made after a resolution for borrowing the money has been adopted and confirmed, and after an opportunity has been given for the taking of a poll on the question, and (if a poll has been taken) when the result is in favour of the loan. (c) *Temporary Loans* from banks may be made by way of overdraft of the current account, but no such overdraft may exceed the ordinary revenue of the local authority in the year then last past.

(viii.) *Tramways.* Any ratepayers, having not less than one-third of all the votes of the ratepayers within any particular area, may by petition request the local authority to apply to the Governor-in-Council for the constitution of such area as a "tramway area." After an opportunity for taking a poll on the question has been given, and when the result is in favour of the tramway, the petition may be granted by the Governor, who may authorise the issue of a Government loan for the purpose of constructing or for purchasing the tramway. The total amount advanced for the purpose must not exceed £3000 for every mile constructed. As regards the repayment of tramway loans, the local authority may levy a tramway rate, and the provisions of the Local Works Loans Acts 1880 to 1889 are incorporated. Up to the end of the year 1910 tramways had been constructed under these provisions in seven shires, their total length being 208½ miles, 44 miles of which have since been taken over by the Government. In some cases these lines are run by the Queensland Railway Commissioner on behalf of the constructing authority. Particulars as to the working of tramways run by local authorities are given in the section in this book on "Roads and Railways." (See pp. 740-1 hereinbefore.)

**3. Area, Population, Number of Dwellings, Rates, Assets and Liabilities of Cities, Towns, and Shires, 1906 to 1910.**—The following table gives particulars of the area, population, number of inhabited tenements, assets and liabilities of cities and towns and of shires, for each year from 1906 to 1910 :—

**QUEENSLAND.—PARTICULARS OF CITIES AND TOWNS AND SHIRES, 1906 to 1910.**

\* Including interest on loans.

5. **The Metropolitan Water and Sewerage Board.**—This Board was constituted by the Metropolitan Water and Sewerage Act 1909, which divested the then existing Water Board of its powers and duties and vested them in an extended form in the new Board. The Act further empowers the Board to carry out a sewerage and drainage system, and relieves the Local Authorities of their responsibilities in that matter. The district of the new Board will comprise the cities of Brisbane and South Brisbane, the towns of Hamilton, Ithaca, Toowong, and Windsor, and the shires of Balmoral (except division 3), Coorparoo, Enoggera (except division 3), Sherwood (except division 1), Stephens, Taringa, and Toombul.

The Board consists of nine members, viz., the president and eight elected colleagues.

(i.) *Brisbane Water Supply.* The supply is derived from the upper reaches of the Brisbane River, and from two storage reservoirs, known respectively as the Enoggera and the Gold Creek reservoirs. For some years after the constitution of Brisbane as a municipality in 1859, the city supply was drawn from a chain of water-holes and sold to the residents. This scheme was later superseded by another under which water-carriers were licensed. Later, again, the Board of Water Supply was constituted, and the

construction of the Enoggera reservoir by the damming of Enoggera Creek was commenced in 1864 and completed in August, 1866. This was followed in 1885 by the construction of the Gold Creek reservoir, which provided an improved service and better water. In April, 1892, the works at Mount Crosby, at the head of the Brisbane River, were completed. At these works the water is pumped to a reservoir 455 feet above Brisbane high-water mark, whence it is delivered to the city by gravitation. Works for increasing and purifying the water supply of Brisbane are to be carried out in the near future.

(ii.) *The Brisbane River Supply.* This is the principal source of supply, about 60 per cent. of the water used being taken from it. The catchment area above the pumping station is about 4000 square miles. The Mount Crosby service reservoir, into which the water is pumped from the river, is built in cement concrete, and is 267 feet long, 100 feet wide, and 15 feet deep from high-water line, which is 455 feet above high-water mark at Brisbane. The capacity is about 2,500,000 gallons. The outlet pipe is thirty-four inches in diameter, and leads through the valve-house to the gravitation main to Brisbane,  $17\frac{3}{4}$  miles long and twenty-four inches in diameter. At Kenmore, eleven miles from Mount Crosby, a junction is effected between this 24-inch main and the 16-inch main from Gold Creek.

(iii.) *The Enoggera Reservoir.* The Enoggera works are the oldest now in use, and are distant from Brisbane about eight miles by road. The catchment area is nearly thirteen square miles in extent, and the reservoir, which is formed by an earthen dam, holds 1,000,000,000 gallons, of which 600,000,000 are available by gravitation. The greatest length of the reservoir is 2600 yards, and its greatest breadth 700 yards. There are two lines of pipes from the reservoir to Brisbane—sixteen inches and twelve inches in diameter. The total carrying capacity of these pipes is about 2,600,000 gallons a day.

(iv.) *The Gold Creek Reservoir.* This reservoir is situated in the upper waters of Gold Creek, a branch of Moggil Creek, distant from Brisbane by road about thirteen miles. The supply is drawn from a catchment area adjoining that of Enoggera, and comprising an area of nearly four square miles. The total capacity is about 406,000,000 gallons, of which 400,000,000 gallons are available. The diameter of the service main is sixteen inches, the distance from the valve house to Brisbane being  $12\frac{1}{2}$  miles. The greatest length of the reservoir is 1650 yards, and its greatest breadth 682 yards.

(v.) *Service Reservoirs.* (a) *Highgate Hill Reservoir.* This reservoir was constructed in 1889 to supply parts of South Brisbane. Its capacity is 2,176,000 gallons. To fill this reservoir, and in order to ensure a good water supply to the south side generally, an inverted syphon, sixteen inches in diameter, was laid under the Brisbane River between Toowong and West End in 1889. The syphon is 800 feet long, and is connected with both the Mount Crosby and Gold Creek mains. (b) *Wickham Terrace Reservoirs.* Two service reservoirs are constructed on Observatory Hill, Wickham Terrace, for the supply of the lower parts of North Brisbane. They are supplied from the Enoggera reservoir through a 12-inch main, the water being aerated as it enters into the reservoirs, which together hold 570,000 gallons. (c) *Bartley's Hill Reservoir.* This reservoir was built in 1907 to increase the supply to the Hamilton, Clayfield, and Nundah districts. Its capacity is 1,367,256 gallons, top water level 250 feet above high-water spring tides. It is supplied from the Mount Crosby reservoir through a 12-inch main. All the service reservoirs are roofed over.

(vi.) *Brisbane Waterworks: Cost, Revenue, Expenditure, and Interest, 1902 to 1911.* The subjoined table gives particulars as to the cost, the revenue and expenditure, and the amount of interest and loan redemption during each year from 1902 to 1911 inclusive:—

**BRISBANE WATERWORKS.—COST, REVENUE, EXPENDITURE, INTEREST, AND  
REDEMPTION OF LOANS, 1902 to 1911.**

Year.	Capital Cost.	Revenue from Rates and Sales of Water.	Working Expenses.	New Work Construction.	Interest and Redemption of Loans.

1911 ...	1,015,276	67,730	30,105	147,438	20,670

\* The book value of the works at the end of 1907 was £569,770, the difference being amounts written off for depreciation, losses through floods, or the removal of smaller mains.

(vii.) *Brisbane Waterworks: Length of Mains, Tenements and Population Served, and Water Consumption, 1902 to 1911.* The following table shows the length of mains, the number of tenements connected, the population supplied, the total quantity of water supplied, the average daily supply, and the average daily supply per head of population supplied during each year from 1902 to 1911 inclusive:—

**BRISBANE WATERWORKS.—PARTICULARS, 1902 to 1911.**

Year.	Length of Reticulation Mains.	Number of Tenements Connected.	Estimated Population Supplied.	Quantity Supplied.	Average Daily Supply.	Average Daily Sup- ply per Head of Estimat'd Population.
	Miles.	No.	No.	,000 Gallons.	Gallons.	Gallons.
1902 ...	216½	17,346	86,730	1,499,674	4,108,696	47
1903 ...	229½	17,435	87,175	1,413,722	3,873,211	44
1904 ...	240½	17,814	89,070	1,686,845	4,621,493	52
1905 ...	250½	18,855	94,275	1,749,820	4,794,028	51
1906 ...	264	19,223	96,115	1,630,899	4,468,216	46½
1907 ...	280½	20,050	100,250	1,777,333	4,869,406	48½
1908 ...	296½	20,365	101,825	1,620,057	4,438,514	43½
1909 ...	308½	21,560	107,800	1,673,287	4,584,351	42½
1910 ...	317	22,830	114,150	1,776,734	4,867,766	42½
1911 ...	333½	24,153	120,765	1,870,767	5,125,390	42

The total length of the trunk mains is 52½ miles.

Particulars relating to the sewerage system of Brisbane are not available.

6. **Country Towns Water Supply, 1910.**—In addition to the city of Brisbane there were at the end of the year 1910 twenty-three towns in Queensland provided with water supply systems, constructed by municipalities chiefly from Government loans. The sub-joined statement gives particulars of all the water supply systems—exclusive of Brisbane—for the year 1910:—

**QUEENSLAND.—PARTICULARS OF COUNTRY WATER SUPPLY SYSTEMS, 1910.**

Cost of construction to 31/12/10 ...		£ 681,102	Expenditure	Office and salaries ...		£ 8,732
Receipts	Rates and sales of water	71,592		Construction ...		17,057
	Other	5,272*		Maintenance ...		18,884
	Total Receipts	76,864		Interest & redemption		29,650
Assets		557,264	Total		74,323	
			Liabilities		406,553	

\* Including £3282 from Government loans.

7. **Fire Brigades.**—In the year 1910 there were twenty-six fire brigades organised in various towns in Queensland. The revenue of these brigades is derived chiefly from grants from the Government, from municipalities, and from the insurance companies, generally in equal proportions, and the following table gives these particulars for the year 1910:—

**QUEENSLAND.—FIRE BRIGADES, 1910.**

Receipts.		Amount.	Expenditure.		Amount.
		£			£
From Government	...	4,609	Salaries and wages	...	7,822
„ Local authorities	...	4,677	Building, repairs, etc.	...	450
„ Insurance companies	...	4,616	Plant, stores, clothing, etc.	...	2,607
„ Other sources	...	1,884	Other	...	3,187
Total	...	15,786	Total	...	14,066

At the end of the year 1910 the fire brigades staffs comprised 64 permanent men, 295 partly paid, and 76 volunteers. The metropolitan brigade at Brisbane and the South Brisbane brigade protect an area of 9½ square miles; their joint staffs comprise 55 men. They have three steam engines and one motor turbine, nine hose reels, and 16,432 feet of hose. There are 48 telephone fire alarms and 40 call points.

### § 5. South Australia.

1. **Development of Local Government Systems.**—In the latter part of 1839 the first municipal law was passed in South Australia, which was thus the birthplace of municipal government in the Commonwealth. On the 31st October, 1840, the principles of self-government were practically adopted in Adelaide by the election of a mayor and council, consisting of nineteen members, and the system has since been extended throughout the settled parts of the State by the formation of district councils and municipal corporations, which are the two types of local authorities now in existence.

2. **District Councils.**—The first District Councils Act was passed in 1858, was amended in 1862, and was further amended and consolidated by the District Councils Act of 1876, which provided for the continuation of existing districts and for the establishment of new ones by proclamation on the petition of the ratepayers. The revenue of the councils consisted of rents, profits, and income from lands vested in the council or over which the council had the control and management; fines and penalties enforced under the Act; fees for licenses; and general and special rates and loans. Provision was made for the election of councillors, their number, qualification, and retirement; for the election of auditors; the meetings, powers and functions of councils; the appointment of constables; revenue and expenditure; assessment and rates; and for making by-laws for various purposes. The Act of 1876 was amended from time to time, and was finally amended and consolidated by the Act which is now in force, namely, the District Councils Act 1887, which has in turn been amended in the years 1899, 1890, 1897, 1904, and 1905. These Acts were again amended by the Local Government Act 1910.

(i.) *The District Councils Act 1887* provides for the continuation and amalgamation of existing districts and for the constitution as a new district of any part of the State containing rateable property capable of yielding upon a rate not exceeding one shilling in the pound the sum of £200. The Governor is authorised to alter the area or boundaries of any district by annexation or by subdivision. New districts are constituted upon petition to the Governor; every petition must be signed by fifty inhabitants of the part sought to be constituted, and if the proposed district comprises portion of a previously existing district, by a majority of the ratepayers of such portion.

(a) *Qualification of Councillors.* Every male ratepayer, if of full age, is qualified to be a councillor, unless he is a minister of religion, a stipendiary magistrate, an uncertificated insolvent, or is the treasurer or a paid official of the district council, or is interested in any contract, except for advertisements and printing, with the district council. The chairman is elected by the councillors from their own number.

(b) *Qualification of Electors.* Every person of either sex, if of the age of twenty-one years, whose name appears as a ratepayer in the assessment book is entitled to vote at the elections of councillors and auditors. In case of a joint tenancy or a tenancy in common, only one person is entitled to a vote for every £75 or part thereof at which the property is assessed.

(ii.) *Assessment and Rates.* Assessments are generally made at four-fifths of the gross annual rent at which the property would let for a term of seven years, or at 5 per cent. on the capital value, but in case of land within a township, not less than twenty acres in area, and not built on, used, or divided by roads, assessment is made at the rate of 2½ per cent. on the value of the fee-simple. All other township land unbuilt on is assessed at 5 per cent. on the fee-simple value, and for lands held under mining lease from the crown, the assessment may not exceed the annual rental. (a) *General Rates* may not be more than one shilling and sixpence nor less than threepence in the pound on the assessed value. (b) *Special Rates* for permanent works may also be declared, provided that the general and special rates together do not exceed two shillings and sixpence in the pound. No special rate may be declared without the consent of the ratepayers to be obtained at a meeting called for the purpose, and any six ratepayers may demand a poll to be taken on the subject. The ratepayers of any portion of a district may memorialise the council for specific works for the benefit of such portion of the district, and if the council decide to comply with the memorial a *separate rate* may be levied in respect of property in the portion defined. Lighting rates may also be declared, but must not exceed fourpence in the pound.

(iii.) *Loans.* Any council may, for the execution of any works for which a special or separate rate has been declared, borrow on the security of such rate up to ten times the amount which at the time of borrowing would result from a rate of one shilling in the pound, but if demand be made by any twenty ratepayers, the question whether or not the proposed loan be incurred must be submitted to a poll of the ratepayers. The interest payable on any such loan must not exceed 6 per cent. By an amending Act passed in the year 1904, additional borrowing powers were conferred on the councils for the purpose of carrying out permanent works subject to the conditions that the total amount borrowed must not at any time exceed three times the amount which would result from a rate of one shilling in the pound, and that the principal sum and interest must be repaid by means of a sinking fund within forty-two years.

(iv.) *Revenue and Expenditure.* The revenue of the councils consists of rents, profits and income from property vested in the council or over which the council has control; the proceeds from the sale of such property; fines and penalties imposed under the Act; fees for licenses; rates; and main road subsidies. Under the District Councils and Corporation Subsidy Act 1890 provision is made for grants out of the general revenue to district councils and corporations in lieu of fees received under the Auctioneers Act 1862 and the Licensed Victuallers Act 1880. The amount of such grant is a sum equal to five shillings in the pound on the amount collected from general rates not exceeding one shilling in the pound declared during any one year. Revenue may be expended in carrying out any authorised works; in payment of salaries and professional fees; in subscriptions to charities; in payment of councillors' travelling expenses; in promoting bills before Parliament, and generally in carrying out the purposes of the Act.

(v.) *Powers and Duties of Councils.* A council may carry out certain permanent works which are defined in the Act, and which comprise the following :—The construction of new streets and roads, sewers and drains; the construction or purchase of water-works, district offices, pounds, abattoirs, markets, baths, hospitals and other charitable institutions; the providing of libraries, museums, and places of public recreation; and the construction of tramways and machinery for the treatment of refuse. The councils are invested with wide powers to make by-laws for the more effective exercise and discharge of their powers, duties, and liabilities, particularly in respect of the following matters :—The compulsory purchase of land; manufacturing districts; the public health; the sale of food and drugs; the management of unoccupied waste lands of the Crown; drainage; piers, jetties, and wharves; weights and measures; vermin destruction; game and fisheries; streets, roads, and public places; fire brigades; impounding; and for fixing penalties for breaches of such by-laws. Upon the district councils is also imposed the duty of administering the Health Acts, the Sale of Food and Drugs Acts, the Game and Fisheries Acts, the Vermin Acts, the Bush Fires Act, the Impounding Act, the Weights and Measures Act, and the Slaughter House Act.

3. *Municipalities* were first established under the Municipal Corporations Act of 1861, which, after providing for the extension of the powers and duties of the Corporation of the City of Adelaide, authorised the Governor, on petition of a majority of not less than two-thirds of the property-owners, to constitute any town, district, or place within the province, into a municipality. This Act and its amendments were consolidated in the Municipal Corporations Act of 1880, which was amended from time to time until the year 1890, when it was repealed and its provisions consolidated by the existing Act, the Municipal Corporations Act of 1890, which was in turn amended in 1893, 1896, and 1903. These Acts were again amended by the Local Government Act 1910.

(i.) *The Municipal Corporations Act 1890.* After making provision for continuing existing corporations and by-laws the Act authorises the Governor to constitute new municipalities, or to alter the boundaries of existing ones, on petition of not less than two-fifths of the ratepayers or owners of ratable property within the land proposed to be incorporated, separated, or added; and also to rearrange, increase or diminish the number of wards of a municipality on petition of not less than one-fifth of the ratepayers therein. Each council consists of a mayor, and of two councillors for each ward, and the provisions as to their qualifications are substantially the same as in the case of district councils referred to above. All persons of full age, if British subjects and not in receipt of public relief or alms, who are either owners or occupiers of any ratable property within a municipality are entitled to vote at the election of the mayor and councillors. Provision is made for the nomination and election of the mayor, councillors, and auditors, and for regulating the meetings of the councils.

(ii.) *Functions of Municipal Councils.* All public streets and roads are vested in the council of the municipality in which they lie, but no street can be declared a public street after the passing of the Act unless it is at least forty feet wide. Full powers are given as to opening, closing, or fencing public streets, and for supervising the formation and repair of private streets and lanes. Councils are further authorised to execute works for, or to contract for the lighting, sewerage, and drainage of municipalities; to take all measures requisite for the public health; to establish public baths, fountains, and parks; to grant licenses for slaughter-houses, hide and skin markets, for the depasturing of cattle, and for the removal of sand and gravel; to control the erection or pulling down and the maintenance of buildings and hoardings; to organise fire brigades, and to order the removal of inflammable buildings. Under the Health Act 1898, every district and municipal council is constituted the Local Board of Health for its particular district, and is charged with the execution of the provisions of that Act for securing the proper hygienic and sanitary conditions in such district.

(iii.) *Assessments and Rates.* Owners and occupiers of ratable property in municipalities are assessed each year on the same basis as stated above in respect to ratable property within districts under the government of district councils. In addition to the rate authorised by the Public Health Act a *general rate*, not exceeding one shilling in the pound, may be declared; rates for lighting and for the improvement of parks and reserves may also be levied, the former being limited to fourpence and the latter to threepence in the pound. The council may also declare a rate for defraying the expense of watering streets, to be apportioned among the persons liable for the rates in respect of properties fronting such streets. *Special and separate rates* may also be levied in the same manner as by district councils, but, in the case of municipalities, the general and special rates together must not exceed two shillings in the pound.

(iv.) *Borrowing powers* of municipal corporations are substantially the same as those of district councils, and similar additional powers were given to municipalities as to districts by the Municipal Corporations Amendment Act 1903.

(v.) *Revenue, Expenditure, and Miscellaneous.* Other provisions as to the revenue and expenditure of municipalities, and their powers as regards permanent works, are the same as those in force under the Districts Councils Acts, referred to above, while very wide powers are given to municipal councils in respect of a variety of matters and things to provide by means of by-laws for the general good government of the municipalities.

4. **Finances of District Councils and Corporations, 1902 to 1910.**—The subjoined tables shew the amounts of assessments and the revenue and expenditure of district councils and of corporations for each financial year from 1902 to 1910 inclusive; the figures given are exclusive of the Main Roads Funds, particulars as to which may be found in the section of this book on "Roads and Bridges."

\* Up to and including the year 1903, the financial year for Corporations ended on the 31st December, but after that date ends on the 30th November. The financial year for district councils ends on the 30th June. † For eleven months ended the 30th November, 1904.

**5. Adelaide Water Supply System.**—The water supply system of Adelaide is under the control of the Public Works Department. The supply is obtained partly from the catchment areas of the rivers Onkaparinga, Torrens, and Sixth Creek, and partly from springs and pumping stations. There are three storage reservoirs, situated at Happy Valley, Hope Valley, and Thorndon Park, having an aggregate capacity of 3,895,000,000 gallons, while the tanks used in connection with the springs and pumping stations have a further capacity of 4,824,000 gallons. The total capital cost up to the 30th June, 1910, was £1,802,703, the total revenue being £2,422,978 and the area served approximately 80,000 acres.

The following table gives various particulars relating to the water supply of Adelaide for the years 1905 to 1910 inclusive:—

**ADELAIDE WATER SUPPLY.—LENGTH OF MAINS, REVENUE, EXPENDITURE, AND CONSUMPTION OF WATER, 1905 to 1910.**

Year Ended 30th June.	Length of Mains.	Gross Revenue.	Working Expenses.	Net Revenue.	Percentage of Net Revenue on Capital Cost.	Total Consumption of Water. <sup>1</sup>
	Miles.	£	£	£	%	Million of Gals.
1905 ...	647	72,471	20,002	52,469	3.16	3,650
1906 ...	656½	72,976	22,298	50,678	3.02	3,550
1907 ...	667½	74,727	19,703	55,024	3.24	3,350
1908 ...	673	76,707	21,233	55,474	3.26	4,000
1909 ...	684	81,412	20,762	60,650	3.53	4,000
1910 ...	704	82,290	22,709	59,581	3.31	4,000

1. In the Adelaide Water District there are no governing meters. The quantities shown above are as recorded by gaugings taken at the reservoirs, and include evaporation and absorption.

**6. Adelaide Sewerage System.**—In connection with the sewerage system of Adelaide, which is also under the control of the Public Works Department, about 288 miles of sewers had been laid in the city and suburbs up to the 30th June, 1910. The sewage is disposed of on a farm and filter-beds, the latter being used only during the winter months.

The following table gives particulars relating to the Adelaide sewerage system for the years 1904 to 1910 inclusive:—

**ADELAIDE SEWERAGE SYSTEM.—REVENUE AND EXPENDITURE, 1904 to 1910.**

Year Ended the 30th June.	Revenue.			Expenditure.			Net Revenue.	
	Rates and Interest.	Sewage Farm. Sales of Produce, etc.	Total.	Maintenance.	Sewage Farm Working Expenses.	Total.	Total.	Percentage on Capital Cost.

1910 ...	36,322	7,213	43,535	7,184	6,088	13,272	30,263	4.41

**7. Water Supply in Country Towns.**—In South Australia there is a number of country waterworks under the control of the Public Works Department. These works are partly used for irrigation purposes, and the most important of them have already been referred to in the section of this book dealing with the subject of "Irrigation." (See p. 593 *ante*.) In addition to the works mentioned in the section referred to, there

are other country districts served by reticulations extending over 311 square miles. Detailed particulars of the various works are not available. The total extent of country for which reservoir water is available is about 4250 square miles, the reservoirs holding, in the aggregate, 7,370,000,000 gallons, and the main pipe-lines reaching 2278 miles. The capital cost of the works under the waterworks branch, as distinct from the water conservation branch, which deals with isolated and remote districts, is approximately £4,095,000.

8. **Fire Brigades Board.**—The Fire Brigades of South Australia are managed by a Board consisting of six members, two being nominated by the Government, one by the Adelaide city council, one by the other metropolitan municipalities, and the other two by the contributing insurance companies. The revenue of the Board is derived by contributions of three-ninths by the Government, four-ninths by the insurance companies, and two-ninths by the city of Adelaide and the other municipalities subject to the Act: Brigades are established in the following municipalities, viz., Adelaide, Kensington and Norwood, including St. Peter's, Unley, Port Adelaide, Glenelg, Gawler, Kapunda, Moonta, Kadina, Port Pirie and Port Augusta. The strength of the brigades consists of 87 permanent firemen and 18 auxiliary firemen. The number of calls received during the year 1911 was 352, of which 30 were to fires of a serious nature.

## § 6. Western Australia.

1. **Types of Local Authorities.**—In this State there are three forms of local authorities, namely :—(i.) Municipalities, (ii.) Road Districts, and (iii.) Local Boards of Health. The first Municipalities Act was passed in 1871, but only a few districts were incorporated under it. In 1895 a more comprehensive measure, the Municipal Institutions Act, was passed, and after being amended from time to time was consolidated by the Municipal Institutions Acts 1902 and 1904. In 1906 the most recent enactment, the Municipal Corporations Act, was passed, repealing and consolidating previous enactments. The whole area of the State outside incorporated municipalities is divided into road districts, which are administered under the Roads Act 1902 and 1904. In municipalities the councils act as Health Boards for the purpose of administering the Public Health Act, while outside municipalities local Boards of Health may be formed. In 1904 another local government measure, the Water Boards Act, was passed, under which Boards may be appointed for the control of waterworks, and rates may be levied for the purpose, the maximum being fixed at two shillings in the pound of ratable value.

2. **Municipalities** are now regulated by the Municipal Corporations Act, which came into force on the 1st January, 1907. Provision is made for the continuation of existing municipalities, and the Governor is authorised to constitute new municipalities on petition signed by at least fifty property-holders of the district proposed to be incorporated; to unite adjoining municipalities on petition under their common seals; to sever any portion from a municipality on petition signed by a majority of the ratepayers, and to annex such portion to a contiguous municipality or road district.

(i.) *Municipal Councils* consist of a mayor and councillors, the number of which depends upon the population of the municipality; if the population is less than 1000 there are six councillors, if from 1000 to 5000 there are nine councillors, and if the population is over 5000 there are twelve councillors, or three for each ward. Any male ratepayer of the age of twenty-one years, if a natural born or naturalised subject, is eligible for election as mayor or councillor, except ministers of religion, uncertificated bankrupts, prisoners, and certain other persons who may be disqualified on the ground of interest.

(ii.) *Qualification of Voters.* Every ratepayer, of twenty-one years of age or over, is entitled to vote at the municipal elections. In the case of joint owners or occupiers, each owner or occupier, if not exceeding two in number, is deemed to be the owner or occupier of half the property; if more than two in number the owners or occupiers may appoint two of their number to be registered in respect of the property. Corporations and companies may also nominate two persons to be registered as voters.

(iii.) *Powers and Duties of Councils.* The councils have power to make by-laws with respect to the usual matters pertaining to municipalities, and are also invested with the control and management of all public places, streets, roads, bridges, sewers, and drains within the municipality. They may contract for the lighting of any part of the municipality for a period not exceeding three years, and may levy a lighting rate; they may construct dams or reservoirs for water supply, may establish fire brigades and baths, and may provide places of recreation, pounds, abattoirs, markets, and weighbridges.

(iv.) *Valuation of Ratable Property.* All land is ratable property except the following:—Property of the Crown used for public purposes or unoccupied; property used for religious or charitable purposes; public libraries, museums, etc.; cemeteries; any land declared by the Governor to be exempt from municipal rates. Generally the annual value of improved or occupied land is the average rent obtainable, less 20 per cent., but in no case may the annual value be less than 4 per cent. of the fee-simple value. The annual value of unimproved or unoccupied land is taken to be not less than  $7\frac{1}{2}$  per cent. on the capital value. No allotment of ratable land may be valued at an annual value of less than £2 10s.

(v.) *Rates.* General rates are levied annually, but may not exceed one shilling and sixpence in the pound on the annual value. Lighting rates and special rates for the repayment of debentures and interest may also be struck, but may not exceed the maximum rate allowed in the case of general rates.

(vi.) *Borrowing Powers.* The council of a municipality may borrow money on the credit of the municipality for permanent works, or for the purpose of liquidating the principal moneys owing on account of any previous loan. Permanent works may be the construction or alteration of any street, footway, road, bridge, culvert, wharf, or jetty; the construction of sewers and drains, and works connected with sewerage and drainage; the construction or purchase of waterworks, tramways, municipal offices, pounds, abattoirs, markets, and baths; the improvement of endowment lands; providing places of public recreation; the construction of a general warehouse, or a theatre, or of refuse destructors; and the purchase of quarries or land. The amount borrowed at any time may not exceed ten times the average ordinary income of the municipality for the two years last preceding, and the amount borrowed to liquidate any loan must not exceed the balance of principal owing. A municipality may also overdraw on the amount of its current account, but the overdraft must not at any time exceed one-third of the ordinary revenue for the preceding year.

(vii.) *Government Subsidies.* Grants are made annually to municipalities by way of subsidies on the amounts of rates collected. To entitle any council to participate in the allocation of the annual Parliamentary vote the council must have levied a minimum general rate of one shilling in the pound, and must have collected not less than £300 from such rate. Newly-constituted municipalities are, during the first year of existence, dealt with apart from the provisions of the general scheme, and are allowed a subsidy of £2 for every £1 of general rate collected; in subsequent years they participate according to the general provisions. The following table shews the basis on which the municipalities are classified:—

## WESTERN AUSTRALIA.—CLASSIFICATION OF MUNICIPALITIES.

Income from General Rates.	From £20,000 to £30,000.	From £10,000 to £20,000.	From £5000 to £10,000.	From £500 to £5000.	Under £500.
Class ... ..	1st	2nd	3rd	4th	5th

No subsidy is paid on income from general rates exceeding £3000.

3. **Area, Population, etc., of Municipalities.**—Returns regarding the area, population, and valuation of municipalities are defective. They are shewn in the table hereunder:—

## WESTERN AUSTRALIA.—NUMBER, AREA, POPULATION, NUMBER OF DWELLINGS, AND VALUATION OF MUNICIPALITIES, 1902 to 1910.

\* Including bank balance, cash in hand, and fixed deposit.

† Exclusive of the municipality of Mount Morgans.

6. **Road Districts.**—The whole area of the State, outside incorporated municipalities, is divided into districts, the executive powers being vested in elective boards. These districts were originally formed solely for the purpose of controlling roads and bridges, but their powers and duties have been extended, so that at the present time they correspond closely to the shires of the other States of the Commonwealth. The enactments at present governing the administration of the Road Boards are the Roads Act 1911, the Parks and Reserves Act, the Cattle Trespassing Act, the Width of Tyres Act, the Cart and Carriage Licenses Act, and the Dog Act. The general powers and duties of the Boards as regards roads and bridges are described in the chapter of this book entitled "Roads and Bridges." (See page 686 *ante*.) In addition to these powers and duties the Boards have power to do everything necessary for the proper management of the property under their control, and may also construct and maintain tanks, wells, and dams, and bore for water for the purpose of supplying water along any road in the district. Subject to the provisions of the Roads Acts, the Board has also the control and management of any such public reserves, parks, commons, wells, dams, reservoirs, buildings, machines, etc., as the Governor may direct. The Board has also extensive powers for making, altering, and repealing by-laws.

7. **Boards of Health** may be established under the Public Health Act 1886, either within or outside of municipal boundaries. In the former case the Act is administered by the municipal councils, while in the latter case special Boards are elected by the ratepayers. The revenue of these Boards consists chiefly of moneys received from health rates and sanitary fees, and the largest item of expenditure is directly connected with the sanitary service. The following table shews particulars of the receipts and expenditure of the various Boards—both municipal and extra-municipal—during each year from 1902 to 1910 inclusive :—

**WESTERN AUSTRALIA.—RECEIPTS AND EXPENDITURE OF LOCAL HEALTH  
BOARDS, 1902 to 1910.**

Year ended the 31st October.	Revenue.			Expenditure.		
	From Public Health Rate.	From other Sources.	Total.	On Sanitary Services.	Other Expenses.	Total.

1910 <sup>7</sup> ...	<sup>8</sup> 37,943	<sup>9</sup> 50,558	88,501	55,283	33,350	88,633

1. Including sanitary rates, £11,745. 2. Including sanitary rates, £16,564. 3. Exclusive of particulars of twenty-one boards which did not furnish returns, and of five boards which were not active during the year, all outside municipalities. Particulars for previous years are also incomplete. 4. Exclusive of expenditure of one extra-municipal board. 5. Including sanitary rates, £17,707. 6. Including sanitary rates, £16,804. 7. Exclusive of 10 boards which did not furnish returns, and 14 boards which were non-active during the year. 8. Including sanitary rates, £17,986. 9. Including sanitary fees and charges £13,341.

On the 31st October, 1910, there were forty-two Local Boards of Health within municipalities and seventy-five extra-municipal Boards.

**8. The Perth Metropolitan Water Supply, Sewerage, and Drainage.**—The Perth Metropolitan Water Supply Works were first opened by a private company in October, 1890. Under the provisions of the Metropolitan Waterworks Act 1896, however, the works were purchased by the Government at a cost of £220,000, and were placed under the control of a Board, the functions of which have been exercised since the year 1904 by the Minister for Works. By the Metropolitan Water Supply, Sewerage, and Drainage Act 1909, all water and sewerage works formerly vested in the Metropolitan Board were transferred to a Minister of Water Supply, Sewerage, and Drainage. This Act also provides for the administration of the transferred properties, for the constitution of water reserves, for the construction and maintenance of works, for the prevention of waste, for rates and sale of water, and for other matters.

(i.) *Water Supply.* The supply of water is derived from three sources—(i.) the Victoria reservoir, (ii.) the Mundaring reservoir, and (iii.) from six artesian bores.

(a) *The Victoria Reservoir.* This is the main source of supply. The reservoir has a capacity of 220,000,000 gallons, and has a catchment area of 10,000 acres on the Darling Ranges. The water gravitates from the Victoria reservoir to Perth through two mains which are respectively 21 inches and 12 inches in diameter, and 15½ and 17 miles in length. There are two service reservoirs—one of 2,413,000 gallons, and the other of 600,000 gallons capacity. The quantity of water drawn from this reservoir during the year ended the 30th June, 1910, was 392.7 million gallons.

(b) *The Mundaring Reservoir.* This reservoir is used as an emergency supply. It has a capacity of 4,650,000,000 gallons, but is only connected by one eight-inch main. During the financial year 1909-10, 18,891,000 gallons were drawn. This reservoir has a catchment area of 569 square miles, and was constructed in connection with the gold-fields water supply.

(c) *Artesian Bores.* There are in all six artesian bores, the flow from which augments the main supply from the Victoria reservoir. The total flow is about 360,000,000 gallons during the season, which lasts approximately for six months.

(d) *Financial Operations of Water Supply Department, 1909 to 1911.* The following table gives particulars of the financial operations of the Metropolitan Water Supply Department for each year ending the 30th June from 1909 to 1911 inclusive:—

**PERTH METROPOLITAN WATER SUPPLY DEPARTMENT.—PARTICULARS OF  
FINANCIAL OPERATIONS, 1909 to 1911.**

Year ended the 30th June.	Capital Cost of Works.	Depreciation.	Net Capital Cost.	Gross Revenue.	Cost of Maintenance and Management.	Interest Earned on Gross Capital Cost.	Ratio of Working Expenses to Revenue.

(ii.) *Sewerage and Drainage in Perth and Fremantle.* The work of providing a sewerage system for Perth and Fremantle was commenced in 1906, and has proceeded without interruption up to the present time. The method of sewage disposal adopted by both schemes is bacterial treatment by means of septic tanks. The main portion of each district is dealt with by gravitation, while the sewage from the low-lying portions along the river frontage is to be lifted to the main pipe line by means of electrically-controlled centrifugal pumps, Perth being served by three stations, and Fremantle by four. There are now over ten miles of various-sized pipes laid, ranging from 3 ft. 3 in. by 2 ft. 2 in. Monier to 6 in. stoneware. The Perth treatment works, situate at Claisebrook, on the west side of the river, consists of four septic tanks, each 100 ft. by 50 ft., with a capacity for a population of about 30,000, the effluent being syphoned across the river to four filter beds, each 100 ft. in diameter, the filtrate then being discharged into the Swan River. The results have so far been satisfactory. The Fremantle works consist of three septic tanks of sufficient capacity to serve a population of about 17,000, the effluent being discharged direct into the open sea at some distance from the main shore. House connections in Perth are making rapid progress, there being upwards of 700 premises already connected to the sewers. In Fremantle the work of connecting has just commenced. The whole of the metropolitan area, and a large portion of the surrounding districts, as well as Fremantle, are served by a system of arterial stormwater drains, of sufficient capacity to cope with the wet conditions of winter months experienced in this State. The total cost of the sewerage scheme is £150,000. The cost of the septic tanks and filters was £34,000.

**9. Fremantle Harbour Trust.**—Under the provisions of an Act passed in 1902 a Harbour Trust was constituted for the general administration of Fremantle harbour, and since January, 1903, the Trust has had full control of all the affairs of the harbour, and undertakes the duties of wharfingers, and the receiving, sorting, storing, delivering, and handling of all cargo, between vessels and the owners of the goods. The works, which were commenced in 1892, were designed with the object of forming a safe and commodious harbour within the mouth of the Swan River, so as to admit vessels at all states of the tide, and thus enable cargo to be loaded and discharged at the quays and goods-sheds on the river banks. Two ocean moles have been thrown out from the north and south heads, the former being 3450 feet and the latter 2040 feet long. A channel, 450 feet wide and 30 feet deep at low water, has been blasted and dredged through the rock which formerly crossed the estuary to the river, and wharves and goods-sheds have been constructed along the reclaimed foreshore on both sides of the harbour. The port possesses up-to-date electrically operated grain storage and shipping appliances, and the quays are well equipped with electric cranes and elevators, all wharves and stores being in direct communication with the State railway system. At the present time all the European mail boats, which make Fremantle the first and last port of call in Australia, are able to enter and leave the harbour in all weather and at all tides. For the year ended the 30th June, 1911, the total revenue of the Trust was £177,433, and the expenditure £54,174, shewing a gross profit of £123,259. The gross amount paid to the Treasury for the year was £96,801, being interest £51,711, sinking fund £14,774, and surplus revenue account £30,315.

**10. Fire Brigades Boards.**—Under the Fire Brigades Act 1898, fire brigades were established in a number of the more important centres of population in the State. These brigades were under the control of local boards, and were in some cases municipal and in others volunteer. On the 30th June, 1910, there were forty-five such Boards in existence. The figures given below shew particulars of forty-two of these Boards for the year 1909-10, three Boards having remained inactive during the year:—

**WESTERN AUSTRALIA.—FIRE BRIGADES BOARDS, 1909-10.**

Number of firemen ... ..	784	Value of land, buildings, & plant	£38,449
Receipts ... ..	£15,632	Expenditure... ..	£15,458

An Act to make further provision for the protection of life and property from fire was passed in 1909 and came into operation on the 1st January, 1910. It is called the District Fire Brigades Act, and divides Western Australia into two fire districts under the control of a Fire Brigades Board. The Board is constituted as follows:—two members nominated by the Government; one member nominated by the Perth City Council; one member elected by the Municipalities of Kalgoorlie, Boulder, Coolgardie, and the Kalgoorlie Road Board; one member elected by the Municipalities and Road Boards other than those above-mentioned; three members elected by the Insurance Companies; and one member elected by the Volunteer Fire Brigades. The election of the Board takes place bi-annually, and its income is provided as follows—two-eighths by the Government, three-eighths by the Municipalities and Road Boards and three-eighths by the Insurance Companies. The receipts for the year 1911 amounted to £30,087, and the expenditure to £31,649, leaving a debit balance of £1562.

The whole of the brigades throughout the State are now controlled by this Board and number fourteen purely permanent; six partly permanent and partly volunteer; and twenty-six purely volunteer brigades; making a total of forty-six. The staff includes a chief officer, deputy-chief officer, five district officers, eighty-eight permanent firemen, seventy-one auxiliary firemen, and 580 volunteer firemen.

## § 7. Tasmania.

1. **Development of Local Areas.**—In this State the city of Hobart was incorporated by special Act in the year 1852, but it was not until 1858, when the Rural Municipalities Act was passed, that a general scheme for the establishment of municipalities was extended throughout the State. This Act was amended from time to time without, however, altering its chief characteristics. In 1869 a Roads Act was passed, and after being amended at various times was consolidated in 1884. Under the provisions of these Acts parts of the State were placed under the control of Town Boards and Road Trusts. The general rate under the Municipalities Act was limited to one shilling and sixpence in the pound of annual value, while special rates could be levied in rural districts, provided that the general and special rates together did not exceed one shilling and sixpence in the pound.

2. **Acts now in Force.**—In 1906 the whole of the Acts dealing with local authorities were amended and consolidated by the Local Government Act of that year. The whole State, with the exception of the urban municipalities of Hobart and Launceston, is divided into municipal districts, and every Rural Municipality, Town Board, Main Road District, Road District, Local Health District, Fruit District, Rabbit District, School District, and Public Recreation Ground District included in any municipality established by the Act is abolished. Each district is incorporated and is under the control of a warden and councillors, who, in addition to the specific duties and powers imposed and conferred by the Act of 1906, are vested with powers and authorities under the following Acts:—The Codlin Moth Act 1888, the Rabbits Destruction Act 1889, the Public Health Act 1903, the Education Act 1885, the Roads Act 1884, the Rural Municipalities Act 1865, the Police Act 1905, the Town Boards Act 1896, the Public Recreation Grounds Act 1888, the Cemeteries Act 1865, and the Californian Thistle Act 1883. The Governor is authorised to unite, subdivide, or abolish municipalities or wards on petition, and may do so without petition if in any municipality there is at any time no council or an insufficient number of councillors to form a quorum. The Act of 1906 was amended in 1908, and again in 1911.

(i.) **Formation of Councils.** In the case of municipalities not divided into wards the council is to consist of the number of members, being a multiple of three, assigned to it by the Governor, while the councils of municipalities which are subdivided consist of

three councillors for each ward. Any resident elector is eligible to act as a councillor unless he is disqualified as being an interested person, a bankrupt or convict, or as undergoing a sentence of imprisonment, or as insane. The warden is elected by the councillors from their own body.

(ii.) *Qualification of Electors.* Both owners and occupiers of property within a municipality are allowed plurality of votes according to the following scale :—

Annual Value of } Property	Under £30.	£30 to £80.	£80 to £160.	£160 to £240.	£240 to £360	£360 and upwards.
Number of Votes	1	2	3	4	5	6

In the case of joint owners or occupiers the number of votes according to the above scale is equally divided as far as possible, and the vote or votes which cannot be so divided may be given by such one of the joint owners or occupiers as may be appointed by the others. The provisions of the Acts relating to voting by post at parliamentary elections may be made applicable to any municipal election on the petition of the council to the Governor.

(iii.) *Local Districts and Committees.* Any municipal council may by special resolution define a local district to be assigned to a local committee, and any district proclaimed under the Public Recreation Grounds Act 1888 may also be defined as a local district. A local committee may exercise any of the powers and functions conferred upon councils as may be declared to be within its province by special resolution.

(iv.) *Revenue and Rates.* The ordinary revenue of a council, which consists principally of (a) rates (other than special rates), tolls, ferry dues, market dues, fees, and other charges authorised by the Act, and (b) grants from the central Government, is carried to a general account called the municipal fund. Rates are of two kinds, namely, (a) general, and (b) special. (a) *General Road Rates*, of not less than sixpence in the pound of the annual value of the whole of the ratable property in a municipality, must be levied at least once a year, but the total amount of all such rates levied in any one year must not exceed one shilling and threepence in the £. The proceeds of general road rates are carried to a separate account and are to be applied for the purposes of constructing and maintaining roads, streets, bridges, jetties, wharves, and tramways; at least three-fifths of all sums received in respect of property situate in a particular ward from the making of such a rate must be expended within such ward for the purposes mentioned. *General Health Rates* may be levied either prospectively or retrospectively in order to defray the expenses incurred in the execution of the Public Health Act 1903. (b) *Special Rates* may be made for the purpose of defraying the cost of constructing and maintaining works for sewerage or drainage, for the manufacture of gas, electricity, hydraulic or other power; watering or lighting roads; maintaining public recreation grounds; the destruction of rabbits; any of the purposes of the Public Health Acts; and of constructing and maintaining slaughter houses, abattoirs, or other works. A *Codlin Moth Tax* may be levied as prescribed by the Codlin Moth Act 1888, and when a council undertakes the removal of house refuse from premises the expense of such work is to be paid for by a *Special Cleansing Rate*. For defraying the expenses incurred in the execution of any work for the special benefit of a particular part of a municipality, the council may also levy a special rate called a *Separate Local Rate* upon all ratable property within such part, but the question as to whether any work is or is not for the special benefit of any particular part of the municipality must be referred to the Minister, who may direct, when such rate would exceed sixpence in the pound, that the question of levying the same be left to the decision of the electors of the defined part; whenever the expense to be incurred involves more than one yearly rate, the question must be referred to the electors.

(v.) *Ratable Property.* The council is not empowered to levy any rate or charge (except for water, prevention of fire, cleansing, drainage, or sewerage, or for light or power actually supplied, or for any service actually rendered) upon—Crown property; any property used solely for religious purposes; any portion of any premises used exclusively as a public library, museum, school of arts or mines, literary or scientific institution, or any cemetery; benevolent asylums or charitable institutions; or upon any building or place vested in trustees for an agricultural or pastoral society for the purposes of a show ground. The Crown has in any such case the right to commute its liability by payment of a sum agreed upon between the council and the Treasurer.

(vi.) *Borrowing Powers.* Power is given to the council to borrow money either—

- (a) By the sale of debentures under provisions of the Local Bodies Loan Act for the purpose of permanent works and undertakings, or for the purpose of liquidating the principal sum owing on account of a previous loan; or
- (b) By way of temporary advances against rates to an amount not exceeding one-half the expected total proceeds of such rate. Temporary advances must be paid within twelve months of the date of borrowing.
- (c) Under the amending Act of 1908, councils may raise temporary loans by way of bank overdraft on the credit of the municipality to an amount not exceeding one-half of the prior year's revenue, and in addition may overdraw to the extent of deposit receipts for money due by the bank.

(vii.) *General By-laws.* The councils have wide powers to make by-laws for the general purposes of the Act, and particularly in connection with the following matters:—The trespass and agistment of animals; the erection or demolition of buildings, awnings, and temporary structures; the prevention and extinction of fires; the granting of licenses; the regulation of markets and weighbridges and the establishment of rents and fees for the use thereof; the regulation or the prohibition of the introduction of any pest or anything affected by a pest; the control of public safety and the preservation of public decency; the control and management of roads and footways; the imposition and collection of tolls upon roads and bridges, and of rates and dues upon ferries, wharves, tramways, jetties, piers, and markets under the control of the council; the regulation of various trades and callings; the control of the general traffic in public places, boats and boatmen, vehicles, steam rollers, and bicycles.

The councils are also vested with all powers which were conferred upon any of the local bodies mentioned above (see page 1032 *ante*, par. 2), and which were abolished by the Local Government Act 1906.

(viii.) *Water Districts.* Any number of municipalities, situated so as to be capable of taking advantage collectively of some common water system or catchment area, may by petition to the Governor be constituted a water district under the Act. In every case where a water district is proclaimed upon the joint petition of two or more municipal councils the management of such district is in the hands of a joint council consisting of such a number of members of each of the councils as the Governor may determine. This council is invested with borrowing and rating powers and may supply water within the district on such terms as it may fix, provided that no water may be supplied for irrigation until domestic and stock supply purposes have first been satisfied. Provision is also made in the Act for uniting municipalities for the purpose of carrying out sewerage, irrigation, or water conservation schemes for the common benefit of the municipalities, or for any other purpose authorised by the Act, such as, in the opinion of the Governor, is likely to be of permanent utility, and is best capable of being carried out by concerted action.

**3. Annual Value, Revenue, and Expenditure of Municipalities.**—The following table shews the annual value, total receipts, and expenditure of municipalities for the years 1908, 1909 and 1910.

**TASMANIA.—ANNUAL VALUE, REVENUE, AND EXPENDITURE OF MUNICIPALITIES,  
1908, 1909, and 1910.**

Year.	Number of Municipalities.	Annual Value of Ratable Property	Revenue.				Expenditure. <sup>2</sup>
			From Rates.	From Govt.	From other Sources. <sup>1</sup>	Total.	
		£	£	£	£	£	£
1908 ...	51	1,340,243	142,466	40,254	186,466	369,186	353,699
1909 ...	51	1,404,328	173,453	44,293	92,244	309,990	318,501
1910 ...	51	1,459,917	147,750	35,616	87,994	271,360	266,108

1. Including sums derived from loans.      2. Including repayments of loans.

The capital value of ratable property in 1910 was £30,924,993.

**4. Total Revenue and Expenditure of Local Bodies, 1908 to 1911.**—Particulars as to Road Boards and Road Trusts are given in the chapter of this book on "Roads and Bridges." In addition to the local authorities already mentioned, Marine Boards have been established at seven ports in Tasmania for the purposes of constructing and maintaining wharves and jetties and of controlling all matters relating to the shipping in the respective ports. Twenty water trusts and forty cemetery trusts have also been established in connection with municipal bodies. The subjoined statement shews the total revenue and expenditure for all local bodies, exclusive of all amounts contributed by the general Government, during each financial year from 1908 to 1911 inclusive.

**TASMANIA.—REVENUE AND EXPENDITURE OF ALL LOCAL BODIES, EXCLUSIVE  
OF AMOUNTS CONTRIBUTED BY THE GENERAL GOVERNMENT, 1908 to 1911.**

\* Exclusive of amounts contributed by the general Government: † Exclusive of expenditure from Government contributions. ‡ Included in municipalities under the new Local Government Act. § Receipts and expenditure of eight water trusts not included in municipalities. || Exclusive of a number of cemetery trusts incorporated in the newly organised municipalities.

**5. Hobart Water Supply.**—The original water supply of Hobart was obtained from a stream known as the Hobart Rivulet, flowing from Mount Wellington, the works being carried out in 1831 by the Imperial Government. These works consisted of an aqueduct and a line of cast-iron pipes, the water being distributed to several points known as "wells." By an Act of the State Parliament passed in 1860 the works were transferred to the municipality. Under this Act certain additional streams flowing from Mount Wellington were acquired as sources of supply, and a storage reservoir containing 45,000,000 gallons was constructed. The catchment area on Mount Wellington at present comprises an area of 4200 acres, the sources of supply having been extended at various times as far as the North West Bay River, fifteen miles from Hobart.

(i.) *Storage Reservoirs.* There are two storage reservoirs about  $2\frac{1}{2}$  miles from the city. One contains 68,000,000 gallons and is 502 feet above sea-level, while the other contains 45,000,000 gallons and is 447 feet above sea-level. The whole of the supply is by gravitation. The water is brought from the various streams by means of stone aqueducts and cast-iron pipes to the reservoirs, and thence by four 10-inch cast-iron mains, of which three lead to the distributing reservoirs and one direct to the shipping and southern portion of the city.

(ii.) *Capital Cost, Tenements Connected, Length of Mains, Revenue and Expenditure, 1911.* The total capital cost to the end of 1911 was £218,122, but a considerable amount of reticulation work has been done out of revenue and not charged to capita account. The outstanding loans at the end of 1911 amounted to £172,175. At the same date the number of tenements supplied in the city and suburbs was 7931, the population 38,884, and the length of reticulation mains 83 miles. The revenue and expenditure for the last six years were as follows:—

#### HOBART WATERWORKS.—REVENUE AND EXPENDITURE, 1906 to 1911.

Particulars.	1906.	1907.	1908.	1909.	1910.	1911.
	£	£	£	£	£	£
Revenue ... ..	19,125	21,802	19,719	20,091	20,643	31,207
Expenditure ... ..	15,817	17,785	22,901	23,729	22,238	20,381

(iii.) *Proposed Extensions.* Parliamentary sanction to borrow £93,000 has been obtained for the purpose of improving the water supply of the city and suburbs of Hobart; £75,000 of this amount is to be spent on a new storage reservoir, and a contract for the construction of the dam for £56,500 has recently been let, the balance being retained for expenditure on other works connected with the scheme.

**6. Hobart Sewerage System.**—A scheme for the construction of a sewerage system in Hobart was adopted in 1903. The sewage is discharged into the estuary of the River Derwent. Up to the end of the year 1911 about 68 miles of sewers had been laid, and 6089 tenements (out of a total of 6580) had been connected at a cost of about £174,760. The revenue for the year was £9180. The scheme, which is intended to sewer over 2000 acres so as to serve an estimated population of about 30,000 people, is almost completed.

## § 8. Local Government Finance.

**1. Introduction.**—In the preceding parts of this section certain particulars have been given regarding local authorities in each individual State. It is proposed to here give in a comparable form for each State particulars regarding the financial operations of local governing bodies. The areas controlled by these bodies are variously known in the

several States as cities, towns, boroughs, shires, municipalities, municipal districts, and road districts. The particulars given in the tables in the two next paragraphs relate to financial years ending as follow:—New South Wales: for the calendar year 1910. Victoria: 30th September, 1910, except Melbourne, 31st December, and Geelong, 31st August, 1910. Queensland: Calendar year, 1910. South Australia: Corporations, 30th November, and district councils, 30th June, 1910. Western Australia: 31st October, 1910, except road districts, 30th June, 1910. Tasmania: Calendar year, 1910.

2. **Number, Revenue, Expenditure and Valuation of Local Authorities, 1910.**—The following table gives particulars of the number, revenue, expenditure, and valuation of local authorities in each State and in the Commonwealth during the year 1910. It may be noted that, excepting in Tasmania, the metropolitan water supply systems are not under municipal control; the particulars given of revenue and expenditure for the five States other than Tasmania do not, therefore, include revenue and expenditure on account of these systems.

## SECTION XXVII.

## INDUSTRIAL UNIONISM AND INDUSTRIAL LEGISLATION.

## § 1. Development of Trades Unions in Australia.

1. **General.**—In Australia, industrial unionism paved the way for industrial legislation. Conditions of employment were on the whole favourable to the investigation of industrial problems; and experimental legislation was possible because of the simplicity and directness of the aim of those engaged in industrial occupations. Moreover, the non-existence of the complexity of the problems and of the organisation of older countries does not interpose difficulties which might otherwise operate. Hence rapid changes in laws regulating industry occur and are likely to occur. To a great extent the trades unions were responsible for these laws. They steadily and continuously urged an amelioration of the condition of the working man, and by organisation and discipline they presented a united front to opposing forces, and attained many advantages by a recognition of the principle that unity is strength. Their efforts have resulted in improved conditions, particularly short hours, a healthier mode of life, and safeguarding against accident. One great aim of present-day industrial legislation has been said to be to extend "the reasonable comforts of a civilised community" to those engaged in every branch of industry. The standard of wages must therefore be maintained at a satisfactory level. Large organisations have been able to attain their ends by force of numbers, and, in the case of the great bulk of the artisan and similar classes, through the solidarity of their unions. The smaller and less perfectly organised industries, unable to maintain an effectual struggle with hope of success, are now receiving, by legislative enactment, the benefits already accrued to the trades unions. Industrial organisation by means of unions now tends to embrace all classes of wage-earners.

While the demands of the early unionists have almost in their entirety been conceded by the employer, unionism nevertheless continues. Industrial legislation has greatly restricted industrial warfare, but it has not yet reached the stage when conflicts between employer and employees cease. It aims at a satisfactory adjustment of industrial differences, without derangement of the economic system, nevertheless strikes sometimes occur.

Each State of the Commonwealth has enacted, with considerable elaboration, legislation respecting trade unions and respecting the regulation of the conditions of industrial life, particularly those of factory employment; and has also regulated the hours of business for the great majority of shops. Machinery for the regulation of wages and other matters connected with employment has also been established by legislation.

At the present time there is an obvious tendency to adjust such matters throughout Australia on uniform lines. The industrial condition of any State of the Commonwealth naturally reacts quickly on any other State. This is one of the consequences of a unified tariff, and of the fact that the general economic conditions of one part of the Commonwealth must necessarily affect very intimately every other part. An expression of the intimacy of these economic and industrial relations of different parts was seen, for example, when the Arbitration Court in New South Wales refused to fix wages in the boot trade in that State at a higher rate than that fixed by the Wages Board in Victoria, because of the additional burden which such a rate would place on local

manufacturers. Collective bargaining is encouraged, through the medium of legal tribunals where necessary, argument and diplomacy taking the place of open strife. Legislation gives legal form and status to the unions, and allots to them legal responsibility. The workman is encouraged, and in some cases compelled, to treat with his employer through his union, and the industrial courts of some States are authorised to direct that preference be given to unionists.

**2. History of Unionism in Australasia.**—(i.) *Commencement of Unionism: the Eight Hours System.* The first trade union in Australia was the "Operative Masons' Society," established in Melbourne in 1850. In 1851 a branch of the "English Amalgamated Society of Engineers" was founded in Sydney. For many years the only unions existing were practically those formed by the several branches of the building trades. They were all subject to the English law prohibiting conspiracies and combinations in restraint of trade, though it does not appear that such law was ever put in force in Australia. The main object of the early unions in Australia was the limitation of the working week to forty-eight hours. The minor and friendly society benefits that were usual amongst the unions of older countries were also desired; but the chief aim was the establishment of the eight hours principle, and that aim for many years was the chief link between the unions. It is difficult to obtain detailed information concerning the unions prior to trade union legislation, but their early history generally resolves itself into an account of the early efforts put forth by metropolitan operatives to secure the limitation of the working day to eight hours. The desire to restrict Chinese immigration operated as a further incentive to combined effort. For the restriction to be effective, co-operation between the colonies was necessary. The question therefore promoted enlargement of view, and fostered amongst the workmen of Australia the sense of community of interest.

(ii.) *New Zealand.* The system was first put into practice in Australasia in 1848 by the "Otago Association," which purchased an area of land upon Port Chalmers, N.Z., and proceeded to build the town of Dunedin, under a system which recognised the eight hours day, thus instituting, in the New World of the south, that period of toil as the limit of the working day. Thus the system began voluntarily in New Zealand long before the unions that demanded and acquired it in Australia had come into existence. But many years elapsed in the Dominion before trades unionism became an established fact. The first Congress of New Zealand Trades was held in 1885. In that year, too, the general celebration of the eight hours' principle by the combined trades was inaugurated.

(iii.) *New South Wales.* In New South Wales, the operative masons obtained the eight hours concession in 1855, after a strike; but little development of the movement was noticeable until 1871, in which year four eight-hour trades—the brickmakers, stonemasons, labourers, and carpenters—inaugurated the annual celebration.

(iv.) *Victoria.* The first Melbourne Eight Hours' procession was held in 1856, the trades taking part being the masons, bricklayers, carpenters and joiners, plasterers, painters, and slaters. In the following year nine trades and about 700 men took part in the function; but the principle of the Eight Hours' Day had been recognised, and new unions were quickly established under the influence and guidance of the pioneers of the movement.

(v.) *Queensland.* After the fever of the gold rush to the Fitzroy River had subsided, settled conditions prevailed in the building industry, and the trades, being well established and organised in Queensland, celebrated their inaugural festival of the eight hours in 1866. In Brisbane, as in Melbourne, the pioneer trade was the stonemasons'.

(vi.) *South Australia.* In South Australia, the establishment of the eight hours system by the unions was accomplished in 1873, the building trades, represented by the stone-cutters, painters, and carpenters, again being the leaders.

(vii.) *Western Australia.* The discovery of gold in Western Australia caused rapid development in the infant cities and towns of that State, and mechanics found abundant employment in the building trades. Unions were soon formed, and the eight hours became an established system in 1896.

(viii.) *Tasmania.* Trade unions were established in Tasmania in 1874, the shipwrights of Hobart being the pioneer society. Here, as on the mainland, the eight hours' day was the chief aim of the operatives, and here, as in Sydney, it was conceded only after a strike. Within a few years, the general system of trades unions was instituted. The inaugural celebration of the system was celebrated in 1890.

(ix.) *The System Universal throughout Australasia.* No provision for eight hours was made in the original documents which set out the conditions of labour under which the members of the Otago (N.Z.) Association were to work in 1848. It was intended to insert a clause embodying the principle, but it was found that such a clause would be inoperative, as contracts to bind free settlers to serve under any conditions of labour beyond the seas were not provided for by any Imperial Statute. The system, however, was tacitly agreed to by both parties, and quietly and voluntarily the eight hours' day was established. Not so amicable were the methods by which it was acquired in the other colonies. There had to be unions of men and unions of trades, before the requisite forces were available to overbear opposition to the system, and, at any rate in two cases, the tradesmen resorted to strikes before the concession was granted. Generally it may be said that trades unions in the Commonwealth sprang out of the desire for an eight hours' day; and with the Western Australian celebration of 1896, trades unionism, with its eight hours' charter, completed its circuit of the Commonwealth. From 1880 to 1890 there was in the States where industry was systematised great activity in the organisation of labour, more particularly at the end of that period. In sympathy with the widespread industrial unrest in England the occurrence of similar unrest in Australia drew the wage-earners into the unions in large numbers.

(x.) *Organisation of Unions.* The first regular association of unions in Australia was the Trades Committee in Melbourne, formed in 1859, which afterwards became the present Trades and Labour Council. Similar councils now exist in all the States. Composed of delegates from the unions, they exercise a general care over the interests of their members.

(xi.) *Union Acts.* The Trade Union Acts of England and the collateral Conspiracy and Protection of Property Act have been copied by the States, the Acts also providing for unions of employers. Except in Western Australia, the latter provision has been but slightly utilised, as apparently it offers no well-defined inducement. South Australia adopted the Acts in 1876, New South Wales in 1881, Victoria in 1884, Queensland in 1886, Tasmania in 1889, and Western Australia in 1902.

The Acts referred to provide for the legal recognition of combinations which come under the definition of trade unions; the registration of unions of seven or more persons, the registration of councils or other bodies to which registered trade unions are affiliated, the vesting of union property in registered trustees, with penal provisions in respect of defaulting officers. The registered unions are required to furnish annual returns of members and funds to a special department.

**3. Operations and Organisation of Unions subsequent to the Acts.—(i.) Unions.** Except as hereinafter mentioned, the Unions do not avail themselves of the Trade Union Acts to any large extent. Information concerning them in some States is not at present available, since they do not divulge their membership and funds. The figures given for registered trade unions must not therefore be regarded as affording any criterion by

which the present position of unionism may be judged. In some States there is a considerable difference between the numbers of registered and unregistered unions, as, for instance, in Victoria, where there are 127 unions in Melbourne, and only three are registered.

The failure to register under the Trade Union Acts does not deprive the unions of the privileges conferred by the Conspiracy Acts.

(ii.) *Workmen and Employers in Unions.* Available statistics at present do not shew what proportion of Australian workmen are members of trade unions.

(iii.) *Concerted Action.* The consummation of the eight hours' system, at which the early unions had aimed, was followed by demands for further concessions and privileges. An intercolonial congress of delegates of trades unions, modelled upon a similar conference of labour organisations in Great Britain, was first held in Sydney in 1879. At the second congress in Melbourne, in 1884, sixty-nine delegates from New South Wales, Victoria, and South Australia were present, representing forty-one unions, branches, or societies. Following the methods of European associations the Australian unions sought to achieve an improved condition for their members by the establishment of rules concerning minimum wage, limited hours of toil, the restriction of the number of apprentices and improvers, and the prohibition of the employment of non-union labour; political reforms, such as payment of Members of Parliament, "one man one vote," were also agitated. Some of the unions refuse to admit to membership any but skilled journeymen, on the ground that their object is to encourage the attainment of proper skill.

(iv.) *Representation in Parliament.* It was during the decade 1880-1890 that the trade unions of Australia espoused direct legislative representation and advocated State intervention between employer and employee. This policy has been called "new unionism." In New South Wales, trade unions obtained direct representation in Parliament in 1881, and again in 1883. A resolution affirming the desirability of Parliamentary representation of labour being carried at the congress of 1884, members representing the special interests of the wage-earners were elected to the Legislatures of some of the States, but little action was taken by the unions to obtain representation by men chosen from among their own ranks until after the great labour troubles of 1890-1892. In that period serious strikes occurred in the maritime, shearing, and mining industries, and it was then that the Labour party proper was formed. One direct result of the outbreak was the recognition of the desirability of peaceful settlement of disputes. The political labour party was accordingly organised, and has since held considerable power in most of the States, frequently occupying the Treasury benches. In 1904, 1908-9, and 1910-12 Labour Governments occupied the Commonwealth Treasury benches, the elections held in April, 1910, having resulted in the Labour party gaining an absolute majority in both of the Federal Houses of Parliament. The present Governments in New South Wales and Western Australia are Labour. South Australia has also had a Labour Government; and in Victoria, Queensland, and Tasmania the Labour party is an important element in Parliament.

Triennial federal conferences laid down a policy for the party, but at present there is no authoritative Commonwealth organisation, and the policy is not binding upon a State league. The Political Labour Council controls political and the Trades Hall Council trade union matters. The former consists of delegates from both unions and "branches." The branches are coterminous with State electoral districts, and nominate candidates for those districts. Candidates for the Commonwealth Senate are balloted for by all league members in the State, and for the Commonwealth House of Representatives by the branches in the constituency.

**4. Registered Trade Unions.**—(i.) *Unions of Employees.* The benefits conferred by registering Trade Unions are not, in some of the States, held in much repute; consequently the statistics of registered trade unions of employees not only do not represent the position of unionism, but, in addition, the statistics themselves for past years are so defective as to be practically valueless. The particulars furnish no reliable indication of the numerical and financial position of Trade Unions. It will be seen that some of the registered unions fail to supply returns; this non-supply may lead to cancellation of the registration. Some of the unions have obtained the cancellation of their certificates of registration, the apparent reason being that they proposed registering under the Commonwealth Conciliation and Arbitration Act. In other States, as New South Wales, considerable activity is displayed in the formation of new unions; the principal reason is the general desire of workers to obtain a status under the Industrial Disputes Act, registration under the Trade Union Act being a condition precedent, as far as new unions are concerned. The industrial legislation of Victoria, on the other hand, offers no special inducement to workers to organise into unions, since the Wages Board system extends the benefits of awards to all individuals engaged in the industry dealt with. The figures at the end of 1910 were as shewn hereunder:—

#### REGISTERED TRADE UNIONS OF EMPLOYEES, 1910.

State.	No. of Unions.	No. of Members.	Receipts.	Expenditure.	Funds.
			£	£	£
New South Wales ...	171	129,544	128,433	122,223	98,758

\* Returns for 9 unions only, 15 having failed to furnish returns. † Industrial unions registered under the Arbitration Acts. ‡ Excluding 15 unions in South Australia.

(ii.) *Unions of Employers.* At the close of 1910 there were in New South Wales three unions of employers, with 802 members; in Queensland five, with 246 members; in South Australia one, with 22 members; and in Western Australia forty-six, with 444 members.

**5. Registration under Industrial Arbitration Acts.**—Western Australia, and New South Wales up to 30th June, 1908, were the only States with Industrial Arbitration Acts under which industrial associations could be, and actually were, registered. The number of registered unions in New South Wales shewed a gradual increase from 1902 to 1907, the figures in the latter year being 109 unions of employers, with 3165 members, and 119 unions of employees, with 88,075 members. Under the Industrial Disputes Act, which succeeded the Arbitration Act of 1901, the information is not required to be furnished. Since the Act of 1908 has operated, industrial organisation has proceeded rapidly, owing to a very evident general desire on the part of the workers to obtain the status necessary to entitle them to the advantages offered by the Act. In Western Australia, the employers' unions numbered 45, with 441 members, in 1904; 59 unions, with 520 members, in 1905; 57 unions, with 534 members, in 1906; 56 unions, with 552 members, in 1907; 48, with 409 members, in 1908; 47, with 408 members, in 1909; 46, with 444 members, in 1910. Unions of employees have shewn a tendency to decline in late years. At the end of 1904 and 1905 there were 140, with 15,743 and 15,461 members respectively; in 1906 there were 130 unions, with 16,015 members; in 1907, 121 unions,

with 14,544 members; in 1908, 121 unions, with 15,187 members; in 1909, 122 unions, with 17,282 members; and in 1910, 130 unions, with 20,429 members. These figures include councils and associations. Registration under Commonwealth legislation began in 1906. In that and the four following years, there was but one union of employers, with 6 members. The unions of employees registered were 20 in 1906, with 41,413 members; 24, with 57,306 members, in 1907; 37, with 69,536 members, in 1908; 7, with 14,161 members, in 1909; 10, with 3760 members, in 1910.

## § 2. Laws Relating to Conditions of Labour.

1. **Tabular Statement of Statutes affecting Labour.**—The Statutes in force at the beginning of 1912 in the several States of the Commonwealth, which, more or less directly, affect the general conditions of labour, are shewn in the table below. Where merely an incidental reference to labour conditions is made in a statute, as is the case with, *e.g.*, the Hawkers and Pedlars Act 1892 of Western Australia, or the Firms Registration Act 1899 of South Australia, the Act is not included in the table.

\* The "Truck" system, as applied to labour, was one by which the master obtained the labour of his servants in exchange for goods or commodities on which it is stated he generally secured a profit. The system is now almost entirely suppressed by the various statutes enacted. † New South Wales Acts, unrepealed in Queensland after Separation in 1859.

**2. Benefits sought to be Conferred by the Acts.**—(i.) *General Provisions.* The legislation enacted has generally had for its object the shortening of hours, improving and fixing standard rates of wages, provision of sanitary accommodation, ventilation and cleansing of premises, safeguarding from accident, and general amelioration of the conditions of labour, particularly that of females and children, in factories. The principal provisions of these statutes are set out in the table hereinafter.

(ii.) *Historical.* The first Australian Factories Act was passed in 1873 in Victoria, and became law on 1st January, 1874. It was entitled "The Supervision of Workrooms and Factories Statute," and contained only six sections. The existing Victorian Act, passed in 1905, contained originally 163 sections, and is now extended by four amendments of 35, 40, 6, and 54 sections respectively. There are, moreover, numerous regulations in force under its authority. The three principal provisions in the Act of 1873 were (a) that any place in which not less than ten persons were engaged for hire in manufacturing goods should be constituted a factory; (b) that such factories as to building, sanitation, etc., should be subject to regulations made by the Central Board of Health; and (c) that no female should be employed for more than eight hours in any one day without the permission of the Chief Secretary. The administration of the Act was entrusted entirely to the local Boards of Health, and the system was found to be less effective than was hoped. The conditions which have given rise to trouble in the old world tended to reproduce themselves in the young and growing industries of the States. Factory workers had to contend with the absence of security for a living wage; unsatisfactory sanitary surroundings; and unchecked and unscrupulous competition of Chinese in certain trades. The advocacy of legislation to control the conditions of employment became pronounced in Victoria in 1880, and a strike of tailoresses in Melbourne in 1882 led to a recognition of the real state of affairs. As a result of unsatisfactory working under the local governing bodies, and on account of agitation of the operatives, a commission was appointed in 1883, and reported the necessity of legislation for the regulation of factories, and in particular pointed out the fact that men were compelled to toil for as many as eighteen hours and women sixteen hours a day. It also shewed that the condition of out-workers was very undesirable, and that the apprenticeship system was frequently used to obtain labour without remuneration, apprentices being dismissed upon asking for payment at the end of their time. The Factories and Shops Act 1884, while providing for the suppression of many evils in respect of accommodation and lengthy hours, did not touch the two last mentioned. It provided for Government inspection, and also that six persons should constitute a factory if the premises were situated in a city, town or borough. In 1887 a short amending Act was brought in to remedy some defects that were found to exist. Its principal provision was that any place in which two or more Chinese were engaged should be deemed a factory. In 1893 a further enactment reduced the number of persons constituting a factory to four. Another Royal Commission sat in 1895, resulting in the Act of 1896, which dealt with matters previously untouched, and the system of regulation was carried on by the Act of 1900 and the complete codification of the law in 1905.

Similar conditions were found to prevail in other States. New South Wales and Queensland adopted regulative measures in 1896 and subsequent years, and South Australia in 1894, 1900, and 1906. Western Australia followed suit in 1902 and 1904. Tasmania adopted the Victorian Act of 1873 in 1884, with a small extension in 1905; and in 1910 enacted Factories, Wages Boards, and Workers' Compensation Acts.

The same remarks apply in a general way to the condition of employees in shops.

**3. Limitation of Hours.**—(i.) *Factories.* As already remarked, the adoption of the eight hours' system for adult males has generally been the outcome of the representations made by the trade unions. Except in New Zealand, there is no general legislation to enforce the principle, although there is now a general recognition of it. A week of forty-eight hours is the usual working week. The larger unions, however, have lately moved for a *net* day of eight hours, with Saturday half-holiday, no loading of other week days

being permitted by way of compensating for the Saturday afternoon. Under this scheme there are, for five days, equal divisions for periods of labour, recreation, and rest, and four hours' work on Saturday, making a working week of forty-four hours. In the majority of occupations, forty-eight hours weekly is the recognised limit of work. On the establishment of Wages Boards and Arbitration Courts, in the States where those institutions exist, the authorities thus created adopted the rule as part of their determinations and awards wherever it seemed reasonably practicable. In some of the larger classes of building trades, the hours have been reduced to forty-four a week, and in some technical and specialist trades, a lower maximum has been fixed, such for example, as the type-setting machine operators in Victoria, for whom the maximum has been fixed by the Wages Board at forty-two hours weekly. Reasonable provision is made by Statute or award for work performed outside the scheduled hours. Organisations of employees, however, oppose overtime in any industry until all the operatives in that industry are working full time.

In the case of women and children there has been very general enactment in the States of the forty-eight hours' limit, and in addition, the maximum periods of continuous labour, and the intervals of cessation therefrom, have been prescribed in all the States. New Zealand has fixed a weekly maximum of forty-five hours for females and boys under 16. The first enactment of the forty-eight hours' limit in Australia was in 1873, when the Parliament of Victoria fixed that period for women and girls in factories.

(ii.) *Shops.* All the States have statutes containing provisions respecting the hours during which shops in large centres may be kept open for business. These provisions, in effect, not only limit the hours during which shop-hands may be employed, but apply also where the shops are tended by the proprietor alone, or by himself and family, with, however, certain exceptions, such as exist in the State of Victoria. In that State shops wherein not more than one assistant, whether paid or not, is employed, are permitted to remain open for two hours a day longer than other shops of the same class. The object of this is to relieve the hardship which exists for such persons, for example, as widows who are wholly dependent for a livelihood upon the casual trade of small shops. It is, however, reported that little or no benefit has accrued from the permission. In New South Wales, Victoria, Queensland, South Australia, and Western Australia the closing time of shops, except those specially exempted, is 6 p.m. on four days of the week, 10 p.m. on one day (except 9 p.m. in South Australia), and 1 p.m. on one day—thus establishing a weekly half-holiday. In Western Australia the opening hour is fixed at 8 a.m. In addition to fixing the closing hour, the total daily and weekly working hours are delimited in the case of women and children. In some States, butchers' shops must be closed an hour earlier than other retail establishments, the reason being the early hour at which assistants must start to attend to the markets and early morning trade.

(iii.) *Hotels, etc.* Establishments, the opening of which in the evening is presumably necessary for public convenience—such as hotels, restaurants, chemists' shops, etc.—are required to remain open for longer hours or are permitted to do business during hours prohibited in other establishments.

(iv.) *Half-holidays.* The provisions of the early closing laws differ somewhat in each State, but the main objects, namely, the restriction of long hours of labour, are identical throughout. Formerly, in some of the States, there were, and there are still in others, provisions making the early closing of a business, or the selection of a day for a half-holiday, dependent upon the option of the majority of the business people concerned, or upon the local authority. The anomalous results of the system whereby shops on one side of the street bounding two municipalities were open, when those upon the other side were closed, led to the introduction of the compulsory system, whereby the hours of business are absolutely fixed by statute. In Queensland, the day of the weekly half-holiday is fixed for Saturday. In Victoria also the Saturday half-holiday became compulsory in 1909, and in New South Wales in the following year, and there is a strong movement throughout the Commonwealth in favour of closing on the afternoon of that day.

(v.) *Exempted Trades.* The hours for shops exempted from the general provisions of the Acts are also prescribed, and special holidays are provided for carriers.

**4. Other General Conditions of Labour.**—Measures for the protection of life, health, and general well-being of the worker, tabulated hereunder, exist in most of the States. Though in some instances founded upon English legislation, many of the provisions are peculiar to Australia. Despite experience and continued amendment they have not even yet attained to a settled form. Of the Australian States, Victoria originally had the most complete system of industrial legislation. Other States gradually adopted the Victorian statutes, either *en bloc* or with amendments suggested by local conditions. Western Australia followed very closely the legislation of New Zealand, where also the measures for the amelioration of the industrial conditions are enforced by law.

**5. Administration of Factories and Shops Acts.**—The provisions of Factories and Shops Acts and of the Early Closing Acts in some of the States are consolidated under a single Act, but in others are separate enactments. The chief provisions of the principal Acts for registration, administration, record-keeping, etc., and of regulations under those Acts, are set out in the following summary:—

- (a) Factories are defined to be places where a certain number of persons are employed in making or preparing goods for trade or sale, or in which steam or other power is employed. In some States the employment of a Chinese, in some of any Asiatic, constitutes the place a factory.
- (b) A Minister of the Crown administers the Act in conjunction with a Chief Inspector of Factories. Inspectors visit the factories with full powers of entry, examination, and enquiry; these are of both sexes, females being employed in that portion of the work where a woman is particularly necessary. Broadly speaking, these powers confer upon the Inspector the right to enter, inspect, and examine, at all reasonable hours by day and night, any factory where he has reason to think anyone is employed; to take a police constable, if necessary, to assist him in the execution of his duty; to require the production of all certificates, documents, and records kept by the occupier, in accordance with the terms of the enactments; to examine, either alone or in the presence of any other person, every person whom he finds in a factory; to make whatever examination he deems necessary to ascertain whether the provisions of the Act are complied with.
- (c) Registration of factories before occupation is obligatory. Description of premises and statement of the work to be done must be supplied, and a certificate of suitability of premises obtained.
- (d) A record of all employees, giving the names, ages, wages, and work of each under a certain age (18, 20, 21, etc.) must be kept and filed in the Chief Inspector's office.
- (e) Names and addresses of district inspectors and certifying medical practitioners must be posted; also the working hours, the holidays, and the name, etc., of the employer.
- (f) Records of out-work must be kept, containing the names and remuneration of workers, and stating the places where the work is done. Out-workers are required to register.
- (g) Places in which only the near kin of the occupier are employed are generally exempt from registration.
- (h) Meals may be prohibited in workrooms, etc. In some States occupiers are required to furnish suitable mealrooms.
- (i) The employment in factories of young children is forbidden, and medical certificates of fitness are required in the case of young persons under a certain age. Special permits, based on educational or other qualifications, may be issued for young persons of certain ages.

- (j) Guarantees of an employee's good behaviour are void unless made with the consent of the Minister.
- (k) Persons in charge of steam engines or boilers must hold certificates of service or competency.
- (l) Provision safeguarding against accident is made for the fencing off and proper care of machinery, vats, and other dangerous structures. Women and young persons are forbidden to clean machinery in motion or work between fixed and traversing parts of self-acting machinery while in motion; and dangerous trades are specified in which a minimum age is fixed. Notice of accidents must be sent to the district inspector. (Dangerous trades are generally under the administration of Boards of Health.)
- (m) Provision is made for the stamping of furniture, in order to disclose the manufacturer, and whether it is made by European or Chinese labour.
- (n) Minimum wage provisions are inserted. Premiums to employers are forbidden.
- (o) Sanitation and ventilation must be attended to, and fresh drinking water supplied. Separate and adequate sanitary conveniences for each sex are required.
- (p) Shopkeepers are required to provide proper seating accommodation for female employees. (In some States this is the subject of special legislation.)
- (q) A dressing-room for females must be provided in factories the manufacturing process of which requires a change of dress.
- (r) Adequate protection must be made against fire and efficient fire-escapes provided.
- (s) Wide powers of regulation are granted to the Executive and heavy penalties imposed, including a penalty by way of compensation to any person injured or the family of any person killed through failure to fence machinery and other dangerous structures.

6. **Registered Factories.**—The number of establishments registered under Factories Acts is shewn below, and is of interest as indicating the extent to which the Factories Acts apply:—

#### FACTORIES REGISTERED UNDER ACTS, 1910.

State.	No. of Registered Factories.	Numbers Employed.		
		Males.	Females.	Total.
New South Wales ...	4,533	54,847	25,125	79,972
Victoria ...	5,362	48,765	34,288	83,053

...	1 to 3 females	1 to 3 females	Reasonable sitting accommodation for females

manual workers, though restriction is made in South Australia to those receiving less than £5 weekly, and in Tasmania the limit is £3, while miners are exempted from the operation of the Act in New South Wales, being provided for in the *Miners' Accident Relief Act* 1900. The liability of employers covers all cases of injury by accident during employment, and in South Australia it extends also to disablement by industrial diseases. Misconduct of employee exonerates the employer. Notice of accident is to be sent to the employer without delay, and proceedings for compensation must be begun within a reasonable time. In New South Wales, Queensland, and Western Australia the matter is settled by a police magistrate; in South Australia the Arbitration Court makes the award. The minimum amount of compensation in case of death is three years' earnings, or £200 (except in Tasmania, where the amount is £100), whichever is greater, up to a maximum of £300 in South Australia, £200 in Tasmania, and £400 in the other three States concerned. In case of incapacity the minimum compensation is half wages up to £1 a week in New South Wales, Queensland, and South Australia, up to £1 10s. in Tasmania, and up to £2 in Western Australia; the maximum is £400 in Queensland, £300 in South Australia and Western Australia; and £200 in New South Wales and Tasmania. Agreements made by consent, may, under the authority of an official prescribed in the Act, vary its provisions. A lump sum may be accepted in lieu of weekly compensation, and compensation cannot be assigned. The main difference in the provisions of the two sets of enactments is that under the Liability Acts the employee had to show neglect or defect; under the Compensation Acts the employer has to shew misconduct of worker.

10. *Other Acts.*—Other legislation regulating conditions of labour has been enacted by the States. The British *Conspiracy and Protection of Property Act* (38 and 39 Vic., c. 86) has been adopted. Servants' registry offices are placed under adminis-

trative control, and the rates of commission chargeable are fixed by regulation. Power is given to workmen to attach moneys due to a contractor who employs them in order to satisfy a claim for wages, such wages being made a first charge on moneys due to a contractor. Workmen are given a lien for wages over material whereon they are working, even if it becomes part of other property. This is in addition to the common law lien, which ceases when possession of the property is parted with. Workmen's wages are protected from attachment. In Victoria, provision is made for the compulsory resumption of suburban lands to provide workmen's homes.

11. **General Results of Industrial Legislation.**—The results of the legislation described must be sought in the Reports of the Inspectors of Factories of the several States. Generally speaking, the perusal of these reports and of the reports of Royal Commissions which have enquired into the working of the Acts, affords satisfactory evidence that the Acts have, on the whole, effected their objects.

### § 3. Legislative Regulation of Wages and Terms of Contract.

1. **General.**—Two systems, based upon different principles, exist in Australia for the regulation of wages and general terms of contracts of employment. A "Wages Board" system exists in New South Wales, Victoria, Queensland, South Australia, and Tasmania, and an Arbitration Court in Western Australia. In New South Wales, Industrial Arbitration Acts of 1901 and 1905 instituted an Arbitration Court. This court expired on 30th June, 1908, having delivered its last judgment on the previous day. Wages Boards were substituted under the Industrial Disputes Act 1908. There is also the Arbitration Court of the Commonwealth, which has power, however, to deal only with matters extending beyond the limits of a single State. New Zealand has an Arbitration Court for regulating wages.

2. **Wages Boards.**—(i.) *Historical.* This system was introduced in Victoria by the Factories and Shops Act of 1896. The original Bill made provision only for the regulation of the wages of women and children, but was afterwards amended in Parliament to extend the system to adult operatives of both sexes.

The Act of 1896 made provision for the regulation of wages only in the clothing and furniture trades and the bread-making and butchering trades. By an Act of 1900 the operations of the Act were extended to include all persons employed either inside or outside a "factory" or "workroom"—see sec. 4, i. (a) —in any trade usually carried on therein. This section is now in the Act of 1905. The Act of 1907 extended the system to trades and businesses not connected in any way with factories, making provision for the appointment of Wages Boards for metropolitan shop employees, carters and drivers, persons employed in connection with buildings or quarrying, or the preparation of firewood for sale or the distribution of wood, coke, or coal. The Act of 1909 extended the system to the mining industry, and those of 1910 extended the operation of the Acts to shires.

The regulation is effected by a Board, called a Special Board, to distinguish it from the Board of Health. Boards for the regulation of wages in the trades specified in the Act of 1896 are appointed as a matter of course, and by the Executive other Boards are appointed only if a resolution for appointment be passed by both Houses of Parliament. Originally the Board was elected in the first instance, but the difficulty of compiling electoral rolls led to the adoption of the system of nomination, which has proved satisfactory. Beneficial results have followed from the institution of the system, conditions of female labour especially being improved. It is also claimed that sweating has been abolished.

The Board fixes the wages and hours of work and may limit the number of "improvers" to be employed (usually by prescribing so many to each journeyman employed). There is no power in Victoria to limit the number of apprentices employed, but such a power does exist in other States. The Board fixes the wages of apprentices and improvers according to age, sex, and experience, and may fix a graduated scale of rates calculated on the same basis. Apprentices bound for less than three years are improvers, unless the

Minister sanctions a shorter period of apprenticeship on account of previous experience in the trade. The Minister may sanction the employment of an improver over twenty-one years of age at a rate proportionate to his experience. Outworkers in the clothing trade must be paid piece rates. Manufacturers may, by leave of the Board, fix their own piece rates, if calculated upon the average wages of time workers as fixed by the Board.

Licenses for twelve months to work at a fixed rate lower than the minimum rate may be granted by the Chief Inspector of Factories to persons unable to obtain employment by reason of age, slowness, or infirmity. Licenses are renewable.

Penalties are fixed for the direct or indirect contravention of determinations, the obedience to which is ascertained by examination of the records of wages, etc.

A Court of Appeal has power to review determinations of the Boards.

The Acts fix an absolute weekly minimum wage, and the evasion of this provision (such as had occurred regarding females employed in the clothing trade), by charging an apprenticeship premium, is prevented by the prohibition of all such premiums. Until the Minimum Wages Act of 1908 began to operate, this absolute minimum provision did not exist in New South Wales. The Act of 1912 of this State combines the Wages Board and Arbitration Court system.

South Australia enacted the Wages Board system in 1900, 1904, and 1906, but the first-mentioned Act was rendered inoperative owing to the disallowance by Parliament of the regulations necessary for carrying it into effect. The Act of 1904 revived the Wages Board system respecting women and children employed in clothing and whitework trades. The action of this statute was paralysed by a decision, the effect of which was to prevent the fixing of a graduated scale of wages as is done by the Victorian Boards. The necessity for some protection to the persons intended to be benefited by these statutes was urged in the annual reports of the Chief Inspector of Factories, but, until 1906, without effect. Many employers, however, voluntarily complied with the Boards' determinations, though these were without legal force. The system was brought into full operation by the Act of 1906, which preceded the Victorian Act of 1907, in extending the system to other than factory trades, and was of a wider scope than the Victorian Act.

The system is also in operation in New South Wales and Queensland, and came into operation in Tasmania during 1911. In Western Australia the object is attained under the Arbitration Court system.

It is claimed that the introduction of the Wages Board system affording protection from unfair competition to employers, and the assurance of fair wages to employees, has led to improvement in working conditions, and that the appreciation of the workers is evidenced by the number of applications for the granting of Boards.

(ii.) *Mode of Constitution.* The following statement is taken from the Report of the Chief Inspector of Factories, Victoria, for 1907. It is still applicable in that State, and is interesting, in view of the very general movement throughout Australia towards the constitution of Wages Boards. The method is not precisely the same in the different States, but that of Victoria is given as being the State in which the system was first introduced, and has had most remarkable development:—

"The constitution of a Board, and the appointment of the members of a Board, involve two distinct procedures. Before a Wages Board is constituted, it is necessary that a resolution in favour of such a course should be carried in both Houses of the Legislature. It is usual for the Minister administering the Factories Act to move that such a resolution should be passed. He may be induced to adopt such a course, either by representations made by employers and employees, or by employees alone, or by the reports of the officers of the department. The reasons alleged by employers for desiring a Board are, usually, unfair competition; and those by employees, low wages, and often the employment of excessive juvenile labour. If the Minister is satisfied that a case has been made out, he will move the necessary resolution in Parliament, and when such resolution has been carried, an Order-in-Council is passed constituting the Board. The Order indicates the number of members to sit on the Board. The number of members must not be less than four nor more than ten. The Minister then invites, in the daily press, nominations for the requisite number of representatives of employers and employees.

These representatives must be, or have been, employers or employees, as the case may be, actually engaged in the trade to be affected. All that is necessary is, that the full names and addresses of persons willing to act should be sent in. Where there are associations of employers or employees, it is not often that more than the necessary number of nominations are received. In any case, the Minister selects from the persons whose names are sent in, the necessary number to make up a full Board. The names of persons so nominated by the Minister are published in the *Government Gazette*, and unless within twenty-one days, one-fifth of the employers, or one-fifth of the employees, as the case may be, forward a notice in writing to the Minister that they object to such nominations, the persons so nominated are appointed members of the Board by the Governor-in-Council. If one-fifth of the employers or employees object to the persons nominated by the Minister—and they must object to all the nominations, and not to individuals—an election is held under Regulations made in accordance with the Act. Shortly stated, employers have from one to four votes, according to the size of the factories carried on, as regards the election of employers, but as regards Wages Boards for shops, each employer has only one vote; and each employee in the trade, over eighteen years of age, has a vote for the election of representatives of employees. The Chief Inspector conducts such elections, the voting is by post, the ballot papers being forwarded to each elector. Within a few days of their appointment, the members are invited to meet in a room at the office of the Chief Inspector of Factories, and a person (always a Government officer, and usually an officer of the Chief Inspector's department) is appointed to act as secretary. The members must elect a chairman within fourteen days of the date of their appointment, and if they cannot agree to a chairman, he is appointed by the Governor-in-Council. The times of meeting, the mode of carrying on business, and all procedure, is in future entirely in the hands of the Board. Vacancies in Wages Boards, and, because of the preponderance of Chinese, all appointments of members of the Furniture Board, are filled on the nomination of the Minister without any possibility of either employer or employee objecting. The result of the labours of a Board is called a 'Determination,' and each item of such determination must be carried by a majority of the Board. It will be seen that, unless employers and employees agree, a full attendance of the Board is required, as, in case of a difference of opinion, the chairman decides the matter, and he has only one vote, the same as any other member of the Board. When a determination has been finally made, it must be signed by the chairman, and forwarded to the Minister of Labour. The Board fixes a date on which the determination shall come into force, but this date cannot be within thirty days of its signature by the chairman. If the Minister is satisfied the determination is in form, and can be enforced, it is duly gazetted. In the event of the Minister considering that any determination may cause injury to trade, or injustice in any way whatever, he may suspend same for any period, not exceeding six months, and the Board is then required to consider the determination. If the Board does not make any alteration, and is satisfied that the fears are groundless, the suspension may be removed by notice in the *Gazette*. Provision is made by which either employers or employees may appeal to the Court of Industrial Appeals against any determination of a Board. This Court consists of any one of the judges of the Supreme Court, sitting alone, and the judges arrange which of them shall for the time being constitute the Court. An appeal may be lodged (a) by a majority of the representatives of the employers on the Board; (b) a majority of the representatives of employees on the Board; (c) any employer or group of employers, who employ not less than 25 per cent. of the total number of workers in the trade to be affected; or, (d) 25 per cent. of the workers in any trade. The Court has all the powers of a Wages Board, and may alter or amend the determination in any way it thinks fit. The decision of the Court is final, and cannot be altered by the Board, except with the permission of the Court, but the Court may, at any time, review its own decision. The Minister has power to refer any determination of a Board to the Court for its consideration, if he thinks fit, without appeal by either employer or employee. The decision of the Court is gazetted in the same way as the determination of the Board, and comes into force at any date the Court may fix. The determinations of the

Board and the Court are enforced by the Factories and Shops Department, and severe penalties are provided for breaches of determination. No proceedings for breaches of the determination can be taken by any one without the sanction of the Department. Any employee, however, may sue an employer for any wages due to him under any determination, notwithstanding any contract or agreement expressed or implied to the contrary."

(iii.) *Special Minimum Wage Provisions.* At the end of 1908 the Minimum Wage Act was passed in New South Wales. A summary of the provisions of this enactment, and a statement of some of the ills it was intended to meet, as set out in the departmental reports, will serve as an indication of the general trend of public feeling in regard to employees throughout the Commonwealth. The Act provides for a weekly wage of not less than four shillings to all persons coming within the definition of "workman" or "shop assistant." That such a measure was necessary is evidenced by the fact that in the workrooms in the Sydney district no less than 514 girls, whose ages ranged from 13 to 21 years, were, at the end of 1908, in receipt of less than four shillings per week, and in the Newcastle district there were 272 girls employed in the dressmaking and millinery workrooms receiving less than four shillings a week, the majority being paid no wages at all for their services. The Minimum Wage Act applies to persons coming within the definition of "shop assistant" in terms of the Early Closing Act. A minimum rate of threepence per hour or portion of an hour is to be paid when overtime is worked at intervals of not more than one month, and a sum of not less than sixpence as tea-money is to be paid on the day the overtime is worked. The payment by employees, or on their behalf, in the clothing and wearing apparel trades, of a premium or bonus is prohibited. The system of so-called apprenticeship without payment originally carried with it the recognition of an obligation to teach the trade, especially in the dressmaking and millinery industry. This aspect of the case had, to a very great extent, been forgotten in the large workrooms, the training received for some time being more that of general discipline than of a technical character. With a minimum wage of four shillings, an employer will find it worth while to teach her employees, so as to bring in a return, in work, for the outlay as speedily as possible, and discharges of partially-trained workers will be less frequent. It is expected that the trades will also be improved by the weeding out of those who fail to show reasonable aptitude for their work. It is hoped that the provisions of the Act will result in considerably less overtime being worked by the younger girls, who are the persons chiefly affected by its provisions.

(iv.) *Comparison with Functions of Boards of Conciliation in Britain.* It may be noted that the Boards of Conciliation, appointed in England under the Conciliation Act 1897, appear to correspond to the Australian Wages Boards rather than to the Arbitration Courts of Australia, inasmuch as they are appointed for each trade or calling, and not to adjudicate generally upon cases which come before them.

**3. The Arbitration Court System.—(i.) Acts in Force.** The following is a general account of the main features of the Compulsory Arbitration laws of Australia. A few important divergences between the Acts are noted. The New South Wales Industrial Arbitration Act (No. 17 of 1912) was assented to on the 15th April, 1912.

The Acts in force at the close of the year 1911 were as follows:—

South Australia: The Conciliation Act 1894.

Western Australia: The Industrial Conciliation and Arbitration Acts 1902 and 1909.

Commonwealth: The Commonwealth Conciliation and Arbitration Acts 1904, 1909, 1910 and 1911. The Arbitration (Public Service Act) 1911.

(ii.) *Significance of Acts.* In Victoria in 1891, and in New South Wales in 1892, Acts were passed providing for the appointment of Boards of Conciliation, to which application might be made voluntarily by the contending parties. The awards of the Boards had not any binding force. Boards were applied for on but few occasions, their lack of power to enforce awards rendering them useless for the settlement of disputes.

The first Australian Act whereby one party could be summoned before, and, presumably, made subject as in proceedings of an ordinary court of law to the order of a court, was the South Australian Act of 1894. Its principles have been largely followed in other States, but it proved abortive in operation in its own State, and in many respects is superseded by the Wages Board system already described. Western Australia passed an Act in 1900, repealed and re-enacted with amendments in 1902 and 1909, New South Wales followed in 1901. The Commonwealth principal Act, passed in 1904, applies only to industrial disputes extending beyond the limits of a single State. In Western Australia there is under the Act a Court of Arbitration and three Boards of Conciliation. Each of the latter has a limited jurisdiction over the industrial district assigned to it, but the Boards are practically obsolete, as nearly the whole of the work under the Arbitration Act has devolved upon the Court.

(iii.) *Industrial Unions.* The Arbitration Act, framed to encourage a system of collective bargaining, to facilitate applications to the court, and to assure to the worker such benefits as may be derived from organisation, virtually creates the Industrial Union. This, except in New South Wales, is quite distinct from the trades union; it is not a voluntary association, but rather an organisation necessary for the administration of the law. The New South Wales Act of 1901 required all trade associations to register as "industrial unions," prescribing the separation of industrial and benefit funds, and enforcing strict and proper management, the industrial funds being available in payment of penalties incurred for breaches of the Arbitration Act. Industrial unions (or "organisations," as they are styled in the Commonwealth Act) may be formed by employers or employees. They must be registered, and must file annual returns of membership and funds. Before unions of employers are registered, there must be in their employment a minimum number of employees. In Western Australia the minimum is 50, under the Commonwealth Act, 100. Unions of employees must, in Western Australia, have a membership of 15; by the Commonwealth Act a membership of 100 is required. The union rules must contain provisions for the direction of business, and, in particular, for regulating the method of making applications or agreements authorised by the Acts. In Western Australia rules must be inserted prohibiting the election to the union of men who are not employers or workers in the trade, and the use of union funds for the support of strikes and lockouts; a rule must also be inserted requiring the unions to make use of the Act. The Amending Act of 1909 regulates the binding of apprentices and terms of apprenticeship.

(iv.) *Industrial Agreements.* Employers and employees may settle disputes and conditions of labour by industrial agreements, which are registered and have the force of awards. They are enforceable against the parties and such other organisations and persons as signify their intention to be bound by an agreement.

(v.) *Powers of Court.* Failing agreement, disputes are settled by reference to the court. This consists of a judge of the Supreme Court of the State, or, in the case of the Commonwealth, of the High Court. In the States, he is assisted by two "members," who are chosen by and are appointed to represent the employers and employees respectively. Technical assessors may be called in to sit with and to advise the court. The Commonwealth Court may (and on the application of an original party to the dispute must) appoint two assessors at any stage of the dispute.

Cases are brought before the court either by employers or employees. The consent of a majority of a union voting at a specially summoned meeting is necessary to the institution of a case; the Commonwealth Act requires the certificate of the registrar that it is a proper case for consideration.

The powers of the court are both numerous and varied; it hears and makes awards upon all matters concerning employers and employees. The breadth of its jurisdiction may be gathered from the Commonwealth definition of "industrial matters," viz., "all matters relating to work, pay, wages, reward, hours, privileges, rights, or duties of employers or employees, or the mode, terms, and conditions of employment or non-employ-

ment; and in particular, but without limiting the general scope of this definition, the term includes all matters pertaining to the relations of employers and employees, and the employment, preferential employment, dismissal or non-employment of any particular persons, or of persons of any particular sex or age, or being or not being members of any organisation, association, or body; and any claim arising under an industrial agreement; and all questions of what is fair and right in relation to any industrial matter having regard to the interests of persons immediately concerned, and of society as a whole."

The object of the court is to endeavour to prevent and settle industrial disputes; and when they have occurred to reconcile the parties. The court may fix and enforce penalties for breaches of awards, restrain contraventions of the Acts, and exercise all the usual powers of a court of law. The High Court has declared that the power of the Commonwealth Arbitration Court to make a common rule, *i.e.*, an extension of award in a particular case to cover the whole industry affected by the proceedings, is *ultra vires* of the constitution.<sup>1</sup>

The court may prescribe a minimum rate of wage; it may also (except in Western Australia) as regards employment direct that preference of employment or service shall be given to members of unions. An opportunity is offered for objection to a preference order, and the court must be satisfied that preference is desired by a majority of the persons affected by the award who have interests in common with the applicants.

The Commonwealth Court is to bring about an amicable agreement, if possible to conciliate and not to arbitrate, and such agreement may be made an award. In order to prevent a matter coming into dispute the president of the Commonwealth Arbitration Court may convene a compulsory conference under his own presidency. Attendance of persons summoned to attend is compulsory. Provision is made in the recent Act, whereby, if there is no settlement arrived at in the conference, the president may refer the matter to the court and then arbitrate on it.

There are four ways in which a matter may be brought before the court—

- (a) By the registrar certifying that it is a dispute proper to be dealt with by the court in the public interest.
- (b) By the parties, or one of them, submitting the dispute to the court by plaint in the prescribed manner.
- (c) By a State Industrial Authority, or the Governor-in-Council of a State in which there is no such Authority, requesting the court to adjudicate.
- (d) By the president referring to the court a dispute as to which he has held a conference without an agreement being reached.

All parties represented are bound by the award, and also all parties within the ambit of a common rule or (in the case of Western Australia) giving adherence. The court possesses full powers for enforcement of awards.

In Western Australia there is also a system of Boards of Conciliation, consisting of representatives of employers and employees. These, however, are practically obsolete. They had power to make awards, which were binding if not challenged within a month after being filed, but which were almost invariably appealed from.

States have included their railway and tramway employees, and also the employees of certain other public bodies under the Acts; the section of the Commonwealth Act giving the Commonwealth Court power over State employees has been declared unconstitutional by the High Court.<sup>2</sup>

(vi.) *Repression of Strikes and Lockouts.* The first instance of a strike on a large scale in Australia occurred in 1890 and 1891, when the industrial upheavals assumed far-reaching proportions. As a result of differences between pastoralists and shearers, the labour unions called out the maritime workers. Industry was paralysed by the cessation of the sea-borne coal trade. Communications were held up, and commercial activity suspended. The chief results of the strike were indirect. It was seen that peaceful methods of adjusting disputes were more conducive to the welfare of the

1. *The King v. The Commonwealth Court ex parte Whybrow.* (2 C.L.R., vol. 2, p. 1).

2. *Federated Amalgamated Railway, etc., Employees v. N.S.W. Railway, etc., Employees.* (4 C.L.R. 488).

community generally, than the suicidal methods of strike and lockout. The unions therefore turned to legislation as an effectual means of improving labour conditions. It was hoped that open hostility to the economic system might be prevented by State regulation. A general desire was shewn for recognition of conciliation and arbitration, voluntary where possible; but compulsory, through national tribunals and under legal authority, where necessary.

Accordingly, industrial legislation aims at preventing strikes and lockouts in relation to industrial disputes, other means of settlement being provided. Such is the declared object of the Commonwealth Acts. It is decreed that no person or organisation shall, on account of any industrial dispute, do anything in the nature of a strike or lockout, or continue any strike or lockout, under a penalty of £1000.

Strikes, however, have not altogether ceased, even in those States where legislation, by stringent enactment, forbids them. It has been noted that strikes of late have occurred chiefly amongst coal miners and certain unions representing unskilled laborers. The prohibiting clauses have not always been enforced by the executive. But in several instances indictment has followed attempts to bring about or to prolong a strike, and fines and imprisonment have been awarded. A decision of the Arbitration Court, ordering the Newcastle coal trimmers to return to work, was upset by the Supreme Court of New South Wales, on the ground that the Arbitration Court had no power to make men work if they did not wish to do so.

Neither Wages Boards nor Arbitration Courts have altogether abolished strikes, but it is believed that they have greatly reduced their number and extent, and checked industrial unrest, by providing a properly-constituted legal tribunal for the settlement of matters in dispute.

(vii.) *Miscellaneous.* Protection is afforded to officers and members of unions against dismissal merely on account of such officership or membership, or on account of their being entitled to the benefit of an award.

It has been settled by the High Court that an Arbitration Court cannot direct—

- (a) That non-unionists seeking employment shall, as a condition of obtaining it, agree to join a union within a specified time after engagement;
- (b) That an employer requiring labour shall, *ceteris paribus*, notify the secretary of the employees' union of the labour required.<sup>1</sup>

(viii.) *The New South Wales Act of 1912.* This Act combines, to some extent, the Wages Boards and Arbitration Courts systems. It repeals existing industrial legislation (*Industrial Disputes Acts of 1908 (two), 1909, and 1910, Clerical Workers Act of 1910, &c.*), preserving the awards and industrial agreements already in force under them; and provides for the regulation of industry by conciliation and arbitration, establishing and defining the powers, jurisdiction, and procedure of the Court of Industrial Arbitration and subsidiary tribunals which it creates. Before registration as an industrial union, employers must have at least 50 persons in their employ. Any trade union of employers may be registered. Power to make agreements with an employer relating to industrial matters is given to industrial unions of employees. Industrial boards are constituted, consisting of a chairman and either two or four members, holding office for three years, and appointed by the Minister. These boards have jurisdiction in matters relating to certain industries enumerated in a Schedule to the Act. Both the *personnel* of the members and the matters to be dealt with are recommended to the Minister by the Court. Boards have power to make awards, fix hours of labour, minimum wages, rates for piecework and overtime, proportion of apprentices to improvers, &c. They may determine industrial matters, and declare that preference of employment be given to unionists. The Court may vary the board's recommendations, or make an award in cases where the board has not done so. Lockouts and strikes are forbidden, and where the latter are penalised, unions concerned may be made to contribute. The Act is to commence on a date to be proclaimed.

4. *Comparative Statement of Tribunals for Regulating Wages in Australia and New Zealand.*—The table on pages 1064 and 1065 shews at a glance the Acts which operate in fixing wages, their application, the constitution and function of tribunals enacted under

1. Trolly, etc., *Union of Sydney and Suburbs v. Master Carriers' Association of New South Wales*. (2 C.L.R. 509.)

them, and the effect and extent of the tribunals' decisions. It will be seen that in all the States there is machinery for the regulation of wages; and also in New Zealand.

**5. Movement Towards Uniformity.**—The wide difference between the development in the several States of the Commonwealth of the regulation by State institutions of the remuneration and conditions of the workers, has given rise to a desire on the part of the Commonwealth Government to secure uniformity throughout Australia by any suitable and constitutional action on the part of the Commonwealth. The provisions of States wages laws vary considerably. In New South Wales, Victoria, and Western Australia, some experience has been gained of their working. The Wages Board system is new in South Australia, Queensland, and Tasmania. The desirability of uniformity has, as already mentioned, been recognised by the New South Wales Arbitration Court, which refused the Bootmakers' Union an award which would increase the wages of its members to amounts exceeding those paid in Victoria in the same trade, the express ground of the refusal being that New South Wales manufacturers would be handicapped by the payment of a higher rate of wage than that prevailing in Victoria.

**6. Constitution Alteration Proposals.**—Two proposed laws for the alteration of the constitutional powers of the Commonwealth in regard to industries and businesses were submitted to the people for acceptance or rejection on the 26th April, 1911. The first law proposed to amend section 51 of the Constitution Act (see p. 22 and 23 hereinbefore) so as to give the Commonwealth Government increased powers to deal with (a) trade and commerce (b) corporations (c) industrial matters, and (d) trusts and monopolies. The second law proposed to insert after section 51 of the Constitution Act, a section empowering the Commonwealth Government to make laws with respect to monopolies. Neither of the proposals was approved by the people. Fuller particulars are given on page 22 of this book.

**7. The "New Protection."**—The opinion has been expressed that a manufacturer who benefits by the Commonwealth protective tariff should charge a reasonable price for the goods which he manufactures, and should institute a fair and reasonable rate of wage and conditions of labour for his workmen.

The above view is known as the "New Protection," a phrase which, though novel, is already firmly established in Australian economic discussions. The outcome has been the enactment of new laws, designed for the benefit of the workers, and for controlling monopolies and trusts which would otherwise exploit the necessities of life.

By the Customs Tariff 1906, increased duties were imposed upon certain classes of agricultural machinery, notably the "stripper-harvester," a machine invented in Australia, which has, to a great extent, replaced the "reaper and binder and thrashing machine" in the harvesting of wheat. By the same Act it was enacted that the machines scheduled should not be sold at a higher cash price than was thereby fixed, and that if that price should be exceeded, the Commonwealth Executive should have power, by reducing the customs duties imposed by the Act, to withdraw the tariff protection.

By the Excise Tariff Act 1906 (No. 16 of 1906), an excise of one-half the duty payable upon imported agricultural machinery was imposed upon similar machinery manufactured in Australia. But it was provided that the latter should be exempt from excise if the manufacturer thereof complied with the following condition, namely, that the goods be manufactured under conditions as to the remuneration of labour, which—

- (a) Are declared by resolution of both Houses of the Commonwealth Parliament to be fair and reasonable;
- (b) Are in accordance with the terms of an industrial award under the Commonwealth Conciliation and Arbitration Act 1904;
- (c) Are in accordance with the terms of an industrial agreement filed under the last-mentioned Act;
- (d) Are, on an application made for the purpose to the President of the Court, declared to be fair and reasonable by him or by a judge of a State court or a State industrial authority to whom he may refer the matter.

## TRIBUNALS FOR THE REGULATION OF WAGES IN

PARTICULARS.	NEW SOUTH WALES.	VICTORIA.	QUEENSLAND.
Name of Acts	Industrial Disputes Acts 1908, 1909, and 1910	Factories and Shops Acts	The Wages Board Act 1908
If Act operative	Yes	Yes	Yes
No. of Tribunals	Unlimited	Unlimited	Unlimited
Actual Tribunal	Industrial Boards, and in certain events, Industrial Court	Wages Boards	Wages Boards
How Tribunal is brought into existence	Industrial Boards by the Governor on recommendation of Industrial Court. Industrial Court constituted by Industrial Disputes Act	By a resolution of Parliament	By the Governor-in-Council
Application of Acts	To industries named in Schedule to 1908 Act, and those added by a resolution of both Houses of Parliament	To any process, trade, business, or occupation specified in a resolution.	Either the whole State or such part as Governor-in-Council may determine
How a trade is brought under review	By application to Industrial Boards	Usually by petition to Minister	By petitions and representations to Minister
Chairman of Tribunal	Appointee of Governor on recommendation of Industrial Court. The person recommended is chosen by the parties; or failing such choice is nominated by Industrial Court	Any person elected by Board. If not elected, he is appointed by Governor-in-Council	Any person elected by Board. If none elected, appointment is by the Governor-in-Council
No. of members of Tribunal	Chairman, and not less than two nor more than four members	Not exceeding eleven	Not less than five nor more than eleven (including chairman)
How members are appointed	Appointed by the Governor on recommendation of Industrial Court	Nominated by Minister. But if one-fifth of employers or employees object, representatives are elected by them	By employers and employees respectively
Decisions—how enforced	By the Industrial Court or Industrial Registrar or Stipendiary or Police Magistrate	By Factories Department in Courts of Petty Sessions	By Factories Department
Duration of decision	For period fixed by Tribunal—not less than one nor longer than three years	Until altered by Board	Until altered by Board
Appeal against decision	To Industrial Court against decision of Boards not presided over by a judge. No appeal from Industrial Court	To the Court of Industrial Appeals	None
If suspension of decision possible	No suspension	Yes; for not more than twelve months	Yes; for not more than six months
If unionism an essential part of system.	No	No	No
Any provision against strikes	Yes	No	No
To whom Tribunal's decision applies	To employers and employees	To trades	To trades

## TRADES IN AUSTRALIA AND NEW ZEALAND, 1911.

SOUTH AUSTRALIA.	WESTERN AUSTRALIA.	TASMANIA.	NEW ZEALAND.
The Factories Acts 1907, 1908, and 1910	Industrial Conciliation and Arbitration Acts 1902 and 1909	Wages Boards Acts 1910 and 1911	Industrial Conciliation and Arbitration Acts, 1908 (two), 1910 and 1911
Yes	Yes	Yes	Yes
As authorised by resolution of Parliament	Several Conciliation Boards One Arbitration Court	Unlimited	Three Commissioners of Conciliation One Arbitration Court
Wages Boards	Arbitration Court	Wages Boards	Arbitration Court
By the Governor-in-Council	By the Act	For the clothing trade, by the Act; for other trades, by a resolution of Parliament	By the Act
To trades carried on in factories and such other trades and callings as may be authorised by Parliament	All industrial occupations	All trades, or groups or parts thereof	All trades
By petitions, etc.	By application of Union or Employer	By application of parties	By application of Union or individual employer
Anyone if chosen by Board. If not, a Stipendiary Magistrate	A Judge of the Supreme Court	Any person elected by the Board. If none elected, appointment by the Governor-in-Council	A Judge of the Supreme Court
Not less than five nor more than eleven, inclusive of chairman	Three, including president or chairman	Chairman, and not less than four nor more than ten	Three
By employers and employees respectively	Practically by employers and employees respectively	By employers and employees respectively	By the Unions of Employers and workers respectively
By Factories Department	By Arbitration Court on complaint of any party to the award or Registrar	By the Minister in Courts of Petty Sessions.	By Arbitration Court on complaint of Union or Inspector of Awards
Until altered by Board or by order of Court of Industrial Appeals	For period fixed by Court, not exceeding three years	Until altered by Board.	For period fixed by Court, not exceeding three years
To Court of Industrial Appeals	No appeal	To Supreme Court	No appeal
Yes	No suspension. Power to amend for purpose of remedying defects or of giving fuller effect to award	Yes	Yes; in case of strikes
No	Yes	No	Yes
Yes	Yes	Yes	Yes
To trades and callings	To trades	To employers and employees	With certain exceptions to the trades concerned generally

By the Excise Tariff Act 1906 (No. 20 of 1906), excise duties are imposed in respect of spirits, and it is provided that if any distiller (i.) does not, after the Act has been passed a year, pay his employees a fair and reasonable rate of wages per week of forty-eight hours or (ii.) employs more than a due proportion of boys to men engaged in the industry, the Executive may on the advice of Parliament impose an additional duty of one shilling per gallon on spirits distilled by that distiller.

Exemptions have been claimed by the manufacturers of agricultural machinery in South Australia, New South Wales, Victoria, and Tasmania. These were granted in the two first-mentioned States in consequence of an agreement entered into between the employers and employees. In Victoria, "this whole controversial problem with its grave social and economic bearings" (to quote the words of the President of the Court) was discussed in a lengthy case upon the application for exemption by Victorian manufacturers, now widely known as the "Harvester Case," and in the report of that case may be found the legal interpretation of the Acts under consideration. The exemptions claimed were refused, and the court after discussing the meaning of the words "fair and reasonable" defined them by laying down what it considered to be a scale of fair and reasonable wages.

The High Court has pronounced that the legislation under these Excise Acts is unconstitutional as being an extension of Federal action beyond the powers granted, and a usurpation of the ground reserved to the States. It may be noted that the rejected measures were enacted with the consent of all parties in Parliament, having been placed upon the Statute Book whilst the Liberal party was in power, the Labour representatives strongly supporting the proposals.

8. **Bounties.**—The Bounties Act 1907, the Manufactures Encouragement Act 1908, and the Shale Oil Bounties Act 1910 make provision for the encouragement of certain Australian industries by the payment to producers of certain moneys allotted by the Act upon the production of the commodities specified. The Acts also provide for the refusal or reduction of a bounty, if the production of a commodity is not accompanied by the payment to the workers employed in that production of a fair and reasonable rate of wage. The amounts paid in bounties during 1910-11 were :—

**COMMONWEALTH BOUNTIES PAID (EXCLUDING SUGAR), 1910-11.**

Cotton.	Flax and Hemp.	Sisal Hemp.	Preserved Fish.	Tobacco Leaf.	Cotton Seed for Manufacture of Oil.	Coffee, Raw.	Fruits, Dried.	Combed Wool or Tops Exported.	Iron Manufactures etc.*	Wire Netting.*	Kerosene.†	Refined Paraffin Wax.†	Total.
£ 91	£ 123	£ 112	£ 115	£ 90	£ 22	£ 112	£ 940	£ 8,522	£ 24,603	£ 4,824	£ 920	£ 553	£ 41,027

\* Paid under the Manufactures Encouragement Act 1908.

† Paid under the Shale Oil Bounties Act 1910.

The provision of bounties for sugar-growers is dealt with on page 393 *supra*. The present operative Act is the Sugar Bounty Act 1910, in the terms of which the grower receives bounty according to his production of sugar-cane grown by white labour. The bounties and expenses for the last seven years were :—

**SUGAR BOUNTIES EXPENSES, 1904-5 to 1910-11.**

## § 4. Operation of the Wage-regulating Laws.

**1. Wages Boards Determinations.**—Wages Boards are appointed upon the application of either employers or employees. The grounds usually alleged by the former are that their business is hampered by "unfair" competitors, who pay only a sweating wage; by the latter, that they are sweated, or are entitled to an increase in their wages, by reason of the prosperity of the trade in which they are engaged. Some of the most recently appointed Boards have not yet made determinations.

In New South Wales there were in November, 1910, 117 Boards in existence. Awards of Boards and of the Industrial Court numbered 195, of which 54 were variations of previous awards, 20 were awards of Boards re-enacting awards of Court of Arbitration, 18 were awards of Industrial Court varying awards, and the remaining 103 were original Awards of Boards. Before the end of the year, two additional awards of Boards were made. In August, 1911, there were 159 boards in existence.

In Victoria there were in June, 1911, 91 Wages Boards affecting 110,000 employees. 71 determinations of Boards were in force. Since the date named the remaining Boards have met for the purpose of fixing wages, hours, etc.

The Court of Appeal in Victoria has heard seven appeals from determinations of Wages Boards. In one case the decision was upheld; in five cases decisions were reversed or amended; in one case the Board, unable to come to a determination, referred the matter to the Court, which exercised its power of fixing a proper wage where the average wage paid by employers did not afford a living wage. The Court also heard an appeal for a modification of its determination with respect to a trade, and decided to modify such determination by reducing the working hours and increasing the wages in certain cases.

The number of Wages Boards appointed in Queensland since the Acts came into force was, in October, 1911, 59. The employees affected numbered upwards of 30,000. In 57 cases determinations were in force. In South Australia there were, at the end of 1910, 44 trades under boards, with about 20,000 employees. Twenty-three determinations were in force. The Wages Board system was inaugurated in Tasmania in 1911. Up to 30th June of that year no determination was in force.

It is stated that the determinations are well observed, and prosecutions for breaches are few, misunderstandings being usually responsible. Where there is no evident intention to evade the determination, rectification can be made on the inspector calling attention to the breach, and the employers usually comply at once with the inspector's requirements. Further action is then deemed unnecessary.

**2. Effect of Acts.**—The question whether the operation of the Acts has bettered the monetary position of the operative may be answered in the affirmative. Starting from the lowest point, the provision of an absolute minimum wage per week has stopped one form of gross sweating. Another case is that of the "white-workers" and dressmakers; with these the lowest grade was the "outworkers," who were pieceworkers. In some branches of the Victorian trade, in 1897, the wages paid to outworkers for all classes of certain goods were only from one-third to one-half the wages paid in the factories for low-class production of the same line of stuff. By working very long hours the outworker could earn ten shillings per week. The average wage of females in the clothing trade in 1897 was ten shillings and tenpence per week; there were, however, in that year 4164 females receiving less than one pound per week, and their average was eight shillings and eightpence. It was almost a revolution when a minimum wage of sixteen shillings per week of forty-eight hours was fixed by the Board, when pieceworkers' rates were fixed to ensure a similar minimum, and when outworkers were placed on the level of pieceworkers. Many employers refused to continue to give outwork and took the workers into the factories on time work. The sanitary conditions

required were far more healthy than could exist in the poorer class of dwellings. The evidence of South Australian reports discloses similar facts in that State.

**3. Change of Rate of Wage.**—The following table shews the change of affairs in Victoria in these trades:—

**VICTORIA—WAGES OF FEMALES IN CLOTHING TRADES, 1897 and 1910.**

Year.	Class.	Females Employed in the Dress, Mantle, and Under-clothing Trade.		Females Employed in the Shirt Trade.			
		Number.	Average Wage.	Number.	Average Wage.		
1897	16 yrs. and over receiving under £1 per wk.	4,164	£ s. d. 0 8 8	435	£ s. d. 0 12 3		
	"    "    £1 and over ...	593	1 9 1	144	1 3 10		
1910	Females Employed in ...	Dress and Mantle Trade.		Shirt Trade.		Underclothing Trade	
		Number.	Average Wage.	Number.	Average Wage.	Number.	Average Wage.
	Females at minimum wage and over ...		s. d.		s. d.		s. d.
	Pieceworkers ...						
		3,674	21 9	271	22 7	736	21 1
		93	19 4	865	19 8	176	19 1

The above trades, the sweating in which is world-wide, are taken as examples, and corresponding results may be obtained in any State, according as there is or is not a regulative law. In Tasmania, where no such law was in operation till 1911, the scale of wages may be gathered from the fact that in clothing factories females of three and five years' service, and of twenty to twenty-six years of age, received twelve shillings per week.

## § 5. Operation of the Arbitration Acts.

**1. New South Wales and Western Australia.**—In New South Wales eighty-six agreements were registered under the Industrial Arbitration Act 1901, and two under the Industrial Disputes Act 1908. These affected 1157 employers and nearly 38,000 employees. In Western Australia thirty-four agreements were registered up to the end of 1906; ten in 1907, six in 1908, fifteen in 1909 and twelve in 1910, making a total of seventy-seven. The courts have been kept extremely busy. In New South Wales, up to the end of 1908, 252 industrial disputes were filed, 130 awards were made, and the balance of the disputes were settled, withdrawn, or, for some other reason, removed from the list. Fifteen industrial agreements were made "common rules," but these are ineffective in consequence of a legal decision. Fifty-five awards have been made "common rules." There have also been 648 summonses for breaches of awards. In Western Australia 300 industrial cases were, up to the end of 1910, determined; and seventy-seven industrial agreements were made and filed. The Industrial Disputes Act of New South Wales proved far more speedy in its remedial effects than did the Arbitration Acts. During recent years the industrial relations in several important industries have been regulated by Industrial Agreements, thus avoiding the necessity of having recourse to the Court of Arbitration.

## § 6. Other Commonwealth Legislation affecting Labour.

**1. Constitutional Power.**—By sec. 51 of the Commonwealth of Australia Constitution Act power is conferred upon the Parliament of the Commonwealth to make laws respecting, *inter alia*—

- (xix.) Naturalisation and aliens.
- (xxiii.) Invalid and old-age pensions.
- (xxvii.) Immigration and emigration.
- (xxxv.) Conciliation and arbitration for the prevention and settlement of industrial disputes extending beyond the limits of any one State.

2. **Legislation.**—(i.) *Old-age Pensions Act.* A special appropriation was made by Parliament (Act No. 18 of 1908), whereby an Invalid and Old-age Pensions Fund was created; the payment of pensions was enacted by another statute (No. 17 of 1908) as from the 1st July, 1909, on which date the system of old-age pensions to persons of 65 years and upwards became established throughout the Commonwealth. The same Act provides for the payment of invalid pensions, operating from a date to be proclaimed; also for the age qualification for women being fixed at 60 by proclamation. In each case the proclamations were made in November, 1910.

(ii.) One of the first Acts of the Commonwealth was the *Pacific Island Labourers' Act 1901*, which prohibited the importation of further Kanaka labour for sugar plantations and provided for the deportation of those already in the Commonwealth.

(iii.) *The Immigration Restriction Acts 1901, 1905, and 1910* prohibit the immigration of any persons who are unable to comply with certain educational conditions. The effect of this Act is to exclude Asiatic and other coloured peoples from Australia.

(iv.) *The Contract Immigrants Act 1905* defines a contract immigrant as an immigrant to Australia under a contract or agreement to perform manual labour in Australia. The contract must be in writing and must be made by or on behalf of a resident in Australia. Its terms must be approved by the Minister of External Affairs before the admission of the immigrant. It must not be made in contemplation of, or with a view of affecting an industrial dispute. The Minister must be satisfied that there exists a difficulty of obtaining a worker of equal skill and ability in the Commonwealth, but this last provision does not apply to contract immigrants who are British subjects either born in the United Kingdom or descended from persons there born. The terms of the contract must offer to the immigrant advantages equal to those of local workers. Domestic servants and personal attendants accompanying their employers to Australia are excluded from the operation of the Act. Contract immigrants not complying with the above conditions are excluded from Australia.

During the year 1907, 972 contract immigrants were admitted into the Commonwealth, of whom 731 were British, 107 were Spaniards, 80 Scandinavians, 41 Austrians, and 13 Germans. In 1908, 22 contract immigrants were admitted, of whom 20 were British and 2 German. The Britishers followed various occupations; the two Germans were piano makers. In 1909, 158 contract immigrants were admitted, of whom 152 were British. Their occupations were—47 agricultural labourers, 36 bottle makers, 37 station hands, and 32 various. In 1910, 39 contract immigrants were admitted, of whom 38 were British and one French. The occupations were various, the greatest number in any one being eight puddlers (iron trade). No contracts were disapproved, and no contract immigrants were refused admission during 1907, 1908, 1909, or 1910.

(v.) *The Sugar Bounty Act 1910* and the *Bounties Act 1907* make the payment of the bounty contingent on the goods having been grown or produced by white labour.

(vi.) Part VII. of the *Trade Marks Act 1905*, providing for the registration of marks by any individual Australian worker or association of Australian workers for the purpose of informing the consumer whether the articles to which it is applied were manufactured by union or free labour—an adaptation of the American "union label"—has been held by the High Court to be constitutionally *ultra vires*.<sup>1</sup> The Court made an order forbidding the Registrar to keep a workers' register.

1. Attorney-General of New South Wales v. Brewery Employees Union (6 C.L.R. 469).

## SECTION XXVIII.

## DEFENCE.

## § 1. Military Defence.

1. **Historical Outline.**—Prior to 1870, the main defence of Australia was entrusted to small garrisons of British troops quartered in the leading cities. The primary purpose of these bodies of troops was to serve as a convict guard. From time to time, rumours of wars and of attacks upon Australia deemed imminent as a result of European entanglements, caused the raising of local companies and batteries, which were generally disbanded upon the cessation of hostilities or the quietening of the rumours. The first of such bodies was the "Loyal Association" formed in 1801 as a volunteer corps, on account of the Napoleonic wars, and at the express invitation of the Governor. Half a century later, and at other later dates, fear of Russian aggression drove the colonists to measures of self-defence. Efforts to permanently establish a defence force, however, failed until 1870. In that year, the withdrawal of the last Imperial regiment from Australia, and the sense of insecurity which the Continental wars had engendered, resulted in a definite basis for colonial defence being settled. Small detachments of permanent soldiery were established to act generally as a nucleus about which the citizen soldiery should be shaped, and, generally, to look after the forts and defence works, which had then begun to be erected. The system rested upon a volunteer basis, training and service being freely and enthusiastically given by the citizens, the Governments supplying arms and accoutrements and sometimes uniforms. Reward for five years' service frequently took the shape of grants of land. About 1880, Imperial experts advised the substitution of the purely volunteer system by a "militia" or partially-paid system. The provision of a small annual allowance, generally £10 or £12 per annum for the gunner or private, with a sliding scale for higher ranks, together with arms, accoutrements, ammunition, and all military necessities free, enabled the "militia" system to be introduced about 1883-4. The expenditure was thereby increased, but it was held that the efficiency was enormously greater. With reductions in the rates of pay the system has remained to the present day. "Volunteer" corps have again been raised, and the "permanent" forces from time to time augmented. A detailed historical account of the Australian defence forces prior to federation will be found in the Commonwealth Year Book, No. 2, pp. 1075-1080.

The establishment and strength of the military forces of the several States on 31st December, 1900, immediately prior to federation, was as follows, cadets, reservists, and rifle club members being excluded:—

## ESTABLISHMENT AND STRENGTH OF MILITARY FORCES OF STATES,

31st December, 1900.

State.	Establishment.		Strength.

2. *Land Defence of Federated Australia.*—(i.) *Assumption of Control by Commonwealth.* The Commonwealth of Australia Constitution Act of 1900 empowered the Commonwealth to legislate with respect to "the naval and military defence of the Commonwealth and of the Several States, and the control of the forces to execute and "maintain the laws of the Commonwealth," and vested the command-in-chief of the Commonwealth forces in the Governor-General, authorising him to proclaim a date, after the establishment of the Commonwealth, for the transfer of the Defence Department from each State. This transfer was effected in March, 1901, when the Ministry for Defence, one of the seven departments of the Executive Council of the federation, took over the control of the whole of the forces of the States.

(ii.) *The System of Administration.* Up to 12th January, 1905, the administration of the Commonwealth military forces was by means of a general officer commanding and a headquarters staff. On the date named, a Council of Defence, to deal with questions of policy, and a Military Board, to supervise the administration of the forces, were constituted. Towards the close of the year 1911 the Council of Defence was enlarged by the addition of two members. The main objects aimed at were (a) to establish continuity in defence policy; (b) to maintain a continuous connection between parliamentary responsibility and the control and development of the defence forces, the Minister being in constant and effective touch with his department; (c) to establish continuity of administrative methods by the creation of a continuous board; (d) the separation of administration from executive command, so as to develop the independence of district commands, and by giving scope to independent thought and initiative, make practicable a larger measure of decentralisation, and, more particularly, to make possible the ultimate development of a citizen force; (e) to maintain, on a uniform basis, the efficiency of the forces, by continuous and searching inspection by, and independent report from, an officer who, as Inspector-General, is appointed to report upon the results of the administration of the forces, the efficiency of the troops, the system of training, the equipment, the preparedness for war, and the state and condition of all defence works.

The military system of the Commonwealth is made up of—

(a) Permanent Forces which include

Administrative and Instructional Staff.  
The Royal Australian Garrison Artillery Regiment.  
The Royal Australian Field Artillery.

Small detachments of—

Royal Australian Engineers.  
Australian Army Medical Corps.  
Australian Army Service Corps.  
Australian Army Veterinary Corps.

(b) Citizen Forces, comprising

Citizen Forces of all arms.  
Reserve Forces.

The Royal Australian Garrison Artillery Regiment practically provides the garrison for certain naval strategic positions and other defended ports, and maintains the forts, guns, stores, and equipment in connection therewith. The other permanent detachments are to form a nucleus, each in its own arm, for instruction and administration of the citizen forces.

The forces of the Commonwealth are organised into—

- (a) Field Force.
- (b) Garrison Troops.

The field force consists of five Light Horse brigades, two infantry brigades, and four mixed brigades, and its duties are to undertake the defence of the Commonwealth as a whole, and to act as reserve to the garrison troops. The garrison troops find the necessary garrisons for the defended ports.

The reserves consist of (a) officers who, having passed through a certain period or course of training, have retired from active service, and (b) members of rifle clubs, attested under the Defence Acts. Rifle club members are required each year to fire a prescribed musketry course, a capitation allowance being paid to clubs for each member classed as efficient. Rifle clubs would furnish a means of bringing the active forces up to war strength in time of national emergency.

(iii.) *Strength of Military Forces under the Federation.* The position of the military forces under the Commonwealth is shewn in the following table :—

## STRENGTH OF MILITARY FORCES, 1901 to 1911.

State.	1901. *1/3/01.	1905. 30/6/05.	1906. 30/6/06.	1907. 30/6/07.	1908. 30/6/08.	1909. 30/6/09.	1910. 30/6/10.	1911. 30/6/11.

\* Includes 83 at Royal Military College of Australia, Duntroon.

3. *Instruction and Exchange of Officers.*—The former practice of obtaining officers and non-commissioned officers of the Imperial Army to act as instructors for the Australian military forces has been discontinued for some considerable time; but in August, 1905, arrangements were made for the mutual exchange of permanent officers between the Com-

monwealth and England, India, and Canada, three officers having been exchanged each year since 1906. At the same time the practice which has existed for some years of sending officers and non-commissioned officers to England for instruction has been continued. In 1911, two officers and four non-commissioned officers of the permanent forces were sent. In addition, four officers of the militia forces were sent to India for instruction in 1908, four in 1909, five in 1910, and five in 1911.

## § 2. Naval Defence.

1. **Historical Outline.**—Prior to 1890, when arrangements were made with the British Government for the maintenance of an Australian squadron, provisions for naval defence had been instituted in New South Wales, Victoria, Queensland, and South Australia, where gunboats, torpedo boats, or small cruisers were commissioned, and naval volunteers raised. A fuller historical account of the Australian naval forces under the States is given in the Commonwealth Year Book, No. 2, pp. 1084, 1085.

2. **The Naval Agreement with the British Government.**—(i.) *The Original Compact.* The naval defence of Australasia and its trade is entrusted primarily to ships of the Imperial Navy, maintained under an agreement entered into between the British Government and the Governments of the Commonwealth and New Zealand, and at their joint charge. This agreement was embodied in Acts passed by the several Legislatures some ten years prior to Australian federation. According to its terms, a naval force, additional to the vessels of the Australian Naval Station, which were to be maintained at their normal strength, was to act as an auxiliary squadron. It consisted of five fast third-class cruisers and two torpedo gunboats, and its special function was the protection of the floating trade in Australasian waters. The agreement was made for ten years, and was then, or at the end of any subsequent year, to be terminable only upon two years' notice being given. On its termination, the vessels were to remain the property of the Imperial Government. Three cruisers and one gunboat were to be kept continuously in commission, and the remainder in reserve in Australasian ports, but ready for commission whenever occasion might arise. The vessels were to remain within the limits of the Australasian station, and were to be employed, in times of peace or war, within such limits, in the same way as the Sovereign's ships of war, or employed beyond those limits only with the consent of the Colonial Governments.<sup>1</sup> The first cost of the vessels was paid out of Imperial funds, but the Colonial Governments paid interest on the prime cost at 5 per cent. (up to a maximum of £35,000 per annum), and a sum not exceeding £91,000 for annual maintenance of the vessels, or a total annual contribution of £126,000. In times of emergency or actual war, the cost of commissioning and maintaining the three vessels kept in reserve during peace, was to be borne by the Imperial Government, and, in every respect, the vessels were on the same status as the ships of war of the Sovereign, whether in commission or not. The officers and men of those in commission were subject to a triennial change. The tenth annual contribution, which was payable in advance on 1st March, 1900, apportioned on a population basis, was as follows:—New South Wales, £37,973; Victoria, £32,749; New Zealand, £21,304; Queensland, £13,585; South Australia, £10,439; Western Australia, £4816; Tasmania, £4776.

(ii.) *The Agreement of 1903.* The agreement was not dissolved by the union of six of the contracting colonies, but its renewal, with some alterations, was embodied in the Naval Agreement Act of 1903, the Parliament of New Zealand also assenting. It

1. The boundaries of the Australasian station were thus defined:—North—On the north from the meridian of 95° east, by the parallel of the 10th degree of south latitude to 130° east longitude; thence northward on that meridian to the parallel of 2° north latitude; and thence on that parallel to the meridian of 136° east longitude; thence north to 12° north latitude and along that parallel to 160° west longitude. West—On the west by the meridian of 95° east longitude. South—On the south by the Antarctic circle. East—On the east by the meridian of 160° of west longitude.

Nothing in the agreement was to affect the purely local naval forces which had been, or might be, established in the colonies for harbour and coast defence. Such local forces were to continue to be paid for entirely by the colony, and to be solely under its control.

Under the new naval agreement, the boundaries of the Australian station will be considerably altered.

provided that the force should be made up of one first-class armoured cruiser, two second-class cruisers, four third-class cruisers, four sloops, and a Royal Naval Reserve of 25 officers and 700 seamen and stokers. One of the ships was to be kept in reserve, three to be partly manned for drill purposes for training the Royal Naval Reserve, and the remainder to be kept in commission and fully manned. Australians were, as far as possible, to man the three drill ships and one other vessel, but the vessels were to be officered by Royal Navy and R.N. Reserve officers. Eight nominations for cadet-ships were to be given annually in the Commonwealth and two in New Zealand. One half of the annual cost of maintenance was to be borne by the colonies—five-sixths of the half (but not exceeding £200,000) by Australia, and one-sixth (but not exceeding £40,000) by New Zealand. The agreement, like the earlier one, was for ten years. By a subsequent arrangement the strength of the squadron was established at one first-class armoured cruiser, three second-class cruisers, and five third-class cruisers. Three sloops were recalled as having no war value, but usually one has been attached to the station as a survey vessel.

**3. The Naval Defence of Federated Australia.**—(i.) *Assumption of Control by Commonwealth.* One of the reasons most frequently urged in favour of a federated Australia was the need for adequate defence. Accordingly, since the consummation of federation, the Commonwealth has assumed control of every branch of defence. Land defences have been unified and systematised, and it has been said that Australia is now ready to take full responsibility for the defence of her ports and dockyards, and for safeguarding her coastal trade. It may be mentioned that the floating trade of the Commonwealth amounts to nearly £200,000,000 per annum, and its adequate protection involves corresponding naval provision with such naval war material as will permit the principal lines of sea communication being kept open; or, if not, ensuring that Australian ports are fully defended.

For defence of floating trade the Commonwealth Government decided to build an Australian fleet, and in March, 1909, contracted for the construction of two torpedo boat destroyers, at a cost of £81,500 each. The vessels arrived in Australian waters in December, 1910. It was also arranged that a third vessel of the same kind should be delivered in Australia in sections, at a cost of £72,500, for local completion.

In connection with the construction of these vessels, eight selected Australian workmen were sent to be trained in the yards of the contractors.

(ii.) *The Naval Forces under the Federation.* Prior to 1905 a naval officer commanding administered the naval forces. On 12th January of that year the Council of Defence was established to deal with all questions of policy, and the Naval Board, then first constituted, took over the administration of the Commonwealth naval forces. The former body was augmented in 1911. Continuity of policy and administration are thereby believed to be ensured, whilst efficiency and uniformity are provided for in the scheme of inspection and report by an officer who, as Director of Naval Forces, is appointed to deal with the training of the *personnel*, and the condition of the *matériel*, of naval forces and works.

The following table shews the strength of Commonwealth naval forces on 30th June, 1911:—

**STRENGTH OF COMMONWEALTH NAVAL FORCES, 1911.**

Branch of Service.	N.S.W.	Victoria.	Q'land.	S. Aust.	W.A.	Tas.	Total.
Permanently Employed	10	196	66	97	1	...	370
Naval Militia ...	321	226	284	112	25	25	993
Naval Volunteer Cadets	150	270	101	227	...	...	748
Total ...	481	692	451	436	26	25	2,111

(iii.) *Harbour Defences.* The vessels for harbour defence obtained by the several colonies prior to federation, and remaining at 30th June, 1911, were as follows:—*Protector* (steel cruiser); *Gayundah* and *Paluma* (steel gun vessels); *Childers* and *Countess of Hopetoun* (first-class torpedo boats). The *Protector* and *Gayundah* are used for the sea-training of the Naval Militia.

### § 3. Growth of the Cadet System.

1. **School Cadets.**—Many years before the consummation of Australian federation the systematic military training of lads had been instituted in the schools of the colonies, and the cadet system had attained considerable development. The Commonwealth Government made arrangements with the various State Departments of Education for boys attending school to be afforded facilities for drill by their teachers, and regular instruction by the Cadet Instructional Staff of the military forces. The strength of the cadets increased rapidly under the Commonwealth defence system, and under the recently-introduced scheme (see § 6 *infra*) has shewn great expansion. The voluntary system came to an end on 30th June, 1911. On the following day the compulsory training provisions of the Defence Acts came into force.

2. **Senior Cadets.**—Senior cadet battalions, for boys having left school, formed a connecting link between the schoolboy soldiers and the citizen forces.

3. **Mounted Cadets.**—Mounted cadet corps were also formed in various parts of the Commonwealth, the members supplying their own uniforms, mounts, and horse-gear, and being trained in troop and squadron drill by instructors appointed for that purpose. Their organisation is distinct from the educational establishments, but they are under similar conditions as regards drill and discipline.

The strength of the Commonwealth cadets, school, senior, and mounted, in the various States was on 30th June, 1911, as follows:—New South Wales, 11,066; Victoria, 4447; Queensland, 5129; South Australia, 2886; Western Australia, 2847; Tasmania, 1648; Commonwealth, 28,023.

4. **Naval Cadets.**—Naval cadets were also organised under the Defence Act. Generally the instruction, given by instructors of the naval forces, aimed at embracing all branches of a seaman's training.

5. **Other Organisations.**—Boys' Brigades, Scouts, and "Aids" have been instituted in connection with various societies. These are not under Governmental control, and receive no State aid. Instruction is given in physical, elementary military drill, knotting and splicing, signalling, first aid to the injured, observation and tracking, field sketching, map reading, bridge building, cooking, hygiene, &c. Members of these associations must undergo the training laid down by the Defence Act.

### § 4. Commonwealth Defence Legislation.

1. **The Defence Acts of 1903 and 1904.**—(i.) *General Provisions of the Acts.* The defence of Australia at the present time is enacted and prescribed by the Defence Acts 1903-11 of the Federal Parliament. The provisions of the Acts of 1903 and 1904 and the regulations under them are still the main working principles of Australian defence, the necessary expansion being provided for in the amendments of 1909, 1910, and 1911, which also enacted the system of compulsory training. By the Acts of 1903 and 1904 the Governor-General was empowered to arrange for the efficient defence

of the Commonwealth, and to appoint officers to responsible positions and to commissioned ranks. The defence force was declared to consist of the naval and military forces of the Commonwealth, divided into "permanent" and "citizen" forces. The former consisted of persons bound to continuous service for a term; the latter of persons not so bound. Prior to 1911, they were divided into "militia," who were paid, and "volunteers," who were not ordinarily paid, for their services. Members of rifle clubs, duly sworn, and enrolled persons who had done active service, made up the reserve forces. Until the inauguration of compulsory training on 1st July, 1911, enlistment in time of peace was voluntary. In time of war, the citizen forces might be called out by the Governor-General, who was to state his reason for so doing, and communicate the fact to Parliament. Members of the naval forces might be called upon to serve outside the Commonwealth, but those of the military forces were not liable for such service. The forces might be used for the protection of the States from domestic violence. Command in time of war might be given to the Commander of any portion of the King's regular forces, or of the King's naval forces. For training, and in war, the naval forces might be placed on board ships of the navy of the Australian station. The Army Act (Imperial) was to apply to the Commonwealth military forces, and the Naval Discipline Act (Imperial) to the Commonwealth naval forces, while on active service, except where those Acts were inconsistent with the Commonwealth Defence Acts. Regulations, however, might prescribe that any provisions of the Imperial Acts named should not apply. Provision was to be made out of the Consolidated Revenue Fund for families of men killed or incapacitated while on service.

Male inhabitants between 18 and 60 years of age were liable to serve in time of war, Parliament being informed of the occasion if in session, and being summoned within ten days if not. Under the Acts of 1903 and 1904 persons the doctrines of whose religion forbade them to bear arms or perform military service might be exempted.

Naval and military cadet corps were also established—to consist of schoolboys over 12 years of age, and youths between 14 and 19 not attending school. They were not liable for active service.

The construction and maintenance of vessels, building and equipment of forts, laying of mines, institution of arms and ammunition factories, the acquisition of artillery and rifle ranges, and the performance of all acts for efficient defence and protection, were provided for. In time of war, the control of railways and tramways might be assumed by an officer duly authorised, and vehicles and boats might be impressed, and troops billeted and quartered. Heavy penalties were decreed for unlawfully giving information as to defences, or unlawfully obtaining same; and for supplying inferior provisions, material, equipment, etc. Information required under the Act was to be correctly given. Persons required to enlist were to do so, and were to take the oath of affirmation prescribed, and no person was to procure or aid desertion or to harbour deserters. Obstructing drill, personating, sketching fortifications and works or trespassing in them, or even being, with the intention of graphic representation, in their vicinity with drawing or photographing materials, etc., was forbidden.

An exhaustive body of regulations was drawn up under the authority of these Acts, and the details of service and duties of members of the forces were set out therein. These, having been notified in the *Government Gazette*, had the force of law.

The Governor-General, under the powers conferred upon him by the Acts, appointed an Inspector-General of the Military Forces, a Director of the Naval Forces, District Commandants, and commissioned officers generally. In the first appointment of officers, preference was to be accorded to persons who had served in the ranks. Promotions of officers were generally subject to passing the prescribed examinations, but distinguished service, or marked ability and gallantry in active service, might be permitted to gain promotion without examination. A Council of Defence, and Boards

of Military and Naval Administration were constituted. A Reserve of Officers was formed, and also an Unattached List, whence officers might be employed for duty with any corps or with the staff. The authority of the Act to establish a Naval and Military College was availed of, and a Chair of Military Science was endowed by the University of Sydney, an officer of the Imperial general staff being appointed Director of Military Science. Reference is made hereinafter to the course of instruction. It is hoped that now not only soldiers will be enabled to perfect themselves in the duties of their profession, but that the influence of the teaching will pervade all classes of the community, and enable Australian citizens to speak and vote more effectively, because with greater knowledge, when defence matters come up for consideration.

(ii.) *Regulations for Efficiency.* Under the regulations certain requirements for efficiency were set out for members of the militia forces, inefficient being discharged. The principal of these requirements were:—Attendance at the annual camps of training; completion of a course of “field training” in the special duties of the arm to which the member is attached; attendance at District Commandants’ inspections; and the performance during the year of an allotted amount of drill, generally 12 days or equivalent. In the case of specialist corps the efficiency requirements were greater. Camps, inspections, musketry, and field-training parades count for efficiency. The attendance of militia forces at the camps held during 1911 is shewn in the accompanying tables:—

#### ATTENDANCE OF MILITIA FORCES AT CAMPS OF CONTINUOUS TRAINING, 1911.

Arm.				Total Strength at date of Camp.	Total Average Daily Attendance.	Percentage of Average Daily Attendance to Strength.
<b>MILITIA—</b>						
Command Staffs	...	...	...	46	39	85
Light Horse	...	...	...	5,512	4,418	81
Field Artillery	...	...	...	1,315	1,142	87
Garrison Artillery	...	...	...	1,183	903	77
Engineers	...	...	...	900	810	90
Infantry—Militia	...	...	...	11,395	9,102	80
Intelligence Corps	...	...	...	41	31	75
Corps of Signallers	...	...	...	270	235	87
Army Service Corps	...	...	...	356	328	92
Army Medical Corps	...	...	...	768	689	88
Army Veterinary Corps	...	...	...	17	13	76
Total Militia	...	...	...	21,803	17,710	81

The numbers classed as “efficient” for the year 1910-11 were as follows:—

#### EFFICIENTS (MILITIA FORCES), 30th JUNE, 1911.

Force.				Strength on 30th June, 1911.	Efficients.	Percentage of Efficients to Strength.	Non-Efficients
Militia	...	...	...	21,638	17,077	69	4,561

Of the 55,400 members of rifle clubs in Australia, 34,701 or 61 per cent. were efficient in 1910-11.

**2. The Defence Acts of 1909, 1910 and 1911.**—The principal provision of the Act of 1909 is the addition of enactments relating to universal obligation in respect of naval and military training; the making of regulations exempting from service (persons with objections to service on religious grounds being exempt in any case); registration and enrolment for naval and military training; and establishment of a military college. Authority is provided for the establishment and maintenance of factories for the manufacture of naval and military equipment and uniforms; and for the employment of persons in a civil capacity for any purpose in connection with the Defence Force, or in any factory established under the Act. Owners of horses, vehicles, etc., which may be impressed for defence purposes, may be required to register them periodically, and any land may be entered under proper authority. Intoxicating and spirituous liquors are forbidden in camps and canteens. The provisions of the Acts of 1909, 1910 and 1911, regarding periods of universal training, are set out below (pages 1081-2). Heavy penalties may be exacted from persons who evade service, and from employers who prevent employees from serving. Exemptions from training in time of peace are permitted to those medically unfit; to those not substantially of European origin or descent (except duties of a non-combatant nature); to school teachers qualified as naval or military instructors, or who are officers of cadets; to members of permanent forces. Specified areas may be exempted. Registration of all liable to serve is prescribed. A Military College under a director and staff is to be established, and instruction is to be given by its graduates to the citizen forces.

The Act of 1910 is an extension of that of the previous year. The exemptions from service are further defined, and comprise membership of Parliament; the holding office as judges, magistrates, constables, prison warders, and lighthouse keepers. Hospital doctors and nurses, non-Europeans, and persons with conscientious objections to bearing arms, are to be exempted from duties other than those of a non-combatant nature. Burden of proof of exemption rests on the person claiming it. Authority is given for the establishment and maintenance of horse depôts, farms and stations for the breeding of horses. Uniforms are to be free to all ranks of the citizen forces. The period of adult training is extended to seven years, in place of two years provided under the Act of 1909, and the duration of service with the adult reserves is consequently shortened to one year instead of six. The organisation and duties of the Commandant and members of the Military College are further defined, and provision is made that any member of the forces over the age of nineteen years who passes the prescribed examination may be admitted to the college.

The Act of 1911 shortens the hours of parade for Senior Cadets by about one-third, and provides for leave of absence on account of weather, or residence at a distance from parade ground.

## § 5. The New Defence System.

**1. Defence Policy.**—(i.) *Peculiar Position of Australia.* The Acts of 1909, 1910 and 1911 were the direct outcome of the feeling, shared by all classes of the community, that Australia was insecure under the voluntary system. Recently, the Minister of Defence referred to the fact that if on a map of the world all the countries stained with blood were to be marked, Australia would be the only white spot. It is the national policy to effect a guarantee, by thorough preparation for war, that this exemption should continue.

(ii.) *Continuity of Administration.* Under the recent Acts the system of administration by naval and military boards continues. The Governor-General is empowered to make appointments and promotions of naval and military officers; appoint an officer to command the whole or any portion of the naval forces; appoint military districts and

sub-districts; raise, organise and maintain permanent and citizen naval and military forces, as may be deemed necessary for the defence and protection of the Commonwealth and of the several States.

(iii.) *Compulsory Training.* By the Defence Acts of 1903 and 1904 all male inhabitants of Australia between the ages of 18 and 60 years were made liable to serve in the defence forces *in time of war*. The recent Acts make training and service compulsory *in time of peace*. By the Act of 1909 the principle of universal liability to be trained was made law for the first time in any English-speaking community. The liability is upon all male inhabitants of Australia (except those specially exempted), who have resided in the Commonwealth for six months and are British subjects.

**2. The Military Scheme.**—(i.) *The Land Army.* The Act of 1909 prescribed Junior cadet training for lads 12 and 13 years of age, followed by Senior cadet training for lads from 14 to 18 years of age, equivalent in duration to sixteen whole days annually (of which eight should be in camps of continuous training), the remainder being divided into convenient parades throughout the year. Thereafter adult training for two years in the citizen forces equal to sixteen days annually (eight in camp), followed by registration or one muster parade each year for six years. The existing citizen forces were to be continued. Arrangements for registration, enrolment, inspection, and medical examination of all persons liable to be trained were made, and it was enacted that a Military College should be established. Some modifications were introduced in the Acts of 1910 and 1911.

(ii.) *Visit and Report of Viscount Kitchener.* Before the Act came into operation, viz., at the end of 1909, Field-Marshal Lord Kitchener visited Australia at the invitation of the Government, and after inspecting the military forces at work at camps held at various places throughout the Commonwealth, and the forts and defence works erected or in course of erection, reported upon the whole scheme of land defence. His recommendations (with the exception of some confidential matters) were made public in the form of a memorandum in February, 1910. A scheme was propounded, its main principles being in conformity with the Defence Acts 1903-9. The adoption of some of Lord Kitchener's recommendations necessitated further amending Acts. The trend and purport of the published report are given in the Commonwealth Year Book, No. 4, pp. 1085-1088.

**3. Organisation of Land Forces under the Defence Act 1903-11.**—(i.) *Proclamation.* The Defence Act 1910, passed by the Parliament which was returned at the elections of April, 1910, came into operation on 1st January, 1911, by proclamation. Some slight modifications were made in the Act of 1911. On account either of sparseness of population or difficulty regarding communications (either of which reasons would entail expenditure incommensurate with military efficiency), certain areas are exempted. In all other parts of the Commonwealth territory the clauses decreeing universal training are proclaimed.

(ii.) *Establishments.* The proposed organisation is based upon necessary considerations of (a) the numbers available; (b) the length of service demanded; (c) the proportion of the various arms required. It differs in some of its details from the scheme propounded by Lord Kitchener and includes—

28 regiments of light horse;  
56 batteries of field artillery;  
92 battalions of infantry;

and a due proportion of engineers, army service, and army medical corps, troops for forts, and other services.

(iii.) *Military Population.* In connection with the numbers available the figures of estimated male population are of interest. The total number at cadet age, *i.e.*, between 12 and 18, at the census of 1911 (3rd April) was about 260,000; at citizen soldier age, *i.e.*, between 18 and 26, 366,000; these latter, with 330,000 at ages between 26 and 35, give 696,000 as the total males at the best period for military service. In addition there were about 614,000 between 35 and 60.

(iv.) *Compulsory Provisions.* The actual requirements under the scheme enumerated in sections 125, 126, and 127 of the Defence Act 1903-1911, are as follows:—

*Section 125.* All male inhabitants of Australia (excepting those who are exempted by this Act) who have resided therein for six months shall be liable to be trained, as prescribed, as follows:—

- (a) From 12 to 14 years of age, in the junior cadets;
- (b) From 14 to 18 years of age, in the senior cadets;
- (c) From 18 to 25 years of age, in the citizen forces; and
- (d) From 25 to 26 years of age, in the citizen forces.

Provided that, except in time of imminent danger of war, service under paragraph (d) shall be limited to one registration or one muster parade.

*Section 126.* (a) The training in the junior cadets shall begin on the first day of July in the year in which the persons liable reach the age of 12 years, and shall continue for two years;

Provided that, in the case of persons who reach the age of 13 years in the year in which this Part commences, the training shall begin on the first day of July in that year, and continue for one year.

(b) The training in the senior cadets shall begin on the first day of July in the year in which the persons liable reach the age of 14 years, and shall continue for four years;

Provided that, in the case of persons who reach the age of 15, 16, or 17 years in the year in which this Part commences, the training shall begin on the first day of July in that year and continue for three years, two years, or one year respectively.

(c) The training in the citizen forces shall begin on the first day of July in the year in which the persons liable reach the age of 18 years, and shall continue for seven years.

*Section 127.* The prescribed training shall be, in each year ending the 30th June, of the following duration:—

- (a) In the junior cadets 120 hours; and
- (b) In the senior cadets four whole-day drills, twelve half-day drills, and twenty-four night drills; and
- (c) In the citizen forces sixteen whole-day drills or their equivalent, of which not less than eight shall be in camps of continuous training.

Provided that in the case of those allotted to the naval forces and to the artillery and to the engineers in the military forces, the training shall be twenty-five whole-day drills or their equivalent, of which not less than seventeen shall be in camps of continuous training.

Provided also that in the senior cadets the duration of a whole-day drill shall not be less than four hours, of a half-day drill not less than two hours, and of a night drill not less than one hour.

Provided also that in the Citizen forces the duration of a whole-day drill shall not be less than six hours, of a half-day drill not less than three hours, and of a night drill not less than one hour and a half.

Provided also that in the senior cadets the number and duration of half-day and night drills may be varied by the substitution of other drills as prescribed of a total duration of not less than sixty-four hours.

Provided also that the Minister may, by *Gazette* notice, declare that whole-day drills and half-day drills may be substituted for night drills in any districts or localities specified in the notice.

Provided also that in the case of senior cadets, who reside over two miles from the place appointed for training, attendance for a less number of hours than prescribed above may be allowed to count as prescribed for the full statutory duration of drills, and power may be given to the prescribed officers to grant leave of absence from training required by this Act when the conditions of the weather, by reason of excessive rain or heat, would render attendance a hardship; and equivalent attendance as prescribed may be required in lieu thereof.

The provisions for registration and inspection are contained in sections 142, 143, and 144 of the Act, and are as follows:—

*Section 142.* All male persons of Australia, who have resided therein for six months, shall register themselves or be registered by a parent, guardian, or other person acting in *loco parentis*, in the manner prescribed—

(a) During the month of January in the year in which they reach the age of 14 years (or, in the case of persons who in the year in which this part commences will reach the age of 15, 16, or 17 years, during the month of January in that year), or

b) If not then present in Australia, or if for any other reason not registered at the prescribed time, within such further time and in such manner as is authorised by the regulations.

Any proceedings for an offence against this section may be instituted at any time within two years after the commission of the offence.

*Section 143.* (a) All persons liable to be trained under paragraphs (c) and (d) of section 125 of this Act and not exempted by this Act shall be allotted to the several arms and corps:

(b) Of all persons liable to be trained such a number as are required shall first be allotted for training in the naval forces.

(c) All persons liable to be trained under paragraphs (b), (c), and (d) of section 125 of this Act who are forbidden by the doctrines of their religion to bear arms, shall, so far as possible, be allotted to non-combatant duties.

*Section 144.* All persons liable to be trained shall attend at the prescribed times and places for inspection, and shall give such information as is prescribed, and shall submit to the prescribed medical examination.

(v.) *Exemptions and Disabilities for Service.* Exemptions from service are set out in sections 61, 61a, 138, 140, and 140a of the Act, as given below:—

*Section 61.* The following shall be exempt from service in time of war, so long as the employment, condition, or statute on which the exemption is based continues:—

(a) Persons reported by the prescribed medical authorities as unfit for any naval or military service whatever; and

- (b) Members and officers of the Parliament of the Commonwealth or of a State ; and
- (c) Judges of Federal or State Courts, and police, stipendiary, or special magistrates of the Commonwealth or of a State ; and
- (d) Ministers of religion ; and
- (e) Persons employed in the police or prison services of the Commonwealth or of a State ; and
- (f) Persons employed in lighthouses ; and
- (g) Persons employed as medical practitioners or nurses in public hospitals ; and
- (h) Persons who are not substantially of European origin and descent, of which the medical authorities appointed under the regulations shall be the judges ; and
- (i) Persons who satisfy the prescribed authority that their conscientious beliefs do not allow them to bear arms ; and
- (j) Persons engaged in any employment specified by the regulations or by proclamation.

Provided that, as regards the persons described in paragraphs (g) (h) and (i) of this section the exemption shall not extend to duties of a non-combatant nature.

*Section 61a.* Where any question arises as to whether a person is exempt from service in the citizen forces, the burden of proving the exemption shall rest on the person claiming the exemption, and applications for exemption shall be decided by the Courts authorised in that behalf by the regulations.

*Section 140.* The Governor-General may by proclamation—

- (a) Exempt from the training in time of peace, all persons residing within any area specified in the proclamation ;
- (b) Vary or extend any area so specified ; or
- (c) Withdraw any exemption under this section ; or
- (d) Limit any exemption under this section to any part of the training required by this Act.

*Section 140a.* The Governor-General may by proclamation grant a temporary exemption for a period not exceeding one year to—

- (a) Persons who reside outside the areas in which training is carried out ; and
- (b) Persons who reside at so great a distance from the places appointed for training that compulsory attendance at the training would involve great hardships.

*Section 138* added to the exemptions permitted under section 61 the following:—

- (a) School teachers who have qualified at a school of naval and military instruction, or other prescribed course, as instructors or officers of the junior or senior cadets.
- (b) Members of the permanent naval or military forces.

It is also provided that—

Persons who are students at a Theological College as defined by the regulations, or theological students as prescribed, may, while they remain such students, on application, be exempted by any prescribed authority from the prescribed training, but shall, on ceasing to be such students, undergo such equivalent training as prescribed, unless exempted by some provision of this Act.

Certificates of exemption will be issued in proclaimed areas by the area officer, in exempt areas by an officer specially appointed. In case of dispute the matter will be referred to the Brigade-Major or Commandant. If the decision of this officer is not accepted,

application may be made by the person claiming exemption to the Courts authorised in that behalf by the regulations, whose decision is final. Burden of proof rests upon the claimant.

Any person who has been convicted by a Court of a disgraceful or infamous crime, or is of notoriously bad character, is permanently disqualified for service.

(vi.) *Penalties for Prevention or Evasion.* Employers may not prevent their employees from serving; nor may persons liable to service fail to perform it. The provisions of the Act regarding prevention and evasion are:—

*Section 134.* (a) No employer shall prevent, or attempt to prevent, any employee who is serving or liable to serve in the cadets or citizen forces, and no parent or guardian shall prevent any son or ward who is so serving or liable to serve, from rendering the personal service required of him, or from attending any camp of instruction appointed to be held by the headquarters of the Commonwealth or any military district, and no employer shall in any way penalise or prejudice in his employment, or attempt to penalise or prejudice in his employment, any employee for rendering or being liable to render such personal service, or for attending such camp, either by reducing his wages or dismissing him from his employment or in any other manner:

Provided that this section shall not be construed to require an employer to pay an employee for any time when he is absent from employment for the purpose of training.

Penalty: One hundred pounds.

(b) In any proceedings for any contravention of this section, it shall lie upon the employer to show that any employee, proved to have been dismissed or to have been penalised or prejudiced in his employment or to have suffered a reduction of wages, was so dismissed penalised or reduced for some reason other than for having rendered or being liable to render the personal service required of him or from attending the camp.

*Section 135.* (a) Every person who in any year, without lawful excuse, evades or fails to render the personal service required by this Part shall be guilty of an offence, and shall, in addition to the liability under section one hundred and thirty-three of this Act,<sup>1</sup> be liable to a penalty not exceeding One hundred pounds and not less than Five pounds:

(b) Any penalty under this section may be recovered summarily on the information or complaint of a prescribed officer.

(c) In fixing the amount of the penalty, the Court shall have regard to the means of the person offending and those of his parents.

(d) In addition to any penalty imposed, or (where the Court is of the opinion that the imposition of a penalty would involve undue hardship) in lieu of imposing any penalty, the Court may, if it thinks fit, commit the offender to confinement in the custody of any prescribed authority for a time corresponding in duration to the time which, in the opinion of the Court, would be taken up in rendering the personal service required.

(e) Any person committed to the custody of a prescribed authority in pursuance of this section may be detained by that authority at any prescribed institution or place, and while so detained shall be subject to the regulations governing that institution or place, and to the training and discipline as prescribed.

(f) It shall not be necessary for the confinement to be continuous; but the person having the custody of the offender may (subject to the regulations) release him for such periods, and call upon him to return to custody at such times, as he thinks fit; to the intent that he may follow his occupation, and that the times and periods of his confinement may correspond, as nearly as practicable, with the times and periods which he ought to have occupied in rendering personal service.

(g) Any person detained in any prescribed institution or place in pursuance of this section who escapes therefrom, or who being released from custody fails to return thereto, may be arrested without warrant by any prescribed person, and taken back to the institution or place, and may on the application of any prescribed officer be ordered by any

1. Section 133 enacts that non-efficient must attend an equivalent additional training for each year they are non-efficient.

Court of summary jurisdiction to be detained for such additional period not exceeding twenty days as the Court thinks fit to order.

*Section 136.* Every person who, without lawful excuse, evades or fails to render the personal service required by this Part shall, unless and until he has performed equivalent personal service as prescribed, be and remain ineligible for employment of any kind in the Public Service of the Commonwealth.

(vii.) *Efficiency Requirements.* The requirements for efficiency in the senior cadets comprise attendance at compulsory parades, as follows:—

- 4 whole-day drills of not less than four hours each; and
- 12 half-day drills of not less than two hours each; and
- 24 night drills of not less than one hour each.

These statutory parades will be increased by extra voluntary parades, the object of which is to enable those who are backward to become proficient, and those who desire to qualify for promotion to obtain the necessary practice. Where leave of absence has been given from a statutory parade, attendance at a voluntary drill will count towards the efficiency requirements; but a statutory parade missed without leave requires two voluntary parades as compensation.

At the end of the year's training, a Board of Officers will classify the trainee as efficient, or otherwise. Those not efficient must do an extra year's training for each failure. Thus there must be twelve annual entries of efficiency or exemption in each soldier's record, before he receives his discharge.

Variations may be permitted in the compulsory half-day and night parades, but a total of sixty-four hours must be served. The whole day parades will usually be held on public holidays. Schools, containing at least sixty senior cadets, may form separate units, and may arrange their parades to suit their school time table; but the cadets must attend the battalion parades.

The efficiency requirements for citizen forces and reserves have not yet been promulgated.

(viii.) *Allotment to Arms.* During senior cadet training there will be no allotment to the various arms of the service. The work of the trainee will cover the foundation work necessary for service in any arm, viz.:—Marching, discipline, the handling of arms, musketry, physical drill, first aid, guards and sentries, tactical training as a company in elementary field work, and elementary battalion drill. Thereafter the cadet with special educational or technical qualifications will be drafted as a recruit to one or other of the specialist or departmental corps, other cadets passing to the "line regiments" of the Australian Army—the light horse and infantry.

(ix.) *Uniform and Equipment of Senior Cadets.* The uniform is simple and inexpensive, but suitable. It consists of hat, woollen shirt, woollen breeches, and puttees. It is free, and issuable every second year. There is no distinction, and uniform will be worn at all parades and drills. Wearing of uniform when not on military duty or proceeding to or from parade is forbidden.

Equipment consists of a cadet rifle with sling and a waist-belt with pouch. The elder senior cadets who are good shots (but not exceeding 10 per cent. of the strength) are allowed .303 (service) rifles. Free ammunition is provided, 150 rounds of ball being available for each cadet. Arms must be kept in the offices or storerooms of the units, and issued for parades only. On no account are arms permitted to be taken to the cadets' homes.

(x.) *Citizen Forces.* On 1st July, 1912, the eldest class of those who commenced senior cadet training on 1st July, 1911 (viz., those born in the year 1894) pass as recruits to the various arms of the new citizen force, forming its first members. Uniform will be simple and suitable for service, and the issue to each soldier will be such that he is able to parade (upon notice) with two woollen shirts, two pairs breeches, greatcoat, hat, sleeping-cap, two pairs puttees or leggings, two pairs military boots, and kit-bag. The future force is planned to comprise 120,000 of all ranks

including about 5000 citizen officers and 8000 non-commissioned officers. Promotion will be absolutely by merit, the principle adopted being that *the best soldiers must lead, whatever their civil avocation or birth.*

(xi.) *Reserves.* No new reserves are created under the Acts of 1909, 1910 and 1911. The present reserves consist of (a) officers, etc., retired from active service; (b) members of rifle clubs. Provision will probably be made for those who, at the age of 26 years, pass out of the organisations created under the Act, to continue service with rifle clubs; but if this is not enacted, it is considered probable that a large proportion of the fully-trained citizen soldiers will remain members of the clubs.

(xii.) *Number under Training.* The male population of Australia of military age gives about 177,000 between 14 and 18 years, and about 321,000 between 18 and 25 years. The estimated medical rejections (based upon the experience of European countries) will probably be 10 per cent. for senior cadets, and from 30 to 35 per cent. for citizen soldiers. To these must be added persons in exempt areas. The number under training, when the system is in full operation, is estimated at 100,000 senior cadets, and 120,000 citizen soldiers.

(xiii.) *Allotment of Units to Divisional Brigade, Battalion, and Training Areas.* Three brigades will form a division. Two brigade areas will each provide four battalions of infantry, one field artillery brigade (with proportion of divisional ammunition column), one field company of engineers, one company army service corps, and one field ambulance. The other brigade of the division provides four battalions of infantry, two squadrons of divisional light horse, one howitzer or heavy battery, one divisional signal company of engineers, one company army service corps, and one field ambulance. Light horse, and field artillery units for light horse brigades will also be furnished by some of the areas. Personnel for garrison artillery and submarine and electric engineers for field forces will eventually be supplied in the areas nearest to such localities. The average annual contingent of recruits will be about 155 for each battalion area, plus such additions as are required for light horse and field artillery units raised therein. The figures shewn in the following tables are approximate, and include the recruits (18-19 year), but not the 25-26 year men.

#### ALLOTMENT OF UNITS TO BRIGADE, BATTALION, AND TRAINING AREAS.

(xiv.) *Higher Training.* The principal institution for the higher training of officers is the Military College, which has been established at the Federal capital. Entrance is by competitive examination, the first of which was held in February, 1911. Lectures and studies commenced at the college in the same year. The course will last four years, and will be followed by a tour of duty in England or India, and a probationary year at area work. Graduates will eventually take the place of the area officers at present engaged; but it will be six years before any graduate of the college will be available; and fifteen years before all the area positions are supplied from it.

Government aid is also furnished to United Service Institutions, which have been established in the larger centres. Lectures of great value are delivered by specialists, and war games, manœuvres, etc. carried out. Some of the institutions have large and well-selected libraries.

Schools of instruction, staff tours, etc., are also conducted, and a military magazine is published.

(xv.) *Record for Anthropometric Purposes.* In connection with the medical inspection, it has been arranged that the colour and character of hair, and the colour of eyes, of those examined shall be recorded for statistical purposes. Instructions have been compiled by the Commonwealth Statistician, in accordance with which the area officers will classify the hair-colour under four divisions, comprising three types of fair, two of reddish, three of brown, and two of black. The character of the hair is recorded also in four divisions, viz.: (a) perfectly straight and smooth; (b) wavy and curly; (c) frizzy; (d) woolly. Intermediate types are to be classed under the heading to which they approach most nearly. The eye-colour will be classified under four divisions, comprising sixteen types, viz., four of greyish, four of bluish, four of yellowish, and four of brown and hazel.

It is possible that later the recommendations of the British Anthropometric Committee will be adopted.

The object of the investigation is to study the development of the Australian nation, the necessary statistic for military identification purposes affording a unique opportunity. A possibility exists of co-ordinating anthropometric work in the schools with that done in connection with compulsory military service.

**4. Compulsory Training in Operation.**—(i.) *Inauguration of the System.* The first work in the active carrying out of the scheme commenced with the training of 200 non-commissioned officers for the instruction of the projected army in a six months' camp. Area officers were chosen from the citizen forces, and underwent a six weeks' course of instruction. With the year 1911 came the active enrolment of the new cadets; the total registrations in training areas up to 31st January exceeded 120,000. These, with belated enrolments in later months, commenced training on 1st July following.

(ii.) *Stages.* The stages are as follows:—

First stage, January to June, 1911.—Existing junior and senior cadets continued to 30th June, 1911, but all equipment returned by that date; registration, inspection, and medical examination of lads whose 14th, 15th, 16th, and 17th birthdays occurred in 1911; preparations made to clothe and equip the new senior cadets.

Second stage, July, 1911, to June, 1912.—Registration, etc., of lads whose 14th birthday occurs in 1912; new junior and senior cadet training from 1st July, 1911. Of the latter, about 20,000 will pass as recruits, inaugurating the new citizen forces in the third stage.

Third stage, July, 1912, to June, 1913.—Registration, etc., of lads whose 14th birthday occurs in 1913; new citizen forces, training begins with 20,000 recruits (18 year old persons drafted from the new senior cadets). During the third, fourth, and subsequent stages the new senior cadet force, numbering 100,000, will continue. During this period the establishments under the new organisation will be completed.

Fourth and subsequent stages, after July, 1913 (and each year).—Registration, etc., of lads whose 14th birthday occurs in 1914, and so on. In the fourth and subsequent stages, the new citizen forces will also be continued, increasing each year by 20,000.

(iii.) *Summary of Working of the System in 1911-12 (Second Stage).* The following table gives a summary of work done under the new scheme up to 31st December, 1911:—

### UNIVERSAL TRAINING.—REGISTRATIONS, MEDICAL EXAMINATIONS, AND EXEMPTIONS TO THE 31st DECEMBER, 1911.

#### SENIOR CADETS.

Military District.	Total Registrations in Training Areas.	Total Medical Examinations.	Number Medically Fit.	Percentage Medically Examined who are Fit.	Number Unfit and Temporarily Unfit.	Percentage Medically Examined who are Unfit or Temporarily Unfit.	Total Exemptions granted in Training Areas.	Total Number liable for Training.	Total Number actually in Training.

5th (W. Australia) ...	1,303	1,269	97.4	34	2.6
6th (Tasmania) ...	297	293	98.7	4	1.3
Commonwealth ...	33,767	33,018	97.8	749	2.2

(iv.) *Registration in 1912.*—Up to the end of April, 1912, the registration of those liable to commence service in the Senior Cadets in that year (*i.e.*, those born in 1898) was 27,086.

(v.) *Territorial Organisation and Instruction.* The territorial organisation of the Commonwealth is one of areas based upon infantry units. There are 92 battalion areas, approximately equal in number of males of citizen soldier age, and each containing a battalion of infantry, with either a battery of field artillery (in urban districts), or a regiment of light horse (in country districts), and also a larger or smaller number of one or more other arms, departmental corps, etc. For internal administrative purposes, the battalion areas are subdivided into two or three training areas. Brigade areas are formed by grouping four battalion areas.

The instructors provided for training existing units and for territorial work in connection with the new system consist of 58 officers and 425 warrant and non-commissioned officers of the instructional staff (permanent), and 219 area officers (temporary). They supervise the training of light horse, infantry, and senior cadet units, and instruct in the non-technical duties of specialist corps. Additional officers and non-commissioned officers in the permanent troops will instruct in technical work.

The officers of the instructional staff act as Brigade-Majors, and as such represent the Commandant in the brigade area. They are responsible for the instruction of officers of the existing citizen forces, conduct local schools of instruction, supervise and instruct the area officers, and allot the non-commissioned officers of their detail to various duties. Assistant Brigade-Majors are also furnished from the instructional staff. The duties of area officers vary both in nature and extent, and comprise registration and organisation of those to be compulsorily trained; clothing, arming, equipping, and training the new senior cadets; and training recruits in the citizen forces. They also relieve citizen officers of administrative work, and perform the duties of adjutant to militia units.

The staff instructors (warrant and non-commissioned officers) carry out the administrative work of their areas or units, and instruct cadets and recruits in light horse and infantry drill and tactics.

The area officers do not undertake the registering and inspection of junior cadets. There is no provision in the Act for registration before the 14th year; but when the junior cadet presents himself for registration before the area officer, it will be necessary for him to show that he has complied with the requirements of the Act during the two preceding years. State Inspectors of Schools and special inspectors of physical training approved and appointed by the Minister of Defence, undertake the supervision of the great body of the junior cadets, the training being in the hands of school teachers, who have been specially instructed for the purpose. The area officer and staff instructors visit schools where the training is not carried out by the schoolmasters.

(vi.) *Proposals for 1912-13 (Third Stage).* The training of adults under the Universal Training clauses of the Act will commence on 1st July, 1912, with the drafting of the 18 year old trainees, i.e., those born in 1894, to the militia forces. The following are the proposals:—The medical examination is to be completed by 31st March, 1912. Those returned as passed will pass into the militia forces, developing and augmenting the existing units. Soldiers now serving in these units will be allowed to continue to serve until the termination of their term of enlistment, when they will be retired; but warrant and senior non-commissioned officers may be re-engaged. All arms except light horse will be maintained by annual quotas transferred from the senior cadets, as laid down in new Peace and Training establishments. When these are reached these units will be required to detail sufficient officers, non-commissioned officers, and men to form the nuclei of new units. If any existing unit is not considered by the Military Board to be sufficiently efficient to justify its retention, such unit will be disbanded. Also, if an existing unit is so widely scattered as to be costly and inconvenient

for administration, such unit will be divided, and will form nuclei for new units which will be raised in the localities in which the scattered portions are located. Except in the case of the light horse, augmentation of existing units will be by transfers from the senior cadets only. In light horse units, in the case of those raised outside the five mile radius of any training locality all recruiting will be voluntary, and in other cases voluntary enlistments may be allowed if there are not sufficient universal trainees having horses available to keep up the establishment. Tables have been prepared shewing how existing units will be augmented in each brigade area, new units raised, and universal trainees allotted as they reach the age of 18 years, for the next seven years. The tables also shew how the existing units will eventually be merged into the new organisation. Trainees posted to the militia forces will be known as recruits for the first year of service. Recruits will be invited in the first instance to volunteer for the branch in which they desire to be trained. In the event of there being too many volunteers the required numbers are to be selected by the brigade majors. If there are too few the required numbers will be posted by the area officer in consultation with the brigade major. Persons forbidden by the doctrines of their religion to bear arms shall, as far as possible, be allotted to non-combatant duties. On the 1st July, 1912, postings to the militia forces of the 1894 class will be promulgated, and then recruit training will commence. Until the scheme reaches its full development the required numbers from rifle clubs will continue to be allotted annually to each unit in order to meet the requirements of mobilisation.

**5. The Naval Scheme.**—(i.) *Historical.* An outline of the development of the Australian naval policy will be found in Commonwealth Year Book No. 3, pp. 1060, 1061. For the more effective coastal defence of the Commonwealth it was decided in 1901 to create a naval force, Australian in character, to replace the squadron at present maintained under the naval agreement with the British Government. Australia would thus have a navy, not merely a marine defence force. Engagements were entered into for the construction of three torpedo boat destroyers, two to be built in Britain, the other to be shipped to Australia in parts, and put together here. Proposals were also made for the construction of vessels in Australia. Skilled artisans were despatched from Australia to gain practical experience in the building of the vessels, and crews were specially trained for the service of them when completed.

(ii.) *Development of the Australian Navy.* The policy of development has continued with but slight variations in the proposals, despite three recent changes of Ministry.

A member of the Ministry, accompanied by naval and military expert advisers, attended the Imperial Defence Conference in London. The principal object of his mission was to concert with the other representatives as to the best measures to be taken to meet a common menace, particularly in the Pacific, where there must always be an outlet for Australian trade. The position was accepted that the burden of defence must in future be borne, not by part, but by the whole of the Empire, and therefore Australian plans and preparations must have the safety of the whole in view. As a fuller Imperial partnership is indispensable to the future security of the Imperial fabric, so a definite place in the Pacific must be allotted to Australia, as to other members of the Empire. It was agreed that Australia should provide a fleet unit, consisting of an armoured cruiser\* of the *Indomitable* class, three unarmoured cruisers of the *Bristol* class, six destroyers of the improved "River" class, and three submarines of "C" class †; also the necessary auxiliaries, such as docks and dépôt ships, for this fleet, which is to form a complete naval unit, and is to be one of the three divisions of the Eastern fleet. It was stated that the British Government might provide an addition to this fleet. The cost of construction at English prices would be about £3,750,000, and the estimated annual cost about £750,000. Of this sum the Imperial Government offered to contribute £250,000, but the Commonwealth Government decided to bear the whole cost.

---

\* Now called "battle cruiser."

† Since altered to two submarines of "E" class.

The first instalment of the Australian fleet unit consists of the destroyers already constructed. One was launched at Govan-on-the-Clyde, on 9th February, 1910; a second at Dumbarton on 9th April following. The vessels are named after Australian rivers, those launched having been christened *Parramatta* and *Yarra*. They were commissioned in September, 1910, as ships of the Royal Navy, and left Portsmouth on 19th September on their voyage to Australia. Crews had been sent from Australia to man the destroyers, and the Admiralty loaned 30 ratings to furnish the complements. The Admiralty also arranged for the cruiser H.M.S. *Gibraltar* to be in touch with the destroyers throughout the voyage. In December, 1910, the vessels arrived in Australia. A third destroyer, the *Warrego*, was shipped to Sydney in parts. She was re-erected at the New South Wales Government dockyard, Cockatoo Island, Sydney, launched on 4th April, 1911, and commissioned on 1st June, 1912. These destroyers are each of 700 tons displacement, with a length of 245 feet; beam of 24 feet 3 inches; draft, 8 feet 11 inches; depth, 14 feet 9 inches. They have turbines, water-tube boilers and oil fuel, and have a legend speed of 26 knots. The armament consists of one 4-inch 30-pounder, three 12-pounders, and three 18-inch deck discharge tubes for torpedoes. The radius of action at cruising speed is nearly 3000 miles. The complement is 66 officers and men. It is intended to build the other three destroyers (to be named *Torrens*, *Swan*, *Derwent*) in Australia. The present annual naval subsidy (£200,000) will cease as soon as the larger obligation is taken over. While on the Australian station the ships will be under the exclusive control of the Commonwealth, both as regards movements and general administration, in time of peace, the *personnel* being subject to the King's regulations, and under naval discipline, with standards of efficiency, and opportunities for advancement, as in the Royal Navy. The battle cruiser (*Australia*) and the three 2nd class cruisers (*Sydney*, *Melbourne*, *Brisbane*), with the submarines, will complete the unit, which will pass under Imperial control whenever required for war purposes. It is to be manned as far as possible by Australians, supplemented by Imperial officers and men. A considerable number of the former are available, viz.—(a) those of the present permanent naval forces, and (b) those in training with sections of the British fleet. Provision is made in the *Naval Defence Act* 1911 for enlistment in the Permanent Naval Forces. A permanent naval college is to be established, and the necessary instruction imparted. The captain has been appointed on the recommendation of the British Admiralty, and has arrived in Australia to organise the college. Other officers for the instruction of the cadets have been nominated by the Admiralty, and have also arrived in Australia. A site has been chosen for the college at Captain's Point, Jervis Bay. It will be equipped with all necessary workshops, machinery, etc. In order to expedite the training of officers, a temporary college will be established at Geelong. It is intended that there shall be interchangeability of officers and men, and also of ships. The British Admiralty invited tenders for the *Australia* in January, 1910, and the vessel is now in course of construction. The first portion of the keel was laid on 23rd June, 1910, and she was launched on 25th October, 1911, the date of completion being November, 1912. The ship is of the *Dreadnought* type, *Indomitable* class, about 19,200 tons, with turbine engines. Her speed will be 26 knots, her armament eight 12-inch and sixteen 4-inch guns, and five torpedo tubes. She will have an 8-inch armour belt amidships, and a 4-inch belt at the ends. The estimated total cost of the vessel is £1,800,000. The smaller cruisers, the *Melbourne* and *Sydney*, are being built in Great Britain. The keel of the *Sydney* was laid on 11th of February, 1911, that of the *Melbourne* on 4th April following. The *Melbourne* was launched at Birkenhead on 30th May, 1912. Delivery will probably be made in September, 1912. These vessels will be about 5000 tons displacement, armed with 6-inch guns, and will cost about £450,000 each. It is the intention of the Government to build the third cruiser, the *Brisbane*, in Australia, the raw material being imported. The two submarines are also being built in England, and it is anticipated that the vessels will be delivered early in 1913. Pending completion of the *Brisbane*, the *Encounter* has been lent from the Royal Navy for service in the Royal Australian Navy.

(iii.) *Naval Reserves.* The naval reserves comprise (a) members of the Australian branch of the Royal Naval Reserve, (b) members of the Citizen naval forces, and (c) Senior naval cadets. The navy has first choice from amongst the trainees under the compulsory system.

(iv.) *Visit and Report by Sir Reginald Henderson.* At the invitation of the Government, Admiral Sir Reginald Henderson visited Australia to advise upon the best position for a central naval base, and the works necessary to make it effective; the positions for secondary bases for the service of a fleet, and their equipment for service in naval operations; also upon the location and character of the training schools for preparing *personnel* for the Australian naval service. The Admiral was also requested to report and advise on any other naval matters upon which he might care to express an opinion, and generally, in regard to all the measures to be taken in the formation of a fleet. After an inspection of various harbours, the Admiral propounded a scheme which he embodied in a report to the Government in March, 1911. It provides 52 vessels and 15,000 men; expenditure on ships, £23,290,000, with an ultimate annual naval vote of £4,794,000; construction of docks, £40,000,000. In twenty-two years the expenditure will be £88,500,000. Six naval bases, and eleven sub-bases, are recommended.

The 52 vessels of the completed fleet would be divided into Eastern and Western divisions, and consist of 8 armoured cruisers, 10 protected cruisers, 18 destroyers, 12 submarines, 3 dépôt ships, and 1 fleet repair-ship, the building of which would extend over 22 years. The *personnel* for this fleet, fully manned, would be about 15,000. Of the £23,290,000 initial cost of construction, the Commonwealth is already committed to £3,500,000. The annual cost of *personnel* would be £516,000 in 1912-3; and would increase to £2,226,000 in 1932-3. Annual cost of maintenance of ships in commission would be £262,000 in 1913-4; rising to £1,226,000 in 1933-4. Annual expenditure on construction and maintenance of ships would increase from £1,491,000 in 1912-3 to £4,824,000 in 1932-3. In 22 years the expenditure on the fleet alone would be £73,275,000; this, with an expenditure on fleet and harbour works of £15,225,000, would make a grand total of projected expenditure of £88,500,000. The strength of the fleet would be 23 ships in 1918, 42 ships in 1923, 48 ships in 1928, and 52 ships in 1933. In the earlier years most of the crews would be obtained from Great Britain; but this would cease in the period 1923-8. A system of "wireless" stations is recommended; also the establishment of naval reserves the erection of barracks, and the institution of a naval college.

(v.) *Proposals for Expansion.* The Australian Government has generally adopted Admiral Henderson's report, and naval expansion is proceeding on the lines therein laid down. At present, however, Australia stands committed only to the fleet unit. In the matter of bases the report is concurred in, and action is being taken for the establishment of the various naval bases and sub-bases required for the fleet unit. All the seagoing ships of the fleet will have "wireless" installed. Shore stations are under the control of the Post and Telegraph Department.

(vi.) A vessel (*Sobraon*) purchased from the Government of New South Wales has been fitted up as a boys' naval training ship (*Tingira*), and was commissioned on 25th April, 1912. The full capacity of the ship is 300, of whom 100 start training on 1st June, 1912, and 100 three months later. The age of entry is  $14\frac{1}{2}$  to 16 years. The boys must engage to serve until they reach the age of 25. Upon medical certification of fitness, they will be entered for service in the Royal Australian Navy. It is intended that the boys shall provide the *personnel* of the new fleet unit. The training ship is thus a very important part of the new scheme.

(vii.) *Strength of the Commonwealth Naval Forces, 1912.* The following table shews the strength of the naval forces in March, 1912:—

**STRENGTH OF THE NAVAL FORCES (PERMANENT AND RESERVES),  
1st MARCH, 1912.**

Description of Force.	Number Borne.			Total.
	Officers.	Men.	Cadets.	
Permanent* ...	59	573	...	£632
Administrative and Instructional Staff ...	34	84	...	118
Reserves† ...	33	970	...	1,003
Reserves‡ ...	...	...	3,045	3,045
Total ...	126	1,627	3,045	4,798
Navy Office personnel...	...	...	...	41
Grand total ...	...	...	...	4,839

\* Seagoing. † Late Militia. ‡ Cadets under universal Training. § This number includes 3 officers and 1 petty officer in England on vessels building, etc., 13 officers, 118 petty officers and men who have been recruited in England.

**§ 6. Expenditure on Defence.**

1. **Expenditure, 1905-6 to 1911-12.**—The following table gives the expenditure of the Department of Defence from 1905-6 to 1910-11, and the estimate for 1911-12:—

**EXPENDITURE ON DEFENCE, 1905-6 to 1911-12.**

Branch or Department.	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.	1911-12. Estimate
Administrative—Central Administration ...	£ 18,832	£ 19,246	£ 21,913	£ 23,884	£ 26,358	£ 104,740	£ 1303,882
Naval Forces ...	45,753	50,200	54,069	59,250	63,168	96,291	288,971

Naval Works & Armament ...	...	...	...	...	...	24,780	40,000
Interest and Sinking Fund on Transferred Properties ...	...	...	...	...	...	...	190,523
Total ...	970,345	1,035,795	*1,084,744	1,050,590	1,534,881	3,008,705	4,775,136

\* In addition, the sum of £250,000 was paid into trust fund for harbour and coast defence.

† Includes establishments under the control of the Central Administration.

2. **Estimates, 1911-12.**—(i.) *Comparison with Preceding Year.* The administration estimates for 1911-12 shew an increase of £678,636 on those for the preceding year. The increase is shewn under the following heads:—

Administrative (including establishments under control of Central Administration) ...	... £199,142
Naval forces ...	... 192,680
Military forces, cadets, rifle clubs, and associations ...	... 286,814
	<u>£678,636.</u>
Central Administration (chiefly Naval Administrative Staff)...	... £25,669

(ii.) *Items of Increase.*—Naval maintenance (£288,971) includes £5200 for Naval College; £23,000 for the boys' training establishment; £178,271 for the naval forces; and £64,000 for maintenance of ships and vessels. Uniforms for adult trainees are estimated to cost £86,000. Military maintenance (£1,234,762) includes district headquarters staffs, £24,000; two new permanent field batteries of artillery, £33,153; permanent garrison artillery, £111,173; permanent engineers, £35,331; instructional staffs, £127,732; medical services, £21,160; stores and allowances for senior cadets, £126,500; and universal training expenditure, £252,810.

3. *Expenditure Compared with Various Countries.*—The total expenditure on defence and the expenditure per inhabitant, according to the latest available estimates, are, in the countries indicated, as follows:—

#### EXPENDITURE ON DEFENCE—VARIOUS COUNTRIES.

Country.	Year.	Army.	Navy.	Total.	Per Inhabitant.
		£	£	£	s. d.
Great Britain ...	1910-11	27,760,000	40,604,000	68,364,000	30 3
Germany ...	1910-11	40,409,000	22,109,000	62,518,000	19 3
France ...	1911	35,924,000	16,493,000	52,417,000	26 7
Italy ...	1910-11	12,560,000	7,447,000	20,007,000	11 7
Austria-Hungary...	1910	14,353,000	2,797,000	17,150,000	6 6
Switzerland ...	1911	1,757,000	—	1,757,000	9 5
Russia ...	1910	48,072,000	8,924,000	56,996,000	8 5
Spain ...	1911	7,396,000	1,266,000	8,662,000	8 10
Norway ...	1910-11	782,000	300,000	1,082,000	9 1
Sweden ...	1911	2,776,000	1,077,000	3,853,000	14 1
Denmark ...	1911-12	844,000	539,000	1,383,000	10 0
Holland ...	1911	2,578,000	1,851,000	4,429,000	15 0
Belgium...	1911	2,397,000	—	2,397,000	6 5
United States ...	1911	35,250,000	26,000,000	61,250,000	13 5
Canada ...	1909-10	1,248,000	—	1,248,000	3 6
Japan ...	1910-11	7,461,000	3,848,000	11,309,000	4 2
Australia ...	1911-12	2,731,000	2,044,000	4,775,000	21 5

### § 7. The War Railway Council.

1. *The Constitution of the Council.*—It was suggested by Lord Kitchener that a War Railway Council should be appointed to secure co-operation between the Commonwealth Defence Department and the States Railway Departments in regard to concentration and mobilisation of troops. A conference, whose members comprised staff-officers of the Commonwealth forces and the chief railway commissioners of the States, was held in Melbourne in February, 1911, under the presidency of the Minister of Defence, and in March the report was made available. The decisions were embodied in a series of twenty resolutions. It was recommended that the War Railway Council should be constituted of eleven members as follows:—The quartermaster-general as president; the senior officer of the engineer and railway staff corps of the Commonwealth railway system and of each State railway system, the Commonwealth consulting military engineer, and two representatives of the naval and military forces as members; and a military officer as secretary. An engineer and railway staff corps was proposed, consisting at its commencement of 48 members, composed of officials of the Commonwealth and State Government railways holding honorary military rank.

2. *Duties in Time of Peace.*—The duties of the council in time of peace would be generally to furnish advice to the Minister of Defence on railway matters, and particularly (a) to determine the method of supplying information to, and obtaining it from, the

various railway departments ; (b) to suggest regulations and instructions for carrying out movements of troops ; (c) to suggest the method of organising railway staff officers in time of war, to act as intermediaries between the various railway authorities and the troops ; (d) to consider the question of extra sidings, loading platforms, etc., and proposals towards unification of gauges ; (e) to suggest the organisation and system of training of railway troops when the development of universal training supplies sufficient personnel whose ordinary employment is railway work ; (f) in time of war to advise also on questions of mobilisation.

**3. Control of Railways in War.**—In times of war, the chief commissioner or general manager of any railway system of which the Commonwealth Government assumes control should be appointed Director of Railways, and should have command of "Railway Control Officers" to be specially appointed as intermediaries acting between the railway administration and the troops. The chief duties of these control officers would be (a) to facilitate the transport of troops, animals, and material ; (b) to act as channels of communication between the military authorities and the technical railway personnel ; (c) to advise the local military authorities as to the capacity and possibilities of the railway ; (d) to bring to the notice of the Director of Railways any means by which the carrying power of the railway may, for military purposes, be increased.

**4. Uniform Railway Gauge.**—The Council recommends the adoption of a uniform gauge of 4 ft. 8½ in. on the lines linking up the capitals between Brisbane and Adelaide and also on the proposed transcontinental line from Kalgoorlie to Port Augusta, the cost of conversion to be shared upon a basis to be determined between the Commonwealth and the States.

**5. State Governments' Approval.**—With the exception of the question of uniform gauge, the State Governments have fallen in with the recommendations of the Council. The gauge question is apart from the general scheme, and is under discussion ; the 4 ft. 8½ in. gauge has been decided on for the transcontinental line. The Council was formally established as an adjunct of the Defence Department in December, 1911, and the chief appointments have been made. The establishment is as follows :—14 colonels, to be drawn from railway commissioners and general managers (Commonwealth 3, New South Wales 3, Victoria 3, Queensland 2, South Australia 1, Western Australia 1, Tasmania 1 ; and 45 lieutenant-colonels, to be drawn from the maintenance, traffic, transportation, locomotive and electric branches (Commonwealth 7, New South Wales 7, Victoria 7, Queensland 8, South Australia 4, Western Australia 7, Tasmania 5). Railway Commissioners are rated as commandants.

## § 8. Relation to the Empire.

During the New Zealand wars many colonists served with the British forces, their service generally being purely as individuals. At the outbreak of the war, the *Victoria*, a steam sloop of 450 tons register, with an armament of seven 32-pounders, and a crew of 95, a large percentage of whom had been in the Royal Navy, was offered by the Government of Victoria to the Imperial authorities for service in New Zealand waters. The offer was accepted, and the vessel proceeded to Auckland, calling *en route* at Hobart, where she took on board part of the 40th Regiment (Imperial). The *Victoria* was employed continuously in transport and various operations along the coast until the termination of the war. In 1885 a field battery, an infantry battalion, and an ambulance corps, numbering in all 770, with 218 horses, left New South Wales to take part in the Suakin campaign. Lord Wolseley's despatch of 15th June, 1885, reads:—"The result was so satisfactory that I trust the noble and patriotic example set by New South Wales may, should occasion arise, be followed by other colonies."

In 1899 the outbreak of war with the Boers led to the several colonies offering contingents. This service was continued when, on 1st March, 1901, the control of the

defence forces passed over to the Commonwealth. Besides the troops officially organised many Australians served as individuals in the campaign. The following table shews the strength of the military contingents sent at various times from Australia to South Africa:—

### STRENGTH OF MILITARY CONTINGENTS SENT FROM AUSTRALIA TO SOUTH AFRICA.

State.	State Troops at State Expense.			State Troops at Imperial Expense.			Commonwealth Troops.			Grand Total.		
	Officers.	Other Ranks.	Horses.	Officers.	Other Ranks.	Horses.	Officers.	Other Ranks.	Horses.	Officers.	Other Ranks.	Horses.
New South Wales	160	3,217	3,135	76	1,308	1,443	78	1,271	1,294	314	5,796	5,872
Victoria	47	751	830	77	1,569	1,877	69	1,052	1,118	193	3,372	3,825
Queensland	39	694	868	73	1,346	1,803	37	699	736	149	2,739	3,207
South Australia	20	335	258	46	644	696	23	467	490	89	1,437	1,444
Western Australia	18	331	269	34	540	608	15	291	306	67	1,162	1,183
Tasmania	6	173	58	17	358	422	13	290	303	36	821	783
Total	290	5,492	5,418	323	5,765	6,649	235	4,070	4,247	848	15,327	16,314

There were, in addition, several special service officers attached, at the request of the colonial Governments, to the British forces; these officers served with the Imperial troops with a view to aiding the development of the Commonwealth forces, particularly in regard to the routine and administration of troops on service.

The Home Government also accepted the offer of contingents from Australia on the outbreak of the Boxer rebellion in China. Naval volunteers were furnished by New South Wales and Victoria, and South Australia equipped a gunboat for the Imperial service. The strength of the New South Wales contingent was 260, and that of the Victorian 200, of all ranks.

## § 9. University Course in Military Science.

Following upon the endowment by the Sydney University of a Chair of Military Science, a curriculum, to extend over a period of three years, commenced in March, 1907. Completion of the course entitles the student to a diploma in military science, and students not completing it receive certificates for any courses in which they have given satisfaction.

The courses for the first year are Military History and Science I. and Military Engineering. In the former subject ten lectures are given in military history and ten in strategy, and in the latter there are ten lectures with five days' practical instruction. In the second year the subjects are Military History and Science II. and Military Topography. The former comprises ten lectures in military history and ten in Imperial defence. In topography ten lectures and seven days' practical instruction make up the course. The subjects for the third year are Military History and Science III. and Military Law and Administration. Ten lectures in military history are joined with ten in tactics to make up the former, while there are ten lectures in the latter course.

The lectures for diploma are given at the Sydney University during Lent and Trinity terms. Short continuous courses of instruction in military subjects for the benefit of officers of the permanent and citizen forces are also arranged, the lectures being delivered during Michaelmas term.

## § 10. The Defence Forces of New Zealand.

The natives of New Zealand have generally shewn themselves well disposed to the British colonists, but in 1845-8 and 1860-70 there were native wars. In these, many of the tribes fought for the Colonial Government. Colonists joined with the Imperial troops in the campaign that began in 1845. In October, 1847, a detachment of Imperial soldiers arrived, under an agreement to perform garrison duty for a few days each year for seven years, and to be constantly in readiness for military service if required, in return for which each soldier received an acre of land with a cottage thereon. The New Zealand Fencibles were also constituted during the first Maori war. In 1860 volunteer forces were raised to fight with the Imperial troops. Military settlers were also enrolled in Australia and other places for service in New Zealand. During the war the Imperial troops were withdrawn, the Colonial Government undertaking its own defence. After the conclusion of the war, part of the field force was organised into a permanent artillery unit. The defences of the Dominion are now constituted under Acts of 1886, 1900, 1906, 1907, and 1909. In 1882 the strength of the forces maintained was 7367—made up of 732 cavalry, 907 artillery, 380 engineers, and 5348 infantry. The colony furnished 150 (approximately) officers and 4850 men for the South African war.

The New Zealand defence forces consist of the Permanent and the Territorial bodies. The former comprise the Staff Corps (Officers), the Permanent Staff (warrant and non-commissioned officers), and the Royal New Zealand Artillery (field and garrison). The Territorial forces are: Mounted Rifles (twelve regiments); Field Artillery (eight batteries); Garrison Artillery (nine companies); Engineers (four companies); Infantry (sixteen regiments); Signal Corps (eight companies); Army Service Corps; Medical Corps (eight field ambulances); Veterinary Corps; Rifle Clubs; and Senior Cadets. The permanent forces are at all times liable for foreign service; the territorial forces only for home service; the senior cadets are not liable for active service.

For the purpose of decentralisation the Dominion is divided into four military districts, these are further subdivided into area-groups and areas.

Liability for service is enacted in the Defence Act and regulations. These provide for the gradual military training of every male from the age of 12 to the age of 25, after which service in the Reserve up to the age of 30 is required. There are no distinctions and no exceptions, except physical unfitness. Persons with conscientious objections to fighting are to serve in non-combatant branches.

As junior cadets, from 12 to 14, all boys undergo a course of elementary military training (chiefly physical) under the Education Department. At 14 they are transferred to the senior cadets, remaining in that division till 18, and performing regular military work, though not liable for active service. At 18 active service in the regiments begins, and continues to the commencement of the reservist period, which extends from 25 to 30, during which time active service in the regiments may be demanded in case of war or other national emergency. A secondary reserve to complete the ranks of the territorial force, after its own reserve has been used up, is furnished by the rifle clubs. Registration of senior cadets is compulsory at the age of 14.

The numbers of territorials and senior cadets registered up to August, 1911, for military training and not then posted to units, together with those already serving, are shewn in the following table:—

Territorials, now serving (under 21 years)	...	...	...	6,309
Registered for enrolment	...	...	...	22,016
Senior Cadets (including those serving)	...	...	...	30,164
Total	...	...	...	58,489
Members of territorial force over age desirous of continuing service	...	...	...	<u>2,862</u>

The training is strictly territorial and carried out (except camp training) within reach of home, and at convenient times. A minimum is laid down, and includes seven days' camp, a prescribed course of musketry and gunnery, and field training.

The establishment of the territorial force is 30,000. It is organised in field and coast defence units, and is to be fully armed and equipped according to the most modern standards. The members are uniformed by the State, and paid and rationed during the annual camp. The training is in the hands of regimental officers, assisted by the officers, and warrant and non-commissioned officers of the permanent forces. Officers are drawn from the ranks on the recommendation of commanding officers, and are appointed, promoted, and retired in accordance with definite regulations calculated to insure their efficiency and status.

The senior cadets are instructed in companies of infantry. In the appointment of officers, and for general disciplinary purposes, the military authorities co-operate with headmasters and the heads of other recognised organisations.

Members of the Reserve are borne on the reserve lists of their late unit, and parade for two half-days annually with some part of that unit. The secondary reserve (members of rifle clubs) carry out each year a prescribed course of musketry.

The New Zealand Staff Corps will ultimately consist of officers who have been trained as cadets in the Royal Australian Military College at Duntroon. Ten of such cadets are to be nominated annually.

Arrangements have been made with the Imperial Army Council for the selection (on interchange) of officers required to fill vacancies in the Staff Corps.

Administration and control is in the hands of the Council of Defence. The following table gives the strength of the various corps on 31st December, 1910:—

#### STRENGTH OF NEW ZEALAND DEFENCE FORCES, 31st DECEMBER, 1910.

HEADQUARTERS AND DISTRICT		Mounted Rifles	...	...	4,817
STAFFS	70	Infantry	...	...	6,384
PERMANENT—		Field Ambulance Corps	...	...	260
Royal N.Z. Artillery (including		Garrison Bands	...	...	143
Electric Light sections)	258	Battalion Bands	...	...	372
VOLUNTEERS—					
Field Artillery	510	Grand total trained	...	...	14,175
Garrison Artillery Division	1,011				
Engineers	350				

In addition there are the following:—Unattached officers, 250; reserves, 246; medical staff, 161; veterinary staff, 19; defence cadets, 5097; and rifle club members, 3750. The grand total of the defence forces is therefore 23,698.

The following table gives the military expenditure of New Zealand from 1905-6 to 1910-11:—

#### MILITARY EXPENDITURE, NEW ZEALAND, 1905-6 to 1910-11.

Year	1905-6.	1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
Expenditure	£156,555	£151,431	£174,670	£193,976	£188,950	£212,280

In addition, the expenditure on naval defence was £100,000 in 1909-10 and 1910-11; and £40,000 in previous years.

## SECTION XXIX.

## PAPUA (BRITISH NEW GUINEA).

## § 1. New Guinea.

1. **Geographical Situation of New Guinea.**—New Guinea, frequently described as the largest island in the world, lies to the north-east of Australia, between  $0^{\circ} 25'$  and  $10^{\circ} 40'$  S. latitudes, and between  $130^{\circ} 50'$  and  $150^{\circ} 35'$  E. longitudes. Its estimated area exceeds 800,000 square miles, the greatest length being 1490 miles and the greatest breadth 480 miles.

2. **Discovery.**—The island was probably sighted by Abreus in A.D. 1511. The first visit by Europeans was apparently either that by the Portuguese Don Jorge de Meneses on his way from Goa to Ternate in 1526, or that by the Spaniard Alvaro de Saavedra in 1528. In 1606 Torres, having parted company with De Quiros at the New Hebrides, sailed, on his way to the Philippines, through the strait which separates the island from Australia, and which now bears his name.

3. **Colonisation.**—Little progress was made for many years in exploration and settlement. First the Portuguese, and afterwards the Dutch, who to a great extent replaced them as the principal European traders in the East, seem to have jealously excluded other traders and adventurers, and to have kept the knowledge of their discoveries to themselves. The coasts were visited by Roda, Schouten, Lemaire, Tasman, Dampier, Torres, Bougainville, and Cook; but the difficulties of navigation, the savagery of the islanders, and the tempting fields for enterprise in the more temperate regions further south, diverted the energy of traders and voyagers. Forrest describes a voyage by himself in 1774. In 1793, New Guinea was annexed by two commanders in the East India Company's service. Since that date the Dutch have made extensive surveys of the western portion, and the British and Germans have occupied and colonised the eastern.

4. **Partition.**—These three powers have agreed to the partition of New Guinea, each having suzerainty over islands adjoining its own territory. The whole of the portion west of the 141st degree of longitude, comprising about 150,000 square miles, or nearly half the island, belongs to the Dutch. The eastern half is divided in almost equal portions between Great Britain and Germany, the area possessed by each (with adjacent islands) being about 90,000 square miles. An Anglo-German boundary commission, appointed for the purpose of defining the boundary between the territories of the two nations, started operations on 26th December, 1908, and completed the field-work on 27th October, 1909. The total length of boundary delimited was  $66\frac{1}{2}$  miles. The work was both important and difficult. For a considerable portion of the survey, the country was exceedingly rough and mountainous, and the natives hostile. In one instance, the line was carried over a range at an elevation of 11,110 feet. The Dutch colony forms part of the residency of Ternate in the Moluccas, and has not been extensively developed. The German protectorate, where considerable commercial development has taken place, includes the northern part of the eastern half of the mainland, known as Kaiser Wilhelm's Land, and the large islands of the Bismarck Archipelago and the Solomon Group, as well as nearly 200 smaller islands. The south-eastern portion of New Guinea, nearest Australia, is British, and a dependency of the Commonwealth of Australia.

## § 2. The Australian Dependency of Papua.

**1. Australian Dependency of Papua.**—Surveys of the east coast of New Guinea by Stanley, Yule, Blackwood, Moresby, and others, brought home to Queensland, and to Australia generally, the danger to her commerce which would result from foreign possession of the islands and coasts opposite to Cape York, and from the holding by a hostile power of the entrance to the splendid waterway inside the Barrier Reef. The mainland opposite the shores of Queensland east of the 141st meridian was therefore annexed by that colony in 1883; but the action was disallowed by the British Government. In 1884, however, a British protectorate was authoritatively proclaimed by Commodore Erskine over the region lying east from the 141st meridian as far as East Cape, with the adjacent islands as far as Kosman Island. In the year following an agreement with Germany fixed the boundaries between the possessions of the two countries, and to Great Britain was assigned the portion now known as Papua, lying between the extreme limits of 5° and 12° S., and 141° and 155° E. The British protectorate was subsidised by Queensland, New South Wales, and Victoria, and lasted till 4th. September, 1888, when it was proclaimed a possession of the Empire. Its constitution was then that of a Crown colony, in association, however, with Queensland. Administration was in the hands of a Lieutenant-Governor, aided by an executive and a legislative council, and advised by a native regulation board. Port Moresby, on the south coast, was made the headquarters of the official establishment; a supreme court was established there, and magisterial courts in the districts; and an armed native constabulary force, numbering 235 on 30th June, 1911, under a European officer, was instituted for the maintenance of order. There were also, on the same date, 466 native village constables employed by the Crown.

**2. Annexation by Commonwealth.**—The territory was placed under the authority of the Commonwealth on 1st September, 1906, by proclamation issued in pursuance of Letters Patent of the 18th March, 1902, and was accepted by the Commonwealth by the Papua Act 1905, which came into force by virtue of the proclamation aforesaid. The transfer was made under the authority of section 122 of the Constitution (see p. 32 hereinbefore). The territory is now under the administration of the Commonwealth, but not included within it, and is divided into eleven magisterial districts.

**3. Physical Characteristics.**—Papua lies wholly within the tropics. The northernmost point touches 5° S. latitude; its southernmost portion, comprising Sudest and Rossel Islands, lies between 11° S. and 12° S. latitude. It is separated from Australia by Torres Straits. The length of Papua from east to west is upwards of 800 miles; towards either end the breadth from north to south is about 200 miles, but about the centre it is considerably narrower. The territory comprises also the islands of the Trobriand, Woodlark, D'Entrecasteaux, and Louisiade groups. The length of coast-line is computed at 3664 miles—1728 on the mainland and 1936 on the islands. The total area is about 90,540 square miles, of which 87,786 are on the mainland and 2754 on the islands. From the eastern end of the territory rises a chain of mountains, which forms a great central ridge and attains its greatest altitude, as it extends westwards, in the Owen Stanley Range, the highest points of which are Mount Victoria (13,200 feet), Mount Scratchley, the Wharton Range, and Mount Albert Edward. The western end of the possession is for nearly 300 miles generally low and swampy for some distance along the coast. The whole territory is well watered. The great mountains and a great portion of the lower country are covered with forest. The islands are mountainous, and, with the exception of the low coral islands of the Trobriand Group, part of Murua, and a few others of small dimensions, principally of volcanic formation. The highest is Goodenough Island, 8000 feet. The largest rivers of the mainland flow into the Gulf of Papua. The Fly River, with its tributaries, drains an extensive area of the territory of the Netherlands, as well as the British. Its length in British territory is about 620 miles, and it is navigable by a steam launch for over 500 miles. Other important rivers are the Turama and the Purari. There are many excellent harbours.

### § 3. Population.

The total white population of Papua on 30th June, 1911, was 1032, made up of 771 adult males and 173 adult females (adults being persons over 16 years of age), and 40 male and 48 female children. The following table gives the population of Papua for the last five years:—

#### WHITE POPULATION OF PAPUA, 1907 to 1911.

YEAR ENDED 30TH JUNE.

1907.	1908.	1909.	1910.	1911.
690	711	702	879	1,032

The chief occupations of whites are:—Government officials and employees, 120; planters (including managers and assistants), 139; and miners, 144.

It is not possible to make a reliable estimate of the number of natives, owing to the fact that much of the interior country is unexplored. It is generally assumed to be somewhere between 400,000 and 500,000. These speak many languages and dialects. The coloured population, other than Papuans, numbered on 30th June, 1911, 450. On the same date, half-castes, including Papuan half-castes, totalled 230. An Immigration Restriction Ordinance prohibits the immigration into the territory of persons who fail to pass the dictation test, or who are persons of bad character, or likely to become a charge upon the public. Exemptions may, however, be granted by the Lieutenant-Governor to persons of special skill whom it is desired to employ as overseers or foremen.

### § 4. Native Labour.

The rights of both employer and labourer are conserved by the Native Labour Ordinances. Service on the part of the native is voluntary, and he must be justly treated, and properly housed and fed. Employers may recruit personally, or obtain their natives through a licensed recruiter. Contracts of service must be in writing, entered into before a magistrate or other qualified officer, and the natives must be returned to their homes on completion of engagement. During the period of service the recruiter or employer is personally responsible for the native's welfare. Refusal to work after engagement, or desertion from service, renders the labourer liable to imprisonment. On the other hand, a magistrate may terminate an engagement where unjust or harsh treatment by the employer is proved. The term of indenture must never exceed three years, and in the case of miners and carriers eighteen months is the limit, but re-engagements may be made. The magistrate must satisfy himself that the remuneration is fair, that the native is willing to undertake the service, and that there is no probability of unfair treatment or detention. Wages must be paid in the presence of an officer. A medicine chest, stocked with necessary drugs and first aid instruments, must be kept by all employers.

Just treatment, good food, and satisfactory remuneration for his labour has made the Papuan savage an excellent servant. With considerable natural aptitude and intelligence, he is able to understand readily what is required by his employer; consequently native labour is very largely engaged by the Administration for the construction of roads and public works, and by the private employer for the clearing and upkeep of plantations. In some districts, however, the natives manifest a marked unwillingness to work.

The number engaged under contract of service during the year ended 30th June, 1911, was 7806. In addition, there were about 1000 persons employed who were not under contract of service. The available labour supply is inadequate for the development of the territory, and importation of Javanese coolies has been suggested.

## § 5. Production.

1. **Papuan Products.**—The products of the territory are obtained from its agricultural, forestal, fishing, mining, and manufacturing industries. There is a Papuan Court at the Imperial Institute, London, where, beside maps, handbooks and reports, a representative collection of products is shewn, additions being made to the exhibits from time to time. The industries of Papua are not numerous, but they are becoming more diversified. In many cases, some years must lapse before the raw material is available for commerce.

2. **Agriculture.**—(i.) *Soil and Rainfall.* The physical features of Papua are favourable to agriculture. Rich soils at varying elevations, and heavy and evenly-distributed rainfall, have ensured success in cultivating almost every tropical product of value. The territory comprises immense areas of rich alluvial and volcanic soils along the coast, and equally fertile land at elevations up to 6000 feet. Splendid rainfalls are recorded, except over a belt of country which runs back from the coast to the hills, and which has its dry season from May to November. This “dry” area is admirably suited for the production of tobacco, fibres, cotton, etc. There are fifteen meteorological stations throughout the territory. An economic museum and agricultural library have been established. By anticipating and removing many of the pioneering difficulties the Government has made the task of the colonist an easy one. The feature of the year 1910-11 was the marked cessation of speculative acquisitions of land, and the steady investment of capital in the development of large areas already acquired. One of the principal difficulties of planters is the heavy growth of weeds, and the Government has undertaken experiments with the planting of grasses to take the place of weeds, and so keep down the gross rank vegetation.

(ii.) *Plantations.* On 31st March, 1911, there were 167 plantations. Agricultural settlement has been mostly in the Central and Eastern Divisions, though plantations are rapidly spreading in other districts, particularly the South-Eastern and Western. The total area planted was 15,881 acres, or an average of 95 acres for each plantation. There are also about 3000 acres cleared ready for planting. The principal plantation industries entered upon up to the present are cocoanuts, rubber, sisal hemp, and coffee. Secondary agricultural industries are the cultivation of bowstring hemp, cotton, vanilla, kapok, cocoa, tapioca, cinnamon, tea, and tobacco. The following table shews the areas under the different cultures (exclusive of maize and garden products) on 31st March, 1911:—

							Acres.
Cocoanuts	...	...	...	...	...	...	9,513
Rubber	...	...	...	...	...	...	2,889
Sisal hemp	...	...	...	...	...	...	2,332
Coffee	...	...	...	...	...	...	132
Other cultures	...	...	...	...	...	...	1,015
Total	...	...	...	...	...	...	15,881

(iii.) *Government and Native Plantations.* There are six Government plantations of cocoanuts and Pará rubber, with a total area of 229 acres. The natives are compelled by an ordinance to plant cocoanuts for food supply. It is estimated that the total area so planted amounts to 350,000 acres. New Government plantations are contemplated.

(iv.) *Government Nurseries and Experimental Stations.* Sylvicultural nurseries have been established with the object of supplying settlers with seeds and plants, which

have been imported from the East and West Indies, Central America, tropical Australia, Ceylon, the Malay States, and the Solomon Islands. Attached to the nurseries are experimental stations, where the suitability of soil and climate for the different products are tested and correct methods of cultivation demonstrated. Four nurseries have been established, the total area being about 190 acres. From these, more than 102,000 Pará rubber trees and seeds, 417,000 sisal hemp plants, 600 bowstring hemp plants, as well as various other plants have been distributed to planters. A Government orchard, for supplying fresh fruit and vegetables, has been established at one of the experimental stations, and yields considerable quantities of European fruit-foods. It is intended to discontinue one of the nurseries, its functions being adequately carried out elsewhere.

(v.) *Indigenous Products.* There are many indigenous plants of great economic value. These comprise sandalwood and other timber trees, sugar-cane, cotton plants, rubber-both, vine, nutmegs, ginger, bamboos, palms, bananas, bread-fruit, edible nuts, sago-palms, fruits, and vegetables.

3. **Live Stock.**—On 31st March, 1911, the live stock in the territory consisted of 339 horses, 5 donkeys, 1149 head of cattle, 116 mules, 177 sheep, 619 goats, 30 pigs, and 6341 fowls. A Government stud farm has been established for the breeding of horses. In April, 1910, twenty-two stud mares, many of them in foal, were imported from Queensland, and further importations are contemplated in 1911-12. An Arab stallion of good breeding is a valuable asset to the stud. The introduction of rabbits, foxes, hares, and monkeys is prohibited.

4. **Forest Products.**—There is a large variety of useful timbers in Papua. Of 120 varieties that have been catalogued, 16 are adapted to resisting heavy strains, and are suitable for girders, railway waggons, etc.; 10 for railway carriage and coach building; 15 for joinery, lining, flooring, etc.; 14 for butter boxes; 5 for boat building; 4 for piles; and 15 for cabinet work. Sandalwood is indigenous. It is largely used for cabinet work, and santal oil is distilled from its roots. Ebony is also produced for export. Rubber is a promising industry. There are considerable areas of native rubber (*Ficus Rigo*), but the planters generally prefer the imported Pará rubber. Guttapercha is obtained from species of *palaquium*, which grow on the hills. Drugs, dyewoods, and spices are also obtained from indigenous plants. Three saw mills have been established, but the output has not been sufficient to supply the local demand for building and other timber, and large quantities of sawn timber have been imported from Australia. About 400,000 superficial feet of log timber were exported to Australia in 1910-11, an increase over the previous year of 342,000 sup. feet. Contracts have also been made by residents to ship timber to Great Britain.

5. **Fisheries.**—Pearl-shell fishing occupies an important place in the industries of Papua. A considerable number of luggers is licensed, but the returns are mostly credited to Queensland, whose boundary approaches to within a few miles of the Papuan coast. The species of tortoise which supplies the commercial tortoise-shell is also a native of the territory. Bêche-de-mer is found along the shores and reefs. There is a dugong fishery on the coast of the Western Division.

6. **Mining.**—(i.) *Variety of Minerals.* Minerals have been discovered in many places, and over an extremely wide range. Those discovered so far are—gold, copper, silver, tin, lead, zinc, cinnabar, iron, osmiridium, gypsum, manganese, sulphur, and graphite. Of precious stones, only the topaz and beryl have been obtained. Large beds of apparently good coal also exist. The discovery of petroleum is reported. The value of the mineral output in 1910-11 was larger than that of any of the four preceding years. A geologist was added to the Government service at the beginning of the year 1911.

(ii.) *Gold.* In 1878 gold, the existence of which in the territory had long been known, was unsuccessfully sought by a party of Australian miners. Ten years later the first field was discovered. The search has now spread over every division, and finds have been recorded wherever the explorers have gone. There are 144 white miners and 911 indentured labourers in Papua; the majority of the whites are working the Murna gold-field. The quantity and value of the gold yield for five years are given below:—

#### GOLD YIELD, PAPUA, 1906-7 to 1910-11.

1906-7.		1907-8.		1908-9.		1909-10.		1910-11.	
Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.
ozs.	£	ozs.	£	ozs.	£	ozs.	£	ozs.	£
16,103	58,886	14,557	51,024	14,710	51,108	16,151	60,181	18,497	68,803

Most of the rivers, with the exception of those flowing into the Gulf of Papua, have been declared open to gold-dredging, and good yields have been obtained from many of the rivers thus dredged.

The Gold-buyers Ordinance (Ordinance XVIII. of 1909) provides for the issue of licenses to buy gold, and imposes a penalty in respect to the purchase of gold by unauthorised persons. The total quantity of gold won to 30th June, 1911, was 322,537 ounces, valued at £1,166,947.

(iii.) *Copper.* A rich and extensive copper field has been proclaimed, and about 30 square miles of it are being worked. There are indications that the mineral exists over a much wider region. The ore shipments in 1910-11 were the largest since the field was discovered. The total amount shipped to date is 855 tons, valued at £13,772.

(iv.) *Other Minerals.* Some good samples of galena (sulphide of lead) have been obtained. Small quantities of cinnabar (sulphide of mercury), graphite (or plumbago), osmiridium (or iridosmine), zinc, native sulphur and other minerals are also found.

A mineral laboratory and museum has been fitted up, and is available to prospectors and others interested.

7. **Manufactures.**—The chief native manufactures are pottery, canoes, fishing nets, mats, shell ornaments, stone implements, and decorated gourds.

### § 6. Statistical Summary.

1. **Revenue and Expenditure.**—The revenue and expenditure for 1910-11, under principal heads, are given below; also a summary covering a period of five years. In addition to the revenue collected during the year, amounting to £45,972, £30,000 was granted by the Commonwealth Government—£25,000 for ordinary expenditure, and £5000 for Government plantations; £2483 was brought forward from the previous year, being the unexpended balance. There was, therefore, £78,455 available for expenditure; of this £70,699 was expended. As compared with 1909-10, the principal increases in receipts were:—Customs receipts, £7653; postal receipts, £2255; mining receipts, £456; and sale of allotments, £1054. The chief item of decrease was sale of Government property, £952. On the expenditure side, large increases occurred in three departments, viz., Government Secretary's Department, £3903; Treasury and Postal Department, £2320; magistrates, £4281.

\* See note to preceding table.

2. Imports and Exports.—The value of imports and exports for five years is shown in the table below. The figures for 1907-8 and 1908-9 evidenced considerable expansion in trade over former years. Those for 1909-10 showed an advance over 1908-9 of £25,497 in imports, and £20,907 in exports. In 1910-11 imports increased nearly 70 per cent. over the previous year, exports nearly 17 per cent.

## VALUE OF IMPORTS AND EXPORTS OF PAPUA, 1906-7 to 1910-11.

Particulars.					1906-7.	1907-8.	1908-9.	1909-10.	1910-11.
					£	£	£	£	£
Imports	...	...	...	...	87,776	94,061	94,680	120,177	202,910
Exports	...	...	...	...	63,756	80,616	79,692	100,599	117,410
Total trade	...	...	...	...	151,532	174,677	174,372	220,776	320,320

The principal articles of import are foodstuffs, which in 1910-11 reached a total value of £57,740. The chief other imports in that year were:—Drapery and clothing, £29,060; hardware and ironmongery, £13,818; building material, £12,433; tobacco and cigars, £11,445; machinery, £8516; wine, spirits, and beers, £6685; live stock, £5516; oils and kerosene, £3869; and boats and launches, £3866. The most notable increases over the previous year are:—Foodstuffs, about £22,000; and drapery and clothing, about £15,000. In each of the five years under review gold has formed considerably more than half the value of the total export. In 1910-11 the value of this metal exported reached £62,112. Other principal exports were:—Copra, £17,837; copper ore, £12,386; bêche-de-mer, pearls, pearl and turtle shell, £9046; rubber, £2054; timber, £681; sandalwood, £190.

3. **Postal and Shipping.**—Considerable development has been shewn in means of communication—the postal returns, and the tonnage of vessels entered and cleared at ports, having largely increased. Particulars regarding postal matter are given hereunder:

## POSTAL STATISTICS OF PAPUA, 1906-7 to 1910-11.

Year.	Letters.		Packets.		Newspapers.	
	Received.	Despatched.	Received.	Despatched.	Received.	Despatched.
1906-7	49,541	41,036	7,487	2,581	38,374	12,846
1907-8	53,118	47,521	6,655	3,137	44,052	12,674
1908-9	57,055	51,259	8,608	3,997	48,070	14,320

## § 7. Land Tenure.

1. **Method of Obtaining Land.**—(i.) *The Land Laws.* The broad principles upon which the land laws of Papua are based are:—(a) No land can be alienated in fee simple; (b) the rental of the land leased is assessed on the unimproved value of the land, and is subject to reassessment at fixed periods.

(ii.) *Agricultural Lands (Class A).* The terms upon which the land may be leased are exceedingly easy to the settler. He can obtain a leasehold of the best class of agricultural land for any period up to ninety-nine years on the following conditions:—

- (a) Upon making application a small deposit fee, ranging from £1 for 100 acres or less, to £5 for 1000 acres, and £5 for every additional 1000 acres or portion thereof, is payable. This is returned to the applicant when, having accepted the lease, he has cultivated a portion of the land.
- (b) No survey fees are charged to the lessee, and no fee is charged for the preparation or registration of the lease.
- (c) If the lease is for not more than thirty years, rent shall be paid during the whole term at the rate of 5 per cent. per annum on the unimproved value of the land.
- (d) If the lease is for more than thirty years the rent payable is determined at 5 per cent. per annum of the unimproved value of the land, but no rent is payable for the first period of ten years.

The unimproved value of the land is to be appraised every twenty years during the currency of the lease, and the rent determined accordingly, but if on any appraisal the rent is raised by more than one-third, the lessee may disclaim the lease, and is thereupon entitled to receive compensation for his improvements.

The compulsory improvement conditions attached to agricultural leases are as follows:—

- (a) One-fifth must be properly planted with some approved plants within five years.
- (b) Two-fifths within ten years.
- (c) Three-fourths within twenty years.
- (d) During the remainder of the term three-fourths of the suitable land must be kept properly planted.

Provided always that, if at any time during the first five years of a lease it appears to the Land Board that reasonable efforts are not being made to fulfil the improvement conditions, they may recommend the Lieutenant-Governor to cancel the lease, and thereupon it shall be lawful for the Lieutenant-Governor, by notice in the *Gazette*, to cancel the lease accordingly.

All agricultural lands which have not been alienated by the Crown have been assessed under Section 13 of the Land Ordinance at an unimproved value of 5s. per acre. This appraisal definitely fixes all land rentals for agricultural lands for twenty years as follows:—First ten years, free; second ten years, 3d. per acre per annum.

The rental of agricultural leases for the whole term of ninety-nine years cannot exceed the following amounts, subject to the clause *re* voluntary forfeiture and compensation:—First twenty years—first ten years, *nil*, second ten years, 3d. per acre; second twenty years, 4d. per acre; third twenty years, 5½d.; fourth twenty years, 7½d.; balance of lease, 9½d.

The maximum area which may be granted in any agricultural lease is 5000 acres.

(iii.) *Pastoral Lands (Class B).* Pastoral land, suitable for cattle and horses, can be obtained in easily accessible positions. All these lands are well watered and clothed with blady kangaroo, crowsfoot, couch, scurvy, and other grasses. The carrying capabilities of this land are estimated at forty head of cattle to the square mile. Application, deposits, fees, etc., are similar to those for Class A.

The compulsory improvement conditions attached to pastoral leases are:—

- (a) Ten head of cattle, horses, asses, mules, or fifty head of sheep, per square mile, must be on the land within five years.
- (b) Within ten years these numbers must be increased to twenty head of cattle or 100 sheep or goats to the square mile.
- (c) The land must be kept stocked to this extent for the remainder of the lease.

Provision for forfeiture of lease is the same as in the case of agricultural lands.

The rentals of pastoral leases for the whole term of ninety-nine years cannot exceed the following amounts, subject to the clause *re* voluntary forfeiture and compensation:— First twenty years—first ten years, *nil*; second ten years, 1s. per 100 acres; second twenty years, 3s. 1½d. per 100 acres; and increasing by one-third for every succeeding twenty-year period. Pastoral lands must be “proclaimed” before leasing.

(iv.) *Residence Leases.* Leases of Crown lands not included in any town may be granted for residence purposes. The area is not to exceed five acres, with annual rent not less than 10s. per acre; improvements as prescribed are to be effected, and the land fenced.

(v.) *Special Leases.* Leases of Crown lands may be granted for the erection of quays, wharfs, storehouses, factories, etc. The area is not to exceed 25 acres, and the period of the lease is limited to 25 years. Conditions as to rent, royalties, and improvements are to be carried out as prescribed.

(vi.) *Sales of Leases.* Permission may be given to sell, by auction or by tender, leases other than agricultural and pastoral, for special reasons.

2. *Land Tenures.*—On 30th June, 1911, the lands of the territory were held as follows:—

	Acres.			
Area of land held by the natives	...	...	...	56,518,842
Area of Crown land	...	...	...	1,036,123
Area of freehold land	...	...	...	26,547
Area of leasehold land	...	...	...	364,088
Area of territory	...	...	...	<u>57,945,600</u>

Since the operation of the Papua Act, private sales of land in the territory have practically ceased. The Government buys from the natives, and then leases to planters, who are forbidden to have direct dealings in land with Papuans. The development in leasehold tenures may be seen from the following table:—

#### TOTAL AREA HELD UNDER LEASE, 1906-7 to 1910-11.

Year ended 30th June.	1907.	1908.	1909.	1910.	1911.
Land held under lease ... acres	48,002	242,395	337,803	363,425	364,088

In 1910-11, the area of leases granted was 33,073 acres; that of leases expired, revoked, and forfeited was 32,411 acres. Of the latter, over 21,000 acres comprised leases which were held for over two years, but upon which no substantial improvements had been effected. There has been steady development in agriculture through the adoption of stringent safeguards against purely speculative acquisitions of land.

The land acquired by the Crown from the natives during 1910-11 was as follows :—

					Acres.
Area purchased from the natives	...	...	...	...	29,236
Area declared waste and vacant	...	...	...	...	12,960
Total	...	...	...	...	42,196
Less waste and vacant areas cancelled	...	...	...	...	19,200
Net increase for the year	...	...	...	...	22,996

The total area surveyed in the Territory is 25,353 acres of freehold, and 84,247 acres of leasehold.

## § 8. Progress of the Territory.

1. **Statistical View of Four Years' Progress.**—As already stated (§ 2, *supra*) the territory was placed under Commonwealth control on 1st September, 1906. The following table indicates the progress that has been made since that date :—

### STATISTICAL VIEW OF FOUR YEARS' PROGRESS, 1907-11.

Subject.	Year ended 30th June.	
	1907.	1911.
White population	690	1,032
Native labourers employed (exclusive of Crown servants)	2,000	8,806
Number of white civil servants	65	120
Armed constabulary	185	235
Village constables	401	466
Territorial revenue	£ 21,813	45,972
Territorial expenditure	£ 45,335	70,699
Value of imports	£ 87,776	202,910
Value of exports	£ 63,756	117,410
Area under lease	acres 70,512	364,088
Tonnage of ocean-going vessels entered and cleared at ports	159,177	300,246
Area of plantations	acres 1,467	15,881
Meteorological stations established	3	15
Gold Yield	ounces 16,103	18,497
Copper ore shipped	tons 137	403
Live stock in territory—		
Horses	173	*339
Cattle	648	*1,149
Mules	40	*116
Timber shipped	sup. ft. ...	400,000

\* On 31st March, 1911.

## SECTION XXX.

## PUBLIC HYGIENE.

## § 1. Introduction.

1. **General.**—Though the safeguarding of the public health as an organised department of administration is of comparatively modern growth, few branches of law have expanded more rapidly than the law relating to public health. The loss of potential wealth incurred through preventable diseases and deaths is of grave concern to the nation, and is a matter which has recently received an increased amount of attention both from the Commonwealth and State Governments and from the Health and other authorities in Australia. Numerous Acts of Parliament have been passed dealing with various aspects of the subject of public hygiene.

2. **State Legislation.**—In the first place there is a number of statutes, passed by the State Legislatures, such as Public Health Acts, Pure Food Acts, and Milk and Dairy Supervision Acts, providing, *inter alia*, for the constitution of Central Health Authorities, vested with definite powers, and furnishing the machinery necessary to enforce these powers. The general effect of this legislation has been to place local sanitary regulations and the execution of the Acts in the hands of the local authorities, subject to a general superintendence by a Government department.

3. **Commonwealth Legislation.**—Secondly, by the enactment of the Commerce (Trade Descriptions) Act 1905, the Quarantine Act 1908, and the Customs Act 1910, the Commonwealth Government has taken the first steps towards the exercise of its constitutional powers for the protection of the public health. All these Acts are administered by the Department of Trade and Customs.

4. **Scope of Enquiry.**—In addition to the statutes already referred to, account should be taken of a large body of legislation which relates more or less indirectly to the subject of public hygiene. It deals with a great variety of subjects and matters, such as factories, conditions of employment, mines, merchant shipping, prevention of fire, buildings, dangerous performances, contagious diseases, and other matters. There is also a number of statutes which have been passed with the object of protecting and supervising infant life. Owing to exigencies of space it is not possible in this section to do more than give a brief description of the scope and results of the legislation relating to public hygiene in its more important aspects.

## § 2. The Public Health Acts.

1. **General.**—The most important statutes relating generally to the subject of public hygiene are the Health Acts which have been passed in each State. While the scope of these Acts differs considerably in some of the States, there is a general similarity in their chief provisions and range of operation. The administration of the Acts is carried on by either a Central Board or a Commissioner of Health under Ministerial control, while their actual execution is imposed on local Boards of Health or on the local authorities.

constituted under the various Local Government Acts. Ordinarily the Central authority has general supervisory powers over local Boards and authorities, and also has power to act in case of default by or in the absence of a local Board or authority as to any duty under the Act, and to recover all expenses incurred. The Central authority may also make regulations, and the central and local Boards may make by-laws for various purposes generally specified in the Health Acts. Generally it may be said that the chief functions of the Central Health authorities are:—(a) the collection and dissemination of useful information relating to health and the prevention of disease, and (b) to control, stimulate, and, where necessary, to supplement the efforts of the local authorities.

Inspectors are sent to make reports on the hygienic conditions of country towns or districts with a view to assisting the local authorities with advice, and keeping the central department posted as to the activity or otherwise of these various bodies.

Rating powers for sanitary purposes are conferred on local authorities by the Local Government Acts.

The general powers of local authorities under the Acts extend to a variety of subjects and matters, including:—sewers and drains, sanitary conveniences, scavenging, cleansing, privies and cesspools, abatement of nuisances generally, offensive trades, public buildings, dwelling-houses and lodging-houses, hospitals, mortuaries, cemeteries and burial grounds, prevention of adulteration of food and drugs, unsound food, pollution of water, supervision of abattoirs and dairies, prevention of infectious diseases, and infant life protection.

**2. New South Wales.**—The Department of Public Health consists of a Permanent Head, Board and Secretary, together with the various staffs—medical, chemical and clerical; in addition there are five sanitary inspectors working under the medical officers of health and the chief sanitary inspector. The business carried on by the Department embraces public health and the general medical work of the Government. The Board is nominee; it was created in 1881, incorporated in 1894, and is charged with the administration of the following Acts:—Public Health Act 1902, Public Health (Nightsoil Removal) Act 1902, Dairies' Supervision Act 1901, Noxious Trades Act 1902, Cattle Slaughtering and Diseased Animals and Meat Act 1902, Sydney Abattoirs, etc. Act 1902, Quarantine Act 1897, Pure Food Act 1908, and Private Hospitals Act 1908. The Board also possesses advisory powers under the Local Government Act 1906.

**3. Victoria.**—In this State the Public Health Acts are administered by a Board composed of two members nominated by the Governor-in-Council and of seven members elected by the municipal councils. The medical and sanitary staffs of the Board consist of (a) the medical inspector, who is also chairman, (b) two assistant medical inspectors, (c) five port health officers, (d) five engineering inspectors, (e) one sanitary inspector, and (f) nine food inspectors. The main function of the Board is to enforce the execution of the Health Acts by the local municipalities, but it has been found advisable to supplement this supervisory function by an active policy of inspections as to the sanitary condition of various districts and the sampling of articles of food. The supervision of the sanitary condition of the milk supply is under the Dairy Supervision Branch of the Department of Agriculture. Acts administered by the Department of Public Health are:—The Health Act 1890, the Cemeteries Act 1890, the Cremation Act 1903, the Adulteration of Wine Act 1905, the Meat Supervision Acts 1900 and 1909, and the Pure Food Act 1905.

**4. Queensland.**—In this State a Department of Public Health was organised in 1901 under the authority of the Health Act 1900. Prior to that time a central authority—the Board of Health—existed, but was without legal power, and the responsibility of sanitary administration was thrown upon the local authorities. The Act of 1900 consolidated and amended prior health legislation and provided for the appointment of a Commissioner of Public Health, charged, under the Home Secretary, with the administration of the Act. The chief functions of the central authority are to advise and stimulate the local authorities on matters pertaining to the Act, and also, where necessary,

to compel the remedying of sanitary evils produced by local inefficiency or apathy. The production and sale of milk and the manufacture, sale, and export of dairy produce, in their hygienic aspects, are controlled by the Department of Agriculture and Stock under the Dairy Produce Acts 1904, 1905, and 1910.

5. **South Australia.**—The Central Board of Health in South Australia consists of five members, three of whom (including the chairman) are appointed by the Governor, while one each is elected by the city and suburban local Boards and the country local Boards. The Health Act 1898 provides that the municipal and district councils are to act as local Boards of Health for their respective districts. There are 175 of these local Boards under the general control and supervision of the Central Board. A chief inspector periodically visits the local districts and sees generally that the Boards are carrying out their duties. There is also a chief inspector of food and drugs (under the Food and Drugs Act 1908), and a chief inspector of cattle, and there are nine other inspectors in outlying districts who are directly responsible to the Central Board.

6. **Western Australia.**—In this State the Health Act, 1911—which amended and consolidated the preceding Health Acts of 1898, 1900, 1902, 1904 and 1909—now operates as from 1st June of that year. By this Act the principal authority (under the Minister), the Commissioner of Public Health, who must be a duly qualified medical officer, possesses full power to act as he may deem necessary in relation to any matter concerning public health, and has authority to appoint persons to assist him in carrying out the provisions of the Act. Every municipal district becomes a health district within the meaning of the Act, and the municipal councils thereof become the local health authorities. Each local authority is bound to carry out, within its district, the provisions of the Act. Local Boards of Health must not exceed seven members, who are appointed by the Governor for a term of three years, and are eligible for reappointment. A majority of the members (who must appoint one of their number as chairman), shall form a quorum, and all matters are decided by a majority of the members present, the chairman, in cases of an equality of votes, having a casting one.

7. **Tasmania.**—In this State a Department of Public Health, under the control of a Chief Health Officer, was constituted by the Public Health Act 1903. The department has one inspector, but district health officers are not provided for. The number of local authorities under the Public Health Act has been reduced to fifty-one since the Local Government Act 1906 came into force. All parts of Tasmania are now furnished with the administrative machinery for local sanitary government.

### § 3. Inspection and Sale of Food and Drugs.

1. **Introduction.**—The importance of securing a pure and wholesome supply of food and drugs is recognised by both the Commonwealth and State Parliaments. Under the Acts referred to later, and the regulations made thereunder, the importation of articles used for food or drink, of medicines, and of other goods enumerated, is prohibited, as also is the export of certain specified articles, unless there is applied to the goods a "trade description" in accordance with the Act. Provision is made for the inspection of all prescribed goods which are imported, or which are entered for export.

(i.) *Commonwealth Jurisdiction.* Under Section 51 (i.) of the Commonwealth Constitution Act 1900, the Commonwealth Parliament has power to make laws with respect to trade and commerce with other countries and among the States. By virtue of that power, the Commerce (Trade Descriptions) Act, 1905, and the Customs Act, 1910, to which reference has already been made in another part of this book (see pp. 599-600), were passed.

(ii.) *State Jurisdiction.* The inspection and sale of food and drugs is also dealt with in each State either under the Health Acts or under Pure Food Acts. There is, in addition, in the several States, a number of Acts dealing with special matters, such as the adulteration of wine and the supervision of meat. The sanitary condition of the milk supply is also subject to special regulations or to the provisions of special Acts; this subject is more particularly referred to in the next succeeding sub-section hereof.

(a) *General Objects of Acts.* The general objects of the Acts dealing with the inspection and sale of food and drugs are to secure the wholesomeness, cleanliness, and freedom from contamination or adulteration of any food, drug, or article, and for securing the cleanliness of receptacles, places, and vehicles used for their manufacture, storage, or carriage. The sale of any article of food or any drug which is adulterated or falsely described is prohibited, as also are the mixing or selling of food or drugs so as to be injurious to health.

(b) *Inspection and Analysis.* Power is given to any authorised officer to enter any place for the purpose of inspecting any article intended to be used as a food or drug and also to inspect articles being conveyed through the streets, by water or by rail. He may take samples for examination or analysis, and may seize for destruction articles which are injurious to health or unwholesome. Chemical analyses and bacteriological examinations are made by qualified officers. Special provision is generally made in the Acts with regard to the sale of preservatives and disinfectants.

(c) *Advisory Committees.* In New South Wales, Victoria, and South Australia Advisory Committees have been appointed for the purpose of prescribing food standards and for making recommendations generally with a view to carrying out the provisions of the Acts. The duty of enforcing these regulations is entrusted to the local authorities, but it is stated that up to the present comparatively few of the local councils seem to have realised the importance of guarding the food supplies of the people.

2. **New South Wales.**—Provisions as to the sale of food and drugs in New South Wales are contained in the Pure Food Act 1908 and in the regulations made thereunder. The administration and enforcement of these provisions are primarily duties of the Board of Health, but may, by direction of the Governor, be left to local authorities. Analyses are made by the Department of Public Health free of charge.

(i.) *Special Provisions.* The Act contains a number of special provisions. Drugs must comply with tests specified in the British Pharmacopœia, and packages of food must be labelled with description, weight, or measure of their contents. The advertising or sale of any injurious or useless food, drug, or appliance may be prohibited, as also may the sale of any substance as a disinfectant or preservative. A person selling prohibited articles may not be liable to penalties under the Act if he prove that he purchased such articles with a guarantee in writing that they were not adulterated or falsely described, that he had no reason to believe that the same were adulterated or falsely described, and that he sold them in the same state as when he purchased them. The person giving the guarantee must be a resident in New South Wales, or, if a company, must have a registered office in New South Wales. The Board of Health may require the council of any local authority to submit for analysis during each year not less than three samples of foods or drugs for each thousand persons of the population of its area.

(ii.) *The Advisory Committee.* The Pure Food Act 1908 provides for the constitution of an Advisory Committee on whose recommendation the Board of Public Health may make regulations prescribing food standards, prohibiting the manufacture or sale of food, or the use of appliances containing any specified substances, and for generally carrying out the purposes of the Act.

3. **Victoria.**—In this State the prevention of the adulteration of food and of the sale of unwholesome food are provided for by the Health Act 1890, as amended by the Adulteration of Wine Act 1900 and the Pure Food Act 1905 and regulations made thereunder. While differing considerably in detail, the general provisions of these Acts are in many respects similar to those of the New South Wales Act of 1908. The Meat Supervision Acts 1900 and 1909 specially deal with the supervision of the slaughtering of animals and the sale of meat in Victoria. The Pure Food Act provides, *inter alia*, for the establishment of a specially qualified Foods Standard Committee charged with the functions of formulating standards of purity, quality, and composition for articles of food and drugs. Various regulations as to both food and drugs have been made by this Committee. The Act requires explicit labelling of packages, and provides for the punishment, where possible, of the actual adulterator. The retail vendor is not penalised if it is clear that he has no guilty knowledge, and that he has taken reasonable precautions against committing an offence. A warranty or invoice may be available as a defence to any proceedings under the Acts, but if given by a person resident outside the State the defendant must prove that he had taken reasonable grounds to ascertain and did in fact believe in the accuracy of the statements contained in the warranty or invoice.

4. **Queensland.**—By Part VI. of the Health Act 1900 and by regulations made thereunder, provision is made for the inspection of food, and for the supervision of the sale of food and drugs by local authorities. The inspection and examination of food stuffs has, however, been almost entirely undertaken by the Department of Public Health, and it appears that very few of the local authorities make any attempt to carry into execution the provisions of the Health Act relating to food. Considerable activity was shewn by the Department during the year 1908-9 in carrying out a pure-food crusade, both in Brisbane and in provincial towns. Seventy prosecutions were carried through the courts in accordance with the food sections of the Act of 1900, and in sixty-three cases, fines were inflicted. During the year 1910-11 twenty-five prosecutions were undertaken and fines were imposed in every case. In any prosecution for selling adulterated food or drugs no person may be convicted if he prove that he did not know of the adulteration, and that he could not, with reasonable diligence, have obtained that knowledge. It is also open to a defendant to prove that he purchased the goods with a written warranty from some responsible person carrying on business in Queensland.

5. **South Australia.**—The inspection and sale of food and drugs is now chiefly contained in the Food and Drugs Act 1908, and in the regulations made thereunder; certain special matters, such as water and meat supplies, are dealt with in Part VII. of the Health Act 1898. An important provision of the Food and Drugs Act is the constitution of the metropolitan area as a single district, so that the sale of food and drugs generally, as well as the inspection and supervision of dairy premises and cattle in the metropolis, is under the control of one central body—the Metropolitan County Board. Another important provision of the Food and Drugs Act is the appointment of an Advisory Committee to fix standards of foods and drugs, and to draw up necessary regulations. In addition to dealing with the supervision of the milk supply and dairies, the Act provides for the inspection and analysis of foods, drugs, chemicals, spirituous liquors, patent medicines, and proprietary articles, for the inspection and examination of all animals offered for sale or slaughter, and for the licensing of ice cream and aerated waters manufacturers. A warranty given by a person resident in South Australia is available as a defence to any proceeding under the Act, if the defendant prove that he bought the article in the same state as sold. Proof of absence of knowledge of adulteration is a sufficient defence if the defendant could not by analysis or other adequate test have obtained that knowledge.

6. **Western Australia.**—The adulteration of food and unwholesome food is now dealt with under Part VIII. of the Health Act 1911. Each local authority (now constituted by this Act the local health authority) may, and when required by the Commissioner of Health must, appoint its own analyst, inspectors, and other officers necessary

to carry out the provisions of the Act. Under the previous Health Act of 1898, fairly systematic inspection of various articles of food was carried on within municipal districts, the samples submitted for analysis consisting chiefly of milk, and it was found that the effective supervision of imported tinned meats requires constant attention. Inspection of alcoholic beverages is carried out by spirit inspectors appointed under the Licensing Acts.

**7. Tasmania.**—Though provision existed under the Public Health Act 1903 for the inspection and supervision of food and drugs, it would appear that prior to 1911 no systematic attempt at enforcement of food purity was made in Tasmania. The statutory powers which existed under the 1903 Act left these matters wholly in the hands of local authorities, and the Department of Public Health had no power to take samples for examination or analysis. In any action under that Act a defendant had to be discharged if he could prove absence of knowledge or that he bought the article in the same state as sold, and with a warranty. Under the Food and Drugs Act 1910, which came into force on the 1st of March, 1911, food and drug regulations are now placed under control of the Department of Public Health. The Act authorises the appointment of inspectors of food and drugs acting under the Chief Health Officer, or in the case of an inspector being a member of the police force, then under the Commissioner of Police, and any local authority may, and when called upon by the Chief Health Officer must, appoint food and drug inspectors. Prosecutions have already taken place under this Act, but it is stated that its efficacy is likely to be seriously minimised by the lightness of the penalties imposed.

**8. Food and Drug Standardisation.**—With the object of securing uniformity of food and drug standards of the principal manufactured products sold in the Commonwealth, a conference, which was attended by representatives of the Commonwealth and all the individual States except Western Australia, was opened in Sydney on 8th June, 1910. The result of this conference was that several adoptions of standards of food and drugs, and labelling of articles for consumption were made, so as to obtain uniformity in the several States. The recommendations of the conference deal with a variety of matters and are too lengthy for inclusion in this publication. Among the most important may be mentioned the following:—(a) The addition to articles of food of preservative substances, being other than common salt, sugar, spice, wood-smoke, vinegar, and acetic acid, should be prohibited as far as possible, and should be permitted only in minimum proportions. (b) The addition to any form of milk of any preservative (except sugar) should be prohibited. (c) The addition of foreign or artificial colourings or flavourings should be avoided as far as possible, and when permitted should be declared.

## § 4. Milk Supply and Dairy Supervision.

**1. Introduction.**—Milk is pre-eminently the food which needs most careful protection at each successive stage of its production, carriage, storage, and delivery, from exposure to infection from extraneous matter. The problem of obtaining a pure and clean milk supply has accordingly, during the last few years, demanded an increasing amount of attention from the Health authorities, and in each State special laws and regulations have been passed governing the supervision of dairy farms and dairies.

(i.) *General Provisions of Acts and Regulations.* In general, it may be said that it is not lawful to sell or offer for sale any milk which is not fresh or wholesome, or which has been watered, adulterated, reduced, or changed in any respect by the addition of water or any other substance, or by the removal of cream. Regulations made under the Acts provide for the carrying-on of dairy farms, dairies, factories, and creameries, under proper and wholesome conditions; and supervisors and inspectors are appointed to enforce these provisions. Generally, the execution and enforcement of the Acts is left to the local authorities.

(ii.) *Registration of Dairymen and Milk Vendors.* Dairymen, milk vendors, and dairy-factory or creamery proprietors are required, under penalty, to be registered. In some States registrations must be applied for before commencing to trade; in other States they must be applied for within a specified time after the premises are first used.

(iii.) *Inspection of Premises.* Dairy inspectors employed by the central departments traverse the principal dairying districts, and inspect dairy premises, dairy herds, appliances, and utensils, and ascertain in what fashion the various local authorities carry out the duties imposed on them. Regulations and instructions are issued by the central departments for the information and guidance of local authorities, dairymen, milk vendors, and others, as to precautions to be observed in order to protect milk from contamination, and to ensure cleanliness as to the structural arrangements, dimensions and ventilation of premises, and as to the care and health of dairy cattle. If an inspector is satisfied that any premises or apparatus used therein are unclean, or unfit for the purposes of dairy produce, he may require the owner to put the same in a proper and wholesome condition.

(iv.) *Notification of Diseases.* Every dairyman or milk vendor is required to report immediately any case of certain prescribed infectious diseases occurring in any human being engaged at or residing on his premises. It is the duty of the local authority to take care that communication between all persons belonging to the infected household and the milk business in all its details is prevented. Cases of notifiable diseases occurring in animals at a dairy farm or dairy must also be reported immediately, and the owner must at once isolate the diseased animal. The sale of milk from an infected cow is prohibited, and, under certain circumstances, an inspector may order an infected animal to be branded or destroyed.

(v.) *Analysis of Dairy Produce.* The local authority generally has power to enter premises and to take away samples of the milk, cream, butter, or cheese there found, and of the water supply therein, for the purpose of examination or analysis.

**2. Number of Dairy Premises Registered.**—The following table shews the number of dairy premises registered and the number of cattle thereon in each State during the year 1910-11:—

**NUMBER OF DAIRY PREMISES REGISTERED AND CATTLE THEREON, 1910-11.**

Particulars.	N.S.W.	Victoria.*	Q'land.	S. Aust.*	W. Aust.	Tas.
Premises registered ...	20,604	11,581	11,276	244	481	654
Cattle thereon ...	854,452	97,623	289,868	2,137	6,610	†

\* Figures are for year 1909-10. † Not available.

**3. New South Wales.**—The provisions of the Dairies Supervision Act 1901 extend to the whole of the Eastern and Central Divisions of this State and to all important dairying districts further inland. Other districts are brought under the operation of the Act by proclamation from time to time. Every dairymen, milk vendor, and dairy factory or creamery proprietor is required, under penalty, to apply for registration to the local authority for the district in which he resides, and also to the local authority of every other district in which he trades. Registrations must be applied for before commencing to trade and must be renewed annually.

**4. Victoria.**—The inspection and supervision in Victoria of dairies, dairy farms, dairy produce, milk stores, milk shops, milk vessels, dairy cattle, and grazing grounds are provided for by the Milk and Dairy Supervision Act 1905, administered by the Minister of Agriculture. Under the Health Act 1890 and the Pure Food Act 1905, however, the Department of Public Health is empowered to take samples of food (including milk, cream, butter, cheese, and other dairy products) for examination or analysis, and to institute prosecutions in case of adulterated or unwholesome food. By

the end of the year 1909, eighty-seven municipal districts, comprising about one-sixth of the area of the State, had been brought under the operation of the Milk and Dairy Supervision Act. The municipal councils have the option of carrying out the execution of the Act themselves or of electing for execution by the Department of Agriculture; up to the present all the municipalities in which the Act has been proclaimed have elected for Departmental execution.

5. **Queensland.**—The control and supervision of the milk supply and of dairies and the manufacture, sale, and export of dairy produce in Queensland are provided for by the Dairy Produce Acts 1904 and 1905, administered by the Department of Agriculture and Stock. These Acts and the regulations made thereunder apply only to prescribed districts, which comprise the whole of the coastal district from Rockhampton down to the New South Wales border and the Darling Downs, Maranoa, and Cairns districts.

6. **South Australia.**—The licensing and registration of dairies, milk stores, and milk shops, and the licensing of milk vendors are now provided for by the Food and Drugs Act 1908, which came into force on the 1st June, 1909. Regulations for registration under this Act were in course of preparation in April, 1910, and it is understood that in many cases the local authorities have held over registration pending the issue of such regulations. Reference has already been made (see § 3, 5 hereof) to the constitution of the Metropolitan County Board.

7. **Western Australia.**—In this State the inspection of dairy herds is under the control of the Department of Agriculture, while the supervision of dairy premises and of subsequent stages in the milk supply is carried out by the Health authorities. At the commencement of the year 1908 a campaign was instituted towards the elimination from dairy herds of tubercular cattle. This campaign took the form of the application to all the animals in each herd of the tuberculin tests and the isolation and slaughter of all re-acting animals.

8. **Tasmania.**—Under the Public Health Act 1903 it was the duty of local authorities to regulate the hygienic conditions of milk production and milk supply, and regulations dealing with milk, cream, and butter standards have been prescribed. Comprehensive by-laws for the registration and regulation of dairymen's premises existed in many districts, but outside the cities and a few towns it would appear that these were seldom enforced. These matters are now governed by the Food and Drugs Act 1910, which came into force on 1st March, 1911.

## § 5. Prevention of Infectious and Contagious Diseases.

1. **General.**—The provisions of the various Acts as to precautions against the spread and the compulsory notification of infectious diseases may be conveniently dealt with under the headings—(a) Quarantine; (b) Notifiable Diseases; and (c) Vaccination.

2. **Quarantine.**<sup>1</sup>—Under the Commonwealth Quarantine Act 1908, the systems of State quarantine formerly in operation were abolished, and a branch of the Department of Trade and Customs, under the immediate control of a Director of Quarantine, was created on 1st July, 1909. As far as is at present practicable uniformity of procedure has been established throughout the Commonwealth in respect of all vessels, persons, and goods arriving from overseas ports or proceeding from one State to another, and in respect of all animals and plants brought from any place outside Australia. In regard to interstate movements of animals and plants, the Act becomes operative only if the Governor-General be of opinion that Federal action is necessary for the protection of any State or States; in the meantime the administration of interstate quarantine of animals and plants is left in the hands of the States.

(i.) *Transfer of Quarantine Stations.* The transfer from the States to the Commonwealth of the quarantine stations, for the purposes of human quarantine, at the following places has been effected:—(a) *New South Wales.* North Head (near Sydney). (b) *Victoria.* Point Nepean (near Melbourne). (c) *Queensland.* Magnetic Island (near

1. From information furnished by W. P. Norris, Esq., M.D., D.P.H., Federal Director of Quarantine.

Townsville) and Thursday Island. (d) *South Australia*. Torrens Island (near Adelaide). (e) *Western Australia*. Woodman's Point (near Fremantle), Albany, and Broome. Animal quarantine stations in each of the States have also been transferred, and steps are being taken for the taking over by the Commonwealth of other stations. New buildings and improvements are in course of construction at several of the transferred stations.

(ii.) *Co-operation of Federal and State Authorities*. In order to secure co-operation between the Commonwealth and State authorities, and with the further object of economical administration, arrangements were, in 1909, made under which the chief medical officer of each State Health Department acts as the Chief Quarantine Officer in his State, and officers hitherto performing quarantine duties under the State Acts became Federal quarantine officers, payment for their services being made through the State Governments. Arrangements were also made for the administration of the Act and regulations relating to oversea animal and plant inspection and quarantine, to be carried out by officers of the State Agricultural Departments. Power to take action for the prevention of the spread of disease within a State still remains in the hands of the State, and as the functions of the Commonwealth and States may be exercised at the same time, the advantage of co-operation is apparent.

(iii.) *Chief Provisions of Act*. The Act provides for the inspection of all vessels from oversea, for the quarantine, isolation, or continued surveillance of infected or suspected vessels, persons, and goods, and for the quarantining and, if considered necessary, the destruction of imported goods, animals, and plants. The obligations of masters, owners, and medical officers of vessels are defined, and penalties for breaches of the law are prescribed. Power is given to the Governor-General to take action in regard to various matters by proclamation, and to make regulations to give effect to the provisions of the Act. Quarantinable diseases are defined as small-pox, plague, cholera, yellow fever, typhus fever, or leprosy, or any other disease declared by the Governor-General, by proclamation, to be quarantinable. "Disease" in relation to animals means certain specified diseases, or "any disease declared by the Governor-General by proclamation to be a disease affecting animals." "Disease" in relation to plants means "any disease or pest declared by the Governor-General by proclamation to be a disease affecting plants." The term "plants" is defined as meaning "trees or plants, and includes cuttings and slips of trees and plants and all live parts of trees or plants and fruit."

(iv.) *Proclamations*. The proclamations so far issued specify the diseases to be regarded as diseases affecting animals and plants; appoint first ports of landing for imported animals and plants and first ports of entry for oversea vessels; declare certain places beyond Australia to be places infected, or as places to be regarded as infected with plague; prohibit the importation (a) of certain noxious insects, pests, diseases, germs, or agents, (b) of certain goods likely to act as fomites, and (c) of certain animals and plants from any or from certain parts of the world; and fix the quarantine lines in certain ports of Australia.

(v.) *Regulations*. Regulations have been made prescribing the quarantine signal; the hours of clearance of vessels; forms of notices, orders, reports, and bonds to be used by masters, medical officers, quarantine officers, and importers; the period of detention of vaccinated and unvaccinated persons in quarantine; the conditions of removal of goods and mails; the method of disinfection of persons, animals, and infected or suspected articles; the conditions under which certain animals not prohibited may be imported; the sustenance charges for quarantine animals; the conditions of importation of hides, skins, wool, hair, bones, and animal manure; the method of carrying out the quarantining, disinfection, fumigation, and treatment of plants and packages. Regulations have also been made with the object of preventing the ingress to and the egress from vessels of rats and mice, and for the destruction of rats, mice, and other vermin.

(vi.) *General*. The procedure has already been greatly simplified. Instead of all oversea vessels being examined in every State, as was formerly the case, those arriving from the south and west are now examined only at the first port of call and pratique

is given for the whole of the Commonwealth, except in cases of suspicious circumstances, while vessels arriving from the northern routes are examined only at the first and last ports. It is expected that the restrictions placed upon oversea vessels will be further removed as the machinery of quarantine is improved. The present freedom from certain diseases which are endemic in other parts of the world, would, however, appear to justify the Commonwealth in adopting precautionary measures not perhaps warranted in the already infected countries of the old world.

**3. Notifiable Diseases.**—Provision exists in the Health Acts of all the States for precautions against the spread and for the compulsory notification of infectious diseases. When any such disease occurs the fact must be notified to the medical officer of health of the district. The duty of giving this notification is generally imposed, first on the head of the house to which the patient belongs, failing whom on the nearest relative present, and on his default on the person in charge of or in attendance on the patient, and on his default on the occupier of the building. Any medical practitioner visiting the patient is also bound to give notice.

(i.) *Notifiable Diseases Prescribed in each State.* In the following statement those diseases which are notifiable in each State are indicated by a cross :—

#### DISEASES NOTIFIABLE UNDER THE HEALTH ACTS IN EACH STATE, 1912.

† Those diseases marked with an asterisk in this column have been declared notifiable diseases, while those marked by a cross have been declared "dangerous infectious diseases" under the Public Health Act 1890, and when prevalent in any municipal district may be declared notifiable diseases within such district. ‡ Other diseases enumerated as notifiable under "The Health Act 1911" of this State are pyæmia, and Malta, dengue, low and Colonial fevers. § Thursday Island area only. ¶ Under the Leprosy Act 1892.

(ii.) *Duties of Authorities.* As a rule the local authorities are required to report from time to time to the Central Board of Health in each State as to the health, cleanliness, and general sanitary state of their several districts, and must report the appearance of certain diseases. Regulations are prescribed for the disinfection and cleansing of premises, and for the disinfection and destruction of bedding, clothing, or other articles which have been exposed to infection. Bacteriological examinations for the detection of plague, diphtheria, tuberculosis, typhoid, and other infectious diseases within the meaning of the Health Acts are continually being carried out. Regulations are provided in most of the States for the treatment and custody of persons suffering from certain dangerous infectious diseases, such as small-pox and leprosy.

(iii.) *New South Wales.* The proclamation and notification of infectious diseases is dealt with in Part III. of the Public Health Act 1902. Special provision is made by that Act for the notification of small-pox and leprosy, and for the custody and treatment of lepers. Many improvements have been effected by the Sydney Harbour Trust (see Section XXVI. hereof; page 990) with a view to generally improving the hygienic condition of the area under its control, and especially with the object of preventing the introduction of bubonic plague. Special reports dealing with the ætiology of outbreaks of plague have been published.

(iv.) *Victoria.* Under Part VIII. of the Public Health Act 1890, the notification of small-pox, cholera, plague, yellow fever, and other prescribed malignant, infectious, or contagious diseases is compulsory. An amending Act, passed in 1907, requires medical practitioners and registrars to report all cases of notifiable diseases coming under their notice in any proclaimed district, and not merely those cases which occur in the district in which the practitioner or registrar is resident.

(v.) *Queensland.* Under Part VII. of the Health Act 1900, all cases of infectious diseases must be notified; special provision is made for notification of cases of phthisis and small-pox. A report on plague in Queensland for a period covering eight successive years—1900 to 1907—has been published by the Commissioner of Public Health. Apart from the statistical data collected and collated, the report deals exhaustively with the medical, preventive, administrative, and epidemiological aspects of the plague, as observed in Queensland. Plague hospitals are provided at Maryborough, Bundaberg, Gladstone, Mackay, Townsville, and Cairns. Provision is also made for the diagnosis of leprosy, and lepers are sent to Peel Island, Moreton Bay.

(vi.) *South Australia.* In this State cases of infectious diseases must be reported to the local Board, under the provisions of Part VIII. of the Health Act 1898. The onus of notification is placed primarily on the head of the family, and, failing him, the nearest relative, the person in charge, or the occupier of the house; in any case, notification must be given by the medical practitioner attending.

(vii.) *Western Australia.* Regulations made under the Health Act 1898 provide for the compulsory notification to local Boards of infectious diseases. The local Boards must report to the Central Board. The necessity for providing hospital treatment for infectious cases has been recognised by the Boards of Health, and in several instances wards for the treatment of these cases have been erected.

(viii.) *Tasmania.* Provisions regarding the prevention and notification of infectious diseases are contained in the Public Health Act 1903, as amended in 1908.

4. **Vaccination.**—In the State of New South Wales there is no statutory provision for compulsory vaccination, though such exists in all the other States of the Commonwealth. With the exception of Victoria, the Vaccination Acts are, however, not generally enforced. The following table shews, so far as particulars are available, the number of persons vaccinated in each State from 1902 to 1911 inclusive:—

## NUMBER OF PERSONS VACCINATED IN EACH STATE, 1902 to 1911.

Year.	N.S.W.*	Victoria.	Q'land.†	S. Aust.	W. Aust.	Tasmania.
1902 ...	896	16,117	...	1,906	†	3,296
1903 ...	605	20,935	...	1,857	†	24,857
1904 ...	20	20,548	...	1,476	†	53
1905 ...	32	20,116	...	1,142	†	†
1906 ...	42	20,539	...	980	†	†
1907 ...	39	20,902	...	3,165	†	†
1908 ...	42	20,924	...	1,502	616†	†
1909 ...	11	21,344	...	1,477	†	†
1910 ...	280	21,575	...	†	†	†
1911 ...	20	20,562	...	†	†	†

\* By Government medical officers only. † Returns not available. ‡ Notifications of vaccinations to district registrars during year 1908-9.

The large increase in Tasmania in 1903 is accounted for by the small-pox epidemic which occurred in Launceston in that year.

(i.) *New South Wales.* Although there is no provision for compulsory vaccination in this State, public vaccinators have been appointed. A fee is paid, and free lymph is provided.

(ii.) *Victoria.* Compulsory vaccination is enforced throughout the State, under Part IX. of the Health Act 1890. From the year 1873 up to the present time it is estimated that 72 per cent. of the children whose births were registered have been vaccinated. Free lymph is provided.

(iii.) *Queensland.* Although compulsory vaccination is provided for in this State, under Part VII. of the Health Act 1900, only one remote district has been proclaimed under the Act.

(iv.) *South Australia.* The Vaccination Act 1882, which applies to South Australia and the Northern Territory, is enforced by the vaccination officer of the State and by the Police Department. Under this Act vaccination was compulsory, but in 1901 an Act to abolish compulsory vaccination was passed. This latter Act was subsequently amended, and the present law is that no parent is liable to any penalty if, within 12 months from the birth of the child, he makes a declaration that he conscientiously believes that vaccination would be prejudicial to the health of the child, and within seven days thereafter delivers the declaration to the vaccination officer. It is estimated that about 15 per cent. of the children born are vaccinated.

(v.) *Western Australia.* In this State vaccination is compulsory under the Vaccination Act 1878, which, however, remains almost a dead letter. All district medical officers are public vaccinators, but they receive no fee for vaccinations.

(vi.) *Tasmania.* All infants in Tasmania are nominally required, under the Vaccination Act 1898, to be vaccinated before the age of 12 months, unless either (a) a statutory declaration of conscientious objection is made, or (b) a medical certificate of unfitness is received. The Act is not enforced, and practically no vaccination of infants is performed in the State, or has been performed since the small-pox outbreak in Launceston in 1903, when 66 cases occurred with 19 deaths. It is estimated that 45,000 persons, or about one quarter of the present population, have been vaccinated.

## § 6. Filariasis and the Destruction of Mosquitoes.

1. **Introduction.**—The remarkable development of parasitology in recent years and the increase in knowledge of the part played by parasites in human and animal diseases have shewn that the difficulties in the way of tropical colonisation, in so far as these arise from the prevalence of diseases characteristic of tropical countries, are largely removable by preventive and remedial measures. Malaria and other tropical diseases are

coming more and more under control, and the improvements in hygiene, which science has accomplished, lend an entirely new aspect to the question of white settlement in countries formerly regarded as unsuitable for colonisation by European races. In Australia the most important aspect of this matter is at present in relation to such diseases as filariasis, malaria, and dengue fever, which, although practically unknown in the southern States, are of common occurrence in many of the tropical and sub-tropical parts of the Commonwealth. In Brisbane, for example, it is stated that during 1908 an examination was made of 200 patients who had been admitted consecutively to the general hospital, and it was found that 17 per cent. were suffering from filaria, though only a few of them had been brought in for treatment for that disease. It is also stated that an examination made in 1909 of 1000 patients admitted for all causes at the general hospital at Brisbane shewed that 13 per cent. of them were infected with filaria.

**2. Scope of Operations.**—In certain parts of Australia considerable benefit has already resulted from the adoption of methods of anti-malarial prophylaxis. The extermination of mosquitoes in their larval stage by drainage, screening and oiling of water supplies, and the isolation of infected persons, are some of the methods pursued with success. It would appear, however, that before any general comfort and freedom from house mosquitoes and from the diseases carried by these insects can result, a much wider crusade for the destruction of the mosquito, involving absolute co-operation and conscientiousness on the part of the community in the elimination of breeding places of mosquitoes, is necessary.\* In many countries "Mosquito Brigades" have been organised, whose object is the killing of the mosquito and the removal, as far as possible, of the conditions favourable to the insects. In other countries the churches, medical societies, corporations, business organisations, factories, and schools have all taken part in organising lectures and spreading literature dealing with the mosquito.

**3. Queensland.**—The existence of filaria in Brisbane was first discovered about thirty years ago. Filariasis is now on the increase, and early in the year 1909 the Commissioner of Public Health for Queensland convened a conference of medical officers of health to the various local authorities to discuss the matter. A plan for combined action in mosquito destruction was the outcome, and it is stated that good results therefrom have already been noticed. Screening of domestic and other water tanks and destruction of larvæ by kerosene have been carried out in a number of places, while particular attention has been devoted to the draining of swamps within the metropolitan area. It may here be mentioned that an Institute of Tropical Medicine was inaugurated in January, 1910, at Townsville, under the control of an expert officer. In his report for 1910, the Director of the Institute refers especially to the initial difficulties confronting him on account of (1) the scarcity of suitable laboratory animals for experimental purposes, and (2) the absence of any systematic scheme of collaboration with medical confrères throughout the tropical portions of Queensland, which is stated to be essential to the success of the Institute, both difficulties requiring some little time and money to overcome. Most of the scientific work done during 1910 is necessarily in an incomplete state, but a fairly large amount of material, especially with regard to animal parasites, has been collected and will be dealt with at an early date. A full course of instruction in tropical medicine and parasitology will be arranged for, in future, at Townsville.

**4. South Australia.**—During the year 1907 malaria assumed such a serious form at the Government Smelting Works at Daly River, in the Northern Territory, that almost every employee was invalidated to Palmerston for treatment. Early in 1908 preventive measures in the way of improved camp hygiene, treatment of swamps by petroleum, and the systematic use of quinine, were adopted, with the result that during that year no case of malaria appeared among the Government employees, although the natives and outsiders suffered as badly as before. The whole experiment cost under £5. Similar precautions have been adopted in other parts of the State.

---

\* See Report of the Commissioner of Public Health, Queensland, 1908-9, Appendix C., p. 17.

5. **Other States.**—In Western Australia it is stated that malaria is not known to exist south of the 20th parallel, while filaria has not been discovered at all. No mosquito-borne diseases are known to exist in Victoria or Tasmania, and it is stated that filariasis is uncommon in New South Wales, the only cases known being imported ones. Kerosene and petroleum have been successfully used to destroy mosquitoes at various places in these States both by municipalities and private individuals.

## § 7. Supervision of Infant Life.

1. **Introduction.**—It has been frequently stated in recent years that when the social, climatic, and industrial conditions are taken into consideration the infantile mortality of Australia, particularly in the large towns, is much higher than it should be. It is now generally recognised, however, that infant mortality is largely attributable to parental ignorance and neglect, and that, in particular, improper feeding is accountable for perhaps the majority of infant deaths. In all the States of the Commonwealth, Acts have been passed with the object of generally supervising the conditions of infant life and of reducing the rate of infantile mortality, and in many of the large towns measures have been adopted by private individuals to spread among the mothers a knowledge of the best methods of feeding and caring for their infants. Milk Institutes have also been established after the manner of the *Gouttes de Lait*<sup>1</sup> in Europe, with the object of reducing the number of deaths of infants from milk poisoning in the summer months. Reference has been made in a previous part of this book (see page 189) to the number of infantile deaths and the rates of infantile mortality in each State, and it will be convenient to here shew corresponding particulars for the year 1911, classified according to metropolitan and other districts in each State:—

### INFANTILE DEATHS AND RATES OF INFANTILE MORTALITY FOR METROPOLITAN AND OTHER DISTRICTS, 1911.

Districts	N.S.W.	Victoria.	Queensland.	S.A.	W.A.	Tasmania.	C'wealth.
NUMBER OF INFANTILE DEATHS.							
Metropolitan	1,286	1,127	334	406	262	89	3,504
Other ...	2,016	1,142	776	264	353	310	4,865*
RATES OF INFANTILE MORTALITY.†							
Metropolitan	71.56	77.54	80.85	77.60	79.02	76.92	75.61
Other ...	68.19	61.76	60.38	45.32	73.93	72.43	64.18

\* Including 4 in Commonwealth territories.

† i.e., the number of deaths of infants under one year of age per thousand births.

It may be seen that in each State the rates of mortality are higher in the metropolitan than in other districts. The causes of "preventable" deaths may generally be attributed to milk poisoning, want of knowledge on the part of mothers, inability to nurse, and lack of the necessary medical facilities.

The figures in the above table do not, however, completely represent the hygienic aspect of the question. For every infant death recorded there are probably three or four survivors who have sustained more or less serious permanent physical damage, quite apart from injuries at birth or congenital causes. It is stated that the far-reaching influence of the first year or two of life upon the whole subsequent physical welfare of the individual cannot be recognised too clearly, and it has been alleged that many serious defects and diseases occurring in later life may be credited to results ensuing from infantile disease. This is particularly the case in respect of digestive diseases.<sup>2</sup>

1. Organised action in this direction commenced in 1894 in Belgium. The original Belgian Society is known as the "*Société des Gouttes de Lait*." The movement has become an international one, and branches of the Society have been founded all over Europe. Similar philanthropic work was commenced in the United States of America before 1894.

2. See Report of Department of Public Health of Tasmania for 1906-7, by J. S. C. Elkington, Esq., M.D., D.P.H., Chief Health Officer.

The conditions regulating the employment of boys and girls in shops and factories are referred to in the section of this book dealing with *Industrial Unionism and Industrial Legislation* (Section XXVII.). Certain particulars have also been given in Section XXIV. (see pages 935-7) of this book regarding Orphanages, and Industrial and Reformatory Schools in Australia. Though perhaps not directly connected with the subject of Public Hygiene, it will be convenient to refer briefly in this sub-section to the principal Acts which have been passed in each State dealing with the subject of child-life, and to the principal functions of the States' Children's Departments.

**2. New South Wales.**—In this State there is a State Children's Relief Board under the direct control of an Honorary Board of nine members and under the administration of the Minister of Public Instruction.

(i.) *Scope of Operations.* The scope of the Department's operations comprises matters under the following Acts:—

(a) *The Infants' Protection Act 1904.* This Act deals with the control of children up to the age of seven years in licensed homes, and with the supervision of such homes. These latter fall into two classes—(1) The private homes of individual women householders, licensed for two or three children, and (2) institutions maintained by public subscription, licensed for any number of children up to 100. The Act also deals with paternity proceedings in connection with the enforcement of maintenance for illegitimate children.

(b) *The State Children's Relief Act 1901.* This Act deals with the boarding-out of destitute children, and includes the extension of monetary aid for children under twelve years of age who are allowed to remain with their own mothers when the latter are widows or deserted wives in destitute circumstances.

(c) *The Children's Protection Act 1902* deals with the supervision of lying-in homes, in so far as the children born therein are concerned. It also provides for the registration of children up to three years old boarded out privately apart from their mothers.

(d) *The Neglected Children's and Juvenile Offenders Act 1905* has provided for the establishment of Children's Courts throughout the State. The Act deals with the disposal of neglected and uncontrollable children and juvenile delinquents who come before the Courts. It contains provisions for the supervision of truant children, and for the introduction of machinery necessary to carry out the purposes of the Act.

(e) *The Public Instruction Act 1880.* The supervision of all children of school age is carried out by officers of the State Children's Relief Department, and action in regard to truancy and prosecutions for breaches of the compulsory clauses of the Public Instruction Act are undertaken.

(ii.) *General Supervision of Conditions of Infant Life.* The principal functions of the State Children's Relief Department are as follows:—(a) Provision for sickly infants with, or without, their mothers at the homes at Paddington and Thirlmere. About twenty children are treated in each home. (b) The compulsory attendance of guardians of infants, boarded out independently by their mothers under the Children's Protection Act, at the Metropolitan Hospital fortnightly, in order that the children in their charge may be systematically supervised by the doctors, and the development of ailments checked. (c) A home for healthy babies, twenty in number, at Croydon, with their mothers, the object being to free the latter from the more or less contaminating influences of large institutions, and at the same time to protect the children from dangers of infection. (d) The establishment of separate cottage homes for invalid children, according to their ailments, including special cottages for the scientific treatment of epileptic and feeble-minded children. (e) The supervision of all children

dealt with at the Children's Courts, the Carpenterian Reformatory, and the Industrial School for Girls. A special aspect of the Board's work under this heading is the supervision of children released on probation, and of children committed to the Farm Home, Mittagong.

3. **Victoria.**—The conditions of infant life in Victoria are, to some extent, supervised by the Department for Neglected Children and Reformatory Schools under the Neglected Children's Act 1890, the Crimes Act 1890, and the Infant Life Protection Act 1907. In Melbourne the Lady Talbot Milk Institute was established in 1908 in order to provide a supply of pure milk for infants. In the first annual report of the Institute, it is stated that out of about 300 infants supplied with milk by the Institute during 1908-9, only eight died. Crèches have been established in many of the suburbs of Melbourne.

(i.) *The Neglected Children's Act 1890.* This Act provided for the establishment of receiving houses and probationary schools, and for the committal of neglected children to the care of the department already referred to, or to approved private persons or institutions. Assistance is afforded to the department by ladies' committees in finding suitable homes for boarded-out children, and in supervising these homes. A receiving depôt has been established, and special schools are provided for boys who are backward in their education. A certain number of boys, who bear the best of characters, are sent to learn farming at the Rutherglen Viticultural College.

(ii.) *The Crimes Act 1890* provided, *inter alia*, for the establishment of reformatory schools for convicted children. A considerable number of court committals and transfers from gaol are made to these reformatory schools.

(iii.) *The Infant Life Protection Act 1907.* This Act came into force on the 31st December, 1907, and all infants then in registered homes were transferred to the care of the department. Provision is made for the inspection of registered homes, which are divided into districts, allotted to four inspectors. The Act does not provide for the registration or supervision of maternity homes.

(iv.) *The Children's Court Act 1906.* This Act provides for the establishment of Children's Courts in every place in the State where a Court of Petty Sessions is appointed to be held. Any boy or girl under the age of seventeen years may be released by the Court on probation under the supervision of a Probation Officer, who may at any time bring before the Court any child under his supervision who has broken any of the terms of his probation. The Courts have power to commit children to the Neglected Children's Department or to reformatory schools.

4. **Queensland.**—The Infant Life Protection Act 1905 is administered by the Commissioner of Police. This Act provides, that, with certain exceptions, no person may receive, in consideration of any payment, into his house any infant under the age of three years for the purpose of nursing such infant apart from its parents for a longer period than forty-eight hours, or of adopting such infant, unless the person is registered as the occupier of the house and the house is registered as a nursing home. Registration of adopted infants is compulsory, and notice of the birth or death of illegitimate infants must be given within three days. Police investigation occurs in the case of every illegitimate child born, whether the child be finally sent to a nursing home, adopted, or taken charge of by parents or relatives.

The Lady Chelmsford Pure Milk Institute was opened in 1909 for the supply of a clean pure milk in Brisbane for infant feeding. The delivery of the milk began on the 1st July, 1909.

5. **South Australia.**—The State Children's Act 1895 provides for the constitution of a council to have the control of all State children and the supervision of all institutions for their reception, education, or training. The Act provides for the establishment and inspection of institutions, for the commitment, release, and apprenticing or placing out of children, and for the licensing and supervision of lying-in homes and foster-mothers. Illegitimate children are also received into the institutions under the care of the council, and are placed out in various homes. It is stated that the result, so far as illegitimate children are concerned, is that the death-rate of infants supervised by the council is under 7 per cent., while the death-rate of those not under such supervision is 45 per cent.

6. **Western Australia.**—In Western Australia the State Children's Act 1907 provides for the control of boarded-out infants, the registration of foster parents, and the general supervision of the conditions of infant life and of neglected or destitute boys and girls under the age of eighteen years. The Act is administered by the State Children's Department. The registration of maternity homes is obligatory, and persons acting as paid foster-mothers to any child under the age of three years must be licensed. Neglected or destitute children may be committed to orphanages, and convicted children to industrial schools. There is one Government institution under the Act, and it is used as a receiving dépôt for the temporary detention of all classes of children. The Act also provides for the establishment of Children's Courts, which must not be held in any police or other court-house.

With regard to the prevention of infantile mortality, the educational aspect has been met by the free distribution of pamphlets giving directions to mothers respecting the care and feeding of infants.

7. **Tasmania.**—The Infant Life Protection Act 1907, which is administered by the Commissioner of Police, provides for the protection of illegitimate and privately boarded-out infants, and for the compulsory registration of nursing homes and occupiers. Notice of the death of an infant in a registered home must be given within twenty-four hours, and the adoption of illegitimate infants under five years of age must be registered. Notice of the birth or death under the age of five years of an illegitimate infant is also compulsory. The Act also deals with paternity proceedings, in connection with the payment of preliminary or maintenance expenses for illegitimate children.

## § 8. Medical Inspection of State School Children.

1. **Introduction.**—For many years medical officers of health and many others concerned in education generally have, from time to time, suggested the desirability of a medical inspection of school children. The State, which enforces school attendance under penalties, is also under the obligation of securing a satisfactory hygiene for the child during such attendance. Moreover, efficiency in education demands several things, viz., that the conditions under which the studies are made shall be physically and hygienically satisfactory; that there shall be no undue concentration of nervous effort on school work, and that the child shall be reasonably safeguarded against infection, etc. Only by an adequate scheme of medical supervision can these results be attained.

Several limited and isolated surveys of the physical proportions of Australian children have been made during the past 30 years in the various States. The first important systematic survey, however, was made in Sydney in 1901, and the results were reported by the Government Statistician of New South Wales to the Australasian Association for the Advancement of Science Conference in Hobart in 1902, and shewed

that the Sydney boy was taller than the English boy, but that his chest expansion was small in comparison with European figures.

A series of measurements on 500 boys took place concurrently but independently in Hobart during 1901, which also gave similar results. It was recognised that the figures were based on limited numbers, but they at least challenged attention. The 1901 survey in Sydney, though small, was a valuable and suggestive contribution to anthropometric research in Australia, and may be regarded as the beginning of a systematic attempt to ascertain what characteristics of bodily form are exhibited in Australia. This inquiry roused considerable interest in the other States, and series of measurements have since been made in Western Australia, Tasmania, and South Australia, by various authorities, and in Victoria by the Education Department's medical officers. Each year since 1907 the Department of Education of New South Wales has carried out regular anthropometric measurements of the height and weight of school children, and now possesses records of about 90,000 children, the results being detailed in the Department's Annual Reports. A card for each child allows his measurements for successive years to be recorded. The department perambulated the apparatus, each set serving about 20 schools, and the visits recur in the same month of each succeeding year.

**2. Co-ordination of Effort.**—It may be seen in the succeeding parts of this subsection that, while the medical inspection of school children has been carried out in some of the States of the Commonwealth in a systematic manner, in other States but little has been done in the direction indicated. So far as it has been carried out, the medical inspection of school children goes to shew that in Australia, as in other lands, the hygiene, both of the schools and of the pupils therein, is more defective than is ordinarily recognised, and that, not only preventable physical injury to the rising generation from school conditions can be avoided, but also instruction itself can be made more efficient by a proper regard to the demands of a good school hygiene. With a view to securing uniformity of procedure in the several States the Commonwealth Government in 1907 formulated a scheme and communicated with the States asking their co-operation in obtaining measurements of school children with a view to establishing the relations between age, weight and height, chest measurement, etc. Delays occurred from various causes, but in a paper read at the Science Congress in Sydney 1911, the subject was again brought under notice, and this led to the appointment by the congress of a committee of experts to encourage anthropometric research and to consider the organisation of a systematic survey of school children throughout Australia. The scheme was essentially identical with the former proposals of the Federal Government, but in the interim the report of the British Anthropometric Committee became available, thus making possible a method uniform with that of Great Britain, and making the results immediately comparable with those of Europe.

The Australian Anthropometric Committee has drawn up a memorandum setting forth the importance and object of the survey, and suggestions as to method for the use of teachers, physical trainers and others interested. This report it is expected will shortly be available.

The plan of the survey is as follows:—The children's heights, weights and chest-measurements are to be taken once a year as near as possible at the same time of the year. A card for each child enables his development to be watched. Differently coloured cards are used for boys and girls. These cards should be kept in the schools, and the results tabulated on sheets and sent to the Commonwealth Statistician for the general tabulation, the Federal Government being willing for this to be undertaken.

In several States advantage has been taken by the Anthropometric Committee of the assembling of teachers in physical training camps to arrange for a demonstration on the object and method of the survey. Much interest has been roused, particularly as affecting the physical growth of school children, and as regards fatigue-effects in connection with the school programme or drill requirements. If in the Anatomical Schools of the Universities special teaching in anthropometric methods were given, it

would perhaps facilitate the work. This has been done in some of the universities of the United Kingdom.

As regards the anthropometrical aspect of the matter, questions dealing with physique and growth must receive more intelligent attention than has hitherto been the case here, if the future of the British race in Australia is to be properly studied. A uniform scheme of comparative physical observations of children would go to shew the ultimate influence of the Australian climate on the British race, and would serve as a guide to the importance of certain forms of physical training. In addition, the importance of gathering information concerning the general trend of physical and mental development of Australian children, the variations induced by environment in different localities and different latitudes, and the extent of preventable influences capable of injuriously affecting mental and physical development, are sufficiently apparent.

**3. New South Wales.**—In this State, arrangements were made in May, 1907, for the medical inspection of school children in Sydney, and later in the year the work was extended to Newcastle. At the inauguration of the scheme, it was considered advisable to restrict the work of the first year to two populous centres in order to determine what procedure would be necessary, and what limits could best be assigned in the further development of the work. Two inspectors were appointed for the first year's work, and a third in March, 1909. The scheme as now in operation embraces Sydney and suburbs, Newcastle and the West Maitland districts, and its extension to other country centres will be carried into effect at an early date.

The results of the third year's work shew that during that period 127 schools, having an enrolment of 75,854 pupils, were visited by the inspectors. Of the total number of pupils, 16,026, or 21 per cent., were presented by the teachers for medical inspection as suffering from some physical defects. Of that number, 7008, or 43 per cent., were found to be suffering from defects of vision; 6634, or 41 per cent., were returned as suffering from post-nasal trouble; 2779, or 17 per cent., from throat trouble; 640, or 4 per cent., from swollen glands; and 891, or 5 per cent., from either defective hearing or ear trouble. The percentages here stated refer only to children presented as defective cases to the school doctors. Of the total enrolment at the schools, 9.2 per cent. had bad sight, 8.7 per cent. nasal trouble, 4.5 per cent. throat trouble or swollen glands, and 1.0 per cent. defective hearing or ear trouble.

Since its initiation in 1907, the scheme has embraced 135 schools, having an enrolment of 80,000 pupils, while upwards of 50,000 physical records have been received from teachers. The foregoing table shews the results of height and weight measurements recorded during the year 1909-10.

4. **Victoria.**—In Victoria three medical inspectors have been appointed by the Education Department, and a commencement was made towards the end of 1909 by the examination of the pupils attending the Melbourne Continuation School. An Advisory Committee was also appointed to formulate a scheme of medical inspection, which it is proposed to extend to all State schools in Victoria. During the year 1909-10 the chief work of the inspectors consisted in carrying out a preliminary investigation of the health of the pupils in various schools in town and country, and it was stated in the Report of the Minister of Public Instruction for that year that the result of this investigation had shewn the presence of an amount of physical defect which, were it not paralleled in other lands would, in its magnitude, seem incredible. Up to the 30th June, 1910, the total number of children examined was 3560, of whom 2613 were in primary schools; of the latter number 1345 were boys, and 1268 girls. During the year ending 30th June, 1911, many of the ideas and intentions outlined in the previous Annual Education Report were initiated, and the foundation laid for a proper and systematic scheme of medical school instruction in future. In the course of that year 8491 children attending primary schools were examined and the results are appended below. The following table shews the defects and their percentage amongst Victorian boys and girls in all primary schools examined:—

**VICTORIA.—NUMBER AND PERCENTAGE OF DEFECTS IN SCHOOL CHILDREN,  
1910-11.**

5. **Queensland.**—In this State a systematic scheme for the inspection of State school children has recently been prepared and came into operation on 1st January, 1911, under which a Medical Branch of the Department of Public Instruction was created, consisting of a Medical Inspector of Schools, a School Nurse, and a Dental Inspector. A report on the work of this branch for the half-year ending 30th June, 1911, has been presented, and shews that of 3068 children examined during that period by the Medical Inspector, 973, or 31.71 per cent., were found to be physically defective to an extent which either now seriously interferes, or threatens to do so shortly, with their educational progress. The report of the Dental Inspector discloses that of 823 children examined 97 per cent. had diseased teeth, and that only about 15 per cent. had clean mouths. The Standard of Vision here taken as interfering with the child's progress is  $\frac{1}{2}$  and  $\frac{3}{8}$ , the latter only if the child complains or suffers from headaches, or assumes unnatural attitudes in trying to see. The standard adopted for defective hearing is  $\frac{1}{16}$ . For explanation and significance of these fractions see footnote attached to the second table of this subsection.

In the report the relation between educational progress or intelligence and physique and nutrition is shown under the three degrees of comparison, indicated by the words "Good," "Fair," and "Poor." These particulars are shewn in the following table:—

**QUEENSLAND.—RELATION BETWEEN INTELLIGENCE OF SCHOOL CHILDREN AND  
PHYSIQUE AND NUTRITION, HALF-YEAR ENDING 30th JUNE, 1911.**

Intelligence.	Number Examined.	Physique.			Nutrition.		
		Good.	Fair.	Poor.	Good.	Fair.	Poor.

NUMBER OF CHILDREN.

Good	...	1,328	741	417	170	867	373	88
Fair	...	1,414	661	495	258	820	479	115
Poor	...	326	109	128	89	158	114	54
		3,068	1,511	1,040	517	1,845	966	257

PERCENTAGE ON NUMBER EXAMINED IN EACH CLASS.

Good	...	1,328	55.8	31.4	12.8	65.3	28.1	6.6
Fair	...	1,414	46.8	35.0	18.2	58.0	33.9	8.1
Poor	...	326	33.4	39.3	27.3	48.5	35.0	16.5

The children examined were also classified according to "intelligence" and "physical condition." This classification is shewn in the following table, and it may be observed that the columns marked with a (x) indicate conditions which are alleged to interfere seriously with the child's school progress. In this table "deafness" does not include the deafness accompanying adenoids, nor does "physical defects" include such as are incidental to adenoids. Excluding the first and last columns, the figures in the table represent individual defects, not individual children.

\* Normal hearing is assumed to be susceptible to an ordinary whisper over a distance of eighteen feet and is represented by the denominator of a fraction, while its numerator indicates to what this distance has to be reduced in order that the whisper may become intelligible. Visual condition or vision is similarly represented by a fraction, the denominator of which represents the distance in metres (a metre being approximately forty inches) at which normal vision would clearly distinguish an object, while the numerator indicates the reduction in distance required ere the patient attains clear effortless visual perception. Thus  $\frac{x}{f_3}$  would mean that a person whose eye test was represented by that fraction, could only see an object at six metres distance, which had he possessed normal vision he would have seen at a distance of twelve metres. Normal vision, which is generally tested by Snellen's ordinary test type, is represented by the fraction  $\frac{x}{6}$ .

6. **South Australia.**—No scheme for systematic medical inspection of schools has yet been adopted here, all Government action having been postponed pending receipt of a report upon the examination of 1000 school-going children in different parts of the State, which was commenced by Dr. Rogers, in August, 1909. No children under seven years nor over 15 years of age were examined. Investigations were made with regard to personal appearance, cleanliness, height, weight, chest measurements, teeth, eyesight, hearing, nose and throat, etc., and the report was presented to the Minister for Education in September, 1910, the results being, on the whole, satisfactory. As this report contains statistical details exhibiting many interesting comparisons between various States in the Commonwealth and other parts of the world, a brief summary thereof has been given at the end of this section.

7. **Western Australia.**—No general scheme for school medical inspection exists here, although examination in a few metropolitan schools has been intermittently carried on. During the latter part of 1906 and the first half of 1907 an extended examination of about 3300 children was conducted by the Department of State Medicine and Public Health with the co-operation of the Education Department. These children were attending the State schools in Perth, Fremantle, Kalgoorlie, Boulder, Bunbury, and Albany. Many physical defects among the children were detected, and the co-operation of the Inspector-General of Schools has resulted in steps being taken, where possible, to provide better hygienic conditions. The system followed during 1909 was that, wherever possible, a visit was made to a school, the teacher bringing up all children who appeared to be suffering from any physical defects or bodily ailments. The exact condition of the child having been determined, a notice was sent to the parents calling attention to the necessity of obtaining treatment for the defect. Under the "Health Act 1911," Medical Officers of Health become medical officers of schools and school children, and although complete details of their duties have not yet been worked out, an opportunity

will soon be afforded of judging how far the new machinery is likely to go towards providing a satisfactory scheme of medical inspection of school children. The Dental Society has also arranged for the examination of teeth at some of the larger schools, and over 1000 children have already been inspected. Free treatment is given where the parents are not in a position to pay for it.

8. *Tasmania*.—The credit of being the first State in the Commonwealth to provide for the medical inspection of schools and school children in a systematic way rests with Tasmania, where, under the direction of the Chief Health Officer and the Director of Education, about 1200 children attending schools in Hobart were inspected in 1906. The general examination was based upon that of the Royal Commission on Physical Training (Scotland) of 1903, but considerable modifications and adaptations were found necessary in order to fit it to immediate requirements. No attempt was made to secure anthropometric observations beyond those of unquestionable medical value, and in only one case (colour of eyes) were any purely anthropological data collected. The sociological data obtained (parental occupation, etc.) were found of much service, and produced some interesting comparative results.

Medical inspection of school children as now existing in Tasmania is carried out by three medical officers, each controlling respectively one of three areas, which for medical inspection purposes are known as Hobart District, Launceston District, and the Country Districts of the State. Additional assistants in the persons of two school nurses have been appointed to follow up the work of the Medical Inspectors. Reports on the physical condition of the children are furnished, and parents advised when medical attention is considered necessary, and in the case of parents unable to pay for such attention, orders are given for free treatment at the hospital. From March, 1907, to 31st December, 1910, the total number of children examined in State schools was 20,961, of which 11,869 were examined in country schools, 5870 in Hobart and 3222 in Launceston. During 1910, 2963 children were examined by Drs. Clark and Ormiston, 1774 by the latter, who found adenoids affecting 35 per cent., defective sight 19.3 per cent., and defective hearing 9 per cent. of the children; while Dr. Clark out of 1189 children found that 242, or 20.35 per cent., were suffering from various defects to an extent requiring medical treatment in order to fit them for their educational studies. Of these 242 children 95 had severe eye defects, and 95 were suffering from advanced adenoids. Out of the 1774 children examined by Dr. Ormiston 14 were found to be mentally deficient in the true sense of the term, while 16 others, though regarded as practically bordering on that condition, were set down as dull or backward, many of this latter group shewing the stigmata of congenital syphilis. With regard to dental condition, all the Medical Inspectors agree that the teeth of the children of Tasmania seem to be uniformly bad.

9. *Comparisons of School Children in Australia and other Countries*.—In 1909 a medical officer was appointed by the South Australian Government to carry out an inspection of 1000 school-going children residing in different districts of the State. Inspection was commenced in August 1909, and the results were embodied in a report issued in September, 1910.\* The matter therein dealt with may conveniently be subdivided into the following sections, viz.:—(i.) height, (ii.) weight, (iii.) chest measurement, (iv.) teeth, (v.) vision, (vi.) hearing, (vii.) nose and throat, (viii.) deformities, (ix.) diseases, (x) "dullards" and their physical defects.

(i.) *Height*. Comparative returns were available for all the States except Victoria and Queensland. In New South Wales and Western Australia the system of age-grouping was different to that adopted in Tasmania and in South Australia. In the former the last birthday was assumed to be the child's age, while in the latter the nearest birthday was adopted. Consequently, some slight allowance must be made for this difference in classification. The following table shews the comparative heights of school children (boys and girls) in Australian States, England and Scotland:—

\* Last birthday assumed to be the age of the child. † Elkington and Clarke. ‡ Blackburne. Last birthday assumed to be the age of the child. § Statistics of Anthropometric Committee. Last birthday assumed to be the age of the child; the boots of the children were not removed. || Mackenzie and Foster. Last birthday assumed to be the age of the child.

It appears from these tables that the Tasmanian children are exceptionally tall, being in advance of the other States at almost all ages. Western Australia stands next to Tasmania in this respect, while South Australian children approximate very closely to those of New South Wales in stature, the latter State having a very slight advantage. It may be seen that the heights of boys examined in Tasmania and Western Australia are greater than those examined in New South Wales and South Australia at every age, and that the New South Wales boys are consistently slightly in advance of South Australian boys, age for age. In the case of the girls, the Tasmanian girl is the tallest at all ages, except 8, when she is surpassed by Western Australia, and at 13 when New South Wales takes the lead. The stature of Western Australian girls, which exceeds that in any of the other States at the age of 8, approximates to that of South Australia at the age of 12, and is lowest of all the States at 13 and 14. As in the case of the boys, the stature of South Australian girls is very nearly the same as that of New South Wales, except at the age of 13, at which the older State has a very distinct advantage.

Comparison of the average heights of the South Australian with those of the English child tell decidedly in favour of the former at all ages. In the case of the boy, England would appear to have a slight advantage at the ages of 9, 11, and 13, but this apparent advantage disappears when it is remembered that the English children were measured in their shoes, whereas South Australian children were measured without their shoes. South Australian girls seem to have a still greater advantage in height over their English sisters than appears in the case of the boys. Only at the ages of 12 and 13 do the latter (English) seem slightly taller, but this superiority at once disappears when the boots are taken into consideration. The disparity in height is most noticeable during the first three years of school life.

(ii.) *Weight.* In comparing South Australian children with those of other States it is obvious from the tables given below that the Tasmanian children lead in weight as they were seen to do in height. The weight of South Australian children closely approximates to that of New South Wales. Among the boys, Tasmania leads at all ages except the age of 13, when the South Australian boy stands first amongst the States. The latter falls a trifle behind the New South Wales boy during his 14th year, and still more behind the Tasmanian at that age, but maintains a marked superiority over the Western Australian lad at the two higher ages. The boy in South Australia weighs nearly the same as the boy in New South Wales at the ages of 7, 8, and 14, falls a trifle behind him at 9 and 10, loses a pound in favour of the older State at 11, regains it at 12, and pushes his advantage over his rival to the extent of nearly  $2\frac{1}{2}$  pounds at 13. The Western Australian lad weighs high during his junior years at school, closely approximating to Tasmania at the ages of 8 and 9. He is considerably ahead of South Australia and New South Wales at 10, 11, and 12, but loses ground at 13, and falls into the rear of all the States at 14.

In the case of girls, Tasmania is in advance of the other States at all ages, and greatly so at the two higher ages. Western Australia is a good second at the junior ages, 8, 9, and 10. The girls from that State weigh nearly the same as those in South Australia and New South Wales at 11 and 12, almost the same as the mother State at 13, but fall behind her at 14. As in the case of the boys so also with the girls, the weights in South Australia closely approximate to those in New South Wales, at some ages being slightly in advance of the latter, at others slightly behind, the most noticeable differences being observable at the two higher ages, when the South Australian girl falls rather more than  $1\frac{1}{2}$  pounds behind in her average. One of the most interesting features is the remarkable average weight of the Tasmanian girl at 14, when she exceeds the next highest State average by upwards of 4 pounds.

South Australian boys compare favourably with average English boys in point of weight at the lowest and the two highest school-going ages, but fall very considerably behind the latter in the middle ages; *e.g.* at the ages of 10 and 11 there is an average difference of about 5 pounds in favour of the English lad, whereas at 13 and 14 the South Australian is slightly ahead in weight.

The following table shows the comparative weights of school children (boys and girls) in Australian States, England and Scotland:—

Last birthday assumed to be the age of the child; the boots of the children were not removed. || Mackenzie and Foster. Last birthday assumed to be the age of the child.

(iii.) *Chest Measurement.* Owing to the variety of methods in obtaining such measurements, comparatively few reliable statistics are available. In South Australia measurements were taken at the level of the nipple next the bare skin with the arms hanging loosely at the sides. Measurements at "full inspiration" and at "forced expiration" were taken, as also the "mean" between these two, but for the purposes of comparison with other places for which similar figures are available "mean" figures only are dealt with. The following table compares the mean chest measurements of Australian boys with those in certain other parts of the world:—

The following table shewing the average degree of expansion in inches amongst boys of two Australian States is very striking, the marked superiority of the South Australian boy at any age being suggestive of more careful training in breathing exercises than in the Mother State:—

**MEDICAL INSPECTION OF SCHOOL CHILDREN.—COMPARATIVE DEGREE OF CHEST  
EXPANSION BETWEEN SCHOOLBOYS IN SOUTH AUSTRALIA AND N. S. WALES.**

Age ... ..	7	8	9	10	11	12	13	14
Average degree of expansion in inches { S. Australia	2.50	2.47	2.81	2.82	2.71	3.0	2.98	3.11
{ N. S. Wales	1.8	1.8	1.9	1.9	2.2	2.5	2.4	2.5

(iv.) *Teeth.* With regard to teeth the proportion of decayed teeth in South Australia was found to be 2.73 teeth per child as against 4.2 in Hobart, and 4.6 in Sydney, in which latter place, however, only ages between 7 and 14 inclusive were dealt with. An examination of 10,500 English and Scottish children averaging the age of 12 shewed a percentage of 3.5 decayed teeth per child as against 1.8 per South Australian child of same age, while Sydney shewed 4.8, New South Wales Country Districts 3.5, and Hobart 3.3 for same age. It is somewhat difficult, however, to obtain reliable data upon this matter, as it is not always made clear whether the averages given refer to second teeth only or to both sets. Out of the whole number of 1007 children examined in South Australia only 70 were found to possess perfect sets of teeth.

(v.) *Vision.* Keenness of vision was tested with the ordinary Snellen's type read at six metres. The various tests made disclosed that the vision of South Australian children is by no means ideal, 15 per cent. of them being unable to read (under normal test conditions) with both eyes separately. The percentage of those possessing normal keenness of vision (6/6) amounted to 54.8. Defective vision in school children appears to be worse in other parts of the Commonwealth, the percentage for New South Wales being 27.7; Hobart, 44.2; Western Australia, 38.3, for children between the ages of 8 and 16 inclusive. In Edinburgh and Aberdeen similar tests revealed percentages of 31.7 and 18.5 respectively. In analysing defects in vision amongst South Australian children, 6/6 was taken as representing "normal" vision; 6/9 "fair"; 6/12 "medium"; and less than 6/12 "bad" vision. For explanation and significance of these figures see footnote attached to second table of sub-section 5 (Queensland) on page 1131 hereof.

Any attempt to record errors of refraction without the aid of retinoscopy being necessarily more or less unsatisfactory, and as the conditions under which these South Australian children were examined absolutely precluded the use of retinoscopy, only such tests as experience and circumstances rendered practicable were adopted. The tests used included, amongst others, a series of striped balls, striped letters, and a series of radiating lines. (a) *Astigmatism.*—The percentage of astigmatism for children (of both sexes) in South Australia between the ages of 8 and 14 inclusive, was found to be 36.8, but many of the ailments were of low degree, the children possessing "full vision" (6/6). No definite relation seems to exist between this trouble and the age of the child, and probably ought not to, astigmatism being a congenital defect. (b) *Hypermetropia.*—Owing to the impossibility of applying the retinoscopic test the examination for hypermetropic errors has not been satisfactory, and must be greatly underestimated, as only the "manifest" cases were recorded. Long sight (hypermetropia) among children is a congenital defect which is present in a very large number of children in the early school-going ages. Later on it may be replaced by normal or even by short sight. The unusual power which a child has, by straining the eye, of bringing it to a correct focus enables it in a great many instances to hide the defect, so that it only becomes "manifest" at a later period of life. The percentage of "manifest" cases among children examined was only 5.6, which is undoubtedly greatly below the extent which would have been revealed by a mirror examination. (c) *Myopia, or Short Sight.*—The general percentage of myopia was found to be 5.9. In the north a few schools were examined in which a large number of short-sighted children were found, and these have considerably raised the percentage throughout the State. In the metropolitan area the percentage was 3.5; in the southern areas 2.7, and in the northern areas 9.8.

*Medical Inspection of School Children.* The following table shews the percentage of astigmatism, manifest hypermetropia, and myopia in South Australian boys and girls at various ages:—

TABLE SHEWING PERCENTAGES OF ASTIGMATISM, MANIFEST HYPERMETROPIA, AND MYOPIA IN SOUTH AUSTRALIAN BOYS AND GIRLS AT VARIOUS AGES.

Ages.	Boys.			GIRLS.		
	Astigmatism.	Hypermetropia.	Myopia.	Astigmatism.	Hypermetropia.	Myopia.
7 ...	38.5	3.8	—	40.5	7.8	1.8
8 ...	31.8	9.0	—	40.6	6.5	3.2
9 ...	38.2	4.4	3.9	44.7	5.6	5.6
10 ...	37.1	1.5	5.1	43.2	5.8	4.4
11 ...	38.2	4.4	8.9	40.9	6.2	6.2
12 ...	40.8	5.4	9.0	31.1	8.7	7.8
13 ...	28.8	4.4	9.3	40.9	3.0	10.9
14 ...	22.2	5.7	10.1	31.4	7.3	7.8
Average at all ages ...	34.4	4.8	5.8	39.1	6.4	6.0

The above table shews the proportion of myopia to be almost the same in boys and girls. It also shows a marked tendency for the defect to increase with the school age. This corresponds with observations made elsewhere. Myopia, unlike the two other errors of refraction (astigmatism and hypermetropia) already dealt with, is generally an acquired defect, and is usually the result of eye-strain. Faulty position, or lighting, and other school defects are often contributing causes. It must be remembered that once a child acquires short sight the trouble is likely to be a progressive one unless checked by suitable glasses.

The number of errors of refraction found throughout the State, even when they did not reduce the visual acuteness, are, nevertheless, potential causes of future eye troubles. The children with apparently perfect vision formed only a small majority; and it is questionable whether they would have been in the majority had it been possible to correctly estimate the proportion of hypermetropia.

(vi.) *Hearing.* For this defect each ear was tested separately, the test employed being a whisper at the distance of eighteen feet, and of the 1007 children examined, in 34 cases or 3.3 per cent. deafness was observed, 16 of them being affected in only one ear. Similar statistics show a percentage of 12.1 for Hobart, while the percentages for West Australian children range from 4 to 15 in the different schools. In Edinburgh the percentage for distinctly defective children was 6.7; of defective 35.2. In Aberdeen the results were exceptionally good, only 5 children being distinctly defective, while the proportion of children set down as possessing slightly defective hearing was 13 per cent. Low percentages of deaf children in metropolitan areas may be greatly due to the facilities which exist for removing adenoid growths.

(vii.) *Nose and Throat.* Examination shewed that 17 per cent. were mouth breathers and that nearly 61 per cent. of the children were suffering from enlarged tonsils, a percentage sufficiently high to be regarded as a somewhat serious matter, when the amount of ill health directly or indirectly arising from such a condition is considered. South Australia seems to possess unenviable prominence in this respect, the percentage of the other places being New South Wales, 49; Hobart, 38; Western Australia, 20-40; Edinburgh, 52; and Aberdeen 30 per cent.

(viii.) *Deformities.* Twenty-four cases of pigeon-breast were noted, and it was observed with satisfaction that cases of curvature of the spine were exceedingly rare, only

0.6 per cent. of spinal deformities being found amongst South Australian children, as against 8 per cent. for Hobart, and 5 per cent. in Western Australia. The New South Wales Report for 1910 states that spinal curvature amongst school children is infrequent, only 15 cases out of several thousand children having been noted.

(ix.) *Diseases.* This section deals with various ailments, such as skin troubles, diseases of the glandular system, the bones and joints, and nervous disorders, but discloses nothing sufficiently important to warrant any special reference here.

(x.) *Dullards.* The report presents many features of significant import, which emphasise the urgent necessity for medical inspection of school children, but none more so than the information contained in the section bearing upon "Dullards and their physical defects." Concerning these and their condition the examiner remarks that "no number of arguments could be more overwhelmingly convincing for this necessity [*i.e.*, medical inspection], and to expect such children, suffering as they are from many remediable troubles, to keep pace with their better-equipped schoolfellows, is highly unreasonable." Of the 1007 examined, 111 children, or 11 per cent., were marked "dull" by the teacher. Fifty-seven of these were boys, equal to 11.4 per cent.; 54 were girls, equal to 10.6 per cent. An analysis of these cases revealed the following conditions:—Twenty suffered from very serious defects of vision; 21 were bad "mouth-breathers" (affected with adenoids); 7 were mentally defective in a very marked degree; 7 were very deaf; 3 had speech defects; 2 had heart disease; 1 was strumous; 1 had a large abdominal tumour; 1 suffered from anæmia and general debility; 1 had chronic bronchitis. These conditions will readily account for 57.6 per cent. of the "dull" children. Of the remainder, three were quadrons of less than average intelligence, and nearly all the other "dullards" suffered from some minor visual defect, enlarged tonsils, or some trouble calculated to handicap them in their school work.

## SECTION XXXI.

## THE COMMONWEALTH SEAT OF GOVERNMENT.

## § 1. The Selection of the Territory.

1. **Constitutional Provisions.**—The powers under which the Commonwealth Government has acted in taking steps towards the establishment of a seat of Government are conferred by the Commonwealth Constitution Act 1900. By section 125 of that Act (see p. 32 hereinbefore) it was provided that the seat of Government of the Commonwealth shall be determined by the Parliament and shall be within territory granted to, or acquired by, the Commonwealth. It was also provided (a) that the territory shall be situated in New South Wales not less than 100 miles from Sydney, (b) that it shall contain an area of not less than 100 square miles, and (c) that such portion of the territory as consists of Crown lands shall be granted to the Commonwealth without any payment therefor. Finally, the section provides that Parliament shall sit at Melbourne until it meets at the seat of Government.

In Year Book No. 4 (p.p. 1134 to 1160), an article was published giving detailed information as to the events leading to the selection of the Federal Capital territory, and as to the progress of operations in connection with the establishment of the capital city. The article was prepared from information gained from personal observation and from data kindly furnished by Lieut.-Colonel David Miller, V.D., I.S.O., Secretary for Home Affairs, under whose supervision all preliminary operations in the Federal Capital territory have been conducted. Information was also supplied by Lieut.-Colonel Owen, A.I.C.E., Director-General of Works, and Mr. C. R. Scrivener, Director of Commonwealth Lands and Surveys.

2. **The Seat of Government Act 1908.**—After considerable delay it was decided by the Seat of Government Act 1908 that the seat of Government should be in the neighbourhood of Yass-Canberra in New South Wales. The chief provisions of this Act were (a) that the seat of Government should be in the district of Yass-Canberra in the State of New South Wales, (b) that the territory to be acquired by the Commonwealth should contain an area of not less than 900 square miles, and (c) that the territory should have access to the sea.

Under this Act, then, the district in which the seat of Government is to lie was finally selected; it yet remained, however, to determine the actual territory for the seat of Government within that district, and to provide the machinery for the acquisition of such territory by the Commonwealth. The locality of the Yass-Canberra district may be seen on reference to the map given on page 1149.

## § 2. The Acquisition of the Territory.

1. **General.**—The chief facts relating to the actual acquisition of the Capital territory by the Commonwealth Government from the Government of New South Wales are outlined in Year Book No. 4 (pp. 1136-8). The boundaries of the territory as originally proposed and as finally selected may be seen by reference to the map on page 1150 hereof.

**2. Agreement between Commonwealth and New South Wales Governments.**—On the 18th October, 1909, the Prime Minister of the Commonwealth and the Premier of New South Wales, subject to the approval of their respective Parliaments, agreed to the surrender by the State and the acceptance by the Commonwealth of an area of approximately 900 square miles (shewn on the map on page 1151 hereof), and made certain stipulations with respect to the surrender and acceptance of the territory. The State also agreed to grant to the Commonwealth an area of two square miles for the purposes of a Commonwealth port, and in addition thereto certain other areas aggregating 2302 acres, which were considered necessary for the defence of the port. The State of New South Wales further granted to the Commonwealth:—(a) the right to construct, maintain, and work a railway from the territory to Jervis Bay; (b) the right to use the waters of the Snowy River or such other rivers as may be agreed upon for the generation of electricity for the purposes of the territory; (c) paramount water rights over the catchment areas of the Queanbeyan and Molonglo Rivers and their tributaries.

The State further agreed:—(a) To reserve from sale, lease, and occupation, except with the concurrence of the Commonwealth, all Crown lands in the catchment areas above referred to; (b) to protect from pollution the waters of the Queanbeyan and Molonglo Rivers; (c) in the event of the Commonwealth constructing a railway within the territory to its northern boundary, the State agreed to construct a railway from a point near Yass to join the Commonwealth line.

**3. Seat of Government Acceptance Act 1909.**—On the 13th December, 1909, the Seat of Government Acceptance Act was assented to. This Act was expressed to commence on a date to be fixed by proclamation after the New South Wales Parliament had passed an Act notifying the agreement and surrendering the territory. The Acceptance Act confirmed the agreement (which was incorporated as a schedule to the Act), determined the site of the seat of Government, and authorised the Governor-General to declare by proclamation that on and from the proclaimed day the territory was accepted by the Commonwealth. It also made provision for the continuance in the territory, after its acquisition by the Commonwealth, of State laws and private interests in land and for the commencement of the administration of the territory by the Commonwealth.

On the 14th December, 1909, a similar measure entitled the Seat of Government Surrender Act was passed by the Government of New South Wales. The Act came into force by proclamation on the following day; it ratified the agreement and surrendered the territory to the Commonwealth.

**4. Proclamations Effecting Acquisition of Territory by Commonwealth.**—On the 20th January, 1910, a proclamation was issued by the Governor-General bringing the Seat of Government Acceptance Act into force on the 22nd January following. The effect of this proclamation was to bring the Act into force to the extent of enabling the Governor-General to issue a second proclamation vesting the territory in the Commonwealth. Prior to the issue of the second proclamation it was, however, considered advisable to secure further legislation in the direction of an Act to provide for the proper government and administration of the territory. The *Seat of Government (Administration) Act* was accordingly passed on the 25th November, 1910; the provisions of this Act are referred to in a later part of this section. On the 5th December, 1910, the second proclamation was carried vesting the territory in the Commonwealth on and from the 1st January, 1911.

### § 3. Physiography.

**1. General.**—The general locality of the Federal territory is shewn on the map on page 1149. The chief topographical features of the whole territory may be seen by reference to the map on page 1152, while those of the districts in the immediate vicinity of the city site are shown on a larger scale on the map on page 1151. The total area of the territory is approximately 900 square miles, or 576,000 acres, of which it will be necessary to reserve from occupation the catchment area of the Cotter River, which has an extent of 170 square miles, or 108,800 acres. An area of about 12 square miles, or 7680 acres, has been set apart for the purpose of the city site, and it is proposed to reserve a further area of about 100,000 acres for parks, roads, military college, and other public purposes outside the city area, leaving 359,520 acres available for profitable occupation under reasonable conditions.

As regards accessibility, Canberra is 204 miles distant from Sydney, 429 miles from Melbourne, 912 miles from Adelaide, and 929 from Brisbane, from which it may be seen that the capital site is reasonably equidistant from the chief centres of population of the Commonwealth. As to access to the sea, it has been found that there is a practicable route for a railway between Canberra and Jervis Bay with a length of about 123 miles. To the north of the territory the country is open, and good roads lead to Yass (*via* Hall) and Gundaroo (*via* Sutton).

In Year Book No. 4 (pp. 1139-1142), reference was made to the chief topographical features of the Federal territory. For this purpose the territory was classified under four main heads:—(i.) The Canberra Ridge and Plain; (ii.) the Murrumbidgee Scarp; (iii.) the Paddy's and Gudgenby Rivers areas; and (iv.) the Cotter River catchment.

**2. Meteorology.**—Meteorological observations have not been taken on the capital site itself over a sufficient number of years to enable a proper appreciation of climatic elements to be arrived at. At Queanbeyan, however, which is only 8 miles distant from the capital site, rain records have been taken since September, 1870; at Duntroon since 1896; and at a number of other places near the capital site for various periods. Particulars of rainfall and temperatures, as recorded at Queanbeyan, have already been given in this book (see page 109.)

(i.) *Rainfall.* The average rainfall for the whole of the Federal territory has been computed by the Commonwealth Meteorologist to be 25.5 inches, or about that of Melbourne or London. The following table gives particulars of the rainfall recorded at several places near the capital site:—

**COMMONWEALTH SEAT OF GOVERNMENT, — RAINFALLS RECORDED AT PLACES IN VICINITY OF CAPITAL SITE.**

Station.	No. of Years.	Average.	Greatest.		Lowest.	
			Year.	Amount.	Year.	Amount.
		Inches.		Inches.		Inches.
Duntroon ... ..	16	18.74	1900	28.94	1902	11.09
Kiandra ... ..	37	64.55	1889	90.06	1908	42.18
Lake George ... ..	26	27.00	1887	42.11	1908	15.90
Queanbeyan ... ..	41	22.52	1887	41.29	1902	10.45
Red Hill ... ..	25	33.89	1887	49.66	1902	18.24
Uriarra ... ..	15	32.92	1887	54.11	1899	20.00

The highest recorded average rainfall within the Federal territory is 32.92 inches at Uriarra, and the lowest, 18.74 inches at Duntroon. It is stated, however, that neither of these records can be accepted as accurate. At Queanbeyan the average rainfall is 22.52

inches; as much as 41.29 inches were registered at that place in 1887, and as little as 10.45 inches in 1902, a range of over 30 inches. The average rainfall in the city site itself is estimated to be 21.80 inches per annum. This equals or exceeds that recorded at the following places:—Berlin, Budapest, Christiania, Copenhagen, Madrid, Marseilles, Moscow, Naples, Paris, San Francisco, Stockholm, St. Petersburg, and Vladivostock.

No official records have been taken within the Cotter catchment area, but it is estimated that the average rainfall cannot be less than from 40 to 60 inches per annum, since Kiandra, which is not many miles distant, has an average of 64 inches and is exposed to the same rain-bearing winds, while it has the disadvantage of being some 500 to 1000 feet lower than many of the peaks which serve as condensing or precipitating agents for the Cotter River. If the records of Kiandra can be taken as a guide, it follows that the precipitation on these higher levels does not suffer the extreme annual variations to which the lower levels of the Federal territory are susceptible, so that the flow of the Cotter River may reasonably be regarded as both fairly uniform and constant.

(ii.) *Temperature and other Matters.* The meagre temperature data so far obtained over the capital site leave information as to many phases of weather inconclusive. Taking Queanbeyan as representative, the mean annual temperature may be assumed to be 55° Fahr., the summer mean 68°, and the winter 42°. The maximum shade temperature recorded at Queanbeyan for the past seventeen years is 104°, the minimum 11° Fahr.; the ordinary summer temperatures are high, while the nights are invariably cool. During winter the temperature frequently falls below freezing point; the minimum recorded in 1911 was 22°, and the winter of that year was quite a normal one. At Duntroon (Military College) the minimum for 1911 was 25°. The prevailing winds during the winter months are from points west of the meridian, and since those from the south, south-west and west pass over the snow-clad Alps, they are keen. During the summer, hot winds from the west and north-west alternate with cool winds from the south, while the frequent north-east winds from the ocean are refreshing and serve to modify the summer temperature. It is rare for snow to fall within the city site, and still more rare for it to remain unfrozen for more than a few hours after sunrise. Fogs are neither frequent nor dense. Observations of evaporation and other climatic elements are not available for a period sufficiently long to enable a reliable estimate of normals, other than those of rain and temperature, to be formed.

A meteorological station was established in 1910 on the capital site and the following instruments installed:—Evaporation tank, thermograph, barograph, hygrograph, aspirator, rain gauge, anemometer, and sunshine recorder.

**3. Geology, Vegetation, Soils, and Agriculture.**—For information as to these matters reference may be made to Year Book No. 4 (pp. 1142-5).

**4. Jervis Bay.**—The territory on the south side of Jervis Bay acquired by the Commonwealth includes (a) an area of about two square miles as described in the first schedule to the Seat of Government Acceptance Act 1909; (b) an area of 132 acres, known as Bowen Island, described in the same schedule; and (c) six other areas aggregating 2270 acres, also described in the schedule. The Commonwealth recently acquired an additional area of about 5000 acres to embrace the headwaters of Telegraph Creek, and the New South Wales Government has agreed to amend the Seat of Government Acceptance Act so as to embrace an additional area of about 9000 acres to include the catchment area of Lakes Windermere and Mackenzie, and the site for the Naval College. The State has also agreed to grant sovereign rights over the area between Bowen Island, Captain's Point, St. George's Basin, Sussex Inlet, Wreck Bay, and the South Pacific Ocean; in this area is included a small portion of the waters of Jervis Bay.

The entrance to Jervis Bay, between Bowen Island and Point Perpendicular, is  $1\frac{3}{4}$  miles in width. The main Federal territory is situated on the southern side of the bay, at what is known as Darling Road, where there is a good anchorage on a sandy bottom, carrying a depth of from 6 to 11 fathoms of water at low-water spring tides. The 5-fathom line comes close up to the shore, and there is nothing less than 11 fathoms thence to the ocean. The sheltered area of Darling Road may be taken to be about  $1\frac{1}{2}$  square miles, and affords an excellent shelter for vessels of even the greatest draught.

## § 4. Administration and Organisation of Services.

1. **General.**—By section 6 of the Seat of Government Acceptance Act 1909, it is provided that all laws in force in the Commonwealth territory, at the date of acquisition by the Commonwealth, shall, so far as applicable, remain in force until other provision is made. Power is given to the Governor-General to exercise certain functions hitherto vested in the Governor of New South Wales, subject to the proviso that the Governor-General may direct that any such function shall be exercised on behalf of the Commonwealth by the authorities of the State in whom it was previously vested. Before issuing the proclamation actually effecting the acquisition of the territory it was thought desirable to make further provision for the administration of the territory by the Commonwealth. The Seat of Government (Administration) Act was accordingly passed in November, 1910.

2. **The Seat of Government (Administration) Act 1910.**—This Act, which came into force on the 1st January, 1911, provides for the government of the territory and deals with the following matters:—(a) *Ordinances.* The Governor-General is authorised to make ordinances having the force of law in the territory, either House of Parliament being empowered, however, to disallow any such ordinance by passing a resolution to that effect. (b) *State Acts.* It is provided that certain State Acts shall not continue in force in the territory. These Acts are as follows:—The Conciliation and Arbitration Act 1899, the Industrial Disputes Acts 1908 and 1909, the Local Government Acts 1906 to 1908, the Country Towns Water and Sewerage Act 1880, and all acts imposing rates, taxes, or duties (except duties on the estates of deceased persons). (c) *Commonwealth Acts.* It is also provided that the following Commonwealth Acts should apply within the territory:—The Commonwealth Conciliation and Arbitration Acts 1904 to 1910, the Australian Industries Preservation Acts 1906 to 1909, and the Secret Commissions Act 1905. (d) *Crown Lands.* The freehold of any Crown Lands in the territory cannot be sold or disposed of except in pursuance of some contract entered into before the 1st January, 1911. (e) *Jurisdiction of Inferior Courts.* The inferior courts of the State of New South Wales exercise the same jurisdiction as they had before the commencement of the Act.

3. **Ordinances.**—Up to the end of March, 1911, five ordinances had been made under the provision referred to above. (a) The first of these came into operation on the 1st January, 1911, and deals with the provisional government of the territory. It directs that the State laws are to continue to be administered by the authorities of the State, and that magistrates, gaolers, and police are to be deemed to be officers of the territory. No new license to sell intoxicating liquor in the territory may be granted; any existing publican's license may, however, be renewed from time to time for the same premises. (b) The second ordinance, providing for the making, levying and expending of rates on land in the capital territory, was made on the 25th October, 1911. This ordinance was amended by the third ordinance, dated the 11th December, 1911, and by the fifth ordinance, dated the 20th March, 1912. (c) The fourth ordinance providing for the care, control, and management of public places and for the regulation of traffic was made on the 1st February, 1912.

It is proposed to pass Commonwealth Acts providing a complete scheme for the government of the territory, as the opportunity and necessity arise. In the meantime it is intended to make other ordinances at an early date dealing with various urgent matters; it is understood that the first of these will relate to the local government of the territory by the Commonwealth.

Information relating to financial and other arrangements, and to the scheme for the organisation of services in the Federal territory, may be found in the last issue (No. 4) of the Commonwealth Year Book (see p. 1151).

## § 5. Surveys.

1. **General.**—After the acquisition of the territory and the selection of the city site, the first step to be taken towards the establishment of the capital city is the carrying out of a large number of necessary surveys. These comprise (a) contour surveys; (b) triangulation survey of the territory; (c) demarcation of the boundaries of the territory and the catchment areas; (d) engineering surveys for water-supply, sewerage, roads, bridges, and other associated objects; (e) topographical or feature surveys of the territory and of the catchment areas of the Molonglo and Queanbeyan Rivers, comprising in all an area of about 1480 square miles; (f) road surveys; (g) surveys in connection with the Yass-Queanbeyan railway; (h) demarcation of boundaries of lands at Jervis Bay; (i) surveys in connection with the railway line to connect the capital city with Jervis Bay, and the establishment of a harbour at Jervis Bay; (j) redetermination of boundaries of privately-owned properties in the territory; (k) preparation of plans and descriptions of the whole of the foregoing surveys. These surveys are being carried out under the direction of the Commonwealth Director of Lands and Surveys.

2. **Astronomical Observatory.**—In connection with these surveys it is in the first place important to observe that a temporary astronomical observatory has been established on the summit of a range of hills, known as Mount Stromlo, about 6 miles south-west of the city site, and situated symmetrically with regard to the eastern and western boundaries of the territory. The primary object in fixing this site is the determination of the initial meridian, to which all surveys, including not only those within the Federal territory but all others throughout Australia, will ultimately be referred. A point on the summit of this range has been determined as the origin of all co-ordinates for the surveys which are to be carried out. Observations are being conducted at Mount Stromlo, and the photographs are being taken to determine the atmospheric conditions. A road with easy gradients  $2\frac{1}{4}$  miles long has been constructed from the base to the summit of the mountain. Further details regarding the observatory site may be found in Year Book No. 4 (p. 1152).

3. **Progress of Surveys.**—Survey operations are steadily progressing. They include the demarcation of the boundaries of the territory, the determination of the boundaries of privately-owned properties, surveys for engineering works and proposals (including railways) and for other necessary purposes. For further information reference may be made to Year Book No. 4 (pp. 1152-4).

(i) *Railway to Jervis Bay.* A route for a railway to Jervis Bay, connecting with the line from the city site to Bungendore, has been selected, and location surveys are now being carried out in view especially of the early establishment of a Naval College at Jervis Bay. The length of the proposed line is approximately 96 miles, with a ruling gradient of 1 in 50 and curves of 12 chains radius as a minimum. The only bridges of any size will be those across the Shoalhaven and Mongarlow Rivers; smaller bridges will be required crossing Reedy and Durra Durra Creeks and the Coorang River. The descent towards Jervis Bay is gradual, the highest point being at the departure from the Goulburn-Cooma railway at 2550 feet above sea-level.

4. **Determination of Boundaries and Particulars of Land Tenure.** Amongst other matters which are in train may be mentioned the valuation of privately-owned properties lying within the territory, with reference to which the New South Wales Government has furnished a detailed statement shewing the nature of each occupation together with certain information in the possession of the State Department bearing upon the values of the properties. Particulars regarding the tenure of land within the Federal territory may be found on page 332 of this book.

Under the Loan Act, 1911, authority has been granted for raising the necessary funds to enable the privately-owned lands within the territory to be acquired by the Commonwealth.

## § 6. The Building of the City, and Associated Matters.

1. **Preliminary Measures.**—Whilst the foregoing survey operations are being performed it is proposed that the preliminary schemes for workmen's habitations, water-supply, sewerage, and other necessary works should be carried out for the necessities, not only of the city itself in its earlier stages, but also of the large number of persons who will be engaged on its construction.

(i.) *Accommodation for Workmen.* Arrangements for housing the employees engaged on the preliminary works and for controlling the area occupied by them are being made. For the purpose of providing in a suitable position an area upon which the officers occupied in surveying and other work, and other persons engaged in the establishment and construction of the city will reside, the estate known as Acton, covering an area of 1780 acres on the north side of the Molonglo River, has been acquired. Quarters for unmarried officers and cottages for married officers are being erected on this estate. During the earlier stages, workmen will probably be distributed on engineering works away from the city site, but from the time when construction within the city begins, there will be an aggregation of a considerable number of men, their families, and dependents.

When this stage arrives, it is proposed to lay out the area referred to as a semi-permanent village. The streets will be formed and drained; cottages erected for married men and families; and accommodation provided for single men. Immediate steps are to be taken for the erection of offices and quarters of the staff. It is also proposed to establish a general store, where all consumable supplies may be purchased. A hospital is also to be provided and equipped, the medical officer in charge to act also as health officer. The establishment of a Government hotel and the provision of schools for the education of children are also in view.

(ii.) *Transport.* Steps are to be taken for the early construction of a railway connecting the centre of distribution at the city site with the Goulburn-Cooma line, either at Bungendore or at Queanbeyan. The construction of such a line will facilitate the supply of materials, plant, stores, and provisions, and will thus decrease the cost of engineering and building construction, and of workmen's living. In the initial stages it may be found necessary to construct a tramway from Queanbeyan for transport purposes until the railway is opened, such tramway to follow the route of, and be a permanent step towards, the line connecting Yass and Queanbeyan. The roads in use in the territory are approximately 200 miles in length; about one-half of these are formed and gravelled in parts, the other half having natural surface with slight formation. A substantial wooden bridge has been erected over the Molonglo River; it will carry the heaviest road load and, if necessary, could be used for railway traffic, pending the construction of a permanent bridge for railway purposes only. There are in addition four other bridges in the territory—two each over the Murrumbidgee and Molonglo Rivers—constructed of timber. A scheme is to be prepared for an efficient system of roads throughout the Federal territory, radiating from the city site.

All roads in the territory have been attended to, and the main roads, bridges, and approaches put into a state of repair, such as is warranted by the existing traffic. A modern road-making plant has been purchased and is in use with much resulting economy and efficiency.

(iii.) *Water-supply and Sewerage.*—It is proposed that a provisional scheme for water supply and sanitation should be carried out at an early date, so that the men who will be engaged on the construction of the permanent water-supply and sewerage systems, of roads, bridges, railways, and other works, will be provided for in a manner which will meet all requirements in the direction of health, and which will not in any way interfere with the site upon which the capital itself will eventually stand. At a later stage, when these permanent works are sufficiently advanced and when construction

within the city site commences on a large scale, a water-supply system will probably be adopted so as to form a permanent step towards the water-supply of the city upon official occupation. Similarly, in regard to sewerage, at first the arrangements will probably be more or less of a temporary nature, but it is proposed that the engineering works should be pushed so far ahead before building operations in the city are commenced, as will admit of a location being assigned for workmen, which will, in course of time, become a sewage district for the city extensions. The question of water-supply for afforestation will also receive early consideration.

(iv.) *Afforestation.* It is proposed to take steps at once for the afforestation of that part of the territory contiguous to the city site, in such a manner as not to interfere in any way with the design of the city. By being planted and properly laid out at an early date, the trees will be in a forward state by the time the capital city is ready for occupation. Approval has been given for the establishment of a nursery for the propagation of trees, plants, and shrubs, and the work is to be proceeded with at once. The scheme includes the growth of trees for scenic and ornamental purposes, for the prevention of the erosion of the banks of rivers and creeks, and for shelter. It appears probable that concurrently with the foregoing operations it will be found advantageous to commence some of the constructional works for the lake which is to be formed by utilising the waters of the Molonglo River at the capital site. It is proposed to obtain expert advice as to a scheme of afforestation and to establish local nurseries for the trees which will be used.

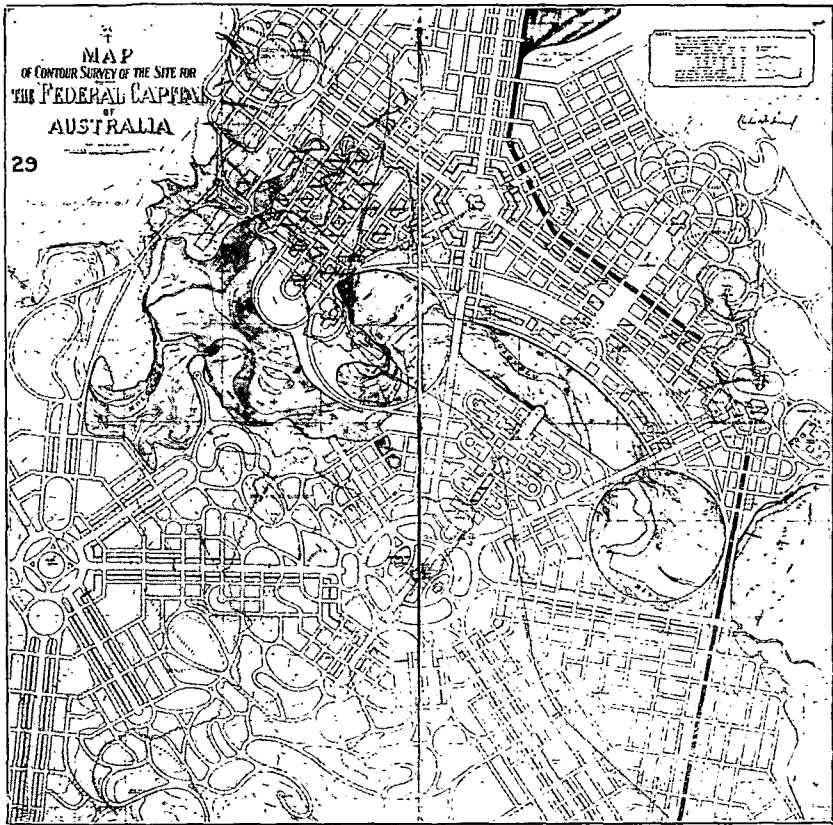

(v.) *Materials.* Steps are being taken with a view to the supply of local materials as far as possible. Shafts have been sunk and samples of shale, which it is thought will be suitable for the purpose of brickmaking, have been obtained. Tests of these samples have been carried out in Sydney and Melbourne with satisfactory results. The type of brick made is the machine-made brick, treated by the semi-dry process. A general plan for a brickmaking yard and sketch plans of buildings have been prepared, with a view to providing for further trials of the shale at the site tentatively selected. It is estimated roughly that ninety million bricks will be required for the public buildings; the delivery of these will probably be accomplished within six years after the erection of the brickworks, i.e., at the rate of fifteen million bricks per annum. It is stated that the volume of shale available is ample for these purposes. Further investigations are to be made as to the nature of the building stone available in the territory. Granite occurs in large quantity over a great part of the territory; none has yet been used for buildings, but it is probable that, with the demand created by the establishment of the capital city, suitable quarries will be opened, while the porphyritic rock which outcrops frequently will no doubt provide valuable stone for ornamental purposes. Stone for road-making is abundant and quarries will be located; sand for building construction and pottery clays will be sought for. The question of the manufacture of sand lime bricks from local materials is under investigation. A pipe-making plant has been purchased and installed to turn out all descriptions of compressed cement pipes from 4 in. to 24 in. diameter.

Portion of the first instalment of Australian timbers for use at the capital has been received and stored, so that when required it will be thoroughly seasoned.

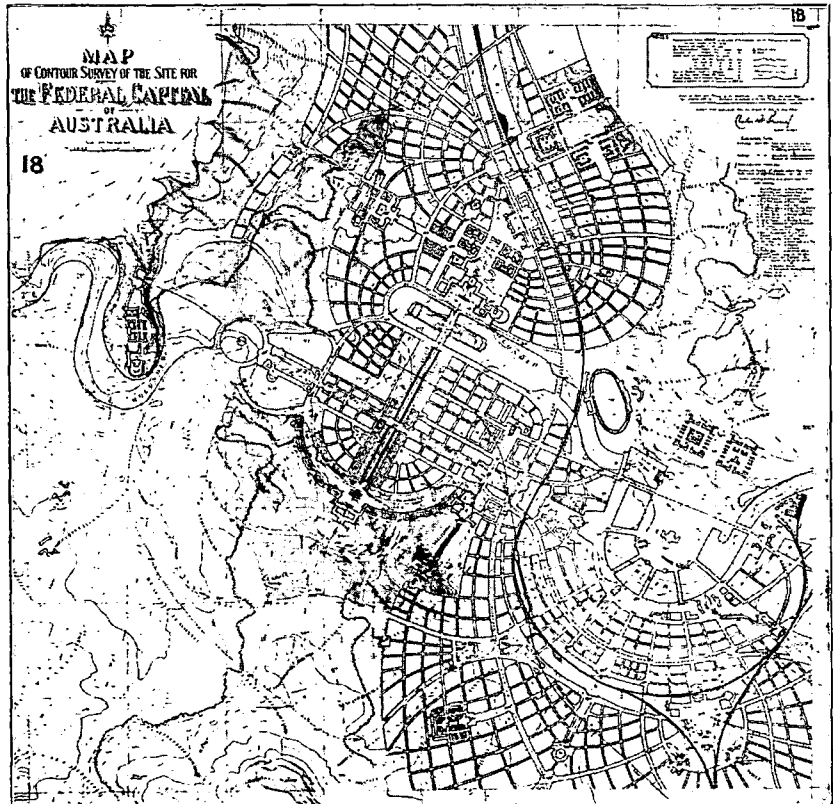

(vi.) *Power.* Power will be required in the early stages of the work for lighting, brickmaking, woodworking, pumping, possibly quarrying, and other purposes, and tenders have accordingly been called for the first unit of prime mover and generator in order to provide the necessary power. The project will be considered as part of a comprehensive scheme to be installed in units.

(vii.) *River Gauging.* Gauge weirs have been constructed on the Molonglo and Queanbeyan Rivers for the purpose of determining the available flow.

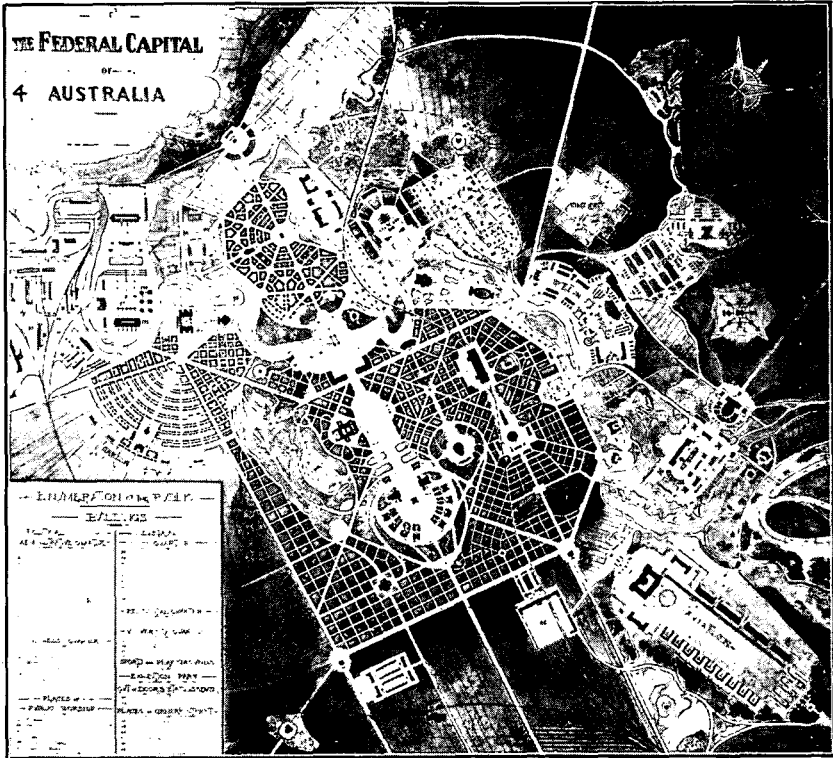

(NOTE.—A B is only the division between the two halves of the plan).

(For remarks see next page).

FEDERAL CAPITAL—PREMIATED DESIGNS FOR LAYING OUT CAPITAL CITY.  
(No. 4. awarded third Premium).

REMARKS.

The names and particulars attached to the premiated designs were as follows:—

DESIGN No. 29 awarded first Premium (see preceding page).

WALTER BURLEY GRIFFIN,  
Architect and Landscape Architect,  
Chicago, Illinois, U.S.A.

DESIGN No. 18 awarded second Premium (see preceding page).

ELIEL SAARINEN,  
Architect,  
Helsingfors, Finland,

DESIGN No. 4 awarded third Premium (see above).

D. ALF. AGACHE,  
Architect Diplômé par le Gouvernement Français,  
Professeur au Collège libre des Sciences Sociales,  
Paris, France.

**MAP**  
OF CONTOUR SURVEY OF THE SITE FOR  
**THE FEDERAL CAPITAL**  
OF  
**AUSTRALIA**

Scale: 500 Feet to an Inch

**NOTES**  
Representative Section (SHEET) is the portion of 25 columns and the Representative Section  
The map is a contour survey of the site for the Federal Capital of Australia, and is  
the property of the Commonwealth of Australia. It is not to be used for any other purpose  
without the permission of the Surveyor-General. The map is a contour survey of the site for  
the Federal Capital of Australia, and is the property of the Commonwealth of Australia. It is  
not to be used for any other purpose without the permission of the Surveyor-General.

Surveyed by photogrammetry, this drawing is based on the original of the Survey of the site for  
the Federal Capital of Australia, and is the property of the Commonwealth of Australia. It is  
not to be used for any other purpose without the permission of the Surveyor-General.

Surveyed under contract from the Minister of the Interior, by the Surveyor-General.

*John A. Smith*  
Surveyor-General

Revised by photoduplication from Drawing on Stone and Printed by the Department of Landscaping, New South Wales  
from original plan by P.J. Brumby, of the New South Wales Department of Landscaping

Revised under instructions from the Minister of State for State Affairs

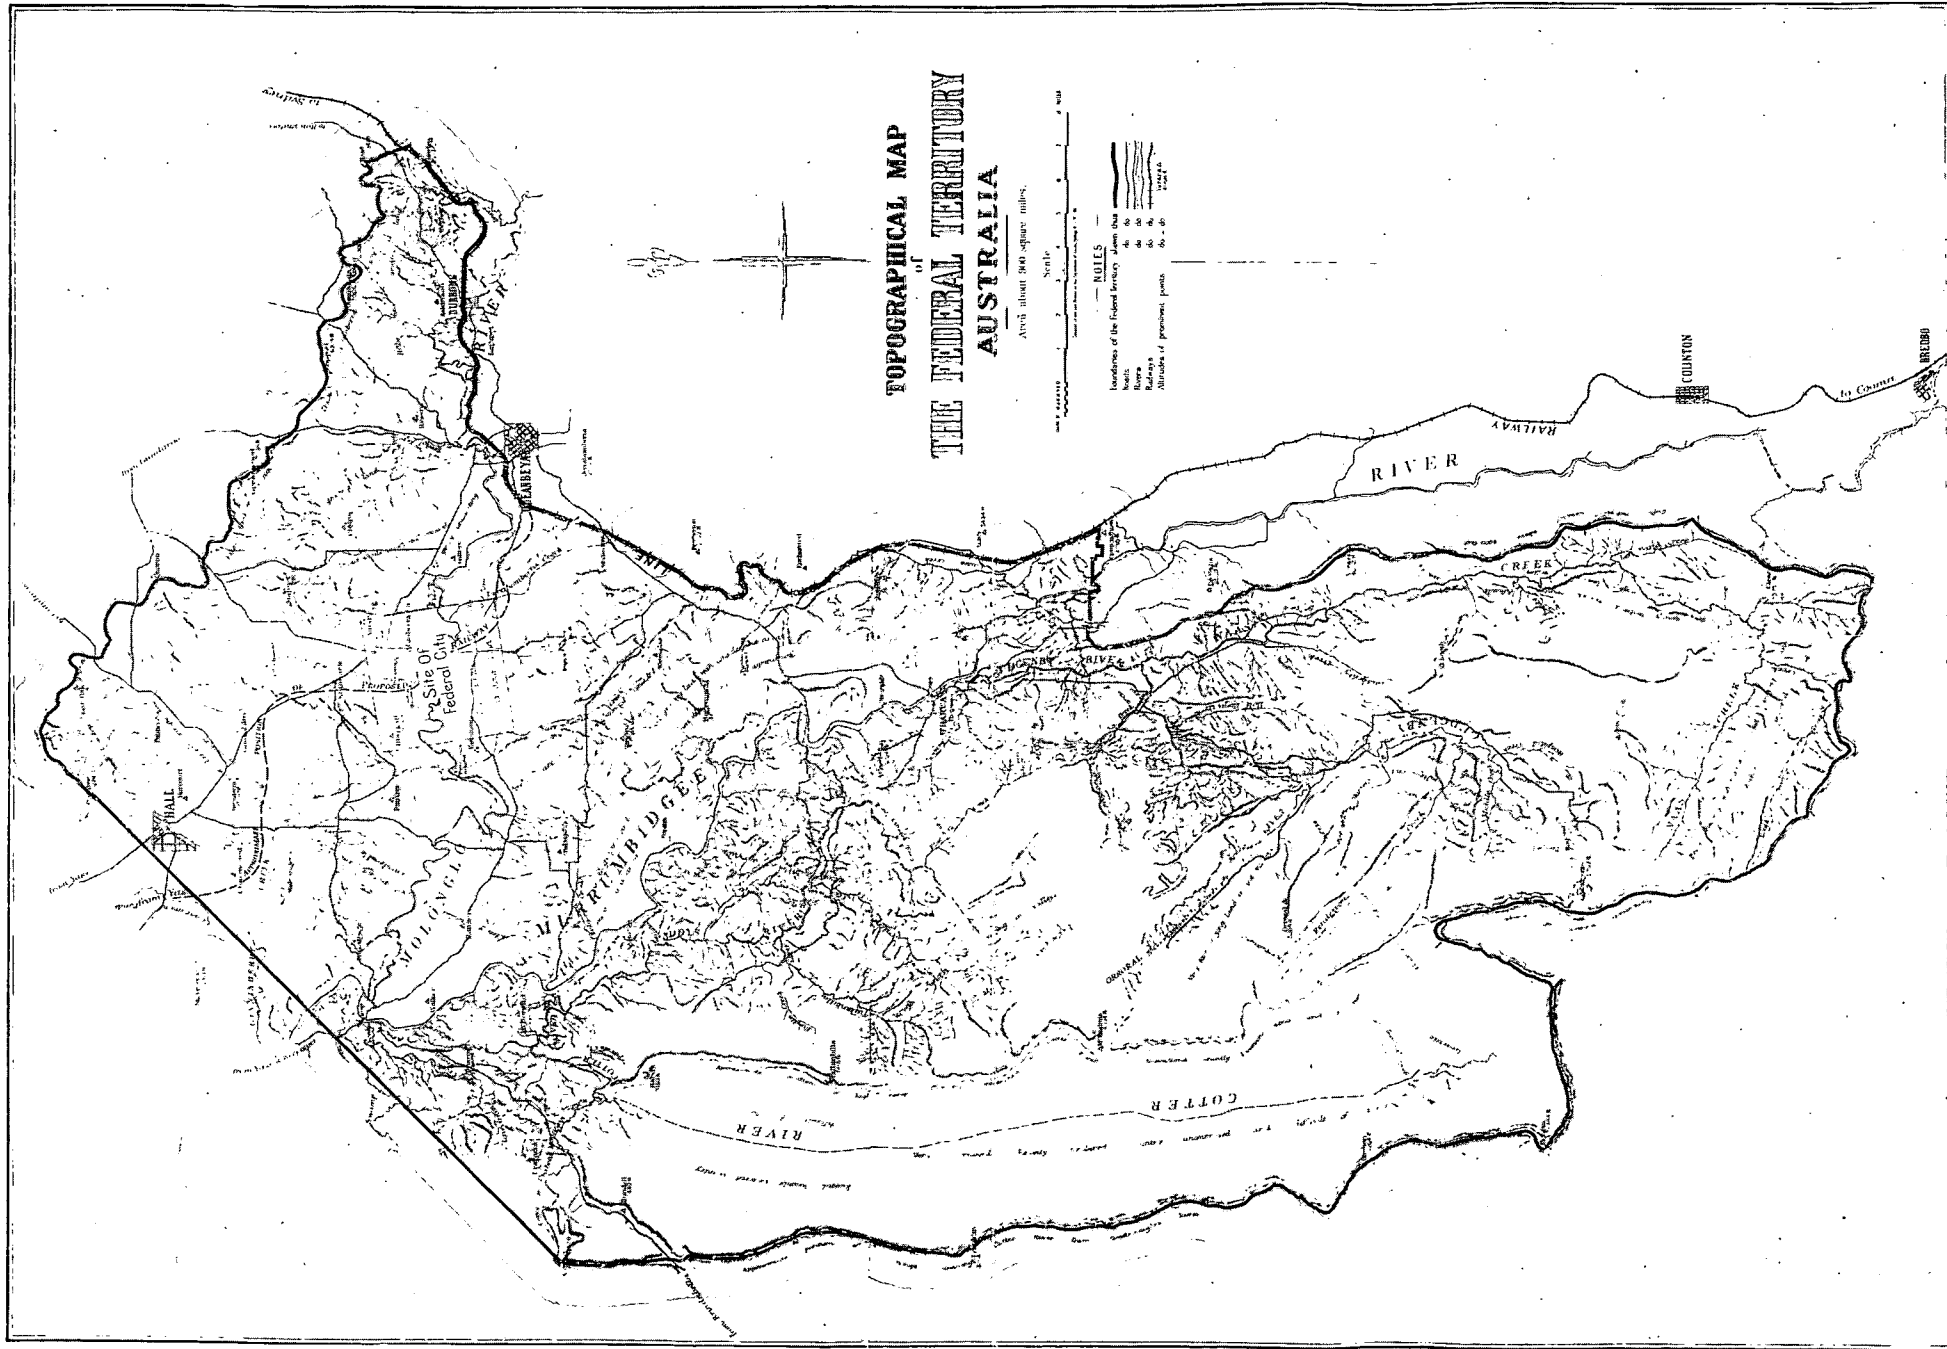

Charles R. Scribner

2. **Probable Successive Stages of Works.**—A scheme, setting forth the proposed successive stages of the works involved in the establishment of the capital city, has been prepared by the Director-General of Works. Although the entire undertaking does not involve any one engineering work of great magnitude, it is necessary that the successive steps should be planned in such a manner that each may become a permanent step obviating temporary expedients. It is also necessary that the whole undertaking should be designed so that certain projects may initially form units or parts, which can be repeated or developed in course of time to meet increase of population. The probable stages in the evolution of the city, as set out hereunder, may overlap, and in some cases projects will continue through successive stages.

(i.) *First Stage. Transport, Materials, and Power.* Country roads and bridges; railway connection with Goulburn-Cooma line; brickworks; lime kilns; and timber (first instalment); generation and transmission of power for construction.

(ii.) *Second Stage. Hydraulic Engineering Works outside City Area.* Water-supply; storm-water drainage; sewerage outfall works; main sewer; sewerage district for workmen; timber (second instalment); railway bridge over the Molonglo River.

(iii.) *Third Stage. Engineering Works within the City Area preparatory to Occupation.* Street tunnels; power plant (permanent station and distribution; construction of housing for workmen; service reservoirs; and impounding weir on Cotter River.

(iv.) *Fourth Stage. Building Construction within the City and Completion of Engineering Works.* Public buildings (offices for use during construction); gasworks; compensating weir on Queanbeyan River; railway to Hall (Queanbeyan to Yass line); impounding weir on the Molonglo for ornamental water; erection of public offices and buildings; erection of Parliament House; completion of city roads.

3. **Outline of Principal Projects.**—A provisional scheme has been formulated setting out the sequence of most of the important projects involved in the building of the city, together with the estimated time necessary for their design and completion, and their approximate cost. There are, however, certain matters which cannot be dealt with even provisionally at present—such as bridges over the Molonglo River and the impounding weir on that river for ornamental purposes—since the location and height of these will depend upon the level of the waters provided for in the accepted designs for laying out the city. Other important works, *e.g.*, the compensating weir on the Queanbeyan River, street tramways, the railway to Jervis Bay, and refuse destructor, are not included in the scheme, since it is considered that they are not essential for the first years of occupation. The scheme provides, subject to the approval and the appropriation by Parliament of the necessary funds, for the completion of the designs and buildings ready for occupation within a period of eight years.

(i.) *Water Supply.* There are two aspects of this matter, *viz.*, one as regards workmen during construction, the other regarding the supply for the city. The former has already been referred to herein (see page 1145). It is proposed that a supply from the permanent source, the Cotter River, shall be provided before the time when there will be any considerable aggregation of workmen and dependents within the city area. In the meantime a supply of water will be provided for the men engaged on preliminary works, probably by pumping from the Molonglo River through sand filters into reservoirs. A weir has been erected on the Cotter River, and the discharge is determined by readings taken daily. The results of the records obtained shew that the mean daily flow between May, 1910, and December, 1910, was over 43,000,000 gallons; since that time it has increased to approximately 57,000,000 gallons daily, which is regarded as very satisfactory, taking into consideration the fact that the domestic and civic requirements of the city in its earlier years are estimated at only 2,500,000 gallons daily (based on a population of 25,000 at 100 gallons a day). A site for an impounding weir on the Cotter River

has been provisionally selected at a place about one mile from the confluence of that river and the Murrumbidgee, and at a level of about 1560 feet. It is estimated that a weir at that place, 70 feet in height, will impound 800 millions gallons of water; if the height were increased to 200 feet, the quantity impounded would be 4800 million gallons. Approval has been given to expend £2000 on investigations to determine the site of the weir. The results of the investigations which have so far been made under this approval are satisfactory. A permanent survey to determine the route of the road from the capital site to the Cotter River has been authorised, and a ford across the Murrumbidgee River has been constructed at a place about 200 feet above the confluence of the Cotter River. This ford provides easy access to the weir site, where, in the near future, extensive works will be carried out. The pipe line, after crossing the Murrumbidgee River, will lead to the pipe head reservoir on a hill near Mount Stromlo (2465 feet), thus necessitating a lift of about 800 or 900 feet. The proposed site for the service reservoir is at Red Hill (2300 feet), near the south-western boundary of the city site. It is proposed that the power for the pumping plant shall be transmitted electrically from the central power station.

(ii.) *Sewerage Scheme.* Various considerations demand that efficient measures should be taken to ensure the innocuous disposal of the sewage effluent. Any system adopted will involve land filtration, and the configuration of the country indicates the slopes of the Molonglo below (*i.e.*, to the west of) the city site as the most suitable place for sewage treatment works. It is proposed that a system of bacteriological treatment combined with broad irrigation shall be adopted.

Until the design for laying out the city is finally adopted, the lowest levels from which sewage will be taken cannot be determined, but it is stated that the engineering surveys, which have already been carried out, demonstrate that the areas available for irrigation by gravitation alone will be too small, and that pumping will be necessary. The lift required will, however, be small even to command a large irrigable area. The relative advantages of pumping the sewage or effluent are under consideration.

(iii.) *Power Supply and Distribution.* In distinction to a system under which independent power-generating units would be installed at various places—for example, at the sewage outfall works and at the pumping station at the Cotter—the adoption of a central station scheme is of importance. It is proposed that the permanent central station shall consist of two generating units each of 500 kilowatts, and one spare unit. Until a proper water-supply is provided, the permanent power station cannot be erected. In the meantime, since power supply is necessary in connection with preliminary works (see page 1146 hereinbefore), the first unit is to be installed in a temporary building on the bank of the Molonglo River, conveniently situated for condensing and feed water. When the permanent station is erected, the first unit will probably be moved from the temporary building and become part of the complete plant.

(iv.) *Buildings.* The scheme provides for the sequence of designs and for the erection of public buildings without intermission, including the Governor-General's residence, Courts of Justice, police buildings and gaol, administrative offices, military dépôt and offices, schools, observatory, medical and hospital buildings, railway station, Prime Minister's residence, accommodation for Members of Parliament, post office, Government printing office, and Town Hall. Other buildings will probably be erected within the first few years of, but not prior to, occupation, such as State House and necessary educational institutions. It has been decided that competitive designs should be invited for Parliament House after the design for laying out the city has been adopted.

The scheme provides for the design and erection of public buildings only. It is proposed that buildings for commercial and residential purposes should be constructed by private enterprise, at a time when the engineering and other works of the city are considered to be sufficiently advanced.

(v.) *Gasworks.* It is considered that gas-supply for cooking and heating will be essential, and that such a supply will also be utilised to a large extent for lighting purposes. It is proposed, therefore, to produce a gas of calorific value suitable for modern lighting, as well as for heating and power. On the basis of available statistics regarding towns having both electric and gas supplies, the consumption for 20,000 people, including town street lighting, will be 80 million cubic feet per annum.

(vi.) *Compensating Weirs on Queanbeyan and Molonglo Rivers.* The proposal to construct a weir to impound ornamental waters in the city site will entail the erection of compensating weirs on the Queanbeyan and Molonglo Rivers. It is considered that the construction of one of the latter weirs should preferably precede that of the impounding weir at the city, and that it would be advantageous to first construct the weir on the Queanbeyan River. The area of the ornamental water will presumably be determined by the accepted city design, but in any case a constant flow of water will be required to maintain a definite level and to avoid so far as possible still waters in any arms or bays. The evaporation losses, deduced from the data obtained at Lake George, will be considerable, as also will be the loss by soakage. The requisite flow cannot be definitely stated until the extent of ornamental water is determined.

(vii.) *Other Matters.* Other matters (in addition to the foregoing and to the preliminary measures specified in paragraph 1 hereof) dealt with in the scheme comprise lime-kilns, storm-water drains, military college, street tunnels, and city streets.

4. **Military College of Australia.**—On the 27th June, 1911, a Military College was opened by the Governor-General at Duntroon, near the eastern boundary of the capital city area, for occupation by the cadets and staff. Particulars regarding the establishment of this College may be found in Year Book No. 4 (p. 1159). Further information is given in the section of this book dealing with Defence (see p. 1087 hereinbefore).

5. **Designs for the Capital City.**—In 1911 the Commonwealth Government invited competitive designs throughout the world for laying out the capital city, with the object of embodying in the construction of the Federal capital the most desirable features from the standpoint of general efficiency for its purposes, of engineering, hygiene, etc. The city will be the permanent seat of Government of the Commonwealth, the place at which the Federal Parliament will meet, where all Commonwealth legislation will be enacted, and where the Governor-General will have his official residence. It will therefore be primarily the official centre of the Commonwealth.

The creation of a capital is a unique opportunity, and it is hoped to reflect in the designs thereof the finest features of modern cities. The Commonwealth will have, as a precedent in the undertaking, the whole experience of the past in architecture and city planning. With the object of inducing experts of world-wide celebrity and reputation to place their talents at the disposal of the Commonwealth Government, it was decided to award premiums of £1750, £750, and £500, respectively, for the three designs considered most meritorious. In response to the invitation thus issued 149 designs were received; these were submitted to a board for investigation and the Minister for Home Affairs has finally adjudicated upon the three premiated designs. The board referred to consisted of three members, viz.:—J. M. Coane, Esq., licensed surveyor, Melbourne; J. A. Smith, Esq., engineer, Melbourne; and J. Kirkpatrick, Esq., architect, Sydney. The last two members submitted a report making recommendations as to the designs for which the premiums should be awarded, and these recommendations were adopted by the Minister for Home Affairs. The first-named member of the board recommended, in a minority report, that the premiums should be paid for three designs, none of which was included in the report of the other two members of the board. The three premiated designs are reproduced on pages 1147 and 1148 hereof, and explanatory notes may be found on the latter page.

## SECTION XXXII.

### THE NORTHERN TERRITORY.

#### § 1. Area and Population.

1. **Introductory.**—Upon the extension of New South Wales westward to the 129th meridian in 1827, the Northern Territory was comprised within that colony (see Year Book No. 4, page 16), and in 1863 was annexed by Royal Letters Patent to the province of South Australia. With the adjacent islands, it was transferred to the Commonwealth on 1st January, 1911.

2. **Area and Boundaries.**—The total area of this Territory is 523,620 square miles, or 335,116,800 acres. Its length from north to south is about 900 miles, while its breadth from east to west is 560 miles. Its eastern boundary, dividing it from Queensland, is the 138th meridian of east longitude; and its western boundary, the 129th meridian, separating it from Western Australia. Its southern boundary is the 26th parallel of south latitude, dividing it from South Australia. The northern boundary is the coast line of those parts of the Indian Ocean known as the Timor and Arafura Seas. Near the mouth of the Wentworth River, in the Gulf of Carpentaria, the coast line is met by the eastern boundary; at Cape Domett, near Cambridge Gulf, the western boundary cuts the northern coast line. The length of coast line is about 1040 miles, or 503 square miles of area to one mile of coast line; an exact survey has, however, not yet been made.

3. **Population.**—(i.) *Character.* In 1881 there were 670 Europeans in the Territory, and at the end of 1910 the number had increased to 1182, the proportion of children having also become much larger. The Chinese population, at its maximum during the years of railway construction, 1887 and 1888, has gradually dwindled, the total in 1910 being 1387. Japanese, first recorded in 1884, increased up to the year 1898, falling again after five years. The highest recorded population, excluding aborigines, was 7533 in 1888; that for 1910 was 2846. The following table shews population for thirty years, distinguishing Europeans, Chinese, and Japanese:—

**POPULATION OF NORTHERN TERRITORY (EXCLUSIVE OF ABORIGINES),  
1881 to 1910.**

Year.	Europeans.				Chinese.				Japanese.		Other Nationalities.				Total Population

(ii.) *Movement of Population.* The following is a summary of movement of population in 1910 :—

**MOVEMENT OF POPULATION, NORTHERN TERRITORY, 1910.**

Europeans—		Europeans—		Excess—	
Inwards, oversea	290	Outwards, oversea	383	Emigration over	
Births ...	17	Deaths ...	42	immigration ...	168
Others—		Others—		Deaths over births	17
Inwards, oversea	163	Outwards, oversea	238		
Births ...	42	Deaths ...	34		
Increase ...	512	Decrease ...	697	Net loss ...	185

The census population (3rd April, 1911) was 2734 males and 576 females, total 3310; the estimate for 31st December, 1911, was 2662 males, 586 females, total 3248.

The immigration and emigration of the Territory from 1880 to 1910 is shewn in the following table :—

**MIGRATION, NORTHERN TERRITORY, 1880 to 1910.**

Year.	Immigra- tion.	Emigra- tion.	Year.	Immigra- tion.	Emigra- tion.	Year.	Immigra- tion.	Emigra- tion.

1890 ...	488	886						

\* From 17th August to end of year.

(iii.) *The Aborigines.* An account of the Australian aborigines, by Dr. W. Ramsay Smith, was given in Year Book No. 3 (pp. 158-176). The interior of the continent is the most thickly populated by the native, but it is believed that they are rapidly dying out. In these regions, remote from contact with other races, the native has maintained his primitive simplicity, and furnishes an interesting subject of study to the anthropologist and ethnologist. At the census of 1911, full-blooded aborigines in the employ of whites, and those who were living in a civilised or semi-civilised condition in the vicinity of European settlements, were enumerated—the males being 743, females 480; total, 1223. It has been estimated that the total black population of the Territory is upwards of 20,000.

## § 2. Historical.

1. *Exploration and Colonisation.*—(i.) *Coastal Surveys.* The coast was surveyed by King in 1817, and by Wickham and Stokes in 1838 and 1839. Port Darwin, the site of Darwin, the present capital, was discovered in the latter year.

(ii.) *Exploration of Interior.* Leichhardt traversed a great deal of the country in 1844-5, journeying from Queensland to Port Essington. Gregory started from Point Pearce in 1855, and reached Brisbane. Minor explorations were also successfully undertaken.

(iii.) *Crossing the Continent.* In 1861, Stuart began his transcontinental journey from Adelaide, and reached the north coast in July, 1862. His track has become the main route, and along it the telegraph line is constructed.

(iv.) *Demarcation of Boundaries.* Upon the extension westwards of New South Wales, in 1827, the Territory was included in that colony, and remained so until 1863, when it was added to South Australia, which in 1836 had been created a separate province.

(v.) *The Military Settlement.* A military post was formed on Melville Island in 1825. This was transferred in 1827 to Raffles Bay, and a few years later to Port Essington. Little public attention was given to the station, and no attempt at colonisation was made. It was abandoned in 1849.

**2. Control by South Australia.**—(i.) *Transfer.* As a result of representations to the Imperial Government by South Australia, the Territory was incorporated with that State in 1863, and administered through a Government Resident located at Port Darwin up to 31st December, 1910. Early attempts at settlement failed. Ultimately, Port Darwin was chosen for the site of the capital, and Palmerston founded.

(ii.) *Land Legislation.* The South Australian Government's land legislation was framed to attract settlers, viz., low rents with easy entry and unencumbered holding over long periods; or grant of fee simple at low price. Special arrangements were made to foster tropical agriculture, including the establishment of botanic gardens at Port Darwin, for observation and experiment. Large "runs" were established on the northern well grassed and watered pastures.

(iii.) *Mining.* The survey and construction of the overland telegraph revealed the auriferous nature of the country, and gold and other minerals were discovered in various localities. The Government regulated the area of claims and the conditions upon which they were held.

(iv.) *Cessation of Supervision by South Australia.* Progress has not been as marked as was desired, the Territory being thought capable of more rapid development. Accordingly the Federal and State Governments agreed upon a surrender by the latter as from 1st January, 1911, since which date the Territory has been a dependency of the Commonwealth.

**3. Transfer to Commonwealth.**—(i.) *The Agreement.* An agreement of transfer, afterwards ratified by the respective Parliaments, was made between the two Governments. In accordance with a proclamation issued in the terms of the Commonwealth Acceptance Act (No. 20 of 1910), the transfer was effected on 1st January, 1911.

(ii.) *The Northern Territory Acceptance Act.* By the Commonwealth Act, the agreement is ratified and approved, the Territory is accepted together with the Palmerston and Pine Creek Railway; laws and courts of justice remain in operation, powers and functions of magistrates and officials remain vested; estates and interests continue upon the same terms; trade with Australian States is declared free. The Commonwealth assumes responsibility for the State loans in respect of the Territory, paying the interest yearly to the State, providing a sinking fund to pay off the loans at maturity,

and paying off the deficit in respect of the Territory. It also purchase the Port Augusta to Oodnadatta railway, and agrees to complete the construction of the trans-continental railway from Port Darwin to Port Augusta.

(iii.) *The South Australian Surrender Act.* The State Act approves and ratifies the agreement surrendering the Territory.

(iv.) *The Northern Territory (Administration) Act 1910.* The Act provides for Government authorising the appointment of an administrator and officials. South Australian laws are declared to continue in force as laws of the Territory and certain Commonwealth Acts to apply. Power is given to the Governor-General to make Ordinances having the force of law.

(v.) *Administration.* A Resident Administrator, vested with supreme authority in internal affairs, was appointed in the Department of the Minister for External Affairs in February, 1912. Many other important administrative offices have also been filled.

(vi.) *Legislation.* (a) *Ordinances passed.* The following Ordinances have been made :—

1911—No. 1, Northern Territory Government; No. 2, Council of Advice; No. 3, Sheriff; No. 4, Tin dredging; No. 5, Marine; No. 6, Registration of Births, Marriages, and Deaths; Nos. 7 and 15, Interpretation; No. 8, Stamp Duties Abolition; No. 9, Supreme Court; Nos. 10 and 12, Registration; No. 11, District Council Assessment; No. 13, Fisheries; No. 14, Land Acquisition; No. 16, Aborigines.

1912—No. 1, Native Birds' Protection; No. 2, District Council Assessment; No. 3, Crown Lands.

(b) *Main Provisions of the Ordinances.* The powers and duties of the Administrators vested in the appointee, include custody of the public seal, appointment and suspension of officials, and execution of leases of Crown lands. He is assisted by a council of advice, not exceeding six, and meeting monthly. A Supreme Court with original and appellate jurisdiction is instituted. A Sheriff and a Registrar-General are provided for, also the registration of births, marriages and deaths, and of deeds and documents. Stamp duties are abolished. District Councils are authorised to assess land values and levy rates on unimproved value. Custody and control of aborigines with extensive powers of supervision are vested in the Chief Protector. Native birds may be declared protected. Crown lands are classified, and their mode of acquisition, entry and holding defined.

### § 3. Physiography.

1. *Tropical Nature of the Country.*—The Territory is within the torrid zone, with the exception of a strip  $2\frac{1}{2}$  degrees wide, which lies south of the Tropic of Capricorn.

2. *Contour and Physical Characteristics.*—The low flat coast line seldom reaches a height of 100 feet. Sandy beaches and mud flats, thickly fringed with mangroves, prevail. Sandstone, marl, and ironstone form the occasional cliffy headlands. The sea frontage of more than 1000 miles is indented by bays and inlets and intersected by numerous rivers, many of which are navigable for considerable distances from their estuaries.

The principal features of the coast line are enumerated in Year Book No. 1, p. 66; the rivers in Year Book No. 2, p. 76; the mountains in Year Book No. 3, p. 67; the lakes in Year Book No. 4, p. 77; and the islands in the present volume, pp. 71, 72.

Inland, the country is generally destitute of conspicuous landmarks. From the coast there is a general rise southwards to the vicinity of the 17th or 18th parallel of

south latitude, where the higher lands form the watershed between the rivers that flow northwards to the sea, and those that form the scanty supply of the interior systems. Towards the centre of the continent the land over a wide area is of considerable elevation, and there are several mountain ranges, generally with an east and west trend.

#### § 4. Climate.

On the northern coast, as in the tropics generally, there are two main climatic divisions—the wet season, November to April; and the dry season, May to October. The changes of season are uniform and regular. Immediately after the vernal equinox, the wet season is heralded by the cessation of the east-south-easterly monsoon, which gives place to calms and light variable winds. Intensely hot weather prevails for a few days, thunder-clouds gathering and increasing daily until they burst in heavy thunderstorms accompanied by hurricanes, and increasing in strength and frequency until the end of November, when they become of almost daily occurrence, about an inch of rain falling during each storm. During December the north-west monsoon sets in gradually, with rain nearly every day, and increasing in force until about the end of January. At this period of the year the wet season penetrates into the heart of the continent. This monsoon dies away at the autumnal equinox, and is succeeded by light and variable winds till the end of April, when the dry season commences with the setting in of the south-east monsoon. Nearly the whole of the rainfall occurs in the summer months.

#### § 5. Fauna and Flora.

1. **Native Animals.**—The ordinary types of Australian fauna inhabit the territory. As elsewhere on the continent, the higher *Theria* are rare. There are many genera of marsupials, and individuals are numerous. The birds also are typically Australian, having brilliant plumage, and not generally gifted with song. Crocodiles and fresh-water tortoises frequent the northern rivers. There are some species of snakes, mostly non-venomous, the most numerous being the harmless python. Frogs abound, the water-holding frog being common in Central Australia. The rivers contain many varieties of freshwater fish. The molluscan fauna of the coast are mostly carnivorous, the vegetable feeders being very poorly represented, probably on account of the dearth of seaweed. Land and freshwater shellfish are not abundant. Among insects, many beautiful butterflies thrive in the warm damp atmosphere. Beetles also are strongly represented. The white ant is a pest, very few timbers being immune from its ravages. Anthills in the Territory sometimes attain a height of twenty-five feet and a diameter of ten feet. Another destructive insect, particularly active and mischievous inland, is the borer. Mosquitoes and sandflies are very troublesome, particularly from January to April. There are not many crustaceans.

2. **Imported Stock.**—Buffalo thrive in the Territory. At Port Essington they are numerous, and there are large herds on Melville Island. Timor ponies have also been introduced. Imported sheep and horned cattle thrive on the stations.

3. **Protection of Fauna.**—Ruthless destruction of native birds is prohibited. An ordinance (No. 1 of 1912) gives the Administrator power to declare that any bird is protected; and provides that permits to export protected birds, or the skins or eggs of such birds, will only be issued subject to such conditions as the Administrator directs.

4. **Flora.**—The vegetation is tropical, many of the forms belonging to the Malayan and Oceanic regions. The timber trees are not of great commercial value, but in the coastal regions tropical vegetation grows luxuriantly to the water's edge. The indented arms of the coast are thickly fringed with the mangrove. On the ranges, pines, fig trees, and orange trees flourish. The Roper River drains extensive forest lands. Leichhardt

pinces and palms form the vegetation of the tableland, which stretches across the Territory about the 14th degree of south latitude. On the higher steppes there are a few varieties of eucalyptus, and many fibre plants are also indigenous. On the wide expanses of plain country of the interior, there is little vegetation, tree growth being very scanty, consisting chiefly of stunted eucalypts, such as the gimlet gum, black box, and desert sheoak. In the north-western districts there is an almost entire absence of lichens and mosses, though ferns are plentiful in the vicinity of the Victoria River. The following orders are well represented:—*Euphorbiaceæ*, *Compositæ*, *Convolvulaceæ*, *Rubiaceæ*, *Goodeniaceæ*, *Leguminosæ*, *Urticæ*.

## § 6. Production.

The table of exports hereunder indicates the principal productions of the Territory, since there is no great home consumption.

1. **Stock.**—The spacious, well-grassed “runs” of the Territory are suitable for horse and cattle breeding. It is anticipated that the cattle trade with the East will develop. Large numbers are overlanded to neighbouring States, which also take considerable quantities of horse hides. The number of stock on 31st December, 1910, was:—

### LIVE STOCK, NORTHERN TERRITORY, 31st DECEMBER, 1910.

Horses.		Cattle.		Sheep.		Pigs.
24,509	...	513,383	...	57,240	...	996

Dairying as an industry is non-existent. The abundant indigenous herbage is, however, well suited for stock, and the making of hay and ensilage would ensure the development of the industry.

2. **Mining.**—Considerable quantities of the precious and commercial metals are mined. The discovery of gold and tin in various localities, and the measure of success that has attended their working, indicates scope for development.

(i.) *Mineral production, 1910.* The gold production in 1910 was:—

### GOLD RAISED, NORTHERN TERRITORY, 1910.

From Batteries.		From Cyanide Works.		Alluvial and Dollied Gold.		Total.	
Quantity.	Value.	Quantity.	Value.	Quantity.	Value.	Quantity.	Value.

\* Includes Santalite valued at £140, and Amblygonite valued at £204. † Includes Bismuth valued at £300.

(iii.) *Employment of Miners, 1894 to 1910.* The following table shews employment in mining for seventeen years, distinguishing Chinese:—

**MINERS, NORTHERN TERRITORY, 1894 to 1910.**

Year.	Europeans.	Chinese.	Total.	Year.	Europeans.	Chinese.	Total.
1894 ...	65	2,055	2,120	1903	91	1,202	1,293
1895 ...	111	2,032	2,143	1904	189	1,158	1,347
1896 ...	193	1,678	1,871	1905	161	1,077	1,238
1897 ...	153	1,633	1,786	1906	179	1,018	1,197
1898 ...	107	1,456	1,563	1907	208	958	1,166
1899 ...	114	1,372	1,486	1908	150	674	824
1900 ...	72	1,432	1,504	1909	190	630	820
1901 ...	58	1,280	1,338	1910	140	602	742
1902 ...	47	1,160	1,207				

(iv.) *Mining Accidents, 1900 to 1910.* There were no injuries received in mining in 1910. During the ten years preceding, ten fatal accidents and eight cases of serious injury were recorded.

3. **Pearl Shell.**—In 1884 mother-of-pearl shell was discovered in the harbour of Port Darwin. Difficulty in working, principally through heavy tides and muddy water, retarded the development of the industry for many years. Latterly, however, the opening up of new patches has led to a revival. In 1910, thirty-six boats were engaged, valued, with their equipment, at £10,900; 216 men were employed. Fifty-five tons of pearl shell were obtained, valued at £10,030. Bêche-de-mer valued at £1303 was also raised.

## § 7. Commerce and Shipping.

1. **Trade.**—The following table shews the total trade of the Territory for the past 10 years :—

## VALUE OF IMPORTS AND EXPORTS, NORTHERN TERRITORY, 1901 to 1910.

—	1901.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.
	£	£	£	£	£	£	£	£	£	£
Imports ...	108,886	107,217	125,244	113,461	86,878	74,659	78,996	68,905	57,994	52,398
Exports ...	302,931	191,558	178,266	235,650	216,279	254,222	345,721	241,028	278,555	269,063
Total Trade	411,817	298,775	303,510	349,111	303,157	328,881	424,717	309,933	336,549	321,461

From 1881 to 1910, the annual average trade in five-year periods was :—

## VALUE OF IMPORTS AND EXPORTS, NORTHERN TERRITORY, 1881 to 1910.

Period.	Average Annual Imports.	Average Annual Exports.	Period.	Average Annual Imports.	Average Annual Exports.
	£	£		£	£
1881-1885	125,600	92,727	1896-1900	127,489	158,978
1886-1890	236,099	113,156	1901-1905	108,337	224,937
1891-1895	109,704	177,463	1906-1910	66,590	277,718

2. **Principal Exports.**—The principal articles of export during the last three years were :—

## PRINCIPAL ARTICLES OF EXPORT, NORTHERN TERRITORY, 1908 to 1910.

Year.	Wolfram		Copper.		Cattle.		Bêche-de-mer.		Tin Ore.		Gold.		Dried Fish.		Horses.

1910 ...	55	10,030	3,816	213,964	5,915	222	160	124	2,989

3. **Shipping.**—The Territory's oversea commerce is carried in British and Japanese bottoms. One of the British lines maintains a monthly service, other lines are irregular. Coastal shipping is chiefly in Australian vessels. There is a small local trade, a steamship running between Port Darwin, Port McArthur, Daly River, Victoria River, and Wyndham (Western Australia). The shipping of Port Darwin in 1910 was :—

## SHIPPING, PORT DARWIN, 1910.

Particulars.	Entered.			Cleared.			Total.		
	Vessels	Tons.	Crews.	Vessels	Tons.	Crews.	Vessels	Tons.	Crews.

1906—1910 ...	87	128,502	88	128,408

## § 8. Internal Communication.

1. **Railways.**—Under the agreement ratified by the Act the Commonwealth is to construct the Northern Territory portion of the transcontinental railway line (connecting Adelaide and Port Darwin, *via* Port Augusta).

The Northern line from Adelaide terminates at Oodnadatta, about 100 miles south of the southern boundary of the Territory. The only line at present in the Territory is one from Port Darwin to Pine Creek, a length of 145½ miles, of 3 ft. 6 in. gauge; and Pine Creek is distant about 1140 miles from Oodnadatta. It is stated that this transcontinental railway would bring London within seventeen days of Adelaide. The Commonwealth also acquired on 1st January, 1911, the property in the line from Port Augusta to Oodnadatta; but the line is at present being worked under the control of the South Australian Railway Commissioner, by agreement between the Commonwealth and South Australian Governments.

2. **Posts.**—The principal mail services are as follows:—

(i.) **Marine.** Postal communication is maintained between Sydney, Melbourne, and Adelaide, *via* North Queensland ports. The service extends to China and Japan. There are three lines of service—two of the shipping companies being British, and one Japanese. The two former are subsidised at poundage rates, the latter at Postal Union rates. One of the British services is monthly, the others are irregular. There is also a quarterly contract service between Port Darwin and Boroloola, calling half-yearly at Roper River; and a service every two months between Port Darwin and Wyndham, on the estuary of Ord River, in the north-east of Western Australia. These are subsidised

Other inland routes are served, and there is a frequent service in Port Darwin.

Between Port Darwin and Banjoewangie the submarine cable is duplicated.

## § 9. Finance.

\* From 1st January, 1911, only.

The Commonwealth received £151,513 from South Australia, being the credit balance of Northern Territory funds, but assumed responsibility for interest on loans and redemptions, which, for the half-year ended 30th June, 1911, amounted to £291,844. The deficiency on the date named was thus £166,856.

2. **Loans.**—The first loan on Northern Territory account was floated in London in 1876; the nominal amount was £75,000, at 4 per cent., due date 1st January, 1916. The public debt on 30th June, 1911, was £3,657,836; the total nominal amount of loans raised being £4,611,836, and £954,000 having been repaid. The following is a summary:—

**PUBLIC DEBT, NORTHERN TERRITORY, 30th JUNE, 1911.**

Principal. £		Rate. %		Annual Interest. £
27,216	...	3	...	817
154,992	...	3½	...	5,423
71,945	...	£3 12s. 3d.	...	2,599
1,798,383	...	3½	...	67,439
1,605,300	...	4	...	64,212
Total ...	3,657,836	—	...	140,490

**§ 10. Land Tenure.**

1. **Holdings.**—The Northern Territory was transferred to the Commonwealth on 1st January, 1911. At that date, out of a total area of 335,116,800 acres, there were alienated 473,990 acres; 103,629,497 acres (about one-third) were held under leases and licenses; and the remainder (about two-thirds) was unoccupied. The principal leases were:—

**PRINCIPAL LEASES, NORTHERN TERRITORY, 31st DECEMBER, 1910.**

Land Held Under—	No. of Leases.	Area in Acres.
Pastoral leases ... ..	256	69,278,000
Pastoral permits and approved applications ...	180	31,456,000
Coal permits ... ..	5	1,664,000
Special permits (mining) ... ..	2	726,400
Annual pastoral leases ... ..	10	487,040
Agricultural leases ... ..	30	8,960

The areas given in the section dealing with Land Tenure differ somewhat from those in this table, the explanation being that certain annual leases and approved applications are here included.

2. **Present Land Policy.**—The land policy of the Federal Government is embodied in Ordinance No. 3 of 1912. Only leasehold titles are to be granted, and the conditions are of a very favourable character. Rents will be low, and the general conditions of tenure elastic. All lands will be divided into three classes, as follows:—(i.) pastoral; (ii.) agricultural and farming; (iii.) city. Each of these classifications will be subdivided in turn, according to quality and situation. It is intended that the leases should be in perpetuity, making them almost equivalent to freeholds, with reappraisements of rent values every 14 years in the case of town lands, and every 21 years in the case of agricultural and pastoral lands. Exceptional cases will receive special treatment. Leases may be assigned, transferred or sublet; and licences for grazing on Crown or reserved lands may be granted. A board, consisting of the Director of Lands as chairman, the Director of Agriculture, and the Chief Surveyor, will classify the land and fix the rents.

## SECTION XXXIII.

## INQUIRY INTO THE COST OF LIVING IN AUSTRALIA.

## I. Introduction.

1. *Nature of Inquiry.*—In view of the desirability of obtaining reliable and comprehensive information in regard to the cost of living in Australia, a special inquiry was undertaken by the Commonwealth Bureau of Census and Statistics, covering the period from the 1st July, 1910, to the 30th June, 1911. The requisite data upon which the results of this inquiry are based were obtained by distributing among householders throughout the Commonwealth, copies of a small account book in which provision was made for entering, for each week of the period referred to, particulars of income and expenditure under certain specified headings.

After a careful examination of the methods adopted and procedure followed in similar inquiries in other countries, and so soon as the necessary books and instructions had been drafted and printed, notices were inserted in the daily press throughout the Commonwealth directing attention to the projected inquiry, its scope and purpose; communications were also addressed to the Trades and Labour Councils in the several States, seeking their co-operation and assistance in the distribution of the weekly account books. In consequence of the press notices a large number of requests was received for books to be forwarded, while several of the Trades and Labour Councils expressed their willingness to distribute the books among their members.

2. *Distribution of Budget Books.*—The distribution of the books was effected in June, 1910, the total number despatched from the Bureau being approximately 1500; of that number only 222 were returned after the end of June, 1911, filled in either in part or in whole for the period of 52 weeks under review. It was found necessary to reject 10 books as unsuitable for various reasons, such as incompleteness or obvious inaccuracy, so that the contents of 212 books were available as a basis for the compilation of the information furnished herein. Nearly all these appear to have been kept with considerable care, and the thanks of the Bureau are due to those who have taken so much trouble to assist in the investigation.

It is a matter for regret that so small a proportion (about 14 per cent.) of the books distributed was returned, though it must be admitted that the labour entailed in keeping the desired records for the whole period is somewhat heavy. In future investigations of this kind it is probable that the period dealt with will be considerably curtailed with a view to increasing the number of budgets available for analysis.

It may be observed that the distribution of the books was not in any way restricted, either in regard to the nature of the occupation of the head of the family or to income received. It was hoped that the number and nature of the returns would be such as would enable the results to be presented both for various classes of occupations and for different ranges of income. As will be seen later, however, owing to the small number of budgets available, it was considered desirable to present the results without any classification of occupations, and with only a very limited classification as to amount of income. Inasmuch as the families for which budgets were obtained were distributed over the six States, and the proportion in each State corresponds fairly closely to its population and importance

in an industrial sense, and owing to the fact that the families are not restricted with reference to any particular industry, it is believed that the results of the inquiry are fairly representative of the conditions existing among the majority of the community. While individual budgets may not be absolutely accurate, it can safely be assumed that averages based on any considerable number of statements represent the true facts with substantial accuracy. In any instances where the averages are based upon a small number of families they should of course be accepted with due caution, for though the family statements may be accurate, the averages may not include a sufficiently large number to fairly represent the class to which they refer.

In this connection it should be observed that the value of any inquiry as to cost of living based upon the voluntary keeping of budgets by householders is to some extent limited by the fact that such budgets are more likely to be kept by the frugal and thrifty than the liberal and generous. The consequence is that the results deduced from these budgets—other things being equal—tend to be on the low, rather than the high, side.

## § 2. The Householder's Budget.

1. **Family Conditions.**—The weekly account books issued to householders contained in all 56 pages, 4 in. by 6½ in. in size, bound in flexible board covers. On the inside of the front cover attention was drawn to the facts (a) that the book was the property of and when complete should be returned to, the Commonwealth Bureau of Census and Statistics; (b) that the information furnished would be treated as strictly confidential; and (c) that the name of the person furnishing the budget need not be specified in the book where any objection was felt to so doing. The first page of the book was devoted to the purpose of ascertaining particulars of locality and of family conditions, and was in the following form :—

WEEKLY STATEMENTS  
OF  
INCOME AND EXPENDITURE.  
1910 - 11  
(Examples enclosed herewith.)

State.....

Town or nearest Post Town .....

Number and Ages of Children living at home :

.....

Number and Ages of Children not living at home who are a charge on the family :

.....

\*Occupation of Husband .....

Occupations (if any) of Wife .....

Occupations (if any) of Children.....

.....

\* State occupation very fully, as "Carpenter, Jam Factory;" "Labourer Sawmill;" "Engine-driver, Gas Works," &c.

The object of the first two lines as to locality was to permit of a classification of the results according to geographical distribution; this has only been carried out according to distribution in the several States. The information as to number and ages of children was required for classification purposes as to size and structure of family, while that relating to occupation was intended for the purpose of analysing the variation in the relative income and expenditure of persons engaged in different occupations and employed in different groups of allied industries. Owing to the paucity in the number of budgets returned, it was not, however, found possible to carry into effect the latter intention, while as regards size and structure of family the only classification made was that relating to families having over four members and those having four or less.

2. **Weekly Statements.**—The remaining pages of the book were provided for the householder to fill in week by week particulars of the weekly income and expenditure of his or her family. Each page was in the following form :—

WEEK ENDING .....				191...		
INCOME.				£	s.	d.

\* Or Interest on Mortgage.

Each book despatched was accompanied by a copy of the following documents :

- (i.) *Addressed Envelope.* A post-free addressed envelope was transmitted for the return of the book when completed.
- (ii.) *Specimens.* Specimens of the first page of the book (see p. 4 hereinbefore), and of a weekly return of income and expenditure, each filled in with a supposititious example, were included for the guidance of the householder.
- (iii.) *Instructions.* Printed instructions explaining briefly the object and scope of the inquiry and the manner in which the returns were to be filled in, were sent in the following form :—

## INSTRUCTIONS.

1. The object of the whole inquiry is to obtain important sociological statistics, viz., some indication of the cost and standard of living in the various Australian States.
2. It is desired that the record should extend from 1st July, 1910, to 30th June, 1911, inclusive, so as to obtain fair averages as well as changes in the cost of living in the different months of the year.
3. The book supplied is so drafted as to suit all grades of income, and it is desired to receive records from persons having widely different incomes. The income shewn must be that actually received by the head of the household, and must, therefore, include income earned by any other members of the household.
4. It is necessary that the record should be a correct statement of the true total income and expenditure of each week of the period, and that the grouping under each item in the book supplied should also be correct. For this reason the book should be made up week by week.
5. The expenditure shewn should be inclusive of that for dependents living away from home.
6. Where circumstances prevent the book from being completed for the whole period, it should, nevertheless, be returned to this Bureau.
7. The examples given will shew the method to be followed.
8. It may be pointed out that in a statistical office all matter received is confidential; all officers have to make a declaration of secrecy, and individual returns will under no circumstances be disclosed. Nevertheless, if in view of the character of this inquiry any objection be felt to giving the name, no mention of it need be made on the book.
9. If desired, a report as to the results will be sent on application to any person assisting in the furtherance of this inquiry.

G. H. KNIBBS,

*Commonwealth Statistician.*Commonwealth Bureau of Census and Statistics,  
Melbourne, 1910.

In addition to the directions contained in the above document, instructions as to filling in the returns were published in the daily press, and any person who desired to be advised on any doubtful point had only to write to the Bureau, when he would be furnished with an immediate reply.

**3. Tabulation and Classification.**—In order to facilitate the analysis and classification of the householders' budgets, the contents of each book were transferred to a tabulation sheet, the various details summarised, and a weekly average for each item computed. The next question considered was that of classifying the results in relation to the following matters:—(i.) Geographical distribution, (ii.) size and structure of family, (iii.) income, and (iv.) occupations of wage earners. In regard to the last of these matters, it was found that the number of returns was insufficient to enable any classification to be made.

(i.) *Geographical Distribution.* The following table shews the distribution of families, from which budgets were received, according to States. It was considered that the small number of budgets available for each State, except New South Wales and Victoria, did not justify the presentation of separate results. In the later tables the figures have, therefore, generally been grouped together for the whole Commonwealth. It was hoped, with a sufficient number of returns, to differentiate as to local distribution with greater particularity, as for example in regard to incomes and expenditure of families living in (a) metropolitan towns, (b) country towns, (c) mining districts, and (d) rural districts.

The distribution of the families in the several States is as follows:—

**COST OF LIVING, 1910-11.—DISTRIBUTION OF FAMILIES IN SEVERAL STATES.**

Particulars.	N.S.W.	Victoria.	Q'land.	S.A.	W.A.	Tas.	C'wlth.
Number of families ...	64	81	19	18	18	12	212

(ii.) *Size and Structure of Families.* It was found that the families for which budgets were received were divided roughly into two equal groups in regard to size of family, 107 families having over four members, and 105 four and under. It was therefore decided to adopt these groups as the basis for classification. As regards structure of family, it was originally intended to tabulate special results for normal families of different sizes: i.e., for families having normal members consisting of father, mother, and children within specified age groups; owing to the small number of returns received it was, however, found impracticable to carry out this scheme. The Classification adopted relates to actual size of families, the structure of the family (i.e., whether composed of father, mother, children, dependents, or relatives), being necessarily disregarded.

(iii.) *Income.* The classification as to incomes was adopted after a careful consideration of the facts. In order to make a distinction between the large class of wage-earners who earn under £3 a week, and those persons who earn more than that amount, it was at first intended to adopt a classification according to incomes of over about £150, and those amounting to about £150 and under; it was found, however, that taking £150 as the limit, the former class embraced 168 families, and the latter only 44. Further, on an examination of the books it appeared that a large number of families depends for their support on means other than the actual wages earned by the head of the household, the other main sources of income being earnings of children, boarders, and interest on investments. It was therefore considered desirable to somewhat increase the limit, and it was found that a fairly even distribution was obtained by making the division at £200, there being 113 families whose incomes were over that amount and 99 under. The following statement shews the number of families in each division of the scheme of classification adopted:—

**COST OF LIVING, 1910-11.—NUMBER OF FAMILIES, CLASSIFICATION BY INCOMES AND SIZE OF FAMILIES.**

Particulars.	Number of Families having—			
	Incomes over £200 per annum.		Incomes of £200 and under p. annum.	
	Over 4 Members.	4 Members or under.	Over 4 Members.	4 Members or under.
Number of families	58	41	49	64

### § 3. Family Conditions.

1. **General.**—In order to permit of any adequate analysis or criticism of the figures relating to income and expenditure presented in this report, it appears desirable that the returns as to family conditions should be first investigated. It is proposed to deal with these matters from the following standpoints, viz.:—(a) Geographical distribution of families; (b) Structure and size of families; and (c) Occupations of heads of families.

2. **Geographical Distribution.**—Though the budgets received were not sufficiently numerous to permit of any classification of incomes according to families living in the metropolitan towns and in other parts of the several States, the urban and rural distribution of the families to which the returns refer is of importance.

For the purpose of classification in the following table, the suburbs have been included with the metropolitan towns, and in Western Australia, Fremantle has also been included with Perth. The families in each State are classified according to income and size of family :—

**COST OF LIVING, 1910-11.—CLASSIFICATION OF FAMILIES RESIDING IN METROPOLITAN TOWNS AND IN OTHER PARTS OF EACH STATE.**

Families having Incomes of—	Number of Members.	Number of Families residing in—														Total.		Total Number of Families.
		N.S.W.		Vic.		Qld.		S.A.		W.A.		Tas.						
		Metro- politan.	Other.	Metro- politan.	Other.	Metro- politan.	Other.	Metro- politan.	Other.	Metro- politan.	Other.	Metro- politan.	Other.	Metro- politan.	Other.			
Over £200 ...	Over 4 ...	15	2	16	5	5	1	4	3	3	1	1	2	44	14	58		
	4 and under ...	11	3	13	2	1	1	3	1	2	1	2	1	32	9	41		
£200 and under ...	Over 4 ...	6	6	13	6	4	2	1	3	3	2	1	2	28	21	49		
	4 and under ...	9	12	15	11	3	2	2	1	3	3	2	1	34	30	64		
Total ...		41	23	57	24	13	6	10	8	11	7	6	6	138	74	212		

It may be seen that the majority of the returns received were from families residing in metropolitan towns, 138, or 65.1 per cent., being from such towns and 74, or 34.9 per cent., from other districts.

**3. Structure of Families.**—The following tables have been compiled in order to bring together the more important returns obtained as to membership of families, classified according to income and size of family.

(i.) *General Membership.* The total number of members of the families for which returns were received was 999, including all persons who generally participated permanently in the family expenditure, but excluding temporary guests or visitors. Some of the families were without the husband, who was either dead or separated from his family, and similarly in the case of the wife. The following table shews the component members of the families classified according to income and size of family :—

**COST OF LIVING, 1910-11.—MEMBERSHIP OF FAMILIES COMPRISED IN RETURNS.**

Families having Incomes of—	Number of Members.	Total Families.	Husbands.	Wives.	Children.	Dependents.	Boarders.	Servants.	Total Persons.
Over £200 ...	Over 4 ...	No. 58	No. 57	No. 56	No. 237	No. 5	No. 10	No. 25	No. 390
	4 and under...	41	38	39	47	5	5	8	142
£200 and under	Over 4 ...	49	46	48	173	2	6	2	277
	4 and under...	64	61	62	65	...	...	2	190
Total ...		212	202	205	522	12	21	37	999

From the above table it may be seen that 10 of the families (4.7 per cent.) were without a husband, and that 7 (3.3 per cent.) were without a wife. Over 66 per cent. of the families keeping servants were restricted to the class having incomes of over £200

and comprising over 4 members. Of 202 husbands, 189 were at work during the whole or the greater part of the period under review, while the remaining 13 were of independent means or were invalids.

(ii.) *Average Number of Members in Sex and Age Groups.*—The table in the preceding paragraph shows the gross number of members of the families under consideration, taking no account of the number of persons which were a charge upon the expenditure during the whole period under review. In the next table this is taken into consideration, and the length of time for which any person (stated to have been either temporarily absent from his home or living temporarily at the home) was a charge upon the family expenditure has been computed. Thus, for example, if a boarder or a servant was stated to have resided with the family for only 9 months of the period under review, such a person is taken into account as having been a charge upon the expenditure for three-quarters of the year only, and is therefore assigned the value of 0.75. For the purpose of computing in a later part of this report the average expenditure, weighted according to sex and age, the number of members has been tabulated in the several age and sex groups indicated.

**COST OF LIVING, 1910-11.—AVERAGE NUMBER OF PERSONS WHO WERE A CHARGE ON EXPENDITURE DURING WHOLE PERIOD.**

Families having Incomes of—	Number of Members.	Number of Families.	Males.		Females.		Children.				Total.
			Over 17.	13-16.	Over 17.	13-16.	10-12.	6-9.	2-5.	Under 2.	
Over £200 ...	Over 4 ...	58	98.2	18.4	120.4	21.5	39.0	34.0	36.0	17.9	385.4
	4 and under ...	41	51.4	2.0	58.1	1.0	3.0	7.0	10.0	8.2	140.7
£200 and under	Over 4 ...	49	58.3	6.0	70.5	5.4	20.0	32.0	59.0	24.7	275.9
	4 and under ...	64	64.8	3.5	67.2	4.5	3.0	4.0	23.0	20.1	190.1
Total ...	...	212	272.7	29.9	316.2	32.4	65.0	77.0	128.0	70.9	992.1

(iii.) *Condition as to Children.* Out of the 212 families investigated 180 included children. The subjoined table shows the average number of children in each group, together with the number of children earning wages and those not earning wages (i.e., either at home or at school or college) classified in age groups.

**COST OF LIVING, 1910-11.—CONDITION OF FAMILIES AS TO CHILDREN.**

Families having Incomes of—	Number of Members.	No. of Families having children	No. of Children.	Average Children per Family.	Children at Work.		Children at Home or at School.					
					Over 17.	13-16.	Over 17.	13-16.	10-12.	6-9.	2-5.	Under 2.
Over £200 ...	Over 4 ...	56	237	4.23	47	8	20	32	39	34	36	21
	4 or under ...	30	47	1.56	8	—	8	3	3	7	10	10
£200 and under	Over 4 ...	49	173	3.53	20	2	3	10	20	32	59	27
	4 or under ...	45	65	1.44	2	1	2	7	3	4	23	21
Total...	...	180	522	2.90	77	11	33	52	65	77	128	79

It may be seen from the above table that a somewhat unduly large number of the children in the families investigated were comprised in the lower age-groups, those of the age of 5 years and under numbering 207, or nearly 40 per cent. of the whole number. This somewhat high percentage indicates that a considerable number of the persons rendering returns had not been married for a long period; and, indeed, it is only natural to assume that such persons are the more likely to be interested in an inquiry of this

nature. As might be expected, the great majority of children in the higher age-groups who were not wage-earners is confined to the class having the larger incomes. The total number of children at work was 88, or 16.8 per cent., and of those at home or at school was 434, or 83.2 per cent., on the total number of children.

(iv.) *Dependents, Boarders, and Servants.* The following table shews the number of persons who may be considered as outside the family circle, but whose cost of living is included in the family expenditure, either as dependents (other than wives and children), boarders, or servants. Families having dependents, boarders, or servants during any part or the whole of the period under review are included in this table:—

**COST OF LIVING, 1910-11.—CONDITION OF FAMILIES AS DEPENDENTS, BOARDERS, AND SERVANTS.**

Families having Incomes of—	Number of Members.	Total Families.	Dependents		Boarders.		Servants.		P.c. of Families having		
			Families having Dependents.	Number of Dependents.	Families having Boarders.	Number of Boarders.	Families having Servants.	Number of Servants.	Dependents.	Boarders.	Servants.
Over £200 ...	Over 4 ...	58	4	5	7	10	21	25	6.89	12.07	36.20
	4 and under ...	41	5	5	5	5	8	8	12.19	12.19	19.51
£200 and under	Over 4 ...	49	2	2	3	6	2	2	4.08	6.12	4.08
	4 and under ...	64	...	...	...	...	2	2	...	...	3.13
Total ...	...	212	11	12	15	21	33	37	5.19	7.07	15.09

4. **Occupations of Heads of Families.**—In order to give some idea of the class of persons to whom the returns refer, the following table shewing the occupations of the heads of families has been compiled:—(a) *Unskilled labour* includes such persons as general labourers, railway gangers, etc.; (b) *Skilled labourers*, artisans and tradesmen, such as fitters, carpenters, electrical workers, etc.; (d) *Agricultural* includes farmers, dairymen, gardeners, and orchardists; (e) *Commercial*, those engaged in trade, such as chemists, tobacconists, storekeepers, etc.; (f) *Clerical*, book-keepers and clerks; (g) *Professional*, clergymen, doctors, school teachers, etc.; and (h) *No occupation* comprises persons retired from business, families with no husband, and heads of families who failed to state their occupations:—

**COST OF LIVING, 1910-11.—OCCUPATIONS OF HEADS OF FAMILIES.**

Families having Incomes of—	Number of Members.	Occupation of Head of Family.							Total.
		Unskilled Labour	Skilled Labour	Agric'l. tural.	Com-mercial	Cleric'l	Profes-sional.	None.	
Over £200 ...	Over 4 ...	3	12	3	11	9	16	4	58
	4 and under ...	—	4	2	4	10	11	10	41
£200 and under	Over 4 ...	11	12	1	2	9	9	5	49
	4 and under ...	7	24	5	4	12	6	6	64
Total ...	...	21	52	11	21	40	42	25	212

It may be seen that what is commonly known as the wage-earning class (skilled and unskilled labour) comprises 73 families, or 34.4 per cent.; clerical and commercial together include 61 families, or 28.8 per cent.; and professional 42, or nearly 20 per cent.

## § 4. Incomes.

1. **Sources of Incomes.**—The sources of the family incomes are shewn in the sub-joined table, classified according to amount of income and size of family. The third column shews the number of families having incomes from the husband only. The fourth, fifth, sixth and seventh columns comprise families having incomes from more than one source. "Miscellaneous" comprises incomes from boarders, investments, etc. The figures given in these columns are not mutually exclusive; that is to say that, for example, a family having an income from both husband and wife is included in both the fourth and fifth columns, while a family having an income derived from wife, children and boarders is included in each of the fifth, sixth and seventh columns. It may be seen that a larger proportion of the small families than the large families derive their incomes from the husband only.

**COST OF LIVING, 1910-11.—SOURCES OF INCOMES.**

Families having Weekly Incomes of—	Number of Members.	Families having Incomes from Husband only.	Families having Incomes from more than one source.				Families with sources of Income not stated.	Total Number of Families.
			From Husband and other sources.	From Wife and other sources.	From Children and other sources.	Miscellaneous and other sources.		
		No.	No.	No.	No.	No.	No.	No.
Over £200 ...	Over 4 ...	11	44	9	24	36	2	58
	4 and under ...	16	22	4	3	19	...	41
£200 and under ...	Over 4 ...	16	28	5	8	22	2	49
	4 and under ...	28	31	6	2	29	2	64
Total ...	...	71	125	24	37	106	6	212

2. **Average Incomes.**—The following table shews the average weekly income for each of the groups specified, and also the general average for all families for which budgets were received :—

**COST OF LIVING, 1910-11.—AVERAGE INCOMES OF FAMILIES.**

Particulars.	Incomes of over £200.		Incomes of £200 & under.		General Average.
	Families of over 4 Members.	Families of 4 and under.	Families of over 4 Members.	Families of 4 and under.	
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Average weekly income ...	6 7 11	6 16 4	3 1 11	2 18 5	4 13 1

The figures given in the above table are subject to certain limitations, inasmuch as in a few cases the total earnings of children were not included in the returns, the amounts specified comprising only the weekly payments made into the housekeeping fund for board and lodging. In a few other cases the amount of actual income was not specified at all, the sums drawn from a bank account for current expenses being given. It is somewhat remarkable that in the higher income class the average incomes of families of over 4 members (£6 7s. 11d.) is less than that of families of 4 and under (£6 16s. 4d.) Although the number of returns is insufficient for secure deductions, this result appears to indicate that the class of persons with larger income have relatively small families.

## § 5. Expenditure.

1. **Relation to Income.**—The average weekly incomes of the 212 families are summarised in the table hereunder. It should be noted that the figures relating to income are subject to the limitations pointed out in the preceding paragraph of this report. The differences between these weekly averages, representing the surplus available for saving, are also shewn.

**COST OF LIVING, 1910-11.—RELATION OF INCOME TO EXPENDITURE.**

Particulars.	Families having Incomes of over £200.		Families having Incomes of £200 and under.		General Average for all Families.
	Over 4 Members.	4 Members and under.	Over 4 Members.	4 Members and under.	
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Income ...	6 7 11	6 16 4	3 1 11	2 18 5	4 13 1
Expenditure ...	5 12 4½	5 2 5½	2 15 7	2 13 0½	3 19 5
Difference ...	0 15 6¾	1 13 10¾	0 6 4	0 5 4½	0 13 8

Just as the table on page 1175 indicated that, in the higher income group, the smaller families had relatively larger incomes, so the above table points to the fact that, as might be expected, the surplus, after payment of cost of living, is considerably greater in small than in large families. The weekly averages specified in the last line of this table represent annual amounts of £40 9s. 3d., £88 2s. 7d., £16 9s. 4d., £13 18s. 5d., and £35 10s. 8d. respectively. This advantage in economic resources which characterises the small family is probably generally true.

2. **General Analysis of Expenditure.**—Selecting what may be considered as the four most important heads of expenditure, viz., housing, food, clothing, and fuel and light, and grouping all other expenditure under the heading "Other Items," an analysis of the average weekly expenditure per family is given in the following table. The results are shewn both as actual averages and as percentages on the total expenditure. The individual items included in each group may be readily understood by reference to the list given on page 1169.

**COST OF LIVING, 1910-11.—ANALYSIS OF AVERAGE WEEKLY EXPENDITURE PER FAMILY.**

Families having Incomes of—	Number of Members.	Housing.	Food.	Clothing.	Fuel and Light.	Other Items.	Total Expenditure
		£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
Over £200 ...	Over 4 ...	0 13 3½	1 11 10½	0 14 8½	0 3 3½	2 9 1½	5 12 4½
	4 and under ...	0 14 2	1 2 6½	0 12 5½	0 3 8	2 9 7½	5 2 5½
£200 and under	Over 4 ...	0 8 0½	1 2 3½	0 7 4	0 2 4½	0 15 6½	2 15 7
	4 and under ...	0 8 8½	0 16 8	0 6 6	0 2 0	0 19 2½	2 13 0½
General Average ...		0 10 10½	1 3 3½	0 10 1½	0 2 9	1 12 5	3 19 5

**PERCENTAGE ON TOTAL EXPENDITURE.**

		per cent.	per cent.	per cent.	per cent.	per cent.	per cent.
Over £200 ...	Over 4 ...	11.54	28.39	13.11	2.95	43.71	100
	4 and under ...	13.83	22.00	12.16	3.58	48.43	100
£200 and under	Over 4 ...	14.48	40.12	13.22	4.26	27.92	100
	4 and under ...	16.41	31.41	12.25	3.77	36.16	100
General Average ...		13.70	29.30	12.72	3.46	40.82	100

It may be seen that, disregarding the expenditure on other items, the cost of food is by far the most important consideration, amounting to over 29 per cent. of the total expenditure. Next comes housing (13.70 per cent.), followed closely by clothing (12.72 per cent.), while expenditure on fuel and light amounts to 3.46 per cent. As regards expenditure on housing, clothing, and fuel and light, the divergencies in the percentages for the several groups, classed according to income and size of family, are not very marked, whereas the percentage expended on food ranges from 22 to over 40, being naturally higher in the larger family groups. The expenditure on food is again relatively much larger in the smaller income group, indicating that economies in expenditure are primarily effected in regard to matters other than food. It is not unlikely, indeed, that expenditure on food alone furnishes a true indication of the standard of material well-being.\* The more limited the resources of the individual, the less must his consumption be, and the coarser the quality of his food.† In Germany anthropometrical measurements have resulted in shewing that the typical man of the poorer classes, by reason of the nutritive inferiority of his food, is neither so corpulent nor so heavy as the typical man of other classes.

In connection with the preceding table it is interesting to compare the results obtained in Australia with those obtained in the United States of America in regard to the economic law propounded by Doctor Engel, for many years Chief of the Royal Bureau of Statistics of Prussia. Dr. Engel's propositions were as follow:—

(i.) That the greater the income the smaller the percentage of outlay for subsistence. This is confirmed in Australia, Germany, and the United States.

(ii.) That the percentage of outlay for clothing is approximately the same, whatever the income.

This proposition is confirmed in Australia, but in Germany and the United States it is not so, as in these countries the percentage of expenditure on clothing increases as the size of the income increases.

(iii.) That the percentage for lodging or rent, and for fuel and lighting, is invariably the same, whatever the income.

The first part of this proposition is not confirmed in Australia, as the families with smaller incomes pay a larger percentage in housing than those with larger incomes. The second part is practically confirmed here.

In the United States the first part is confirmed, and the expenditure for lighting varies little, but the percentage of expenditure for fuel decreases as the income increases. In Germany neither parts of the proposition are confirmed, the percentages decreasing as the incomes increase.

(iv.) That as the income increases in amount the percentage of outlay for sundries becomes greater. This is confirmed in Australia, Germany, and the United States.

**3. Comparison with other Countries.**—Any direct comparison of the results of inquiries as to the cost of living in Australia and other countries is practically impossible, owing mainly to two things, viz., (a) that the inquiries have not generally been conducted on similar lines; and (b), that budgets have not been obtained either for corresponding classes of persons or for similar income groups. Any adequate comparison of cost of living in different countries requires the dissection out of the general result of the following things, viz., (i.) standard of living; (ii.) prices; (iii.) rates of wages; (iv.) social classifications; and (v.) general economic conditions.

Of those countries for which information is available the results for the United States of America and for Germany can be presented in a form similar to that shewn in the table in paragraph 2 hereof (see p. 1176). But even in these cases direct comparisons are impracticable, for in America the inquiry was limited to working-class families,

\* See Journal of the Royal Statistical Society, Vol. LI., p. 161. † It does not of course follow that the nutritive value is less.

while in Germany the average incomes are much lower than in either Australia or the United States. A comparison of the general percentage distribution of expenditure in these countries is shewn in the table hereunder. In order to make the figures more fully comparable, family groups have been selected for the United States and Germany with incomes approximately the same as the general average for Australia.

**COST OF LIVING.—COMPARISON OF GENERAL DISTRIBUTION OF EXPENDITURE  
IN AUSTRALIA, UNITED STATES, AND GERMANY.**

Particulars.	Percentage on Total Expenditure of Cost of—					Total.
	Housing.	Food.	Fuel and Light.	Clothing.	Other Ex- penditure.	
Australia ...	13.70	29.30	3.46	12.72	40.82	100.00
United States* ...	17.40	36.45	5.03	15.72	25.40	100.00
Germany† ...	14.90	30.31	3.12	14.91	36.76	100.00

\* Inquiry made in 1902. † Inquiry made in 1907.

It may be seen that the greatest variation occurs in the percentage expended on food, and this is largely due to the facts previously mentioned, namely, that in the United States families with high incomes were expressly excluded, while in Germany the average income is low, whereas the budgets for Australia include all classes, and incomes are thus relatively high.

As regards expenditure on food in relation to income, comparisons can be made with the United Kingdom, France, and Belgium, in addition to the United States and Germany, special inquiries having been made into the cost of living in these countries by the British Board of Trade during the years 1907 to 1910. In the inquiries instituted in all the countries specified, except Australia, the budgets relate only to working-class families. For Australia figures are therefore given, not only regarding general results obtained for all groups, but also for the special group having incomes of £200 and under, and families of over 4 members, since it is considered that the families included in that group are more closely analogous to the class of families for which investigations were made in the other countries specified. The groups of working-men's families earning the highest rates of wages have been selected for these other countries in order that the results may approximate as closely as possible to the conditions present in the Australian inquiry.

**COST OF LIVING, 1910-11—EXPENDITURE ON FOOD IN AUSTRALIA COMPARED  
WITH THAT IN OTHER COUNTRIES.**

Country.		Average Weekly In- come per Family.	Average Number of Members per Family.	Average Weekly Ex- penditure on Food.	Percentage of Expendi- ture on Food on Average Income.	Weekly Cost of Food per Head.
		£ s. d.	No.	£ s. d.	per cent.	s. d.
Australia	* ...	4 13 1	4.71	1 3 3 $\frac{1}{4}$	25.0	4 11 $\frac{1}{2}$
	† ...	3 1 11	5.6	1 2 3 $\frac{1}{2}$	36.0	4 0 $\frac{1}{4}$
United States	...	3 0 6	6.0	1 12 6	53.7	5 5
United Kingdom	...	2 12 0 $\frac{1}{2}$	6.4	1 9 8	57.0	4 7 $\frac{1}{2}$
Germany	...	2 8 8 $\frac{1}{2}$	5.8	1 7 4 $\frac{1}{2}$	54.4	4 8 $\frac{1}{2}$
France	...	2 12 11	4.9	1 11 7 $\frac{3}{4}$	59.7	6 1 $\frac{1}{4}$
Belgium	...	2 12 1 $\frac{1}{4}$	5.9	1 9 8 $\frac{1}{4}$	56.9	4 9 $\frac{1}{4}$

\* All Groups. † Groups having incomes of £200 and under and families of more than 4 members.

It may be seen, therefore, that in regard to the first set of figures given for Australia (relating to all groups) the weekly cost of food per head is higher than in all the other countries except the United States and France, while the percentage of expenditure on food is less than in any other country. In regard, however, to the special group selected, which is considered to approximate more closely to the groups included in the returns for other countries, the cost per head is considerably less than in any other country, as also is the percentage of expenditure on food.

Having dealt with the general distribution of expenditure, it will now be desirable to refer in greater detail to some of the more important items specified in the budgets.

4. **Housing Accommodation.**—The following table gives particulars of the number of families (a) owning houses unencumbered by mortgage; (b) living rent free, *i.e.*, having houses or quarters either in lieu of, or in addition to, salary or wages; (c) owning houses, but paying interest on mortgages thereon; and (d), leasing houses on rent. The absolute numbers are shewn in addition to the percentages in each class.

**COST OF LIVING, 1910-11.—PARTICULARS OF FAMILIES OWNING, LEASING  
HOUSES, ETC.**

Families having Incomes of—	Number of Members.	Owning Houses.	Living Rent Free.	Paying In- terest on Mortgages	Paying In- stalments on Purchase.	Paying Rent.	Total Families.
NUMBER OF FAMILIES.							
Over £200 ...	Over 4 ...	No. 12	No. 4	No. 6	No. 8	No. 28	No. 58
	4 and under	8	2	6	5	20	41
£200 and under	Over 4 ...	5	4	4	7	29	49
	4 and under	9	3	5	15	32	64
Total	...	34	13	21	35	109	212
PERCENTAGE OF FAMILIES.							
Over £200 ...	Over 4 ...	per cent. 20.69	per cent. 6.89	per cent. 10.35	per cent. 13.79	per cent. 48.28	per cent. 100
	4 and under	19.51	4.88	14.63	12.20	48.78	100
£200 and under	Over 4 ...	10.21	8.16	8.16	14.28	59.19	100
	4 and under	14.07	4.69	7.81	23.43	50.00	100
Total	...	16.04	6.13	9.91	16.51	51.41	100

It may be seen from the above figures that slightly over one-half (51.41 per cent.) of the total number of families lease their houses on rent, and that the proportion of families leasing houses is greater in the lower than in the higher income group. The percentage of families buying houses by instalments is 24.43 in the group having incomes of £200 and under and families of 4 and under, and is considerably higher in that group than in any other. The figures shew, not unexpectedly, that a greater proportion of families in the higher income group than in the lower own their houses.

The average weekly amount spent on housing accommodation by way of interest, instalments on purchase, and rent is shewn in the table hereunder. The last column shews the average weekly percentage of expenditure on housing accommodation on total expenditure for those families which have an expenditure on this item; that is to say, that in computing the percentages, the expenditures of the 47 families which either own their houses or live rent free are excluded.

**COST OF LIVING, 1910-11.—EXPENDITURE PER FAMILY ON HOUSING  
ACCOMMODATION.**

Families having Incomes of—	Number of Members.	Number of Families.	Average Amount Spent Weekly on—			Per cent. of Expenditure on Housing Accommo- dation.
			Interest.	Instal- ments.	Rent.	
			s. d.	s. d.	s. d.	per cent.
Over £200 ...	Over 4 ...	42	4 6 $\frac{3}{4}$	14 6	17 3 $\frac{1}{2}$	16.10
	4 and under ...	31	7 5 $\frac{1}{4}$	13 6 $\frac{3}{4}$	18 4	17.58
£200 and under ...	Over 4 ...	40	2 2 $\frac{1}{2}$	9 10	9 3	17.50
	4 and under ...	52	2 10 $\frac{1}{4}$	10 2 $\frac{1}{2}$	10 3 $\frac{1}{2}$	20.22
General Average	...	165	4 7	11 9 $\frac{1}{2}$	13 3 $\frac{3}{4}$	17.58

It is significant that in both income groups the smaller families pay not only a higher rent than the larger families, but also disburse a greater percentage of their expenditure on housing accommodation. This points to the fact that the smaller families are able to live in greater comfort than the larger.

Owing to the comparatively small number of budgets received, it is not possible to make any general analysis of the average amounts paid for housing accommodation according to geographical distribution of the families. The figures shew, however, that the 25 families living in Sydney paid an average weekly rent of 17s. 10d., or 18.4 per cent. on the total expenditure of their families, while in Melbourne 29 families paid an average weekly rent of 14s. 10 $\frac{1}{2}$ d., or 18.5 per cent. on their total expenditure. The number of budgets from other individual places is not sufficient to warrant the presentation of any averages based thereon.

5. **Expenditure on Food.**—The data obtained from the budgets as to expenditure on food form one of the most important features of the inquiry. It is proposed to present the results from the following standpoints, viz. :—(i.) Average weekly expenditure per family; (ii.) average weekly expenditure per head (unweighted); and (iii.) average weekly expenditure per head (weighted) according to sex and age groups.

(i.) *Average Weekly Expenditure per Family on Food.* The table given hereunder shews the average weekly expenditure per family on each item of food specified in the householder's budget, classified according to income group and size of family.

**COST OF LIVING, 1910-11.—AVERAGE WEEKLY EXPENDITURE PER FAMILY ON  
VARIOUS ITEMS OF FOOD.**

Families having Incomes of—	Number of Members.	Bread.	Meat.	Vegetables and Fruit.	Milk.	Butter, Cheese, etc.	Sugar.	Tea, Coffee, etc.	Other Food.	Total.
		s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	£ s. d.
Over £200 ...	Over 4 ...	3 2	7 0 $\frac{3}{4}$	4 4 $\frac{1}{4}$	3 3 $\frac{3}{4}$	4 4	1 10 $\frac{1}{4}$	1 2	6 7 $\frac{1}{4}$	1 11 10 $\frac{1}{2}$
	4 and under ...	1 10 $\frac{1}{2}$	5 1 $\frac{1}{2}$	3 5	2 10 $\frac{1}{4}$	2 7 $\frac{1}{4}$	1 0 $\frac{1}{4}$	0 10	4 9	1 8 6 $\frac{1}{4}$
£200 and under ...	Over 4 ...	2 8 $\frac{1}{2}$	4 11	2 8 $\frac{1}{4}$	2 7 $\frac{1}{4}$	2 5 $\frac{1}{4}$	1 5 $\frac{1}{4}$	0 10 $\frac{3}{4}$	4 4	1 8 3 $\frac{1}{4}$
	4 and under ...	1 8	3 9 $\frac{1}{4}$	2 2	1 9 $\frac{1}{4}$	2 2 $\frac{1}{2}$	1 0	0 8 $\frac{1}{4}$	3 3 $\frac{1}{2}$	0 16 8
General Average	...	2 4 $\frac{1}{4}$	5 2 $\frac{1}{4}$	3 1 $\frac{1}{4}$	2 8	2 11 $\frac{1}{4}$	1 4 $\frac{1}{4}$	0 10 $\frac{3}{4}$	4 8 $\frac{1}{4}$	1 3 3 $\frac{1}{2}$

It may be seen that the most important item of expenditure in Australia is that on meat, which is followed in the order named by expenditure on other food: vegetables and fruit, butter, cheese, etc., milk, bread, sugar, and tea, coffee, etc. That order is

not, however, invariably maintained in the individual groups. As might be anticipated, the expenditure on food is greater in the higher income class and in the larger family groups. A comparison of expenditure on food in Australia with that in other countries has already been given on p. 1178 hereof.

(ii.) *Average Weekly Expenditure per Head on Various Items of Food.*—The next table furnishes particulars of expenditure per head, irrespective of sex and age, on each item of food. In computing the number of persons who were a charge upon the family expenditure temporary absence from home has been taken into account (see p. 1173 hereinbefore).

### COST OF LIVING, 1910-11.—AVERAGE WEEKLY EXPENDITURE ON FOOD PER HEAD.

Families having Incomes of—	Number of Members.	Number of Families.	Number of Heads.	Average Number of Heads per Family.	Expenditure per Head on—								Total.
					Bread.	Meat.	Vegetables and Fruit.	Milk.	Butter Cheese, etc.	Sugar.	Tea, Coffee, etc.	Other Food.	
Over £200 ...	Over 4 ...	58	385.4	6.65	d. 5½	s. d. 1 0½	d. 7½	d. 6½	d. 7½	d. 3½	d. 3	s. d. 1 0	s. d. 4 9½
	4 and under ...	41	140.7	3.43	6½	1 6	11½	10	9½	3½	3	1 0½	4 6½
£200 and under	Over 4 ...	49	275.9	5.63	5½	0 10½	5½	5½	5½	3	3	0 9½	3 11½
	4 and under ...	64	190.1	2.97	6½	1 3½	8½	7½	9	4	3	1 1½	5 7½
General Average ...		212	992.1	4.68	6	1 1	7½	6½	7½	3½	2½	1 0	4 10½

It may be seen that in each of the income groups the smaller families spend a greater amount on food per head than the larger families. This is no doubt partly due to the fact that in the larger families greater economies can be effected in regard to waste, but it also indicates that the smaller families, as previously pointed out, live in a greater degree of comfort than the larger families. The expenditure per head on the various terms specified is in the same order as the expenditure per family.

(iii.) *Average Weekly Expenditure per Head on Food, according to Sex and Age Groups.*—The figures given in the table in the preceding paragraph relating to cost per head of various items of food do not differentiate either between sex or age groups. On page 1173 hereof particulars have already been given specifying the average number of members of families classified according to sex and age groups. By weighting each class, in the manner indicated hereunder, according to the cost of food consumed, an average weekly cost can be computed for each class. Earlier investigations have shewn that the average consumption of an adult male and an adult female differ, so also, of course, does the average consumption at different ages. Hence in analysing the results we should weight each class according to its consumption so determined. Then in the manner indicated hereunder the average weekly cost can be computed for each class on a common basis. (See footnote for method.)<sup>1</sup>

1. Let  $N_1, N_2, N_3, \dots$  etc. represent, in any income and family group, the average number of heads in each sex and age class. Let also  $w_1, w_2, w_3, \dots$  etc., denote the corresponding weights representing the relative consumption of each sex and age class. Then if  $S$  be the total weekly sum expended on food for a whole group, we shall have

$$\frac{S}{N_1w_1 + N_2w_2 + N_3w_3 + \text{etc.}} = k, \text{ say}$$

$k$  being then the average cost of food per unit-weight, this unit being arbitrarily taken to measure  $w$ .

Let  $C_1, C_2, C_3, \dots$  etc., denote the average weekly cost per head in each class with the corresponding suffixes, then

$$C_1 = \frac{Sw_1}{[Nw]} = kw_1$$

the square brackets denoting the sum of all the products of the numbers into the weight as above. Similarly  $C_2, C_3, \text{etc.} = kw_2, kw_3, \text{etc.}$  These values  $kw, \text{etc.}$ , denote then the average weekly expenditure per head for the several classes denoted by the suffixes.

The weights applied to each sex and age group were selected after a careful study had been made of reports and other available information bearing on the matter, both from a physiological, economic and anthropometric standpoint. The weights selected for each class were as follow :—

**COST OF LIVING, 1910-11.—EXPENDITURE ON FOOD, WEIGHTS ASSIGNED TO EACH CLASS.**

Particulars.	Males.		Females.		Children.			
	Over 17.	13-16.	Over 17.	13-16.	10-12.	6-9.	2-5.	Under 2.
Age in years ...								
Weight ...	100	80	80	70	65	50	35	20

The average number of persons in each sex and age class in the various groups classified according to income and size of family have already been given in the table on page 1173. The total weekly expenditure on food for each group was £92 9s. 7d., £46 3s. 10d., £54 11s. 11d., and £53 6s. 7d., while the total weekly expenditure for all groups was £246 11s. 11d. Proceeding on the lines indicated, see formula in preceding footnote, the results are shewn for each class in each group in the following table :—

**COST OF LIVING, 1910-11.—AVERAGE WEEKLY EXPENDITURE PER HEAD ON FOOD FOR EACH SEX AT DIFFERENT AGES.<sup>1</sup>**

Families having Incomes of—	Number of Members.	Males.		Females.		Children.			
		Over 17.	13-16.	Over 17.	13-16.	10-12.	6-9.	2-5.	Under 2.
		s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.	s. d.
Over £200 ...	Over 4 ...	6 6½	5 2½	5 2½	4 6½	4 2½	3 3½	2 3½	1 3½
	4 and under ...	8 3½	6 7½	6 7½	5 10	5 4½	4 1½	2 10½	1 8
£200 and under	Over 4 ...	6 2½	4 11½	4 11½	4 4	4 0½	3 1½	2 2	1 2½
	4 and under ...	7 6½	6 0½	6 0½	5 3½	4 11	3 9½	2 7½	1 6
General Average ...		6 11	5 6½	5 6½	4 10	4 6	3 5½	2 5	1 4½

<sup>1</sup> These are the values of *kw* in the formula deduced as shewn.

It may be seen that instead of the general average cost previously obtained for all classes, amounting to 4s. 10½d., the average cost in the special sex and age classes ranges from 1s. 4½d., in the case of a child under two years of age, to 6s. 11d. for an adult man. From the figures given in the above table the average cost of food can, of course, be computed for any given family. Applying the results shewn in the table to various families selected at random from the householders' returns, it is found that the divergencies between the cost of food thus estimated and the average cost obtained from the weekly budgets are generally small. This indicates that the weights which have been assigned are substantially in accordance with the facts. Thus, for a family in New South Wales, consisting of father, mother, and five children, aged 11, 8, 5, 4 and 1 year, and having an income of over £200 a year, the estimated weekly cost of food, according to the results given in the preceding table, is 25s. 1d., whereas the actual average computed from the weekly budgets is 23s. 10d. Again, in the case of a family of eleven persons, also with an income of over £200, the estimated cost is 41s. 1½d., as against an actual cost of 42s. 5½d.; and for a family of seven persons in Western Australia, with an income under £200 a year, the estimated cost is 27s., as against an actual average of 30s. 10d.

It is not practicable to obtain similar results for sex and age classes in regard to expenditure on items other than food, owing to the difficulty in computing any satis-

factory system of weights accurately denoting the extent to which the various items are used or consumed by persons in the various classes.

**6. Expenditure on Clothing.**—In the family budgets there was included a number of persons, such as boarders, servants, and adult children, whose clothing was not paid for out of the common fund. In order, therefore, to obtain particulars of the average cost per head these persons must be excluded. The third column in the table hereunder shews the average number of persons whose expenditure on clothing was included in the returns, due allowance having been made for temporary absence from home. The succeeding columns shew the average weekly and the corresponding annual expenditure for the different income and family groups.

**COST OF LIVING, 1910-11.—AVERAGE WEEKLY AND ANNUAL EXPENDITURE PER HEAD ON CLOTHING.**

**7. Expenditure on Other Items.**—The table hereunder shews the average weekly expenditure per family on items other than housing, food, clothing, and fuel and light, each of which, with the exception of the last, has been dealt with separately. Expenditure on fuel and light does not permit of further analysis. The percentage of each item on the total expenditure is also shewn.

**COST OF LIVING, 1910-11.—AVERAGE WEEKLY EXPENDITURE PER FAMILY ON OTHER ITEMS.**

Families having Incomes of—	Number of Members.	Other Groceries not Food.	Non-alcoholic Beverages.	Alcoholic Beverages.	Tobacco, Cigars, etc.	Fares.	Insurance.	Contributions to Benefit Societies. £200 and under ...	Over 4 ... ..	3.33	0.22	0.49	0.86	2.40	3.04	1.91	0.60	2.96	1.01	0.79	10.31	27.92
	4 and under ...	3.21	0.27	0.70	1.02	3.33	3.57	2.00	0.62	2.70	2.04	1.02	15.68	36.16
General Average ...		2.67	0.26	0.74	0.63	3.41	4.72	1.41	1.57	3.09	1.97	1.41	18.04	40.82

It may be seen that, disregarding "other expenditure," the most important item in the above table is expenditure on insurance, which is followed in the order named by fares, medical expenses, other groceries not food, rates and taxes, education and school materials, contributions to benefit societies and sports and amusements (equal), alcoholic beverages, tobacco, cigars, etc., and non-alcoholic beverages.

In view of the probability, previously referred to, that the budgets include a considerable proportion of returns from householders whose habits are of a thrifty and economical nature, and who habitually exercise a careful supervision over their expenditure, it appears likely that the average amounts specified as being expended on various items—especially on those which are of the nature of luxuries—are somewhat too low to be representative of the general community. This view is also borne out by an examination of the individual budgets. Thus, in regard to alcoholic beverages, it appears that no less than 88 out of the 212 families were teetotallers. Of the balance 42 families spent on this item an average amount of less than 3d. per family per week, while there are only 15 families entered as spending over 2s. each a week. Of the last number nine exceeded 3s. each per week, and three exceeded 5s. a week. On non-alcoholic beverages the average weekly expenditure per family is only 2½d., while the average expenditure on sports and amusements is also very low, viz., 1s. 1½d. per week, 21 families returning no expenditure under this heading. Expenditure on tobacco is also small, the weekly average per family being 6d. There are only 81 families with a weekly expenditure in excess of that sum, while 103 families returned no expenditure on this item. The relatively high expenditure on insurance and contributions to benefit societies, amounting together to 6.13 per cent. on the total expenditure, indicates thrift and economy. "Other expenditure" includes a considerable variety of miscellaneous items, such as servants' wages, furniture, repairs and maintenance of property, holiday expenses, and any other outlay not specifically mentioned under any other heading. The percentage on total expenditure ranges from 10.31 for larger families in the smaller income group to 25.15 for small families with larger incomes.

8. **Conclusion.**—It is to be regretted that in an inquiry of such importance, and so closely touching the interests of the majority of the community, the response of the public in furnishing budgets of income and expenditure has been so limited. In a similar inquiry carried out in the United States of America in 1902, data were obtained as to cost of living for one year from 25,440 families, representing 124,108 persons. Many interesting investigations and important analyses could thus be carried out. Again in Germany, in 1907, schedules were distributed to 4134 families, of which 960, or 23.2 per cent., filled in the particulars for the full period of twelve months, while 699 families, or 16.9 per cent., persevered for from six to eleven months. The results of the inquiry in Australia compare very unfavourably with those in the countries mentioned, only 178, or 9.4 per cent., on the total number distributed (1500), having persevered for the full period of twelve months, and 20 families, or 1.1 per cent., for from six to eleven months. The result in those countries where the people respond willingly to inquiries of this nature is that a better knowledge of sociological and economic conditions is acquired, and the possibility of directing national development on scientific lines is enhanced. In the United States and Germany especially, it appears that the masses of the community are beginning to realise that, in so far as sociological knowledge can contribute to national success, that people has the position of advantage whose investigators discover the largest body of scientific truth, and whose practical men are the most prompt in the application of it in social organisation. A movement has recently been set on foot for an inquiry into the cost of living on an international basis. If such an inquiry be carried out in all its bearings the results should go far towards elucidating several important matters in regard to which the information at present available is meagre and unsatisfactory.

## SECTION XXXIV.

## MISCELLANEOUS.

## § 1. Immigration.

## (A) The Encouragement of Immigration into Australia.

1. **Introduction.**—Various measures have from time to time been adopted by the Commonwealth and State Governments, as well as by private societies and individuals, with a view to promoting the immigration of suitable classes of settlers into Australia. Some of the States of the Commonwealth are at present pursuing immigration policies of a vigorous nature; in others, relatively little is being done. The activities of the Commonwealth Government (which is vested with constitutional powers in regard to immigration under Sec. 51, xxvii., of the Constitution Act 1900) with respect to the encouragement of immigration, have hitherto practically been confined to advertising in handbooks, newspapers, and periodicals, the resources and attractions of Australia.

2. **State Immigration.**—The advertising in the United Kingdom of the resources of the individual States has been carried out by their Agents-General in London. Various means have been adopted, including newspaper advertising; the publication of illustrated pamphlets bearing on the resources and principal primary industries of the State; lectures by officers who have a knowledge of the conditions prevailing in the State; official displays at the principal agricultural, manufacturing, and similar exhibitions; cinematographic pictures typical of industrial life and scenic views; and pictures and lantern slides.

(i.) *Nominated and Assisted Passages.* Arrangements have been made by most of the State Governments with several of the principal shipping companies for substantial reductions in the amounts of passage money to be paid by immigrants. These reductions are generally granted to all persons desiring to settle on the land or engaging in any form of rural industry, to domestic servants, and to any others who satisfy one of the several Agents-General in London that they will make suitable settlers. Provision has also been made whereby settlers may nominate their relatives or friends for passage to Australia at greatly reduced rates.

(ii.) *Reception on Arrival.* Immigrants whose coming is advised are met on board the vessel on arrival by Government officers, who make themselves acquainted with the needs of the passengers and assist and advise them in various ways. To those desirous of settling on the land, information and assistance is rendered by officers of the Lands Department, and special concessions are granted in respect of fares on the Government railways. In other cases endeavours are made to obtain employment for each applicant according to his special needs and qualifications.

(iii.) *Numbers of Immigrants.* Particulars of the net immigration to the Commonwealth are given on pages 132-3, and of assisted immigration on page 140, hereinbefore.

(iv.) *Recent Immigration.* The years 1910 and 1911 marked a great step forward in Australian immigration generally, as several, if not all, of the State Governments

adopted more active and direct means than had hitherto existed for making the advantages and opportunities of their respective States better known to the people of the United Kingdom, Europe, and America. In Victoria, to which State a small number of emigrants from America had been attracted (chiefly by the irrigable areas), it was decided to further enlighten American and Canadian home-seekers with regard to irrigated lands, and a delegation was accordingly sent to Vancouver by the Victorian Government to arrange for a special excursion of land-seekers, who arrived in Australia early in May, 1912. Many of these have since taken up land in the irrigable areas and other portions of the State. It appears likely that the success of the Victorian experiment will result in definite steps being initiated by the other States of the Commonwealth to attract population from similar sources.

(v.) *Uniform Rates for State-aided Immigrants.* The matter of State-aided immigration to Australia was discussed at the Premiers' Conference, held in Melbourne early in 1912, and this resulted, amongst other things, in the fixing of a scale of minimum rates of passage money which immigrants to any of the States would be charged in future, such rates to operate as from 31st March, 1912. It was expressly agreed, however, that, while no State should charge a lower amount than those mentioned, no objection would be made to higher rates being imposed. The minimum scale of passage rates arranged at the Conference is as follows:—(a) Farmers, farm hands, skilled artisans, and all nominated, assisted, or indented male immigrants, £6. (b) Adult females, £3. (c) Children of immigrants under 12 years of age, £1 10s. Age limits for all State-aided immigrants were also fixed as follows:—(a) Males, married women and widows, 45 years. (b) Single women, 35 years. The only free immigrants to be those whom the shipping companies carry free. It was also arranged that the maximum bonus payable to immigration agents be as follows:—(a) Per adult, £1; per child under 12 years, 10s. (b) In the case of an assisted immigrant recruited by an agent nominating his wife and family within twelve months of his arrival in the State, a similar bonus on account of the wife and family be paid to the agent. (c) In the cases of immigrants with capital of £200 and over, which capital is deposited with the Agent-General for transmission to the State, an additional bonus of 1 per cent. to the agent on the capital so deposited.

**3. Initiation of Commonwealth Scheme.**—For the financial year 1911-12 a sum of £20,000 was voted to the Commonwealth Department of External Affairs for advertising the attractions of Australia for settlers, farm workers, and tourists. The State Immigration Bureaux co-operate with the Department of External Affairs in keeping the High-Commissioner for Australia in London advised as to lands in the respective States available for selection, the openings for agricultural workers, and as to general information concerning matters of interest to intending settlers. A press advertising campaign has been initiated, the Commonwealth carrying on the general advertising of Australia by means of paragraphs and illustrated articles in British, European, and American publications, while the several States advertise for the class of immigrants they specially require. It is proposed that "landseekers' excursions" shall form an important part of the Department's operations. Bioscope films are utilised for the illustration of lectures, and handbooks for settlers and tourists, as well as folders, and other publications have been issued. Pictorial posters are also utilised.

**4. Visit of Scottish Agricultural Commissioners.**—In 1909 communications were entered into with Lord Pentland, Secretary of State for Scotland, relative to arranging for a visit to Australia of a number of prominent Scottish gentlemen interested in agriculture as land owners, farmers, Directors of Scottish Chambers of Agriculture, and also a number of men engaged in scientific agricultural education. Twelve Commissioners were nominated by Lord Pentland, and arrangements were made for them to tour the Commonwealth. The members of the Commission reached Fremantle on the 20th September, 1910, and, under the direction of a representative of the Department of External Affairs, proceeded to Queensland, and began an itinerary which took them

throughout the principal agricultural districts and many of the pastoral districts of each of the States. The tour, extending over a distance of about 14,000 miles, concluded on the 19th January, 1911, when the Commission sailed from Fremantle. The Commissioners are submitting to the Commonwealth Government a report as to their observations, and the report will be circulated in the United Kingdom and elsewhere for the information and guidance of intending settlers and others.

**5. The High Commissioner for Australia and the Agents-General.**—Intending settlers or immigrants may, on application, obtain information from the High Commissioner for Australia—

THE RIGHT HON. SIR G. H. REID, P.C., G.C.M.G., ETC.,  
COMMONWEALTH OFFICES,  
72 VICTORIA STREET,  
LONDON, S.W.

#### (B) The Regulation of Immigration into Australia.

**1. Pre-Federal Restrictions.**—(i.) *Alien Races.* The several States of Australia had regarded it as desirable, long prior to Federation, to impose certain restrictions upon the admission of persons wishing to become inhabitants of those States. The influx of Chinese, for example, was limited by stringent statutes, and later general Acts were passed in some of the States which had the effect of restricting the immigration of other—principally Asiatic—races.

(ii.) *Undesirable Immigrants.* Further restrictions were placed upon the admission of persons who were undesirable as inhabitants, either for medical or moral reasons, or who were likely to be an economic burden upon the community.

**2. Powers and Legislation of the Commonwealth.**—(i.) *Constitutional Powers.* By Chap. I., Pt. V., Sec. 51, xxvii. and xxviii. of the Commonwealth Constitution Act the Parliament of the Commonwealth is empowered to make laws with respect to immigration and emigration and the influx of criminals. (See page 23 herein.)

(ii.) *Legislation.* The powers above specified have now been exercised by the Commonwealth Government, and the laws passed in pursuance thereof supersede the State laws above referred to.

The first Act passed, dealing with this matter, was the Immigration Restriction Act 1901, which contained provisions restricting the immigration of the classes of

persons mentioned above. This Act, which contained clauses restricting the immigration of persons under contract, was subsequently repealed by the Contract Immigrants Act 1905, which amended and was substituted for the original Act, but both these Acts have since been amended by the Immigration Restriction Acts of 1908 and 1910, and the immigration of alien races and undesirable persons is now regulated by these latter Acts. Admission of immigrants under contract to perform manual labour is, however, still controlled by the provisions of the Contract Immigrants Act 1905, and will be permitted if the contract is in writing, is made by or on behalf of some person named, who must be resident in Australia, and approved by the Minister. Such approval will not be given if the contract is made with the view of affecting an industrial dispute or if the remuneration and other terms are not as advantageous to the contract immigrant as those current for workers of the same class at the place where the contract is to be carried out. See page 1069 herein.)

There is an additional provision where the proposed immigrant is not a British subject born in the United Kingdom or descendant of such a person. In such case it has to be proved that there is a difficulty in the employers obtaining in the Commonwealth a worker of at least equal skill and ability.

In case of infraction of the law it is provided that the contract is absolutely void and the immigrant and employer are both liable to penalties, and the employer is also liable to pay the immigrant until he obtains employment, or, at the option of the immigrant, to provide expenses for his return to the country whence he came.

**3. Prohibited Immigrants.**—(i.) *Provisions of the Acts.* Persons comprised in the following classes are prohibited from entering the Commonwealth, viz.:—(a) Any person who fails to pass the dictation test; that is to say, who fails to write out not less than fifty words of a language prescribed by regulation when dictated to him by an officer administering the Act. (b) Any person likely to become a charge upon the public. (c) Any idiot or insane person. (d) Any person suffering from an infectious or contagious disease. (e) Any person who has been convicted of an offence, other than a mere political offence, and has been sentenced to imprisonment for one year or longer and has not served his sentence or received a pardon. (f) Any person undesirable for moral reasons.

Regarding (a) it may be stated that the Act of 1901 provided for the dictation of not less than fifty words of a European language. The Act of 1905 provided for the retention of this test until regulations be passed prescribing the languages to be employed. No such regulations have yet been made, and the provision of the Act of 1901 is therefore *de facto* still in force. It may be stated that the dictation test is not and never has been imposed upon persons of European race.

(ii.) *Exemptions.* To these restrictions there are the following exemptions, viz.:—(a) Any person holding an exemption certificate. (b) Members of the King's regular land and sea forces. (c) The master and crew of any public vessel of any Government. (d) The master and crew of any other vessel landing during the stay of the vessel in a Commonwealth port; but before the ship can obtain her outward clearance the crew must, at the demand of an officer administering the Act, be mustered, and if any member of the crew be missing, and would otherwise, in the opinion of the officer, have been a prohibited immigrant, then such person is deemed to be a prohibited immigrant, and until the contrary be proved, to have entered the Commonwealth contrary to the Act. (e) Any Commissioner of, or other person accredited from, the Imperial or any other Government.

(iii.) *General Provisions.* An immigrant may be required to pass the dictation test at any time within two years after he has entered the Commonwealth.

A prohibited immigrant within the meaning of (a) above may, at the discretion of an officer, be allowed to enter the Commonwealth, or to remain within it, upon depositing £100 and within thirty days either obtaining an exemption certificate or departing from the Commonwealth; in either case the deposit is returned.

The punishment for breach of the Act by a prohibited immigrant is imprisonment for six months and deportation in addition to or in substitution for such imprisonment, if so ordered.

**4. Liability of Shipmasters and Others.**—The master, owners, agents, and charterers of a vessel from which a prohibited immigrant enters the Commonwealth are jointly and severally liable to a penalty not exceeding £100 for each entrant. The vessel may be detained as security, but may be released upon the giving of a bond with two sureties for the payment of any penalties; the vessel may be seized and sold in default of payment of penalties. The master, owners, agents, and charterers may be required to provide a return passage for the prohibited immigrant, and to pay for his maintenance during his detention prior to deportation. Masters of vessels are authorised to prevent such a person from landing and to obtain any necessary assistance.

Under the Immigration Restriction Act 1908, any person on board a vessel at the time of her arrival from any place outside Australia at any port in Australia who is not (a) a *bona fide* passenger of the vessel, or (b) a member of the crew of the vessel whose name is on the articles, is deemed to be a stowaway, unless the master gives notice that the person is on board the vessel, and does not permit him to land until an officer has had an opportunity of satisfying himself that the person is not a prohibited immigrant. The master, owners, agents, and charterers of a vessel are jointly and severally liable to a penalty of £100 for each stowaway brought into any port in Australia. Power is given to search vessels for stowaways. The Immigration Restriction Act, 1910, provides penalties for being concerned in bringing immigrants secretly to the Commonwealth.

**5. Agreements with other Countries.**—Arrangements may be made with the Government of any country regulating the admission into Australia of the subjects or citizens of such country, such subjects being not, during the subsistence of the arrangement, required to pass the dictation test.

Persons who have resided either continuously or from time to time in the Commonwealth for a period of five years in the whole, and who are about to depart from it, being persons who, if they return, would be prohibited immigrants, may obtain a certificate of exemption entitling them to return.

Certificates of exemption are granted by the Minister of External Affairs, whose department administers the Act, and also by the collector of customs in each State.

**6. Statistics.**—The following tables shew the number of persons who desired but were not permitted to land, those who were allowed to land, and the nationality of the persons admitted.

**PERSONS ADMITTED OR REFUSED ADMISSION TO COMMONWEALTH UNDER  
PROVISIONS OF IMMIGRATION RESTRICTION ACT, 1904 to 1911.**

## § 2. Patents, Copyrights, Trade Marks, and Designs.

1. **Devolution of Jurisdiction upon the Commonwealth.**—Prior to the establishment of Federation, and for a few years thereafter, each Australian State possessed independent jurisdiction in respect of patents, copyrights, trade marks, and designs, and had, with the exception of Tasmania in regard to copyrights, enacted its own laws. Any person, therefore, who desired to obtain the grant of a patent, or the registration of any copyright, trade mark, or design had necessarily, with the exception aforesaid, to incur the trouble and expense of making separate applications. The Commonwealth Constitution Act conferred upon the Federal Parliament power to legislate respecting these

matters. (See page 23 hereinbefore.) The Patents Act of 1909 applied the laws relating to patents for inventions, to the territory of Papua.

The State Acts, though in general based upon the Imperial Statutes dealing with these subjects, were not wholly governed by them. The Commonwealth Acts, both in regard to principle and practice, have the same general foundation, but in some respects have been modified and brought into line with the totality of Australian experience.

**2. Patents.**—The first Commonwealth Patents Act was passed in 1903, and was amended in 1906, 1909, and 1910. (See page 41 hereinbefore.) Under these Acts, which are administered by a "Commissioner of Patents," the power of the States to grant patents was abolished, and their functions in that respect were transferred to the Commonwealth. A single Commonwealth patent now gives throughout the Commonwealth and the territory of Papua that protection which formerly could only be obtained by procuring a patent in each State and the said territory. The rights of State patentees or the patentees in the territory of Papua are in all cases reserved to them. The holder of a State patent in force may obtain, for a period not exceeding the unexpired time thereof, a Commonwealth patent for the invention comprised in the State patent, provided however, that any State other than the State in which the patent under the States Patent Act was granted may be excepted from the patent if the Commissioner of Patents is satisfied that the invention either (a) is not novel, (b) has been made the subject of a pending application, or (c) has been published, in such State. Comparatively small fees, totalling £8, are now sufficient to obtain for an inventor protection throughout the Commonwealth, and the only renewal fee (£5) is payable before the expiration of the seventh year of the patent, or within such extended time, not exceeding one year, and upon payment of further fees as may be allowed.

(i.) *Applications for Patents.* Any of the following persons may make application for a patent:—(a) The actual inventor. (b) His assignee, agent, attorney, or nominee. (c) The actual inventor or his nominee jointly with the assignee of a part interest in the invention. (d) The legal representative of a deceased actual inventor or of his assignee. (e) Any person resident in the Commonwealth to whom the invention has been communicated by the actual inventor, his legal representative, or assignee (if the actual inventor, his legal representative, or assignee is not resident in the Commonwealth). An application for a patent must be for one invention only, and must be made in the form prescribed, and lodged by being left at or sent by post to the Patent Office at Melbourne. It must be accompanied by either a provisional or a complete specification. The application must contain a declaration in the prescribed form setting out the facts relied on to support the application, and must be signed by the applicant before a witness.

(ii.) *Term for which Granted.* The term for the duration of every patent is limited to fourteen years from the date of application. A patent ceases if the patentee fails to pay the renewal fee within the prescribed time.

(iii.) *Opposition to Grant of Patent.* Within three months of the advertisement of the acceptance of a complete specification, or within such further time, not exceeding one month, as may be allowed by the Commissioner, any person may give notice at the Patent Office of opposition to the grant on any of the following grounds:—(a) That the applicant has obtained the invention from the opponent or from a person of whom he is the legal representative or assignee or nominee. (b) That the invention has not been communicated to the applicant by the actual inventor his legal representative or assignee (if the actual inventor his legal representative or assignee is not resident in the Commonwealth). (c) That the invention has been patented in the Commonwealth on an application of prior date or has been patented in a State. (d) That the complete specification describes or claims an invention other than that described in the provisional specification, and that the opponent has applied for a patent for such other invention in the interval between the leaving of the provisional and complete specifications. (e) Want of novelty. (f) Prior publication.

The case is heard and decided by the Commissioner, from whose decision an appeal lies to the High Court or the Supreme Court of the State in which the Patent Office is situated.

(iv.) *Single Patent for Cognate Inventions.* The Act of 1909 provides that two or more provisional specifications for inventions which are cognate or modifications one of the other and constituting a single invention may be combined in one complete specification, upon which a single patent may be granted in respect of the whole of such applications.

(v.) *Patents of Addition.* Special provisions are made for granting patents to an applicant or patentee in respect of any improvement on his invention. Such patents are called "Patents of Addition." They are granted for a term of the same duration as that of the original patent, or to such of that term as is unexpired, and in respect of such patents no renewal fee is payable.

(vi.) *Amendments.* Amendments to specifications by way of disclaimer, correction, or explanation may be allowed on request to the Commissioner, provided that the specification, if amended as requested, does not claim an invention substantially larger than, or different from, the original invention. Any person may oppose an amendment on giving notice of opposition at the Patent Office. Amendment of other documents is provided for by the regulations.

(vii.) *Revocations of Patents.* Revocation of a patent may be obtained by petition to the High Court or the Supreme Court of a State. Every ground on which a patent might at common law be repealed by *scire facias* is available as a ground of revocation. A petition for revocation may be presented by either (a) the Attorney-General or person authorised by him, (b) any person alleging that the patent was obtained in fraud of his rights or of the rights of any person under or through whom he claims, or (c) by any person alleging that he or any person under or through whom he claims an interest in any trade, business, or manufacture had publicly used, made, or sold within the Commonwealth before the date of the patent anything claimed by the patentee as his invention, or (d) any person alleging that he or any person under or through whom he claims was the actual inventor of any invention included in the claim of the patentee.

(viii.) *Compulsory Working and Licenses.* At any time not less than four years after the date of a patent, and not less than two years after the 13th December, 1911, any person may apply to the High Court or the Supreme Court of the State in which the Patent Office is situated for an order declaring that the patented article or process is not manufactured or carried on to an adequate extent in the Commonwealth. From and after the time when any such order may take effect, the patent is not deemed to be infringed by the manufacture or carrying on in the Commonwealth of the patented article or process, or by the vending within the Commonwealth of the patented article made within the Commonwealth. Any person interested may, after the expiration of two years from the granting of the patent, present a petition to the Commissioner alleging that the reasonable requirements of the public with respect to a patented invention have not been satisfied and praying for the grant of a compulsory license or, in the alternative, for the revocation of a patent. If the parties do not come to an arrangement between themselves, the Commissioner, on being satisfied that a *prima facie* case has been made out, must refer the petition to the High Court or the Supreme Court of the State in which the Patent Office is situated. If the Commissioner is not satisfied that a *prima facie* case has been made out he may dismiss the petition.

(ix.) *Restoration and Surrender of Patents.* The Act of 1906 provides for the restoration (under certain conditions) of applications for patents which may have lapsed through default of the applicant or of an officer of the Patent Office.

A patentee may surrender a State patent for an invention for which a Commonwealth patent has been granted in terms of section 7; or, by permission of the Commissioner, subject to the leave of the Court or consent of the parties in a petition for revocation, may surrender a Commonwealth patent.

(x.) *Contracts and Proceedings.* Subject to certain provisions specified in the amending Act of 1909, no patentee may enforce conditions of contract which will restrict the rights of the purchaser, lessee, or licensee from using any article or process supplied or owned by any person other than the patentee or from acquiring from the patentee any article not protected by the patent. Such contracts made prior to the Act of 1909 may be determined by three months' notice from either party.

Any person threatened by circular or advertisement with proceedings for infringement may apply for an injunction and damages, unless the threatening party shows due diligence in prosecuting an action.

(xi.) *International Protection of Patents.* The Patents Act contains provisions under which the international arrangements for the protection of patents contained in the Imperial Acts could be made applicable to the Commonwealth by order of the King-in-Council. The necessary proclamation was issued by the Imperial Government as regards England and Australia on the 1st February, 1907, and as regards all other countries in the International Convention on the 5th August, 1907. Applicants for patents, subject to the country in which first application is made being a party to the arrangement, are now, therefore, if they apply in Australia within twelve months of their first foreign application, entitled to receive patents for their inventions in priority to other applicants, and such patents have the same date as the date of the first application abroad. Corresponding arrangements have also been made by the Commonwealth with New Zealand.

(xii.) *Patent Attorneys.* Any person on passing the prescribed examination, and on paying a fee of £5, may be registered by the Commissioner as a patent attorney. A solicitor may practise as a patent attorney without passing the prescribed examination and without being registered as a patent attorney. No person may describe himself as a patent attorney, or as a patent agent, or as an agent for obtaining patents unless he is registered or entitled to practise as a patent attorney.

(xiii.) *Patent Office Publications.* Complete specifications are printed shortly after they become open to public inspection by acceptance, or under Section 121 of the Act. Each specification is open to public inspection. A number of publications, of which a list may be found in the Australian Official Journal of Patents, is on sale at the Government Printing Office, Melbourne.

The *Australian Official Journal of Patents* is issued weekly, and contains lists of applications and proceedings, with illustrated notes of accepted complete specifications. A supplementary annual volume contains statistics, indexes to names of persons concerned, classified indexes to subject matter of applications lodged, and a numerical index to proceedings on Commonwealth applications which have been advertised during the year; there are also name and numerical indexes to proceedings on State applications.

(xiv.) *Applications Filed, Provisional Specifications Accepted, and Letters Patent Sealed, 1904 to 1911.* The numbers of individual inventions in respect of which applications were filed in the States or Commonwealth during each year from 1904 to 1911 inclusive are shewn in the following table. The number of applications accompanied by provisional specifications and the number of patents sealed in respect of applications made in each year are also shewn.

3. **Copyright.**—Prior to the establishment of Federation the copyright legislation enacted by all the States except Tasmania, throughout which State Imperial legislation governed local productions, was based upon and closely followed the English law of copyright, differing, however, in some cases therefrom as to the periods for which a copyright was granted. Only local publications were affected by it. A colonial law did not affect the rights of authors and artists where copyright was acquired outside the colony.

(i.) *Copyright Acts.* The first Commonwealth Act was passed in 1905 (see page 41 hereinbefore). It deals with literary and artistic copyrights, performing right and lecturing right. It may be applied, by registration under the Act, to any copyright or performing right in any literary, musical or dramatic work, or artistic work, entitled to protection in Australia by virtue of any Act of the Parliament of the United Kingdom, or entitled to protection in any State by virtue of any State Copyright Act.

(ii.) *Principal Features.* The principal feature of the Australian Act is that it provides the same duration of right under the above heads, namely, the life of the author and seven years thereafter, or forty-two years from publication, whichever be the longer. Copyright subsists in every book, whether the author be a British subject or not, which has been printed in type, set up in Australia, or plates made therefrom, or from plates or negatives made in Australia in cases where type is not necessarily used, and has, after the commencement of the Act, been published in Australia, before or simultaneously with its first publication elsewhere. With respect to lectures, it is provided that the author shall be the first owner of the lecturing right, and that he may prevent publication of a report of the lecture by giving notice orally at the beginning of the lecture, or by a conspicuous written notice on the entrance door or in the lecture-room stating that reporting is prohibited. The owner of the copyright in a book may be requested by the Minister, on application being made by any person desirous of translating such book, to make a translation thereof, if it be not translated within ten years of publication. If the owner of the copyright fail to comply with such request the Minister may confer the right of translation into a particular language upon the person making the application. The person ordering a photograph for which consideration is paid is the owner of the copyright in it.

An important feature of the Copyright Act is that provision is made whereby the owner of the copyright in any book or artistic work, or his agent, may, by notice in the prescribed form, require any person to deliver up to him any pirated reproduction of the book or work, and similarly the owner of the performing right in a musical or dramatic work, or his agent, may forbid the performance of the work in infringement of his right,

and may require any person to refrain from performing or taking part in the performance of the musical or dramatic work specified. Any person failing to observe the requirements of any notice served under these provisions is liable to a penalty not exceeding £10.

(iii.) *Registration.* Registration is a necessary preliminary to an action for infringement, but copyright exists independently of registration. The Commissioner of Patents has been appointed "Registrar of Copyrights." Proceedings for the rectification of the register may be taken before the Supreme Court of any State. In the matters of copyright the Commonwealth is a party to the Berne Convention.

Particulars of applications for registration of copyrights and of the revenue derived therefrom are given in paragraph 6 hereof.

4. *Trade Marks.*—The remarks made concerning the unification of the patent system of the Commonwealth apply equally to trade marks. Under the Trade Marks Act 1905, which came into force on the 2nd July, 1906, the Commissioner of Patents is appointed to act also as "Registrar of Trade Marks." There are two trade marks, viz., the "Workers' Trade Mark" and the "Commonwealth Trade Mark," for which special provisions are contained in the Act; the provisions regarding the former of these two Trade Marks have, however, been held to be unconstitutional (see p. 1069 *ante*). The part of the Act governing the registration and application of the Commonwealth Trade Mark, applies to all goods included in or specified by a resolution passed by both Houses of Parliament that the conditions as to remuneration of labour in connection with their manufacture are fair and reasonable.

(i.) *Essential Particulars of Trade Marks.* A registrable trade mark must consist of essential particulars with or without additional matter. The essential particulars must be one or more of the following:—(a) A name or trading style of a person printed, impressed, or woven, in some particular and distinctive manner; (b) a written signature, or copy of a written signature of the person applying for registration thereof or of some predecessor in his business; (c) a distinctive device, mark, brand, heading, label, or ticket; (d) or invented word or invented words; (e) a word or words having no reference to the character or quality of the goods, and not being a geographical name used or likely to be understood in a geographical sense. The additional matter which may be added shall be either (a) any letters, words, or figures or (b) any combination of letters, words, or figures or any of them.

(ii.) *State Registrations.* State registrations cease to be in force at the expiration of fourteen years from the date of the Commonwealth Act, or at the time when, under the State Trade Marks Act, the trade mark would, if after the commencement of the Commonwealth Act no fee for the continuance of its registration were paid, first become liable to removal from the register, whichever first happens. It is also provided that no fee shall be receivable nor shall any act be done after the commencement of the Commonwealth Act for the continuance of the registration of a trade mark under a State Act. Commonwealth registration of a State registered mark may be effected, and the fact of its registration in a State prior to the coming into force of the Commonwealth Act, may entitle the registered proprietor in the State to Commonwealth registration, notwithstanding the existence of defects which might be ground for refusal of an application for the registration of a new trade mark.

(iii.) *Duration of Registration and General Provisions.* The registration of a trade mark is for a period of fourteen years, but may be renewed from time to time. International and intercolonial arrangements for the mutual protection of trade marks may be made in a manner similar to that provided for the protection of patents. In this regard Australia has become a party to the International Convention for the protection of industrial property. Registration may be opposed by any person lodging a notice of opposition at the Trade Marks Office within three months after the advertisement of the application, or such further time, not exceeding three months, as may be allowed.

(iv.) *Publications.* The *Australian Official Journal of Trade Marks* is issued weekly, and contains lists of applications and proceedings, with representations of marks (when

accepted) sought to be registered. *Copyrights.* An index of owners of literary, artistic, and international or State copyright, together with an alphabetically-arranged list of the subjects of works, is published in the official journal of trade marks, and, at the end of each year, published in consolidated form. *Designs.* Information corresponding with that given for copyrights is published. Indexes to names of applicants and subject matter of applications are compiled and are on sale.

5. **Designs.**—The Designs Act of 1906 came into operation on the 1st January, 1907. Under this Act a Commonwealth Designs Office has been established and the Commissioner of Patents appointed "Registrar of Designs."

(i.) *Registration.* Any new and original design which has not been published in Australia before the lodging of an application for its registration may be registered in respect of all or any of the articles enumerated in the classification contained in the regulations, which comprise jewellery, paperhangings, carpets, floor-cloths, lace, hosiery, millinery, wearing apparel, textile fabrics, bookbinding, and articles composed wholly or chiefly of a variety of solid substances. A separate application must be made in respect of each class in which the owner of the design desires it to be registered. After an application for the registration of a design has been lodged the design may be published and used without prejudice to the validity of the registration.

(ii.) *Duration of Copyright in Designs.* The registration takes effect as from the date of the lodging of the application, and, subject to the provisions of the Act, remains in force for a period of five years from that date. The owner of a registered design must, within two years after registration, substantially use the design, or cause it to be used, in Australia, and if he fails to do so the copyright ceases. If, however, such design is used in any manufacture abroad the above period is limited to six months.

(iii.) *General.* The Act also contains provisions regarding the remedies for infringement of designs and the rectification of the register. Arrangements for the international and intercolonial protection of copyright in designs were made by the same proclamation referred to above with regard to patents and trade marks. The owner of a registered design must cause each article to which the design is applied to be marked before delivery for sale with the prescribed mark to denote that the design is registered.

6. **Applications for Copyrights, Trade Marks, and Designs.**—The following table gives particulars of copyright, trade mark, and design applications received and registered under the Commonwealth Acts from 1907 to 1911 inclusive:—

**COPYRIGHT, TRADE MARK, AND DESIGN APPLICATIONS RECEIVED AND REGISTERED UNDER COMMONWEALTH ACTS, 1907 to 1911.**

**§ 3. Old-age Pensions.**

1. **General.**—A system for providing for the relief of the aged poor by some means which did not involve the stigma associated in so many minds with the idea of charitable aid, and which, while protecting the recipients from actual want, still left to them as large a degree of freedom as possible, has long been sought for by economists, statesmen, and social reformers. The difficulties surrounding a satisfactory solution of the question are numerous and great, and various schemes have been propounded with the object of overcoming them. Two of the principal objections which have been urged against the introduction of a general system of old-age pensions are—

- (i.) its costliness;
- (ii.) its tendency to induce thriftlessness.

The former is undoubtedly a serious difficulty, since in any normally constituted population the number of persons aged say sixty-five years and upwards will represent

about 5 per cent. of the total population, and the provision of the funds required to pay to these a sum which would provide them with even the barest necessities of life would be a very considerable burden upon the State Treasury. To limit this amount various suggestions have been made, of which probably the most effective have been those which provide, the one for a contribution to the pension fund by the pensioner during his earlier years, and the other for a reduction of the amount of pension payable to those in receipt of income from other sources. The former of these is the principle which has been acted upon in the scheme in operation in Germany, while the latter is that which underlies the schemes in vogue in the Commonwealth, New Zealand, and the United Kingdom.

The objection which has sometimes been raised to the payment of old-age pensions on the score of the tendency to thriftlessness thereby induced is one which, in Australia, at all events, is not accorded much weight, the general feeling being that the number of cases in which the prospect of a pension of, say, 10s. per week from sixty-five onwards would lead to thriftlessness in earlier years, is so small as to be practically negligible.

**2. Introduction of Old-age Pensions into Australia.**—The credit of introducing old-age pensions into the Southern Hemisphere belongs, not to the Commonwealth, but to her sister dependency, the Dominion of New Zealand, where pensions have been payable since 1st April, 1898. The first State of the Commonwealth to make provision for the payment of old-age pensions was Victoria, whose legislation on the subject came into operation on 18th January, 1901. Later in the same year, viz., on 1st August, 1901, the pension system of New South Wales came into force, while in the case of Queensland old-age pensions became payable from 1st July, 1908. Finally, an Act providing for the payment of old-age pensions throughout Australia was passed by the Commonwealth Parliament in 1908, pension payments thereunder commencing on 1st July, 1909. This Act superseded the State Acts in so far as provision for old-age is concerned.

**3. Commencement of Commonwealth Act.**—The Commonwealth Invalid and Old-age Pensions Act was assented to on the 10th June, 1908, and payment of old-age pensions commenced as from 1st July, 1909. Provision is also made in the Act for the payment of invalid pensions. The part of the Act relating thereto, however, did not come into operation on the commencement of the Act, but it was provided that it should commence on some subsequent date to be fixed by proclamation. This proclamation was made on the 19th November, 1910, the first payments thereunder being made on the 15th December, 1910.

**4. Administration of Commonwealth Act.**—The general administration of the Act is, subject to the control of the Minister, placed in the hands of the Commissioner of Pensions, who is assisted by a Deputy Commissioner appointed in each State. Power is given to the Commissioner and the Deputy Commissioners to summon witnesses, receive evidence on oath, and require the production of documents for the purposes of the Act.

Each State is divided into districts, each of which is placed in charge of a Registrar, whose duties consist in receiving and investigating pension claims and in keeping such books and registers as are required for carrying out the provisions of the Act.

**5. Pension Age.**—For an old-age pension the age qualification is similar to that previously in force in New South Wales under the State Act, viz., attainment of the age of sixty-five years, or, in the event of permanent incapacitation for work, attainment of the age of sixty years. The Act also provides that the age qualification for women may be fixed by proclamation at sixty years instead of sixty-five. This proclamation was made on the 19th November, 1910, the first payments thereunder being made on the 15th December, 1910. For an invalid pension the age qualification is attainment of the age of sixteen years if accompanied by permanent incapacitation for work.

**6. Length of Residence.**—In the original Act of 1908 the residential qualification for an old-age pension was the same as that of the New South Wales Act, viz., continuous residence for twenty-five years. Owing, however, to the fact that in the other two States in which pensions were payable under the State régime the residential qualification was only twenty years, an amendment of the Act was passed by the Federal Parliament in August, 1909, reducing the Commonwealth term to twenty years also, thus diminishing the chance of lapse of pension through transfer from State to Commonwealth. For an invalid pension continuous residence for at least five years is required. In neither case, however, is continuous residence in Australia deemed to have been interrupted by occasional absences not exceeding in the aggregate one tenth of the total period of residence. The applicant for any pension must be residing in Australia on the date when he makes his claim, and in the case of an invalid pension must have been incapacitated while in Australia.

**7. Rates of Pension.**—The rate of pension payable, whether for old age or invalidity, is required by the Act to be determined by the Commissioner or one of the Deputy Commissioners, and is to be fixed at such amount as he deems reasonable and sufficient, having regard to all the circumstances of the case, but must not exceed £26 per annum in any event, nor be at such a rate as will make the pensioner's income, together with pension, exceed £52 per annum.

**8. Limitations in respect of Income and Property.**—With a view to restricting the pensions to persons actually needing assistance, provision was made in all the State Acts reducing the payment when the applicant already possessed income or property above a given amount. This principle is also embodied in the Commonwealth Act. In the case of independent income it has already been mentioned that the pension payment must be so modified that the aggregate income, inclusive of pension, does not exceed £52 per annum. Payments received by way of benefit from any registered friendly society, or during illness, infirmity, or old age from any trade union, provident society, or other society or association, are not, for the purposes of the Commonwealth Act, treated as income. As regards accumulated property, the pension is subject to a deduction of £1 per annum for every complete £10 by which the net capital value of the property exceeds £50, except where the property includes a home in which the pensioner permanently resides, and which produces no income, in which case a net capital value of £100 is allowed prior to the pension deduction coming into operation. Accumulated property, whether in or out of Australia, to the value of £310 or upwards will disqualify for a pension, as will also an applicant's direct or indirect deprivation of himself of such property with the object of obtaining a pension. In the case of husband and wife, except where they are living apart pursuant to any decree, judgment, order or deed of separation, the net capital value of the accumulated property of each is deemed to be half the total net capital value of the accumulated property of both, and the amount of property in such case allowed prior to deduction is £50 if including, and £25 if not including a home.

**9. Character of Applicant for Pension.**—In all the State Acts provision was made that the recipients of old-age pensions should be persons of good moral character, and, in New South Wales and Victoria, imprisonment for extended periods would act as a disqualification. In the Commonwealth Act it is also provided that "no person shall receive an old-age pension unless he is of good character," but a similar provision is not made in the case of invalidity.

**10. Number of Commonwealth Claims and Old-age Pensions.**—During the first year of practical working of the Commonwealth Act, viz., that ended 30th June, 1910, the number of cases considered was 76,168. Of these 39,875 were cases in which a State old-age pension was exchanged for one payable by the Commonwealth. The remaining 36,293 were new applications received during the year, of which 30,526 were granted, 3921 were rejected, and 1846 were still in course of consideration on 30th June,

1910. During the year ending 30th June, 1911, a further number of 20,260 were considered. Details of the several States are as follows :—

**COMMONWEALTH OLD-AGE PENSION BUSINESS.—YEAR ENDED 30th JUNE, 1911.**

State.	New Applications during 1910-11.				Total Cases Considered since Inception.	Total Claims Admitted since Inception.
	Granted.	Rejected.	In Course of Consideration.	Total Received.

11. **Old-age Pensions Current on 30th June, 1911.**—The total number of pensions current on 30th June, 1911, was 75,502, or 11,364 less than the number of claims admitted, due to the fact that 10,169 pensions lapsed by death, and 1195 by cancellation since the beginning of the business. Details for the several States are as follows :—

**COMMONWEALTH OLD-AGE PENSIONS CURRENT, 30th JUNE, 1911.**

State.	Total Claims Admitted.	Discontinuance by		Pensions current on 30th June, 1911.	
		Death.	Cancellation.	Number.	Per 1000 of Population.
New South Wales ...	32,468	3,780	528	28,160	17.13

\* Number of males to each 100 females.

**13. Ages and Conjugal Condition of Old-age Pensioners Admitted during 1910-11.**

—The recorded ages of the 16,465 persons to whom pensions were granted during the year 1910-11 varied considerably, ranging from 777 at age 60 to 3 at age 96. Particulars for quinquennial age groups are as follows :—

**AGES AND CONJUGAL CONDITION OF PENSIONERS ADMITTED DURING 1910-11.**

Age at Admission.	Males				Females.				Grand Total.
	Single.	Married.	Widowed	Total.	Single.	Married.	Widowed	Total.	
60-64 ... ..	156	405	126	687	322	2,203	2,424	4,949	5,636
65-69 ... ..	707	1,748	706	3,161	257	1,448	1,633	3,338	6,499

**14. Commonwealth Claims for Invalid Pensions.**—Invalid pensions first became payable on 15th December, 1910, and on 30th June, 1911, 9906 cases had been investigated. These consisted of 3609 cases taken over from the States under Section 35 of the Act, and 6297 new claims received. Of the latter number 4164 were granted. 1350 were rejected, and 783 were awaiting consideration on 30th June, 1911. Particulars for the different States are as follows :—

**INVALID PENSION BUSINESS.—YEAR ENDED 30th JUNE, 1911.**

State.	State Pensions taken over by C'wealth.	New Applications to 30th June, 1911.				Total Cases Con-sidered.	Total Claims Admitted during Year.
		Granted.	Rejected.	In Course of Con-sideration.	Total Received.		
N.S.W. ... ..	3,498	565	408	334	1,307	4,805	4,063
Victoria ... ..	111	2,123	508	177	2,808	2,919	2,234

West. Australia ... ..	...	184	87	42	313	313	184
Tasmania ... ..	...	412	70	88	570	570	412
Commonwealth	3,609	4,164	1,350	783	6,297	9,906	7,773

**15. Invalid Pensions Current on 30th June, 1911.**—The 4164 claims granted and the 3609 cases taken from the States constitute 7773 pensions admitted. From this number must be deducted 322, including 226 deaths in the period under review, and 96 cancellations. This leaves 7451 as the number of invalid pensions current on 30th June, 1911. This, it may be noted, includes 19 cases of special allowance granted to blind persons who are not entirely incapacitated for work. Details for the several States are follows :—

## INVALID PENSIONS CURRENT ON 30th JUNE, 1911.

State.	Claims Admitted.	Discontinuance by		Pensions current on 30th June, 1911.	
		Death.	Cancel- lation.	Number.	Per 1000 of Population.
New South Wales ... ..	4,063	135	84	3,844	2.31
Victoria ... ..	2,234	48	3	2,183	1.68

\* Number of males per 100 females.

17. **Ages and Conjugal Condition of Invalid Pensioners Admitted during 1910-11.**—The recorded ages of the 4164 persons who received invalid pensions in the period under review varied from 16 to 87. The following table gives particulars in decennial age groups after age 20.

## AGE AND CONJUGAL CONDITION OF INVALID PENSIONERS ADMITTED IN 1910-11.

Age at Admission.	Males.				Females.				Grand Total.
	Single.	Married.	Widowed	Total.	Single.	Married.	Widowed	Total.	
16-19 ... ..	72	...	...	72	72	...	...	72	144
20-29 ... ..	253	24	...	277	259	6	3	268	545
30-39 ... ..	205	99	4	308	238	33	18	289	597
40-49 ... ..	208	270	20	498	243	78	90	411	909
50-59 ... ..	256	427	65	743	212	242	350	604	1,552
60-69 ... ..	72	110	20	202	24	45	74	143	345
70-79 ... ..	5	11	6	22	4	8	20	32	54
80 ... ..	2	2	3	7	2	...	9	11	18
Total ... ..	1,073	943	118	2,134	1,054	412	564	2,030	4,164

18. **Cost of Administration.**—Under the State régime the cost of administration differed considerably in the several States, and for 1908-9 represented in New South Wales 4.17 per cent. of the amount actually paid in pensions. In Victoria for the same year the corresponding percentage was 0.70. During the year 1910-11 the total cost to the Commonwealth of administering the Old-age and Invalid Pensions Department was £39,244, or 2.10 per cent. of the amount actually paid in pensions. As this total includes the cost of initiating the system in the three States of South Australia, Western Australia, and Tasmania, as well as extending it in the other three States, it is probable that the cost of administration in future years will represent a smaller percentage on the amount paid in pensions. Details concerning the cost of administration for 1910-11 are as follows:—

	£
Salaries ... ..	10,023
Temporary assistance ... ..	1,960
Services of magistrates, registrars, clerks of courts, and police ...	6,149
Commission to Postmaster-General's Dept., at 12s. 6d. per £100 paid	11,541
Postage and telegrams ... ..	2,674
Other expenses ... ..	6,897
	<hr/> 39,244

The actual sum disbursed in Old-age and Invalid Pensions in the financial year 1910-11, apart from the cost of administration, was approximately £1,868,648.

19. **Estimated Cost of Commonwealth Old-age Pension Scheme.**—In the first two issues of the Year Book estimates of the probable cost of the Commonwealth scheme were given. The former of these, based largely on the old-age pension experience of New South Wales, taken in conjunction with the census results of 31st March, 1901, and the subsequent estimates of increase of population, brought out a sum of £1,580,000 as representing the probable cost, including administration, if the New South Wales scheme had operated throughout the Commonwealth during 1906-7. In the second issue of the Year Book the results of a more extensive investigation were published. These were obtained from an analysis of the New Zealand old-age pension experience, combined with the Australian Census results of 1881, 1891 and 1901, and gave an estimate for each year from 1909-10 to 1926-7 of the probable cost, including administration, of the Commonwealth scheme as provided in the original Act. The figures so obtained for the year 1909-10, were £1,440,000; for 1914-15, £1,616,000, and for 1919-20, £1,854,000. The reduction of the residential qualification from 25 to 20 years under the Amending Act of 1909, had the effect of somewhat increasing the number eligible for pensions, and consequently of increasing the probable cost. The extent of this increase was estimated at 4 per cent., and in the third issue of the Year Book the estimated cost under the present system, on the assumption that the Commonwealth conditions would not differ materially from those of New Zealand, was given as follows:—1909-10, £1,498,000; 1914-15, £1,681,000; and 1919-20, £1,928,000. It will be seen that the actual cost for 1909-10, inclusive of administration, viz., £1,534,476, exceeded this last estimate by £36,476, or practically by the cost of administration.

With reference to the probable cost of invalidity pensions for the Commonwealth, the only experience available is that of New South Wales, where the number in force on 30th June, 1909, was 3714, and the cost, inclusive of administration, was approximately £79,200. On this basis, the cost of such a scheme for the Commonwealth, as a whole, may be roughly estimated at about £210,000 per annum for the present, increasing in subsequent years probably in proportion to the population.

20. **Liability Undertaken in Granting Old-age Pensions.**—As an indication of the extent of the responsibility which an old-age pension scheme involves, it may be mentioned that in connection with the evidence tendered to the Commonwealth Commission

on Old-age Pensions a computation was made of the total liability in respect of accrued pensions which the Commonwealth would have incurred if, at 31st March, 1901, the date of the Census, 39 per cent. of the persons aged sixty-five and upwards were entitled to pensions of ten shillings per week. The present value at that date of the liability so computed was £10,415,820. (See Minutes of Evidence of Royal Commission on Old-age Pensions, p. 80.)

#### 4. Local Option.

1. **General.**—The principles of local option as to the sale of fermented and spirituous liquors have been applied in all the States of the Commonwealth. The last State to adopt those principles was Western Australia, where provision was made for a system of local option by the Licensing Act 1911.

2. **New South Wales.**—The Acts in force relating to local option in this State are the Liquor Amendment Acts 1905 and 1907. There were formerly two Acts which dealt with the subject, viz., the Licensing Acts 1882 and 1883, consolidated by the Liquor Act 1898. Under the Act of 1905, which came into force on the 1st January, 1906, the local option vote is to be taken in every electorate on the day fixed for the poll therein at each general election. The option with regard to licenses extends to publichouses, wineshops, and clubs, and the persons entitled to vote are those entered on the Parliamentary electoral rolls.

(i.) *Resolutions to be Submitted.* Except where resolution (c)—see below—has previously been carried, and is in force in an electorate, the following resolutions are to be submitted:—(a) That the number of existing licenses continue. (b) That the number of existing licenses be reduced. (c) That no licenses be granted in the electorate. Where resolution (c) has previously been carried the resolution to be submitted is:—(d) That licenses be restored in the electorate. Resolutions (a) and (b) are carried by a simple majority of the votes given, but neither resolutions (c) nor (d) will be carried unless at least three-fifths of the votes given are in favour thereof, whilst at least 30 per cent. of the number of electors on the rolls must vote for such resolution. If resolution (c) is not carried, the votes given in favour of that resolution are to be added to the votes given for resolution b).

(ii.) *Effects of Resolutions.* The effects of carrying the resolutions are as follows:—If resolution (a) is carried, the number of licenses may not exceed the number at the time of taking the vote. If resolution (b) is carried, the number of licenses must be reduced, and may be reduced to three-fourths the number at the time of voting. If resolution (c) is carried, no licenses may be granted, renewed, or transferred. If resolution (d) is carried, licenses may be granted, renewed, and transferred, but so that the number of licenses is not greater than the number held when resolution (c) was carried, nor less than half such number.

For the purpose of effecting a reduction under resolution (b), a special court determines the reduction to be made in the number of existing licenses, and decides which premises are to be closed. The best conducted premises are given a preference over others. If resolution (c) is carried, it is to take effect at the expiration of three years from the date of the vote.

(iii.) *Local Option Votes, 1907 and 1910.* The first local option vote under the Act of 1905 was taken at the general election in 1907, and the second at the election in 1910. The following statement shews the number of electorates in which each of the resolutions was carried:—

## NEW SOUTH WALES.—EFFECTS OF LOCAL OPTION VOTES, 1907 and 1910.

Particulars.	General Election, 1907.		General Election, 1910.	
	Number of Electorates.	Number of Votes.	Number of Electorates.	Number of Votes.
<i>Results in favour of—</i>				
(a) Continuance ... ..	25	209,384	76	324,973
(b) Reduction ... ..	65	75,706	14	38,856
(c) No license ... ..	Nil	178,580	Nil	212,889

3. **Victoria.**—The Acts dealing with the subject of local option as to the sale of fermented and spirituous liquors, and with the compulsory closing of hotels in this State are the Licensing Acts 1890, 1906, and 1907. Other Acts, now repealed, which dealt with the subject are the Licensing Acts 1876, 1885, and 1888.

The last division of the Act of 1906 relates to the subject of local option; this division, however, does not come into force until the 1st January, 1917. In the meantime, in order to reduce the number of victuallers' licenses in Victoria, a Licenses Reduction Board is constituted.

(i.) *The Licenses Reduction Board.* Although the operations of this Board are not conducted in accordance with the principles of local option, the duties of the Board are, until the 31st December, 1916, after which date a system of local option comes into force under the Act of 1906, to reduce the number of licenses in excess of the statutory number, and to award compensation according to the scheme provided for by that Act. The Board consists of three members at a salary of £800 per annum each, who may not engage in any business or employment other than the duties of their office as members of the Board. The Board was first appointed on the 21st May, 1907. A Compensation Fund has also been established under the Act, and is raised by means of a compensation fee at the rate of 3 per cent. on the value of liquor purchased by every licensed victualler. The owner of the premises is chargeable with two-thirds, and the tenant with one-third of the compensation fee. The total amount paid into the Compensation Fund was £48,233 for the year 1907, £48,543 for 1908, £49,300 for 1909, £48,875 for 1910, and £51,716 for 1911. When any reduction of licensed premises has been made, the remaining hotels, which will be benefited, are to bear a *pro rata* assessment to make up the amount of license fees lost. The amount so lost up to the end of the year 1911 was £7885, which sum has been apportioned among 1642 hotels in proportion to the benefit which, in the opinion of the Board, they will derive from the closing. The maximum compensation, which is payable out of the Compensation Fund referred to above, is to be based on the results of the three years preceding the 31st December, 1906, in the case of owners, and of the three years preceding the 31st December, 1905, in the case of licensees. Up to the 31st December, 1911, 512 hotels had been closed by the Board, 151 of this number having surrendered their licenses. In all cases compensation, where claimed, was awarded, the total paid amounting to £243,443, or an average of £475 each. 144 of these hotels were situated in the metropolitan district, while the remaining 368 were in country districts. In 93 cases no claims for compensation were made by the licensees. The following table shews particulars of the operations of the Board up to the 31st December, 1911.

## VICTORIA.—OPERATIONS OF LICENSES REDUCTION BOARD, 31st DECEMBER, 1911.

Particulars.	Licenses in December, 1906.			Hotels Deprived of Licenses	Compensation Awarded.		Hotels Surrendered.	Compensation Awarded.	
	Number in Existence.	Statutory Number.	Number in Excess.		Owner.	Licensee.		Owner.	Licensee.
Metropolitan & Suburban Country	1,020 2,440	877 1,622	401 976	140 213	£ 102,155 74,664	£ 17,548 12,271	4 155	£ 3,091 29,813	£ 599 3,302
Total ...	3,460	2,499	1,377	353	176,819	29,819	159	32,904	3,901

\* In some districts the number of hotels was below the statutory number; in these districts the total number of hotels less than the statutory number was 418.

No reduction of any licensed premises is allowed in any licensing district in which the number of licensed premises is below the statutory number, but new licenses may, until 1917, be granted in such districts provided that a majority of the electors vote in favour of the increase, and that at least one-third of the number of electors on the roll record their votes. In such districts the total number of hotels below the statutory number allowed was 418 at 31st December, 1911.

Where a deprivation sitting is held before 30th June the Acts specify that a deprived license expiring on or before the 31st December following shall not be renewed. Where the sitting takes place after 30th June the license may be renewed for a period making in all six months from the first day of such sitting. To avoid difficulties on this score the Board holds its deprivation sittings in the first half of the year and its compensation and re-allotment sittings in the second half. Surrenders take effect on the date fixed by the Board at the time of acceptance.

Up to 30th June, 1912, the Board had deprived 94 hotels of their licenses in addition to those scheduled above, of which 17 licenses were surrendered. Grand total, 606.

(ii.) *Local Option Resolutions.* A local option vote of the electors is to be taken in every electoral district for the Legislative Assembly on the day fixed for the poll at each general election after the 1st January, 1917. The resolutions to be submitted, the majorities necessary, and the effects of carrying the resolutions are the same as specified in the case of New South Wales. Where any license existing before the 1st February, 1886, is cancelled as the result of a local option vote, the owner and licensee have each a claim to be paid out of the Compensation Fund, but only to the extent that such fund is from time to time available. If it appear to the Treasurer that there is not sufficient money in the fund to meet the claims, he may require every licensed victualler in Victoria to pay an additional compensation fee in order to satisfy the claims.

4. **Queensland.**—In Queensland the subject of local option is dealt with in Part VI. (sections 114 to 126) of the Licensing Act 1885. The provisions of that part of the Act may be applied in any municipality or division, or any subdivision of either, or in any other area which forms part of a municipality or division, and also forms part of one licensing district.

(i.) *Resolutions to be Submitted.* Any number, not less than one-sixth, of the ratepayers in an area may, by notice in writing, require the chairman of the local authority to take a poll of the ratepayers for or against the adoption of all or any of the following resolutions to have effect within the area, viz.:—(a) That the sale of intoxicating liquors be prohibited. (b) That the number of licenses be reduced to a certain number, specified in the notice, not less than two-thirds of the existing number. (c) That no new licenses be granted. The persons entitled to vote are those whose names are on the voters' roll or rate-book of the municipality or division of which the area forms part, as rated in respect of property within the area. Resolutions (b) and (c) may be carried by a simple majority, but resolution (a) cannot be carried unless "a majority of two-thirds of the votes recorded in respect of that resolution . . . is in favour of its adoption."

(ii.) *Effects of Resolutions.* If resolution (a) is adopted, it comes into force on the 30th June in the year following that in which the notice requiring the poll was given. If (b) is adopted, the licensing authority must restrict the total number of licenses and certificates granted or renewed to or within the number specified. If resolution (c) is adopted the licensing authority may not grant any new certificates for a licensed victualler's license or wine-seller's license.

(iii.) *Re-submission of Resolutions.* If resolution (a) is adopted, a poll may not be demanded again until after the expiration of three years from the date of adoption, and in such case a poll may be taken on resolution (a) only. If (b) is adopted, a poll may be again demanded on it or on the question of a further reduction, or on the adoption of the resolutions (a) or (c), but not until the expiration of two years after the last poll was taken. If resolution (c) is adopted, a poll may again be demanded on it or on resolutions (a) or (b), but not until the expiration of two years after the last poll was taken. If all the resolutions are rejected, a poll may not be demanded again until after the expiration of two years from the date of the last poll.

(iv.) *Resolutions Adopted, 1911.* At the end of the year 1911, resolution (a) was in force in one area in Queensland, viz., Tiaro shire, Bauple district. Up to the same date a poll as to resolution (b) had not been demanded in any area. The following statement shews the number of areas in which each resolution was either in force or precluded up to the 31st December, 1911:—

**QUEENSLAND.—NUMBER OF AREAS IN WHICH LOCAL OPTION RESOLUTIONS WERE IN FORCE OR PRECLUDED FROM ADOPTION, 31st DECEMBER, 1911.**

Particulars.	Resolution (a).	Resolution (b).	Resolution (c).	Total.
No. of areas in which resolutions in force ...	1	0	130	131
No. of areas in which resolutions precluded from being put in force ...	1	0	52	53
Total ...	2	0	182	184

The only resolution upon which a poll had been demanded within the metropolitan district (ten-miles radius) was resolution (c); this resolution is in force in thirty-six areas within the metropolitan district and has not been precluded in any area within that district.

5. **South Australia.**—In this State the subject of local option is now regulated by Part V. of the Licensing Act 1908. Acts which formerly dealt with the subject were the Licensed Victuallers Amendment Act 1891, the Licensed Victuallers Further Amendment Act 1896, and the Local Option Act 1905.

Under the Licensing Act of 1908 each electoral district for the House of Assembly is constituted a local option district, and each electoral district may be divided into local option districts by proclamation of the Governor. A quorum consisting of 500 electors, or one-tenth of the total number of electors, whichever be the smaller number, in any district may petition the Governor for a local option poll. The persons entitled to vote at the poll are those whose names appear on the electoral roll and who reside in the local option district. The option extends to (a) publicans' licenses, (b) wine licenses, (c) storekeepers' Australian wine licenses, (d) storekeepers' licenses, and (e) club licenses.

(i.) *Resolutions to be Submitted.* The following are the resolutions which are to be submitted, under the Act of 1908, at every poll:—(a) That the number of licenses be reduced. (b) That the number of licenses be not increased or reduced. (c) That the number of licenses be increased in the discretion of the Licensing Bench. One ballot paper to apply to all classes of licenses, and any one of the resolutions is carried by a majority of the valid votes recorded. If the votes recorded in favour of resolution

(a) do not constitute a majority, such votes are to be added to the votes in favour of resolution (b). If the sum of the votes recorded in favour of resolutions (a) and (b) do not constitute a majority, such votes are to be added to those recorded in favour of resolution (c).

(ii.) *Effects of Resolutions.* As to each class of license of which there are not less than three licenses current within the local option district at the date of the poll, the first resolution is to be taken to mean that the number of licenses so current be reduced by one-third; and as to each class of license of which there are less than three current, the first resolution is to be taken as equivalent to the second resolution.

The constitution of special Benches consisting of three members, appointed by the Governor, is provided for in order to give effect to the first resolution. A special Bench also deals with resolutions for the reduction of licenses adopted before the passing of the Act of 1908, but not then given effect to.

(iii.) *Resolutions Adopted.* Under the Acts prior to that of 1908 resolutions to reduce the number of licenses had been adopted in nine districts, in four of which, however, the polls were subsequently declared void. Special Benches were appointed in January, 1909, to deal with the determinations of electors in those districts in which the results of the polls were in favour of reducing the number of licenses, viz., in the districts of Port Adelaide, East Torrens, and Sturt. In accordance with the determinations of these Benches it was decided in February and March, 1909, that the following licenses, namely—thirty-five publicans', one wine, eleven storekeepers' colonial wine, and one storekeeper's—should not be renewed.

(iv.) *Local Option Polls.* On the 2nd April, 1910, local option polls were taken under the Act of 1908 in twenty-four districts; the electors in the remaining nine local option districts did not petition for polls. Resolution (a), that the number of licenses be reduced, was carried in only one district, Wallaroo; in the remaining 23 districts resolution (b), that the number of licenses be not increased or reduced, was carried. At the General Election of the House of Assembly held on the 10th February, 1912, no local option polls were held in any local option district.

**6. Western Australia.**—The law relating to local option in Western Australia is contained in Part V. (sections 75 to 86) of the Licensing Act 1911, which was assented to on 16th February, 1911, and came into force on the 7th April following. Prior to the passing of this Act there was no provision for any system of local option in Western Australia.

(i.) *Resolutions to be Submitted.* Under the above-mentioned Act, a vote of electors is to be taken in every district in or before April, 1911, and in every third year thereafter (1920 excepted). The resolutions to be submitted are:—(a) That the number of licenses existing in the district continue. (b) That the number of licenses existing in the district be increased. (c) That the number of licenses existing in the district be reduced. (d) That no licenses be granted or renewed in the district. If resolution (d) has been previously carried and is in force in the district the resolution submitted will be (e) That licenses be restored in the district. The resolutions (a), (c), and (d) are not to be submitted to the electors until after the 21st December, 1920. At the taking of every local option vote, the following questions will also be put before the electors:—(1) Do you vote that all new publicans' general licenses in the district shall be held by the State? and (2) Are you in favour of State management throughout the district? Resolutions (a), (b), and (c) are deemed to be carried if a majority in number of the votes given is in favour of any such resolution, provided that if resolution (b) has not been carried, the votes given in favour of that resolution shall, if resolution (a) has been submitted at the same time, be added to the votes given for resolution (a) and shall be deemed to have been given in favour of resolution (a). Resolution (d) is carried if three-fifths at least in number of the votes given are in favour of that resolution, provided

that where it has not been carried, the votes given for it shall be added to those given for resolution (c). Resolution (e) is carried if three-fifths at least in number of the votes given are in favour of it. It is also provided that resolution (d) or (e) shall not be carried unless thirty per cent. or more of the number of electors in the licensing district vote for such resolution.

(ii.) *Effect of Resolutions.* If resolution (a) is carried, or in the case of a local option taken before the end of the year 1920, if resolution (b) is negatived, the number of licenses shall not exceed the number at the time of taking the vote. If resolution (b) is carried, the Licensing Court may increase the number of licenses. If resolution (c) is carried, the number of licenses at the time of taking the vote shall be reduced and may be reduced to three-fourths of such number. If resolution (d) is carried, no licenses shall be granted, renewed or transferred. If resolution (e) is carried, licenses may be granted, renewed and transferred, but so that the number of licenses shall not be greater than the number held when the resolution (d) was carried in the district, and if it is not carried, the resolution (d) previously carried shall continue to have effect.

(iii.) *First Local Option Poll.* The first vote under the above provisions was taken on 26th April, 1911, the main question being confined (as prescribed by the Act when the vote is taken prior to 1920) to resolution (b) i.e., "that the number of licenses be increased," the only other questions submitted being those of State control of new publicans' general licenses and State management throughout all licensing districts.

The following table shows the result of this local option poll:—

**WESTERN AUSTRALIA.—RETURN SHEWING THE RESULT OF LOCAL OPTION  
POLL OF 26th APRIL, 1911.**

Result of Local Option Poll.		Do you vote that all new Publicans' General Licenses be held by the State.		Are you in favor of State Management throughout all Licensing Districts.	
Votes given in favor of the number of Licenses in the various districts being increased.	Votes given in favor of the number of Licenses in the various districts not being increased.	Yes.	No.	Yes.	No.
4,554	17,623	27,007	14,387	26,631	14,944

7. *Tasmania.*—In this State the subject of local option is dealt with in Part VI. (sections 72 to 84) of the Licensing Act 1902, as subsequently amended by section 8 of the Licensing Act 1908, which later Act, however, does not come into full operation until the first of January, 1917. Other Acts which formerly dealt with the subject, but now repealed, are the Licensing Acts 1889 and 1890, the Inn Keepers Relief Act 1894, and the Licensing Act Amendment Act 1898. Under the Act of 1902, opposition to the grant of a license may be made (i.) by any resident ratepayer, (ii.) by petition of rate-payers resident in the neighbourhood, or (iii.) by local option poll.

(i.) *Opposition by Resident Ratepayer.* Any ratepayer resident in the district in which a house in respect of which an application for an hotel or publichouse certificate is intended to be made is situated, may, by giving five days' notice to the Clerk of Petty Sessions, oppose the grant of the certificate before the Licensing Bench. The objections which may be taken to the granting of a certificate for an hotel or publichouse license are as follows:—(a) That the applicant is of bad character; (b) that he has been convicted of certain specified offences; and (c) that the house in respect of which the application is made does not comply with the requirements of the Act. The objections which may be taken to the granting of a provisional certificate for an hotel license are:—(a) That the house does not comply with the requirements of the Act, and (b) that an hotel is not required in the neighbourhood.

(ii.) *Petition of Resident Ratepayers.* The ratepayers resident in the neighbourhood of a house in respect of which an application for a license is made may petition the Licensing Bench against the granting of such license. The neighbourhood referred to is defined as meaning a space within a radius of 200 yards from the front door of the house if within a city, within a radius of 800 yards if within a town, and within a radius of two miles if the house is not situate within a city or town. If the petition is directed against the granting of a provisional certificate, and is signed by a majority of the resident ratepayers, the bench must refuse to grant the certificate.

(iii.) *Local Option Poll.* Any number of ratepayers, not less than seven, resident in the neighbourhood of the house in respect of which a provisional certificate for an hotel license has been applied for, may require, by petition lodged with the Clerk of Petty Sessions, that a poll of the ratepayers resident in the neighbourhood be taken upon the question whether such provisional certificate be granted or not. If a majority of the votes taken be against the granting of the certificate the Licensing Bench must refuse to grant it.

Particulars as to operations under Part VI. of the Act are not available.

## 5. Preferential Voting.

1. **Introduction.**—The methods of election adopted in the early stages of representative institutions are now in many cases considered to fail to respond to the needs of the more complex political conditions of highly civilised communities, and it would appear that the movements which have taken place in favour of improved electoral methods are in keeping with the advances made in practically all other human institutions. The original system of exclusive majority representation has often resulted in an exaggeration of the majority, sometimes in the total suppression of the minority, and on other occasions in the return of a majority of representatives by a minority of the electors.\* To remedy these evils various schemes of preferential voting have been devised, on the basis that one of the essentials of the realisation of true self-government is that every responsible section of the community shall be able to give expression through its own representatives to its needs and desires in the assembly which is representative of the community, and which derives its authority from the fact that it is so representative. The systems of preferential voting which are in force in certain of the States of the Commonwealth are briefly described in this sub-section.†

2. **Systems in Force.**—Systems of preferential voting are now in force in the States of Victoria, Queensland, Western Australia, and Tasmania.

Preferential voting is not, however, a part of the electoral system of the Commonwealth, nor is it in operation in New South Wales or South Australia. In the former State the Electoral Act 1910, however, provides that if, as the result of the first ballot for the election of Members of the Legislative Assembly, it is found that no candidate has received an absolute majority of votes, a second ballot shall be taken between the candidate who has received the highest number of votes, and the candidate who has received the next highest number of votes, and requires the Returning Officer to decide the precedence of candidates for the purposes of the second ballot where the voting is equal by giving such casting vote or votes as may be necessary for this purpose, and to give a casting vote if, as the result of the second ballot, the candidates receive an equal number of votes.

---

\* See "Proportional Representation," by J. H. Humphreys. Methuen & Co., London, 1911.

† Information supplied by C. Oldham, Esq., Commonwealth Chief Electoral Officer.

3. **Victoria.**—A system of preferential voting was brought into operation for the first time in this State under the provisions of the Preferential Voting Act 1911, on the occasion of the general elections for the Legislative Assembly. The law requires the elector to mark his vote by placing the numeral 1 on the ballot-paper opposite the name of the candidate for whom he votes as his first preference, and where there are more than two candidates, to then give contingent votes for all the remaining candidates by placing numerals 2, 3, 4, and so on as the case requires, opposite their names, so as to indicate, by such numerical sequence, the order of his preference. At the scrutiny, the number of first preference votes given at the election for each candidate is ascertained, and the candidate who has the greatest number of such first preference votes (if such number constitutes an absolute majority of votes) is declared elected.

A ballot-paper is treated as informal if it does not indicate the elector's first preference for one candidate, and, in the case of any election where there are more than two candidates, the contingent votes for all the remaining candidates.

If no candidate has an absolute majority of votes, the Returning Officer declares the candidate who has obtained the fewest first preference votes to be a defeated candidate, and, thereupon, opens all the parcels containing ballot-papers used at the election, and arranges such ballot-papers by placing, in separate parcels, all those on which a first preference is indicated for the same candidate and the full contingent votes are also given for all the remaining candidates, omitting ballot-papers which require to be rejected; and the ballot-papers counted to the defeated candidate are then distributed among the non-defeated candidates next in order of the voter's preference. After such distribution, the number of votes given to each non-defeated candidate is again ascertained. If no candidate then has an absolute majority of votes, the process of declaring the candidate who has the fewest votes to be defeated, and distributing his ballot-papers among the non-defeated candidates next in order of the voter's preference, is repeated, and the votes recounted after every such redistribution until one candidate has obtained an absolute majority of votes, and is declared elected.

If on any count, two or more candidates have an equal number of votes, and one of them has to be declared defeated, the Returning Officer is required to decide which is to be declared defeated, and, if on the final count, each candidate has an equal number of votes, the Returning Officer is further required to give a casting vote, and so decide the election.

4. **Queensland.**—A modified system of optional preferential voting for the Legislative Assembly is in operation in Queensland, under the provisions of Section 78A to 78 J inclusive of "The State Elections Act 1885 to 1908."

The elector is required to strike out from his ballot-paper the names of the candidates for whom he does not intend to vote, and then may, if he thinks fit, indicate on his ballot-paper the name or names of any candidates for whom he does not vote in the first instance, but for whom he desires his vote or votes to be counted in the event of any candidate or candidates for whom he votes in the first instance not receiving an absolute majority of votes, and if he indicates more than one such candidate, may indicate the order in which he desires that his vote or votes shall be counted for any such candidate or candidates. Such indication must be made by writing the figures 2, 3 or any subsequent number opposite to the name or names of the candidate or candidates for whom he does not vote in the first instance, but for whom he desires his vote or votes to be so counted, and the order indicated by such numbers is taken to be the order in which he desires his vote or votes to be so counted.

When one member only is to be returned at the election, if there is no candidate who receives an absolute majority of votes, all the candidates except those two who receive the greatest number of votes are declared to be defeated candidates. The vote of

every elector who has voted for a defeated candidate is counted for that one (if any) of the remaining two candidates for whom he has indicated that he desires his vote to be counted. The vote so counted for such remaining candidates is added to the votes originally given for them, and the candidate who receives the greatest number of votes, including the votes so counted (if any), is declared elected.

When two members are to be returned, and there are not more than four candidates, the two candidates who receive the greatest number of votes are declared elected. When two members are to be returned, and there are more than four candidates, if there is no candidate who receives an absolute majority of votes, all the candidates except those four who receive the greatest number of votes are deemed defeated candidates.

The vote or votes of every elector who has voted for a defeated candidate or defeated candidates must be counted for that one or those two of the remaining four candidates for whom the elector has not voted in the first instance, but for whom he has indicated in the required manner that he desires his vote or votes to be counted. The votes so counted for such remaining candidates are added to the votes originally given for them, and the candidates who receive the greatest number of votes, including the votes so counted (if any), are declared elected.

If only one candidate receives an absolute majority of votes, he is declared elected, and in that case all the other candidates except those two who receive the next greatest number of votes are deemed defeated candidates. The vote of every elector who has voted for a defeated candidate is counted for that one (if any) of the remaining two candidates for whom the elector has not voted in the first instance, but for whom he has indicated in the required manner that he desires his vote to be counted. The votes so counted for such remaining candidates are added to the votes originally given for them, and the candidate who receives the greatest number of votes, including the votes so counted (if any), is declared elected.

When two or more candidates, neither of whom is elected, receive an equal number of votes, the Returning Officer decides by his casting vote which of them have or has the greatest number of votes. If an elector writes a figure opposite to the name of a candidate for whom he votes in the first instance, the ballot-paper is not rejected for that reason only.

The foregoing provisions for securing the absolute majority of votes do not apply to any election at which more than two members are to be elected for one Electoral District.

**5. Western Australia.**—Preferential voting was made compulsory in this State (where it had previously been optional) under the Amending Electoral Act of 1911.

The elector is required to mark his ballot-paper by placing the numeral 1 opposite the name of the candidate for whom he votes as his first preference, and if there are more than two candidates, to give contingent votes for all the remaining candidates by placing the numerals 2, 3 and so on (as the case requires) opposite their names, so as to indicate by such numerical sequence the order of his preference. At the scrutiny a ballot-paper is rejected as informal if, when there are more than two candidates, it is not marked so as to indicate by numerical sequence the voter's preference as regards *all the candidates*, subject to the proviso that if numerals in arithmetical sequence are placed opposite the names of all the candidates but one, the next following numeral is deemed to be placed opposite the name of the remaining candidate. A special provision also avoids the rejection of a ballot-paper by reason of the fact that the elector has indicated his vote or first preference by means of a cross instead of the numeral 1.

The candidate who receives the largest number of first preference votes is declared elected if such number constitutes an absolute majority of votes; but if no candidate has an absolute majority of votes, the Returning Officer declares the candidate who has obtained the fewest first preference votes to be a defeated candidate; and each ballot-paper counted to him is then (unless exhausted) distributed among the non-defeated candidates next in order of the elector's preference. When a

candidate is declared defeated, any ballot-paper counted to him is deemed to be exhausted if there is not indicated upon it a consecutive preference for a candidate not declared defeated. After such distribution the number of votes given to each non-defeated candidate is again ascertained, and if no candidate then has an absolute majority of votes, the process of declaring the candidate who has the fewest votes to be defeated and distributing each of his ballot-papers (unless exhausted) amongst the non-defeated candidates next in order of the voter's preference is repeated, and the votes recounted after every such distribution, until one candidate has obtained an absolute majority of votes, when such candidate is declared duly elected. When only two candidates remain undefeated, and neither has obtained an absolute majority, the candidate who has obtained the largest number of votes is declared to be elected. Every ballot-paper not rejected as informal is counted in every count until it becomes exhausted, when it is rejected in all further counts.

If on any count two or more candidates have an equal number of votes, and one of them has to be declared defeated, the Returning Officer is required to decide which is to be declared defeated, and is required to give a casting vote in the event of an equality of votes on the final count; but otherwise he may not vote at the election.

**6. Tasmania.**—The State of Tasmania is distributed into five electorates for the purposes of House of Assembly Elections, and each electorate returns six members, who are elected under a system of proportional representation. In a general election the elector is required to mark his ballot-paper by placing within, or substantially within, the squares respectively opposite the names of three candidates the numbers 1, 2 and 3, so as to indicate the order of his preference. He may, in addition, indicate the order of his preference for as many more candidates as he pleases, by placing within, or substantially within, the squares respectively opposite their names, other numbers next in numerical order after those already used by him.

The rules under which the scrutiny of the ballot-papers is conducted require that—

(A) The number of first choices recorded for each candidate shall be counted, and all informal voting-papers shall be rejected.

(B) The aggregate number of such first choices shall be divided by one more than the number of candidates required to be elected, and the quotient increased by one, disregarding any remainder, shall be the quota, and (except as hereinafter provided in Rule J) no candidate shall be elected until he obtains a number of votes equal to or greater than the quota.

(C) Any candidate who has, upon the first choices being counted, a number of such votes equal to or greater than the quota shall be declared elected.

(D) Where the number of such votes obtained by any candidate is equal to the quota, the whole of the voting-papers on which a first choice is recorded for such elected candidate shall be set aside as finally dealt with.

(E) Where the number of such votes obtained by any candidate is in excess of the quota, the proportion of votes in excess of the quota shall be transferred to the other candidates not yet declared elected, next in the order of the voter's respective preferences, in the following manner:—

(i.) All the voting-papers on which a first choice is recorded for the elected candidate shall be re-examined, and the number of second choices, or (in the case provided for in Rule L) third or next consecutive choices, recorded for each unelected candidate thereon shall be counted.

(ii.) The surplus of the elected candidate shall be divided by the total number of votes obtained by him on the counting of the first choices, and the resulting fraction shall be the transfer value.

(iii.) The number of second or other choices, ascertained in paragraph (i.) to be recorded for each unelected candidate, shall be multiplied by the transfer value.

(iv.) The resulting number, disregarding any fractional remainder, shall be credited to each unelected candidate, and added to the number of votes obtained by him on the counting of the first choices.

(F)—(a) Where, on the counting of the first choices or on any transfer, more than one candidate has a surplus, the largest surplus shall be first dealt with. If then more than one candidate has a surplus, the then largest surplus next in order of magnitude shall be dealt with, and so on. Provided that, if one candidate has obtained a surplus at a count or transfer previous to that at which another candidate obtains a surplus, the surplus of the former shall be first dealt with.

(b) Where two or more surpluses are equal, the surplus of the candidate who has the highest on the poll at the count or transfer at which they last had an unequal number of votes shall be first dealt with, and if they have had an equal number of votes at all preceding counts or transfers, the Returning Officer shall decide which candidate's surplus shall be first dealt with.

(G)—(a) Where the number of votes obtained by a candidate is raised up to or above the quota by a transfer as aforesaid, he shall thereupon be declared elected. And in such case, notwithstanding the fact that he may have reached the quota, such transfer shall be completed, and all the votes to which he is entitled therefrom shall be transferred to him, but no votes of any other candidate shall be transferred to him.

(b) Where the number of votes obtained by a candidate is raised up to, but not above the quota by a transfer as aforesaid, the whole of the voting-papers on which such votes are recorded shall be set aside as finally dealt with.

(c) Where the number of votes obtained by a candidate is raised above the quota by a transfer as aforesaid, his surplus shall be transferred to the candidates next in the order of the voter's respective preferences, in the following manner:—

(i.) The voting-papers on which are recorded the votes obtained by the elected candidate in the last transfer shall be re-examined, and the number of third, or (in the case provided for in Rule L) next consecutive choices recorded for each unelected candidate thereon counted.

(ii.) The surplus of the elected candidate shall be divided by the total number of voting-papers mentioned in paragraph (i.), and the resulting fraction shall be the transfer value.

(iii.) The number of second (or other) choices, ascertained in paragraph (i.) to be recorded for each unelected candidate, shall be multiplied by the last-mentioned transfer value.

(iv.) The resulting number, disregarding any fractional remainder, shall be credited to each unelected candidate, and added to the number of votes previously obtained by him.

(H)—(a) Where, after the first choices have been counted and all surpluses (if any) have been transferred as hereinbefore directed, no candidate, or less than the number of candidates required to be elected, has or have obtained the quota, the candidate who is lowest on the poll shall be excluded, and all the votes obtained by him shall be transferred to the candidates next in the order of the voter's respective preferences, in the same manner as is directed in Rule E.

(b) The votes obtained by such excluded candidate as first choices shall first be transferred, the transfer value of the vote in each case being 1.

(c) The other votes of such excluded candidate shall then be dealt with in the order of the transfers in which, and at the transfer value at which, he obtained them.

(d) Each of the transfers which takes place under the two previous clauses of this rule shall be deemed for all purposes to be a separate transfer.

(I)—(a) Where the number of votes obtained by a candidate is raised up to or above the quota by any such transfer as aforesaid, he shall thereupon be declared elected. And in such case notwithstanding the fact that he may have reached the quota, such transfer shall be completed, and all the votes to which he is entitled therefrom shall be transferred to him, but no other votes shall be transferred to him.

(b) Where the number of votes obtained by a candidate is raised up to, but not above, the quota by any such transfer as aforesaid, the whole of the voting-papers on which such votes are recorded shall be set aside as finally dealt with.

(c) Where the number of votes obtained by a candidate is raised above the quota by any such transfer as aforesaid, his surplus shall be transferred to the candidates next in the order of the voter's respective preferences in the same manner as is directed in Rule G, Clause (c). Provided that such surplus shall not be dealt with until all the votes of the excluded candidate have been transferred.

(d) Where any surplus exists it shall be dealt with before any other candidate is excluded.

(j) The same process of excluding the candidate lowest on the poll, and transferring to other candidates his votes shall be repeated until all the candidates, except the number required to be elected, have been excluded, and the unexcluded candidates, who have not already been so declared, shall then be declared elected.

(K) Where at any time it becomes necessary to exclude a candidate, and two or more candidates have the same number of votes and are lowest on the poll, then whichever of such candidates was lowest on the poll at the last count or transfer at which they had an unequal number of votes shall be first excluded, and if such candidates have had an equal number of votes at all preceding counts or transfers the Returning Officer shall decide which candidate shall be first excluded.

(L) In determining what candidate is next in the order of the voter's preference, any candidates who have been declared elected or who have been excluded shall not be considered, and the order of the voter's preference shall be determined as if the names of such candidates had not been on the voting-paper.

(M) Where on any transfer it is found that on any voting-paper there is no candidate opposite whose name a number is placed, other than those who have been already either declared elected or excluded, such voting-papers shall be set aside as exhausted.

Where in the case of a by-election one candidate only is to be elected and no candidate on the first count secures an absolute majority of the whole of the formal votes recorded at the election, the candidate who has the fewest votes is excluded (i.e., regarded as defeated) and each ballot-paper counted to him is (unless exhausted) counted to the unexcluded candidate next in the order of the voter's preference.

If no candidate then has an absolute majority of votes, the process of excluding the candidate who has the fewest votes and counting each of his ballot-papers (unless exhausted) to the unexcluded candidate next in the order of the voter's preference is repeated until one candidate has an absolute majority of votes.

Every ballot-paper not rejected as informal is to be counted in every count until it becomes exhausted, when it is rejected in all further counts. Where a candidate is excluded, any ballot-paper counted to him is deemed to be exhausted if there is not indicated upon it a consecutive preference for one unexcluded candidate.

If on any count two or more candidates have an equal number of votes and any one of them has to be excluded, the Returning Officer decides which shall be excluded, and if in the final count two candidates have an equal number of votes, the Returning Officer decides by his vote which shall be elected, but otherwise the Returning Officer has no vote at the election.

A comprehensive report on the General Election for the House of Assembly held on the 30th April, 1909, furnished to the Government by Messrs. Douglas, Piesse, and Birchall (officers connected with the Administration), gives full details of the working of the proportional representation system in Tasmania, and may be studied with advantage by persons interested.

## § 6. Valuation of Commonwealth Production.

The want of uniformity in methods of compilation and presentation of Australian statistics renders it an extremely difficult task to make anything like a satisfactory valuation of the various elements of production. At present there is so little accurate statistical knowledge regarding such industries as forestry, fisheries, poultry, and bee-farming, that any valuation of the production therefrom can only be regarded as the roughest approximation. As a matter of fact complete information as to value of production in all States is available in regard to the mining industry alone, and even in this case adjustments have to be made before the returns are strictly comparable. Careful estimates have been made in connection with the value of production from the agricultural and pastoral industries, which, it is believed, in the main give fairly accurate results. In the case of manufactories, five of the States in 1908 collected statistics of the value of production, while for the sixth State, Tasmania, an estimate has been prepared which it is believed gives a fair approximation. While the difficulties in the way of obtaining adequate valuations for all classes of production are serious enough at the present time they are still more pronounced in seeking to obtain information as to values for earlier years, when the returns were far more incomplete. It must be clearly understood, therefore, that the values given in the succeeding table are, in general, approximations only. With the adoption of the forms and methods of tabulation agreed upon at the Statisticians' Conference of 1906 it is hoped, however, that at no distant date fairly complete valuations will be available for all industries, and the returns collected in 1909 and 1910 certainly shew a considerable improvement over those of previous years. In the meantime the figures quoted must be taken with all their limitations. The table hereunder shews the approximate value of the production from all industries during the years 1906 to 1910:—

### ESTIMATED VALUE OF PRODUCTION FROM INDUSTRIES, 1906 to 1910.

Year.	Agriculture.	Pastoral.	Dairy, Poultry, & Bee-farming.	Forestry and Fisheries.	Mining.	Manufacturing.*	Total.
	£1000.	£1000.	£1000.	£1000.	£1000.	£1000.	£1000.
1906 ...	25,349	45,389	13,611	4,879	26,622	†	†
1907 ...	30,500	50,660	15,584	4,826	28,301	†	†
1908 ...	37,150	47,259	15,045	4,286	24,580	36,637	164,957
1909 ...	41,056	50,864	15,064	4,462	23,039	40,018	174,503
1910 ...	39,752	56,993	17,387	4,789	23,215	45,598	187,734

\* These amounts differ from those given in Section XIII., Manufacturing Industries, owing to certain products which are there included having been included in Dairy Farming and Forestry in this table. † Full particulars not available.

The total production from all industries during 1910 was £187,734,000, equal to an average of £42 19s. 2d. per inhabitant.

In the next table will be found the value of production in each State at decennial intervals since 1871, and for the year 1909. Details for individual States are not available for the year 1910, owing to discontinuance by Customs Department of collection of

statistics of Inter-State trade. The figures for the Census years have been taken from "Australia and New Zealand," and, in view of what has been said in a previous paragraph, must be regarded as very rough estimates only:—

### ESTIMATED VALUE OF PRODUCTION, 1871 to 1909.

State.	1871.	1881.	1891.	1901.	1909.	Develop- ment* since 1871.
	£1000.	£1000.	£1000.	£1000.	£1000.	
New South Wales ...	15,379	25,180	36,740	38,954	65,591	4.3
Victoria ...	19,260	22,750	30,320	30,807	42,545	2.2
Queensland ...	3,995	10,200	14,274	16,933	26,565	6.6
South Australia ...	5,228	8,457	9,026	10,314	16,468	3.1
Western Australia ...	707	943	1,806	12,544	16,325	23.1
Tasmania ...	2,131	3,586	3,921	5,033	7,009	3.3
Commonwealth ...	46,700	71,116	96,087	114,585	174,503	3.7
Average per head ...	£ s. d. 27 17 2	£ s. d. 31 1 3	£ s. d. 29 19 9	£ s. d. 30 2 6	£ s. d. 40 16 6	1.5

\* Ratio of value of production for 1909 to that for 1871.

## § 7. Norfolk Island.

1. **Area, Location, etc.**—Norfolk Island, discovered by Captain Cook in 1774, is situated in latitude 29° 3' 45" south, longitude 167° 58' 6" east. Its total area is 8528 acres, the island being about 5 miles long and 3 miles wide. From Sydney it is distant 930 miles, and from New Zealand 400 miles. The coast line is 20 miles; and its form that of an irregular ellipse. Except on the south-west, inaccessible cliffs rise from the water's edge. Cocoanuts flourish, and native pine trees attain a magnificent size. The climate is equable, and the average annual rainfall 43 inches.

2. **Settlement.**—The first colonisation, in 1788, was by Lieutenant King, who in H.M.S. *Sirius* established a small penal station as a branch settlement of that at Port Jackson. The settlement was abandoned in 1806, and thence for 20 years its chief use was as a whaling station and place of call for British warships.

From 1826 to 1855 it was again made a penal station. In 1844 it was annexed to Van Diemen's Land (Tasmania).

The descendants of the *Bounty* mutineers having become too numerous to subsist on Pitcairn Island were removed thence to Norfolk Island in 1856. The new community numbered 193, 94 males and 99 females, and were the descendants of British sailors and Tahitian women.

In 1856 the island was severed from Tasmania, and created a distinct and separate settlement under the jurisdiction of New South Wales. In 1897 it was made a dependency under the Governor of that Colony, and is now administered by the Chief Secretary's Department through a resident Chief Magistrate, in whom is vested the executive government of the settlement, and the penal supervision of its affairs.

3. **Population.**—The census population (3rd April, 1911) was 568 males, 417 females, total 985.

4. **Production, Trade, etc.**—In 1910 the imports from the Commonwealth were valued at £6294, the exports at £749. The chief articles sent to the Commonwealth were skins, £220; cocoanut oil, £265. There is little other production. A monthly

steam service is maintained with Sydney; other communication is irregular. The "all red" cable from Great Britain *via* Vancouver, Fanning Island and Fiji, bifurcates at Norfolk, one line connecting with New Zealand, the other with Brisbane.

5. **Social Condition.**—Education is free and compulsory, and there is a public school under the State Department of Public Instruction, and with standards corresponding to the State public schools.

The magistrate's court has criminal jurisdiction in all crimes except capital offences, civil jurisdiction in all matters, and authority to grant probate and letters of administration.

Dealings with Crown lands are in the hands of the Governor alone.

## § 8. Lord Howe Island.

1. **Area, Location, etc.**—Between Norfolk Island and the Australian coast is Lord Howe Island in latitude 31° 30' south; longitude 159° 5' east. It was discovered in 1788. The total area is 3220 acres, the island being seven miles in length and from one half to one and three-quarter miles in width. It is distant 436 miles from Sydney. The flora is varied and the vegetation luxuriant, with shady forests, principally of palms and banyans. The highest point is Mount Garner, 2840 feet. The climate is mild and the rainfall abundant.

2. **Settlement.**—The first settlement was by a small Maori party in 1833; afterwards a colony was settled from Sydney. Constitutionally it is a dependency of New South Wales, and is supervised by a visiting magistrate.

3. **Population.**—The estimated population on 31st December, 1910, was 56 males, 49 females, total 105.

4. **Production, Trade, etc.**—The principal product is the seed of the native palms. A monthly steamship service is maintained with Sydney. The lands belong to the Crown. The occupants pay no rent, and are tenants on sufferance.

## APPENDIX.

---

Recent information and returns which have come to hand since the various sections of this book were sent to press, are given in the pages immediately following.

## SECTION IV. POPULATION.

### § 1. Census of 3rd April, 1911, p. 116.

A summary of the Census results available at the date of writing Section IV. has been included in that section. Further results available at the date of going to press are given hereunder :—

#### 1.—MALE POPULATION OF STATES AND TERRITORIES OF COMMONWEALTH

At Census of 3rd April, 1911, classified according to Age. (Exclusive of Full-blooded Aborigines).

### SECTION V.

#### VITAL STATISTICS.

### § 1. Births.

1. **Male and Female Births, p. 167.**—The total number of male and female births registered, and the birth rates per 1000 of the population in each State and Territory and in the Commonwealth, during the year 1911 were as follows :—

#### BIRTHS AND BIRTH RATES, 1911.

Particulars.	States.						Territories.		C'wlth.
	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N. Ter.	Federal Capital Ter.	
Males ...	24,383	16,934	8,703	5,615	4,124	2,716	16	17	62,508
Females ...	23,154	16,092	8,281	5,442	3,967	2,721	15	13	59,685
Total ...	47,537	33,026	16,984	11,057	8,091	5,437	31	30	122,193
Birth rates ...	28.75	24.84	27.65	26.89	28.21	28.57	9.34	16.85	27.21

### § 2. Marriages.

1. **Marriages, p. 180.**—The following statement shows the number of marriages registered in each State and Territory and in the Commonwealth, and the marriage rates per 1000 of the mean population, during the year 1911 :—

#### MARRIAGES AND MARRIAGE RATES, 1911.

Particulars.	States.						Territories.		C'wlth.
	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N. Terr.	Federal Capital Ter.	
No. of marriages	15,278	11,088	5,167	4,036	2,421	1,477	10	5	39,482
Marriage rates*	9.24	8.34	8.41	9.81	8.44	7.76	3.01	2.81	8.79

\* Number of marriages, not persons married, per 1000 of mean population.

### § 3. Deaths.

1. **Male and Female Deaths, p. 187.**—The number of deaths registered in each State and Territory and in the Commonwealth during 1911, and the death rates per 1000 of the mean population, are shewn in the following table:—

**MALE AND FEMALE DEATHS AND DEATH RATES, 1911.**

Particulars.	States.						Territories.		C'wth.
	N.S.W.	Vic.	Q'land.	S. Aust.	W. Aust.	Tas.	N. Ter.	Federal Capital Ter.	
Male ...	9,973	8,355	4,060	2,179	1,923	1,037	59	5	27,591
Female ...	7,173	6,861	2,484	1,859	1,000	890	6	5	20,278
Total ...	17,146	15,216	6,544	4,038	2,923	1,927	65	10	47,869
Death rates...	10.37	11.45	10.65	9.82	10.19	10.13	19.58	5.62	10.66

**Frequency of Deaths according to Sex and Age.**—Diarrhœa, Dysentery, Enteritis (see par. 29, p. 234).—The following table, based on the Australian experience for the years 1907 to 1910 inclusive, indicates the distribution of deaths from these causes according to age and sex. The figures given represent the number of deaths per annum in a total population of 10,000,000, distributed according to sex and age in the same manner as the Australian population. The number of deaths from these causes is highest under 12 months, and rapidly diminishes to a minimum at about age 13, increasing thenceforward to about age 77, and subsequently declining with the diminishing numbers exposed to risk.

**COMMONWEALTH OF AUSTRALIA DEATH-RATES FROM DIARRHŒA, ETC., ACCORDING TO AGE-GROUPS, 1907 to 1910.**

**EXPLANATION OF GRAPH.**—The curves shew the death-rate per annum for Diarrhœa, etc., per million persons of the corresponding age-group. The base of each small square represents one year of age, and the height of each small square represents 400 persons on curve A, 20 persons on curve B, and 200 persons on curve C.

**FREQUENCY OF DEATHS ACCORDING TO SEX AND AGE.—DIARRHŒA, DYSENTERY,  
ENTERITIS.—NUMBER OF DEATHS PER ANNUM PER 10,000,000 OF TOTAL  
POPULATION, AUSTRALIA, 1907 to 1910.**

Age Groups.	Males.	Females.	Persons.	Age Groups.	Males.	Females.	Persons.
0	3,239	2,579	5,818	50-54	52	34	86
1	663	582	1,245	55-59	55	32	87
2	102	115	217	60-64	67	64	131
3	52	49	101	65-69	102	96	198
4	25	25	50	70-74	144	117	261
5-9	47	54	101	75-79	150	120	270
10-14	15	10	25	80-84	99	76	175
15-19	17	11	28	85-89	43	37	80
20-24	15	22	37	90-94	12	11	23
25-29	20	21	41	95-99	2	3	5
30-34	19	18	37	100 & over	...	...	...
35-39	32	27	59	Not stated	3	2	5
40-44	31	25	56				
45-49	40	38	78	Total ...	5,046	4,168	9,214

**Death Rates from Diarrhœa, etc., according to Age Groups** (see par. 29, p. 234).—The figures given above, while indicating the relative frequency with which deaths occur from the causes specified in a given population, do not give a true indication of the force with which these causes act at the several ages, since account is not taken of the respective numbers subject to risk. To present this aspect of the question, the following table has been compiled shewing the number of deaths per annum in each sex and age group per 1,000,000 of population in such group.

This brings out clearly the manner in which the rate of death from these causes diminishes rapidly from the earliest age, at which it is very heavy, to about age 13, and increases continuously to the oldest age. The progression in rate is very similar for males, females and persons. A graph shewing the rate for persons appears on p. 1240.

**DEATH RATES FROM DIARRHŒA, ENTERITIS AND DYSENTERY, PER MILLION  
PER ANNUM OF THE CORRESPONDING SEX AND AGE GROUP, AUSTRALIA,  
1907 to 1910.**

## SECTION VIII.

### AGRICULTURAL PRODUCTION.

#### § 4. Wheat.

1. **Progress of Wheat Growing, p. 364.**—The following table shews the estimated area under wheat and the prospective yields of wheat in each State and the Commonwealth for the season 1911-12:—

#### ESTIMATED AREAS UNDER WHEAT AND PROSPECTIVE YIELDS, 1911-12.

Particulars.	N.S.W.	Vic.*	Q'land.	S. Aust.	W. Aust.	Tas.	C'wlth.
Estimated area ... Acres	2,334,780	2,164,066	47,538	2,190,782	559,145	41,905	7,338,216
Prospective yield ... Bush.	24,616,100	20,891,877	381,224	20,352,720	5,149,889	826,528	72,218,338
Average yield per acre ..	10.54	9.65	8.02	9.29	9.21	19.72	9.84

\* Final figures.

## SECTION XII.

### MINES AND MINING.

#### § 2. Gold.

2. **Production of Gold at Various Periods, p. 485.**—The Australian gold yield for 1911 is shewn in the subjoined table. The figures are open to final revision, but the totals will not be materially altered:—

#### GOLD RAISED IN AUSTRALIA, 1911.

Particulars.	States.						Territories.		C'wealth.
	N.S.W.	Vict.	Q'land.	S. Aust.	W. Aust.	Tas.	Northn. Terr.	Fd. Cap. Ter.	
Quantity Fine ozs.	181,121	504,000	386,165	3,531	1,370,668	31,101	7,277	...	2,484,063
Value ... £	769,353	2,140,855	1,640,323	15,000	5,823,075	132,108	30,910	...	10,551,624

The quantity raised in New Zealand during the year 1911 was 427,833 fine ounces, valued at £1,817,316, making the total yield for Australasia 2,911,896 fine ounces, valued at £12,368,940.

## SECTION XV.

### COMMERCE.

#### Non-Coincidences in the Statistics of Trade.

To those unfamiliar with the nature of Trade Statistics there are certain non-coincidences or apparent discrepancies between the Trade Statistics of different countries which are sometimes erroneously mistaken for real discrepancies. The following remarks will make the nature of the differences clear, and will shew why there cannot be agreement although the statistics are accurately kept.

(i.) *Exports to Various Countries.* It has been pointed out on page 621 of this volume that the value recorded in this country, of exports to any particular foreign country, does not represent the actual purchase of Australian goods by that country.

It is obvious that at the time of export, the ultimate destination (place of consumption) cannot be known, and the most that can be obtained is the final point to which the goods are originally consigned from the exporting country. In this way the exports recorded in Australia as to the United Kingdom include, of course, goods consigned to that country for sale, but which are there purchased and again despatched to all parts of the world.

In regard to wheat the position is frequently even more indefinite, for in many instances wheat ships are despatched to the Canary Islands, the Channel Islands or some other convenient port, there to receive orders as to their further, though perhaps not final, destination. Wheat is frequently sold and resold many times between its despatch from the exporting country and its arrival in the country of consumption, and consequently such wheat indicates no direct trade association between the producing and the consuming countries, the trade operation being, so far as it immediately affects the producing country, with the first foreign buyer.

The foregoing amply illustrates the limitations of statistics of the export trade in so far as any particular country is concerned, even when confined to ordinary commercial commodities of limited life.

In regard to gold bullion and specie and similar things which pass readily and continuously from country to country, and soon lose their identity of origin, no country of consumption can be established statistically. Gold is largely shipped from Australia "under option," that is, it may be carried in a vessel to the terminal port of its voyage, or it may be diverted at some intermediate port according to the business requirements of the consignee. In this way Australian gold shipped to order of London bankers may be diverted at Colombo to, say, China. In this case the business is actually between (i.) Australia and London, and (ii.) London and China, though in the Commonwealth export returns the transaction would appear as an export to Colombo, the export entry having been passed as to Colombo "optional." In fact, the large consignments of gold made to India and to South Africa have not been made in satisfaction of claims of those countries on Australia, but in satisfaction of English claims, and have merely been consigned to the countries named by order of the London bankers whose clients (the British Government) required large sums in gold in the countries named.

The following tabular statement of the trade between Germany and the Commonwealth, as recorded in each country, may be taken as an illustration of the extent to which the difference may amount between the results as ascertained by the import returns of one country and the export returns of the other.

#### COMMONWEALTH EXPORTS TO GERMANY.

	Commonwealth Records.		German Records.*		Excess of Import Records.	
	Exports to Germany.		Imports from Com'wealth.			
	1909.	1910.	1909.	1910.	1909.	1910.

## GERMAN EXPORTS TO THE COMMONWEALTH.

	German Records.*		Commonwealth Records.		Excess of Import Records.	
	Exports to Commonwealth.		Imports from Germany.			
	1909.	1910.	1909.	1910.	1909.	1910.
	£	£	£	£	£	£
Merchandise ...	2,918,600	3,164,700	4,537,112	5,214,149	1,618,512	2,049,449
Gold ...	...	1,500	1,500	997	1,500	—503
Total ...	2,918,600	3,166,200	4,538,612	5,215,146	1,620,012 55.52%	2,048,946 45.15%

\* Figures kindly supplied by W. de Haas, Esquire, German Trade Commissioner in Australia.

The discrepancies shewn above are not in any way due to inaccuracy of either record, but merely to the necessary limitations of all export trade statistics, from which there is no escape.

## SECTION XXVII.

## INDUSTRIAL UNIONISM AND INDUSTRIAL LEGISLATION.

## § 3. Legislative Regulation of Wages and Terms of Contract.

3. **The Arbitration Court System** (page 1062).—The *Industrial Arbitration Act* 1912 of New South Wales came into operation by proclamation on 18th April, 1912.

## SECTION XXVIII.

## DEFENCE.

## 1. Military Defence.

2. **Land Defence of Federated Australia** (page 1073).—On 31st March, 1912, the land forces were:—

Permanently employed ...	2,042	Unattached List of Officers ...	291
Militia ...	21,429	Reserve of Officers ...	671
Volunteers ...	127	A.A. Medical Corps Reserve ...	224
Area Officers ...	209	Chaplains ...	163
Rifle Clubs ...	52,726		
Cadets (Compulsory Trainees) ...	91,479	Total ...	169,361

## § 4. Commonwealth Defence Legislation.

2. **The Defence Acts of 1909, 1910 and 1911** (page 1079).—Under the authority of the Act of 1909, factories have been established in connection with the Defence Department. The Commonwealth Harness, Saddlery, and Leather Accoutrements Factory at Clifton Hill, Victoria, was opened in September, 1911. The first output from the Cordite Factory at Maribyrnong, Victoria, was in June, 1912. Work has been proceeding at the Clothing Factory at South Melbourne, Victoria, since the beginning of 1912. The Small Arms Factory at Lithgow, N.S.W., was opened on 8th June, 1912. These establishments will be under the control of the Defence Department, but will manufacture goods for other departments.

## § 5. The New Defence System.

3. **Organisation of Land Forces under the Defence Act 1903-11** (p. 1085).—Efficiency requirements for Citizen Forces were promulgated in regulations issued in June, 1912. The prescribed training consists of sixteen whole-day drills, or their equivalent, of which not less than eight must be in camps of continuous training; provided that trainees in the Naval Forces, and in the Artillery and Engineers, must attend twenty-five whole-day drills or equivalent, not less than seventeen in camp. Whole-day, half-day, and night drills are to last not less than six, three, and one-and-a-half hours respectively, but whole-day drills in camp include the whole of the twenty-four hours. The nature of the training will be as hitherto in force in the Militia, and authorised from time to time by the Military Board. Trainees are to attend statutory parades, of which notification shall have been given. Leave from these may be granted by commanding officers, if necessary, owing to temporary absence from the locality, but if such absence is over a month, training must be performed with some other convenient unit. Leave may also be granted for illness or other unavoidable cause; the necessary training being made up by attendance at voluntary parades.

A specially appointed officer is to classify trainees at the end of each annual training as efficient or non-efficient. Non-efficients must attend an additional year's training for each year of non-efficiency. Before being classed as efficient, trainees must have attended all statutory parades, or their prescribed equivalent. Absence without leave from a statutory parade necessitates attendance at two voluntary parades. The standard of efficiency will be based on the number of years' training already performed, the work of the unit during the year, and the grade of proficiency that should be reached by a man of ordinary capacity giving proper attention to his work.

4. **Compulsory Training in Operation** (page 1088).—At the end of April, 1912, the total registrations in training areas numbered 179,028; total medical examinations, 118,403; number medically fit, 109,600; percentage of those medically examined found fit, 92.6; number unfit and temporarily unfit, 8803; total exemptions in training areas, 63,953; total number liable for training, 92,047. The total number actually in training was, military, 88,525; naval, 2990. Total, 91,515.

The number of Junior Cadets medically examined up to 30th April, 1912, was 46,505, of whom 45,347 (97.5 per cent.) were medically fit.
